About the Editors

PAUL FINKELMAN is the President William McKinley Professor of Law and Public Policy at Albany Law School and the author or editor of more than twenty books, including *The Encyclopedia of American Political History* (CQ Press, 2000) and *The Political Lincoln* (CQ Press, 2009).

TIM ALAN GARRISON is the director of Native American Studies and associate professor of history at Portland State University. He is the author of *The Legal Ideology of Removal: The Southern Judiciary and the Sovereignty of Native American Nations* (University of Georgia Press, 2002) and several articles on the history of Indian removal.

Editorial Advisory Board

ANDREW FISHER is assistant professor of history at the College of William & Mary in Williamsburg, Virginia. His current research focuses on the Native peoples of the Columbia Plateau in the Pacific Northwest.

BRIAN HOSMER is associate professor of history and Native American studies at the University of Illinois at Chicago. Formerly director of the Newberry Library's D'Arcy McNickle Center for American Indian History, Hosmer is the author of numerous books and articles on economic change and cultural identity in Native communities during the twentieth century.

STACY LEEDS is professor of law and director of the Tribal Law and Government Center at the University of Kansas. She is a citizen of the Cherokee Nation and a former justice on the Cherokee Nation Supreme Court.

JUDITH V. ROYSTER is co-director of the Native American Law Center and professor of law at the University of Tulsa College of Law. She writes and lectures in the areas of federal Indian environmental, natural resources, and water law, and is an editor of and contributing author to *Cohen's Handbook of Federal Indian Law*, as well as the author of several other books, articles, and papers.

RENNARD STRICKLAND is Distinguished Professor Emeritus at the University of Oregon School of Law and a legal historian of Osage and Cherokee heritage. The founding director of the Center for the Study of American Indian Law and Policy at the University of Oklahoma, Strickland is the author or editor of more than thirty-five books.

Preface

In 1987 ethnohistorian James Axtell published the article “Colonial America without the Indians: Counterfactual Reflections,” in which he imagined a North America bereft of humans at the time of European exploration and settlement. The purpose of his piece was to demonstrate how vital the Native peoples of the continent had been to the history and development of the United States. Axtell’s imaginative contention could also be extended to an exploration of the relationship between the story of U.S. Indian policy and the general history of the United States. That history is not only important in its own right; it is also interwoven with the political, economic, legal, cultural, and social histories of the United States—which would have developed in other ways. The United States would be a very different nation today if its government had not had the responsibility of dealing with the tribal nations.

Some might see the history of the relations between the United States and American Indians as a long tragedy in which the former subjugated, dispossessed, and annihilated the culture of the latter. Concomitant with this U.S. assault on Native land holdings, political rights, and culture, however, is a story of triumphant persistence. Despite more than two centuries of attacks on their political, territorial, and cultural integrity, the Native peoples of the United States have survived, endured, and, in some cases, returned to prosperity. Today, many Native peoples are experiencing a societal renaissance, thanks to their demands that they be allowed to fulfill their own destinies. The *Encyclopedia of United States Indian Policy and Law* attempts to document both the tragedies and this Native resilience.

A Complicated History

Relations between the U.S. government and Native peoples have always been complicated. Even the idea of a “U.S. Indian policy” has been problematic because a single “Indian nation” never existed. Rather, hundreds of tribal nations stretched from the Atlantic to the Pacific, all with their own histories, languages, cultures, and interests. U.S. policies toward Native peoples often were contradictory because of the different relationships that specific tribes had with the

United States. In addition, federal policy was always influenced by the responses, reactions, lobbying, and activism of Native Americans.

From the founding of the United States to the modern era, presidents, governors, legislators, judges, generals, and diplomats have participated in the development, implementation, and interpretation of Indian policy. The *Encyclopedia of United States Indian Policy and Law* attempts to provide an introduction to their actions, ideas, and programs. Many American presidents have taken a direct interest in American Indians, whether it was to remove them from their homelands, as a series of presidents tried to do in the first decades of the United States’ existence, or attempts to revive the principles of tribal sovereignty and self-determination, as Richard M. Nixon sought to do in the 1970s. Many members of Congress also endeavored to place their own stamps on federal Indian policy. They include politicians Henry L. Dawes, who has become infamous with Native peoples for the allotment act that bears his name, and Daniel Inouye, who cosponsored the Indian Gaming Regulatory Act that provided tribes with a new means of economic development and diversification. Supreme Court justices, including John Marshall, who declared the Indian tribes to be sovereign nations in *Worcester v. Georgia*, are also chronicled, as are the individuals—all men except for Menominee activist Ada Deer—who supervised the federal government’s Bureau of Indian Affairs. U.S.-Indian relations have also been marked by hundreds of wars and battles, many of which are considered in these pages. Although this is not an encyclopedia of U.S.-Indian wars, we have included the prominent and iconic warriors of the U.S. Army, including George Crook, George Armstrong Custer, and William Henry Harrison. Just as important in these volumes are the diplomats and peacemakers, such as William Clark, Joel Palmer, and Lawrence Taliaferro.

The history of U.S. Indian policy is as much a product of Native agency as it is of non-Indian action. Indian leaders, in other words, played as great a role in this policy history as did federal legislators, executives, and judges. Native chiefs, from Cornplanter to Wilma Mankiller, worked to preserve the

autonomy of their nations as they guided their people through changing times. Indian war leaders, such as Tecumseh and Crazy Horse, resisted U.S. aggression and endeavored to protect their homelands from confiscation and their peoples from what they deemed a corrupting culture. Moved by forces we find difficult to understand, Native prophets such as Handsome Lake, Tenskwatawa, and Wovoka devised a variety of responses, ranging from accommodation to outright violent resistance, in their search for a path their people could walk while navigating the new maze of life created by the arrival of non-Native outsiders. Activists, from William Apess in the nineteenth century to the “Red Power” protesters in the twentieth, lobbied, protested, and argued on behalf of their peoples. Some of them saw common interests among the panoply of Native societies and forged pan-Indian movements committed to the Indian cause, however they defined it in their time. In this encyclopedia, we hope to make clear to readers that Native peoples have been and continue to be actively engaged in resisting, reforming, bending, and otherwise helping to make the policies the U.S. government has applied to them.

Devising programs and policies involving Indians has always been complex and frustrating for the national government. Often the policies, and their results, have not been pleasant. The history of U.S. Indian policy is a long, ugly trail marked by death, forced relocation, racial bigotry, and cultural genocide. Sometimes tragedy resulted from premeditated assault on Native lives, rights, and culture. In some instances, such as at Wounded Knee in 1890, agents of the United States committed atrocities and war crimes against Native peoples. At New Echota in 1835, and in other treaty negotiations throughout the West, federal officials deliberately violated fundamental principles of ethical behavior to expropriate Indian land, wealth, or resources. Sometimes the suffering of Native peoples was the unforeseen consequence of the government’s attempts to act in the Indians’ best interests. For instance, President George Washington’s secretary of war, Henry Knox, believed that Indians were of equal innate intelligence to white Americans and that they merely needed a proper education and the appropriate environmental circumstances to elevate themselves to the supposedly lofty perch of Anglo-American civilization. Knox’s “civilization program,” designed to prepare Native people for assimilation, was thus motivated by what he thought was an honorable intent. Unfortunately, his confidence in the superiority of his own civilization set the United States on a course to destroy all Native cultures within the reach of its influence.

Languages, healing practices, means of subsistence, dances, educational practices, and other ways of daily living would be affected negatively by the American effort to “civilize” the Indian over the next 150 years.

When Indians decided not to accommodate the U.S. government’s demands that they surrender their territory or step aside to permit national expansion, they faced invasion, forced dispossession, and relocation. The removal and reservation policies were both based on the principle that Native peoples should get out of the way of the burgeoning American state and isolated in places where they could begin to embrace Anglo-American civilization on their own by learning to speak English, becoming adherents to one form of Christianity or another, and learning to farm like American yeomen. While undergoing this acculturative transformation, Indians were not to question the demands of the United States. Rather, they were to cede their lands and surrender their natural resources. Indians wishing to avoid this fate, according to nineteenth-century U.S. policy makers, had to embrace individual property ownership and American ideals, leaving their tribal connections and culture behind. In the late nineteenth and twentieth centuries, hundreds of young Indians were shunted off to boarding schools, where they were forbidden to speak their languages, required to cut their hair, and taught to look with embarrassment on the places, peoples, and cultures from whence they came.

During the course of the twentieth century, Native Americans were buffeted by a U.S. government that seemed unable to decide what it wanted from them. Should Native peoples abandon communal ownership of property and their traditional cultures, as the proponents of allotment demanded? Should they try to reestablish their tribal land base and tribal governments as John Collier, the commissioner of Indian affairs, encouraged them to do during the Indian New Deal? Should they wean themselves of federal paternalism and abolish their tribal institutions as the advocates of termination required? For the first sixty years of the twentieth century, Indian peoples adapted, protested, and lobbied as they tried to appease and make their case to an increasingly powerful U.S. government that rarely considered their opinions. Native activists and tribal leaders during these decades worked with passion and determination to retain some semblance of tribal identity for their peoples and to preserve cherished aspects of their national cultures.

The period since approximately 1960 has been one marked by a reaffirmation of tribal sovereignty and a reinvig-

oration of Native cultures. This rebirth has been generally approved of and supported by the U.S. government, which finally began to consider Indian opinions on how the federal-tribal relationship should be maintained. Although the occasional Supreme Court justice, senator, or state legislator has tried to forestall the renewal of tribal nations, for the most part the last five decades have been marked by generally positive trends—improved Native healthcare, tribal economic expansion and diversification, and increased political and legal tribal autonomy. That is not to say that all is rosy on reservations or in urban Indian homes. Native peoples still fall below the national mean in almost every measure of societal well-being. We can hope, however, that the time when the United States simply imposed its will on the tribes has passed and that we have entered into a new, lasting age of tribal sovereignty in which Indian nations and the United States deal with each other on a government-to-government basis.

The Content of This Encyclopedia

U.S.-Indian relations are so complex that an encyclopedia on the topic requires discussion of a broad array of subjects and the participation of scholars from a number of disparate disciplines. A significant amount of space in the *Encyclopedia of United States Indian Policy and Law* is devoted to legal issues and the syntheses of legal scholars, reflecting the fact that the law touches on almost every aspect of Native life. For example, the art, artifacts, and sacred sites of Indians have been the subject of lawsuits and legislation. Legal disputes over tribal natural resources, such as oil, gold, and natural gas, are part of the history of U.S.-Indian relations, as are environmental conflicts over water rights, fisheries, whaling, the buffalo, eagles, and other endangered species. Readers will find coverage of such topics in these volumes.

Native culture has changed dramatically over time and has been entwined in the history of U.S.-Indian relations and law. Indians have been icons of American nationalism, appearing on coins and currency in the nineteenth century and stamps in the twentieth and twenty-first centuries. From the beginning of the nation, Native peoples have been depicted on and in public buildings, in some places as heroic first Americans and in others as subjugated enemies. On occasion, Americans have venerated Indians by making them symbols of the nation even as they worked to take their land and destroy their culture. In the twentieth century, some sports teams selected Indians as their “mascots” or invoked Indians in their names. Americans who claimed to be “honoring” supposed Native character traits failed to see how such

caricatures could be degrading. The offensiveness of some of these images of Natives has led to litigation and might someday lead to legislation; culture, thus, also has an important place in an encyclopedia on U.S. Indian policy and law.

Most important, the political relationship between Indians and the United States has been, and remains, complicated and significant. U.S. courts have struggled with definitive questions: What is an Indian, and how do tribes, states, and the United States define one? What is a tribe? Is a tribe a foreign nation or a domestic, dependent one? What are the sovereign powers of a tribal nation? How do federal and state laws complement or impinge on those of an Indian nation? American law and policy have fluctuated over the years on these questions. Money, power, land, and personal identity turn on these issues and will continue to do so in the foreseeable future.

This encyclopedia explores these questions and others. We hope that it will help all Americans understand the complex and difficult policy issues surrounding relations among Indian tribes, Native peoples, and the U.S. government.

Organization, Terminology, and the Selection of Subjects

The *Encyclopedia of United States Indian Policy and Law* opens with a series of essays that periodize and survey the history of U.S. policy. Readers will note that the dates of these periods overlap in some cases. Our editorial board felt periodizing in this way would remind readers that history often resists human categorization and that new policies are conceived, developed, and implemented at the same time that previous policies are being gradually abandoned. While the U.S. government was imposing the “civilization” policy on Native Americans during the early nineteenth century, for instance, the roots of the removal policy were taking shape in the mind of Thomas Jefferson. The result was one of the most dramatic and regrettable events in Native American history: the forced removal of the Cherokees from the Southeast, where they had adopted the lifestyle, religion, market economy, and political institutions of neighboring white Americans in response to the U.S. government’s call for them to embrace American “civilization.” The Cherokees attempted to conform to one federal policy only to suffer the disastrous consequences of the policy that succeeded it. Our periodization honors these dramatic overlaps. After the overview surveys, readers will find a host of entries—biographies, legal cases, statutes, wars, and thematic essays—arranged in alphabetical order.

Perhaps the most difficult challenge in preparing any encyclopedia is deciding what to include. We are sure that some readers will be disappointed to find particular battles or statutes omitted while others have been covered. Particularly daunting was the process of determining which American Indians to feature in biographical articles as many, many Native individuals deserve attention in the study of U.S. Indian policy. Our decisions were not guided by an intention to include “Great Indians.” Rather, we made every effort to select those Native Americans who had a significant impact on federal policy, whether they did so as politicians, diplomats, educators, activists, or leaders in war.

Another difficult decision concerned appropriate terminology. With the emergence of the term “Native American,” scholars began to explain at the beginning of their books what terms they used for Native peoples and why. We feel compelled to do so here as well, having settled on an inclusive approach. The terms “Indian,” “American Indian,” and “Native American” have become the most common collective names for the indigenous peoples of North America. Some anthropologists decades ago tried to impose “Amerindian” on the community of scholars, but fortunately, this term has been generally abandoned. Native peoples in Canada are commonly considered collectively as “First Nations” peoples. Presently, some Native scholars are calling for the use of the term “Indigenous” or simply “Native.” Some publishers require their authors to use the collective “Native American” in every instance. Not one of these terms is satisfactory to all, and all authors have their own preferences.

In determining the terminology for this encyclopedia, our primary goal was to be sensitive to the wishes of our Native readers, though they themselves are divided on what collective term should be used. First, we asked authors to use the name of the tribal nation when possible, ideally the name of the nation that its people prefer. Second, we had faith that our authors, many of whom are Native, would be sensitive to this issue. We therefore left to each author the decision on how he or she refers to the collective indigenous inhabitants of North America; hence, terminology is not consistent throughout these volumes. We did occasionally insert another of the terms to avoid redundancy, but in each case, authors had the final say on the term used. Some scholars, such as your undersigned editors, tend to use the terms “Native,” “Native American,” “Indian,” and “American Indian” interchangeably. We do so not just to avoid redundancy, but more so to express in a subtle way

that we are not comfortable with settling on any particular term and that we understand some people are offended by one term and prefer another. We should also note here that some authors objected to the use of the term “tribe,” and we made every effort to accommodate their individual preferences. For reasons of clarity and logic, we have used the traditional plural to refer to a tribe when possible. In other words, we refer to “the Catawbas” as a group, rather than “the Catawba.”

Illustrations and Design

The cover illustrations were selected to represent the passage of time, from the nineteenth century to the present. Volume one displays a painting by John Mix Stanley depicting an international council of tribes at Tahllequah in the Cherokee Nation in 1843. Volume two presents two Native men, dressed in their fancy dance regalia, conversing with each other at the 2002 Inaugural Pow Wow marking the creation of the National Museum of the American Indian on the Mall in Washington, D.C. The U.S. Capitol dome hovers over them in the background, just as the power of the United States has weighed on the lives of American Indians for more than two hundred years.

The design featured in each chapter opening is a Seneca spontoon tomahawk pipe. We think the depiction of a peace pipe constructed in the form of a tomahawk perfectly symbolizes the complex history of U.S.-Indian relations.

Acknowledgments

This project, literally “years in the making,” would not have been possible without the assistance of the superb staff at CQ Press. Acquisitions editor Doug Goldenberg-Hart was enthusiastic about the project from the beginning, so much so that he came by to listen to one of our dry lectures at the Hart Senate Office building. He was always reasonable and encouraging. Doug’s requests for the inclusion of certain articles showed us his devotion to the project. Andrea Pedolsky, editorial director, also provided superb leadership throughout the process. Managing editor Joan Gossett ensured that the project was on time and of the quality that we had hoped for when we began this journey. Our project managers, January Layman-Wood and Nancy Matuszak, made it all happen. Without them we would have been lost in a wilderness of our own making. We are sure our families will always remember them for what they did to us in the year 2008. In all seriousness, they were joyful and sympathetic taskmasters.

Production editing was provided by Emily Bakely, Sarah Fell, and Belinda Josey. Colin Agnew, our project assistant, pestered authors, maintained contracts and contacts, and kept track of everything. Kristin Teigen, Tim Garrison's former graduate assistant and now an independent historian, not only checked facts for numerous articles, but also contributed several articles to this collection. We thank her profusely for her work. Fredd Brewer, Paul Finkelman's administrative assistant, helped manage our databases.

We also want to thank our copy editors. Shannon Kelly carried the ball for most of the project, and we salute her skill, her eye for style and concision, and her wit. We also want to thank Lawrence Baker, Jennifer Campi, Margo Harris, Sabra Bisette Ledent, Colleen McGuinness, Kate Macomber Stern, Robin Surratt, and Tracy W. Villano, who all joined the team at the end and pulled us over the finish line.

Most of all, we owe a huge debt of gratitude to our editorial board: Andrew Fisher, Brian Hosmer, Stacy Leeds, Judith Royster, and Rennard Strickland. They helped determine which articles to include and their length. More important, they read dozens of articles and brought their understanding and knowledge of policy and law to bear on content issues. Several scholars, particularly Theda Perdue and Michael D. Green, offered suggestions that improved the quality of the encyclopedia. Linda Walton and Tom Luckett, chairs in the history department at Portland State University, provided emotional support by acknowledging the scholarly value of this project. A faculty enhancement grant from Portland State helped fund some of our editorial work.

We pay tribute to the scores of historians, law professors, lawyers, journalists, writers, and scholars from a variety of fields who have shared their knowledge in making this ency-

clopedia possible. You will not only find national experts writing on subjects in their field; you will also find a host of dynamic up-and-coming scholars who will be making their mark on the history of policy and law in the future. We are proud of our roster of Native scholars on the editorial board and in our large family of authors. Our supposition was that we could not provide a Native perspective on the history of U.S. policy if Native scholars were not truly participating in this endeavor from beginning to end and from front to back. We note here that we intend to devote a portion of any royalties received from the sales of the encyclopedia to support Native students in higher education.

We also want to honor one scholar who has done more for the study of U.S. Indian policy than any other. Francis Paul Prucha, emeritus professor of history at Marquette University, has been a prolific student of U.S. Indian policy. His monumental study, *The Great Father: The United States Government and the American Indians*, is a survey of federal policy that will never be duplicated. A testament to his significance can be found in the dozens of authors who cite him in their bibliographies. Clearly, this encyclopedia would not have been possible without the scholarship of Father Prucha.

In closing, we want to express our appreciation to our families for their patience and support. We could not have completed such an enormous project without them. To our children, Sam Garrison, Abigail Finkelman, and Isaac Finkelman, who kept asking, "When's it going to be done, Dad?" we can now answer, "It's done."

OVERVIEWS OF U.S. INDIAN POLICY AND LAW

Indian Policy of the Continental Congress

When the Second Continental Congress convened in Philadelphia in May 1775, few of its members were planning to design a national Indian policy. The delegates were meeting in accordance with the resolutions of the First Continental Congress (1774), which had issued a stern protest to Parliament against the Coercive Acts that were passed in retaliation for the Boston Tea Party. Their original charge was to try to foresee Parliament's reaction to that protest and to implement a trade embargo against Britain if its government proved unresponsive. Instead, they found themselves the directors of an armed rebellion that had erupted in New England the previous month. The rebellion obliged Congress to transform itself into something resembling a national government, the better to pursue the intensifying war between the American colonies and the British government. By the end of 1775, Congress had of necessity usurped several powers of the British Crown: it had created an army, opened secret relations with France, and sent treaty commissioners to meet with the Iroquois and Delaware Indians to secure their neutrality or friendship.

Colonial Precedents

This was not the first time that Americans from different colonies had worked together to negotiate alliances or agreements with Native Americans. Beginning in the late seventeenth century, several colonial governments—notably New York, Pennsylvania, Virginia, and South Carolina—had signed treaties with, or requested military assistance from, the Six Nations of Iroquois, thereby tying the colonies and the Iroquois together in a loose alliance known as the Covenant Chain. In 1754 delegates from several colonies had met in Albany and debated Benjamin Franklin's plan to create an intercolonial government with the power to set a common Indian policy. And in 1770 New York and Virginia had tried to hold an intercolonial congress where delegates from the various provinces could develop common regulations and practices respecting Indian trade. Thus, the members of the Continental Congress did have several decades of colonial experience in joint policy making and diplomacy upon which to draw.

Diplomacy, Alliance, and War, 1775–1782

In negotiating with the western Indians at the outset of the American Revolutionary War (1775–1783), Congress applied the same diplomatic techniques that British and colonial agents had developed earlier in the century. It authorized Silas Deane, its agent in France, to purchase cloth, beads, ironwares, and other diplomatic gifts for potential Indian allies. It organized treaty councils with the Iroquois and the other northern Indian nations, at which federal commissioners provided their guests with food and gifts, guaranteed their pre-war borders, and signed neutrality agreements with them. It also appointed agents to the Six Nations of Iroquois (Philip Schuyler) and to the Northwest Indians (George Morgan). Both agents met regularly with Native American leaders to distribute gifts and hear grievances; Morgan, for example, made several trips to Wyandot, Delaware, and Shawnee towns between 1776 and 1779 in an effort to counter the influence of British governor James Hamilton.

Congress also tried to form military alliances with Indian nations or communities that solicited American assistance. During the Revolutionary War the Continental Army employed several hundred Caughnawaga, Oneida, Tuscarora, and Delaware warriors as auxiliaries and scouts. The Continental Congress used gifts and hospitality to “brighten the chain of friendship” (an Iroquois phrase) between these allies and the United States, and in 1778 it signed a treaty of alliance with the Delawares, promising them American assistance and eventual incorporation into the Union as a state.

Congress also paid \$925 to educate several Caughnawaga children at Eleazor Wheelock's Indian school in New Hampshire, and several hundred more for the boarding and education of the sons of several allied Delaware chiefs. These educational outlays were initial manifestations of the “civilization policy” that American presidents and officials would develop during the early national era. More importantly, they were a means of obtaining hostages, thereby ensuring the allegiance of the students' parents.

The members of Congress generally did not concern themselves with military campaigns against Britain's Indian

allies. One exception was the 1779 Continental Army expedition against the Six Nations of Iroquois. In January 1779, General George Washington met with a congressional conference committee to discuss administrative issues and to plan that year's campaign. At this meeting Washington and the committee members decided to commit the Continental Army to "harassment" of the Six Nations in retaliation for Iroquois raids on settlements in New York and Pennsylvania the previous year. In the summer of 1779, an army expedition under Daniel Brodhead and John Sullivan accordingly laid waste to forty Iroquois towns and killed nearly one thousand people.

The Limits of Congressional Power

There were some significant limitations on Congress's ability to regulate Indian affairs and recruit allies during the Revolutionary War. The Woodland Indians in the East desperately needed European goods, since the war had virtually shut down the fur trade in that region, but Congress's poor credit and Britain's control of the sea lanes made it increasingly difficult for American officials to supply Indians' needs. In 1776 Congress spent over \$260,000 on Indian diplomacy, chiefly on provisions, presents, and the establishment of a storehouse for the Oneidas in western New York. However, that figure dropped to \$55,000 by 1778 and to \$2,800 by 1781. This decreased funding was one reason why 80–90% of the Indian men who fought in the Revolutionary War took the side of Britain.

Moreover, Congress never enjoyed full jurisdiction over Indian relations. A clause in the early draft of the first federal constitution, the Articles of Confederation, gave Congress uncontested authority to regulate Indian diplomacy and trade, but after Virginia and South Carolina congressmen objected to the clause the drafters modified it. The final version of the Articles, completed in 1777 and ratified in 1781, gave the U.S. government jurisdiction over "Indians, not members of any of the states." This loophole was large enough to allow the individual state governments to enact their own Indian policies, on the grounds that the Trans-Appalachian Indian nations resided within their colonial charter boundaries. The four southern states of Virginia, North and South Carolina, and Georgia conducted their own expeditions against the Cherokees, and held peace treaties whereby they extracted large land cessions from that nation. Virginia seized British posts in the Ohio Valley, which it claimed under its colonial charter, in 1778–79, and in the early 1780s Virginia and Pennsylvania

militia raided Delaware and Shawnee towns in the same region.

Postwar Policy and the Conquest Theory, 1783–1786

In 1782 American diplomats signed preliminary peace articles with Great Britain, and in April 1783 the Continental Congress proclaimed an armistice with Britain's Indian allies. Later that year two congressional committees began drafting reports that outlined the United States' postwar policy toward the Trans-Appalachian Indian nations. The committee reports stipulated that in return for the United States friendship and protection, the western Indians needed to make restitution for their attacks on white settlers during the war, and they could do so by ceding lands to Congress and the southern states. They also proposed that federal treaty commissioners make a token payment of gifts and provisions for these land cessions, and that they promise the restoration of peaceful trade as soon as possible.

Federal commissioners, accompanied by American soldiers, met the chiefs and captains of several Indian nations throughout the next two years. One group of officials signed treaties with the Six Nations of Iroquois (Fort Stanwix, New York, October 1784); with the Chippewas, Delawares, Ottawas, and Wyandots (Fort McIntosh, Pennsylvania, January 1785); and with the Shawnees (Fort Finney, Ohio country, January 1786). The other met with the Cherokees, Choctaws, and Chickasaws at Andrew Pickens's Hopewell plantation in South Carolina (November 1785–January 1786). The first group of commissioners, which included Richard Butler and George Rogers Clark, took a hard line toward the northern Woodland Indians. They informed the Natives that they were "conquered peoples"; demanded an immense land cession, which amounted to approximately two-thirds of the present-day state of Ohio; threatened the Indians with destruction if they did not comply; and took hostages as security for the return of wartime captives. The southern commissioners, who included Benjamin Hawkins and Joseph Martin, were more temperate in their behavior but were unable to grant the southern Indians' urgent requests: removing white intruders from the Cherokee and Chickasaw lands and supplying those two tribes with trade goods.

In the spring of 1786, Congress approved the commissioners' treaties and passed an Indian Ordinance that established a peacetime Indian department. The new ordinance provided for two federal superintendents of Indian affairs, one for the communities north of the Ohio River and one

claimants in the Southwest, North Carolina and Georgia, refused to cede their western land claims to the Union, and so the federal government could not extend its jurisdiction into the region. (The Articles of Confederation prohibited Congress from interfering with Indian affairs on territory claimed by individual state governments.) Instead, Congress had to ask the states of North Carolina, South Carolina, and Georgia to hold a joint treaty conference with the southern Indians. The three states' legislatures delayed for over a year while they argued over logistics and finances, and their commissioners did not send invitations to the Creeks and Cherokees until the spring of 1789, by which time the Continental Congress that authorized their commissions had expired.

The Treaty of Fort Harmar, 1789

Meanwhile, Arthur St. Clair began preparations for his northern treaty council in the winter of 1787–1788. However, an attack by Ottawa warriors on the storehouse St. Clair had constructed for his treaty goods caused the governor to move the conference from neutral ground—the falls of the Muskingum River—to the federal stronghold of Fort Harmar (in present-day Marietta, Ohio). This decision alienated many suspicious Northwest Indians who feared St. Clair would imprison or kill them if they met him at an American fort. Consequently, only a few hundred Iroquois and Northwest Indian chiefs and captains attended the governor's conference in December 1788 and January 1789. At the conference several Wyandot chiefs tried to convince St. Clair to accept a modified Indian boundary in the Northwest and halt American settlements west of the Muskingum River. The governor refused and insisted that the Northwest Indians renew the Fort McIntosh cession. In the final Treaty of Fort Harmar (January 9, 1789), however, he did permit the Indian signatories to continue hunting in the ceded lands, and paid them \$6,000 worth of goods. A separate treaty with the Six Nations of Iroquois, which St. Clair negotiated at the same conference, renewed the Treaty of Fort Stanwix and paid the Iroquois \$3,000.

The Treaty of Fort Harmar was no more successful in establishing peace with the Northwest Indians than previous

treaties had been. The majority of the region's Indians, who were not represented at the conference, disavowed the authority of the chiefs and captains who did attend, and by the summer of 1789 Northwest Indian warriors were again raiding American settlements in the Ohio Valley. The treaty did, however, set U.S. Indian policy on a new course—or, rather, return it to the course that Congress had followed during the Revolutionary War—of managing Native Americans through negotiation and cash subsidies, rather than through threats and hostage-taking. In the summer of 1789, the new Federal Congress acknowledged this change by affirming that the Fort Harmar treaty was then in force, thus making it both the last act of Confederation Indian policy and the first formal act of U.S. Indian policy under the Constitution.

U.S. Indian Policy: Congress and the Executive, 1775–1803

The policy of the United States government toward American Indians underwent a series of profound shifts between the start of the American Revolutionary War (1775–1783) and the conclusion of the Louisiana Purchase. The United States's policy swung between treating the various Indian nations as roughly sovereign equals or as conquered dependents. American policies also varied between tribal nations. Overall, while United States policy makers looked to the Indian nations as trading partners and allies (as had their British predecessors) during this period, they became increasingly committed to acquiring Indian land. Although driven largely by changing conceptions of national self-interest, U.S. Indian policy also came to be informed by Enlightenment thinking that saw racial attributes as fluid and changeable; given the proper stimuli, Enlightenment-influenced founders believed, American Indians could be “civilized” and made to live as did European Americans. These policies of land acquisition and “civilization” were ultimately unified during Thomas Jefferson’s presidency, with the acquisition of Louisiana marking a major turning point.

Indian Policy during the Revolutionary War, 1775–1783

Although American Indian nations played significant roles in the interimperial wars earlier in the eighteenth century, the Continental Congress hoped to persuade the Indian nations to remain neutral at the start of the Revolutionary War. In conducting Indian policy, Congress mimicked both the institutional structures and negotiating forms of its British predecessors. Less than two months after the battles at Lexington and Concord, on July 12, 1775, Congress created three separate administrative units—the Indian departments—for managing Indian relations. The northern department included the Iroquois Six Nations and all the nations north of them; the southern department encompassed the Cherokees and all the nations to the south; the middle department was comprised of the nations in between, essentially the Indians of the Ohio Valley and Pennsylvania. Congress appointed five commissioners to oversee the

southern department and three commissioners for each of the other departments. The commissioners possessed extensive power to negotiate with the nations within their department, to distribute gifts to maintain the Indian nations’ friendship, and to use gift-giving, persuasion, and even force to hinder the actions of British Indian superintendents within their departments. Congress had created an institutional structure similar to that of the British Indian superintendencies whose influence it was designed to counter.

Congress initially encouraged Indian nations to adopt a posture of neutrality in the war. The day after creating the Indian departments, Congress approved a speech to be given to the Iroquois that described the conflict between the American colonies and Great Britain as a “family quarrel” and urged the Iroquois to remain neutral. Commissioner Philip Schuyler delivered this message during conferences in New York at German Flats and Albany in August and September 1775. By the early months of 1776, rumors had spread that the Iroquois were actively siding with the British (this was mostly untrue at this point), resulting in both British and American agents actively courting the Iroquois, which led to the Six Nations becoming divided by mid-1776. Delegates from only four of the six nations journeyed in June 1776 from Iroquoia to Philadelphia to meet the leaders of the Continental Congress. As the war continued to unfold, the rift within the Six Nations deepened. Iroquois warriors fought with both British and American forces at the Battle of Oriskany (1777), and the Continental Army invaded Iroquoia under General John Sullivan’s leadership in August 1779, destroying many villages.

In the middle department, Commissioner George Morgan also shifted his diplomatic posture from promoting neutrality to actively courting Indian alliances with the United States. Most of the Ohio Valley nations were unresponsive, having committed themselves either to neutrality or to open alliance with Britain due to the diplomacy of British governor Henry Hamilton. However, the Delawares (Lenapes) did negotiate with Morgan, and the parties concluded a treaty at Fort Pitt on September 17, 1778—the United States’ first formal Indian treaty after independence.

The Treaty of Greenville, bearing the signatures of Indian chiefs and warriors, followed the defeat of Shawnee chief Blue Jacket's forces at the Battle of Fallen Timbers to the federal army. The tribes surrendered most of the Northwest Territory to the United States.

Matters in the southern department were even more grave for the United States at the start of the war. Early in 1776 the Cherokee responded to Hamilton's request to join the British side, and, under the leadership of Dragging Canoe, Cherokee warriors attacked many American settlements. Forces from Virginia, North and South Carolina, and Georgia counterattacked and defeated the Cherokee, forcing their surrender in April and May 1777. Low-level conflict between the southern Indians and American settlers persisted through the end of the war. Despite the defeat of the Cherokee on the battlefield, most southern Indian nations remained loyal to the British government, primarily due to the influence of southern Indian superintendent John Stuart.

Beyond its alliances with the Delawares, a minority of the Iroquois (the Oneidas and Tuscaroras in particular), and some smaller Indian nations solidly within U.S. territory (such as the Stockbridge Indians), the American government was, overall, far less successful than the British in winning American Indian allies during the Revolutionary War. Many American Indians perceived the settler population of the United States as being more interested in land acquisition than trade; their choice was, by and large, a rational one con-

sidering their circumstances. However, the unwillingness of most American Indian nations to support the United States in its fight for independence became a major factor as the United States formulated a course of action regarding Indian nations after the war.

Confederation Period, 1783–1789

In the aftermath of the Revolutionary War, the policy of the United States shifted away from one that treated the Indian nations as potential allies and partners in warfare to one that attempted to treat them as conquered subjects. The Treaty of Paris (1783) between the United States and Great Britain that ended the war awarded the United States sovereignty of the entire territory east of the Mississippi River, south of the Great Lakes, and north of Florida. No Indian nation was mentioned. Arguing that Britain's Indian allies had suffered the same defeat as had the British, agents of the United States claimed all of the Indian lands as conquered territory, (officially) allowing continued Indian residence on the land with congressional permission. The vast majority of American Indian nations rejected and resisted this doctrine, known as the "doctrine of conquest." Both conquest theory and the weakness of Congress under the Articles of Confederation severely inhibited U.S. Indian policy for the rest of the 1780s.

Congressional Indian policy during the Confederation period had its origin in the report of the Continental Congress's Committee on Indian Affairs issued on October 15, 1783. The committee's report laid out the goals of the Indian policy of the United States for the remainder of the decade. Led by delegate James Duane of New York, who had experience dealing with the Six Nations, the committee recommended Congress adopt an Indian policy that was practical but also disciplinary. Considering first the northern and middle Indian departments, the committee emphasized that the majority of the Indian nations in these regions had sided with the British and, they said it could be argued, deserved a harsh measure of punishment. But attempting to reduce or expel these Indian populations was both impractical (since the United States had no means to do so) and dangerous (since the Indians could simply reconstitute themselves under British protection in Canada and continue to threaten the United States). The committee thus advocated negotiation with the various Indian nations in order to get them to accept American sovereignty, agree on proper boundary lines between settler and Indian communities, and work out arrangements for trade to continue between the two groups. A different Committee on Indian Affairs for the Southern

Department put forward similar recommendations in May 1784 that were ultimately adopted in March 1785.

The approach that the Congressional committees put forward unraveled as the appointed commissioners attempted to negotiate treaties with the various Indian nations. Reasons for this varied. At the signing of the Treaty of Fort Stanwix with the Iroquois Six Nations in October 1784, the treaty commissioners explicitly referenced the notion of an American “right of conquest” to Indian land based on the Treaty of Paris. The leadership of the Six Nations present at the treaty negotiations were troubled by such claims, but were also concerned about rejecting a relationship with the Continental Congress outright and being subject only to the state of New York. Feeling threatened, they signed the treaty. In the Ohio Valley, however, most Indian leaders felt they could reject the conquest doctrine outright. Commissioners concluded the Treaty of Fort McIntosh with the Wyandots, Delawares, Ottawas, and Chippewas in January 1785 and the Treaty of the Mouth of the Great Miami with the Shawnees in January 1786, but these treaties proceeded with a minority of Indian nations’ leadership involved. Indian leaders balked at accepting conquest theory and were also dismayed that, despite its promises, the government could do almost nothing to stem the flood of settlers into the trans-Appalachian region. Tensions increased during the 1780s when settler communities came into contact with Indian ones.

Indian Policy of Federalist Administrations

The ratification of the federal Constitution in 1787-1788 and the beginning of the Washington administration and first federal Congress in 1789 inaugurated a new chapter in the relationship between the American Indian nations and the United States. The new Constitution placed the treaty-making power in the hands of the president and the Senate and explicitly vested these powers in the federal government. Although state governments would continue to play advisory roles in treaty-making with Indian nations, the states were clearly excluded from the enterprise. Both Congress and the Washington administration forwarded policies they hoped would reduce tensions on the frontier and convince Indian leaders that the new U.S. government had the power and will to enforce and uphold its treaty obligations, as well as to punish Indian nations that disobeyed or disagreed.

The principal architect of the new Indian policy was Washington’s first secretary of war, Henry Knox. Within months of taking office, in July 1789 Knox proposed to abandon conquest theory and treat the Indian nations as sov-

ereign states. Beyond attempting to bring a measure of good faith to the treaty-making process, Knox also saw that white settlers on the frontier (many of whom were squatters settling on Indian lands illegally) were often as much to blame, if not more so, as Indians for initiating conflict. The federal government needed to restrain white settlers and strictly regulate access to the Indian Country. On July 22, 1790, Congress passed the first Indian Trade and Intercourse Act. (The law would be renewed and modified several times into the 1830s.) Portions of this legislation were modified from the Land Ordinance of 1786, while others were innovations. The law articulated a sharp divide between settlers’ lands and Indian Country, and restricted access to Indian Country only to federal agents and licensed Indian traders. Murder and other crimes committed by whites against Indians would be punished by the federal government. In order to limit individuals, corporate bodies, or even the states from defrauding Indian nations of their lands, treaties and land sales would all have to be conducted under the authority of the federal government. Private lands sales and treaties negotiated by the states alone were declared illegal. Of course, while these were strong measures on paper, the infant federal government lacked the means for widespread enforcement, and abuses and violations occurred throughout the trans-Appalachian west. To remedy this, Knox embarked on a program of rebuilding the United States Army from the tiny force that remained after the Continental Army disbanded.

Knox’s policy of negotiation was put into effect almost immediately. The Washington administration chose to submit for the Senate’s ratification the Treaty of Fort Harmar, concluded in January 1789 with many of the same nations present at the Treaty of Fort McIntosh in 1785. Washington and Knox then made overtures to Alexander McGillivray, the leader of the Creek Indian nation. These negotiations culminated in McGillivray and a number of other Creek leaders journeying to the temporary federal capital city of New York in July and August 1790. The resulting Treaty of New York epitomized the Knox policy. The Creek Nation placed itself under the protection of the U.S. and opened itself up to American trade, while the federal government agreed to a firm boundary line that actually went against the desires of the state of Georgia, the Creeks’ near neighbor. Similarly, the government concluded the Treaty of Holston with the Cherokees in July 1791.

But where Washington and Knox negotiated civilly with the more populous and organized southern Indian nations, they adopted a more belligerent stance with the Indians of

the Ohio Valley. It was in this region that resistance to the United States—both its diplomatic overtures and its settler population—was most severe. Majorities of many nations refused to negotiate with the United States and actively fought against the Americans. An alliance of various Ohio Indians fighting under Miami war chief Little Turtle defeated small American forces under generals Josiah Harmer and Arthur St. Clair in 1790 and 1791, respectively. After two years of unsuccessful diplomatic overtures, Knox put his new, larger federal army in the field. Under the command of Anthony Wayne, the “Legion of the United States” marched deep into the Ohio country and defeated the Indian allies under the Shawnee chief Blue Jacket at the Battle of Fallen Timbers in August 1794. The following July at the Treaty of Greenville, the United States received a grant of most of the present-day state of Ohio from the defeated Indians.

Overall, the Washington administration’s Indian policies were pragmatic—limiting Indian-settler contact would limit potential conflict and thus prevent frontier warfare the new federal government could not afford during its early years. But the policies were also ideological in nature. Knox’s pursuit of Indian negotiation, restraint of frontier settlements, and rebuilding the federal army meshed with Treasury secretary Alexander Hamilton’s plans to consolidate the national debt, build a national bank, and use the federal government to promote the growth of the American financial and manufacturing sectors. Not only was the emerging Federalist Party building what historians have come to label a “fiscal-military state,” but their desire to remake the United States into a modern commercial nation with a mixed economy benefited greatly from slowing down territorial expansion. Knoxian Indian policy and Hamiltonian finance worked together to further the growth of the federal government along Federalist ideological lines.

At the same time, federal Indian policy was also informed by Enlightenment racial thinking. Conventional wisdom among eighteenth-century natural philosophers held that racial differences were not biological in nature, but rooted in a people’s environment. That is, climate and geography affected not only a people’s modes of subsistence, but its culture and mores as well, and these developments led to other choices that distinguished and defined one civilization from another. But these philosophers believed that behaviors, and the value systems that emerged from them, were not fixed and could be changed. Changing American Indian behavior and leading Natives on the path toward European “civilization” became a major goal behind U.S. Indian policy in the 1790s.

When Anglo-American policy makers looked at the American Indian nations, they saw groups of nomadic hunter-gatherers who ranged over hundreds of square miles, needlessly wasting land that could be put to productive use. They believed that if Indians could be taught to become farmers, like their white counterparts, they could fully embrace and participate in Euro-American civilization and would also willingly surrender the excess land they no longer needed. (Historians today recognize that the vast majority of the Indian peoples of the eastern woodlands were agriculturalists, but eighteenth-century whites either did not, or chose not to, see this.)

Beginning with George Washington’s annual message to Congress in 1791, the so-called plan of civilization became an essential part of U.S. Indian policy. Indian agents would attempt to introduce European agricultural technologies into Indian Country in order to transform Indian modes of subsistence and Indian culture. The “civilization” policy was an approach embraced by both the Federalists and their Jeffersonian Republican successors. The aforementioned treaties with the Creeks at New York and with the Cherokees at Holston included provisions that required the United States to supply farm implements and spinning wheels in the effort to persuade the tribes to embrace civilization.

While eighteenth-century racialism and the plan of civilization would provide common ground for Federalists and Republicans, by the time of the presidency of John Adams, concerns about Federalist Indian policy would ultimately fuel larger concerns the Jeffersonian Republicans had with Federalist policies. Growing populations in western states and territories such as Georgia, Kentucky, the old Northwest Territory, and the old Southwest Territory resulted in larger numbers of citizens and jurisdictions favoring expansionist policies. For example, the Treaty of Colerain (1796) with the Creek Nation provoked fears that the federal government was protecting the Creeks’ sovereignty at the expense of Georgia’s. The Jeffersonian Republicans wanted the federal government to favor the sovereignty of the states and the interests of frontier settlers. While he embraced the plan of civilization, the desire to protect and preserve the sovereignty of the states was a touchstone of the Indian policies of Thomas Jefferson’s first administration. In his first two years in office, Jefferson’s agents negotiated at least six different Indian treaties. The diplomatic crisis that led to the acquisition of the Louisiana territory transformed Jefferson’s Indian policy in several fundamental ways.

Early Jeffersonian Policy and the Effects of the Mississippi Crisis, 1802–1803

In 1802 rumors began to circulate in European capitals about the contents of the secret Treaty of San Ildefonso (1800) between Spain and France. Many speculated, correctly, that Spain had retroceded the territory of Louisiana to France. The prospect of French control of the mouth of the Mississippi River concerned the Jefferson administration, which had to consider how the United States would and could respond to such an event. Making these tensions even worse was the fact that in October 1802 the Spanish intendant at New Orleans suspended the right of American merchants to store their goods during the transshipment process (when goods were being transferred from river-going barges to ocean-going ships). The effective closure of the Mississippi River to American shipping provoked a diplomatic crisis. Jefferson and his cabinet engaged in multiple efforts to deal with the crisis between December 1802 and March 1803. Jefferson dispatched James Monroe as a special envoy to France to negotiate a purchase of New Orleans and the Floridas—what would ultimately become the Louisiana Purchase. He instructed Secretary of War Henry Dearborn to accelerate five planned Indian treaty negotiations, as he was worried that a French presence in Louisiana would lead to many Indian nations renewing their pre-1763 alliances with France. Finally, he asked Congress's permission for secret funds for an expedition into the Louisiana territory to ascertain its geography and the disposition of the Indian nations there. This became the Lewis and Clark Expedition.

In addition to increasing the pace of Indian negotiations, Jefferson's administration also changed its tenor in response to the Mississippi crisis. In private letters to Indian agents Benjamin Hawkins and William Henry Harrison in February 1803, Jefferson outlined why he wanted an increasing number of treaties with the Indians. Purchasing Indian lands around the major rivers of the trans-Appalachian west would ensure that the United States could maintain the rivers as lines of communication and commerce. But most importantly, with treaties came increased commerce with the United States, and with commerce came Indian dependency on American trade goods. Debt would soon follow, and, as he told Harrison, the United States could then offer to relieve debts in exchange for more and larger cessions of lands. And even though the Louisiana Purchase (ratified in October 1803) made the concerns of foreign powers influencing the American Indian nations of the Mississippi and Ohio valleys nearly moot, the aggressive acquisition of lands would continue.

Between the Mississippi crisis and the inauguration of James Madison, Jefferson's agents concluded an additional twenty-four Indian treaties, gaining cessions of territories in what would eventually be thirteen different states, including most of Missouri, Arkansas, Illinois, and Indiana. Not long after the acquisition of Louisiana, Jefferson began encouraging tribes to relocate into the territory. In hindsight, these efforts set the United States on a path toward a general removal of the eastern tribes.

U.S. Indian Policy: Congress and the Executive, 1803–1848

During the administration of President Thomas Jefferson (1801–1809), the objective of federal Indian policy makers was, in the words of historian Robert Berkhofer in his 1979 work *The White Man's Indian*, “expansion with honor”—acquiring the Indian land demanded by white settlers without killing the Indians in the process. Jefferson and his subordinates believed they could attain this difficult goal by continuing their Federalist predecessors’ “civilization” program. If, Jefferson reasoned, the U.S. government could persuade the trans-Appalachian Indians to adopt commercial agriculture, stock raising, spinning, and weaving, Native American families could sustain themselves on far less land than they had previously needed for hunting. Federal commissioners could then persuade the Indians to sell their surplus lands for money that they could invest in farm equipment and spinning wheels. Eventually, the U.S. government could incorporate the Woodland Indians into American society as citizens, thus eliminating them as political rivals and demonstrating the superiority of American civilization to the French and British, neither of whom had been able to effect such a large-scale conversion of Indians.

In practice, though, the federal government’s commitment to Indian civilization remained limited during the early nineteenth century. In 1802 Congress renewed a \$15,000 annual appropriation to supply interested Indians with gifts such as plows, looms, and livestock to “improve” their lives. The executive branch gave Protestant missionaries small grants to open schools for Cherokee children and paid for the upkeep of a Catholic priest and teacher for the Kaskaskias. In speeches to Native American audiences, Jefferson and his Indian agents urged listeners to abandon their old lifeways and adopt agriculture, English literacy, and the ownership of private property. These efforts comprised the full extent of federal officials’ investment in the civilization program before the War of 1812 (1812–1814).

The Jeffersonians demonstrated the limits of their commitment to Indian civilization by enlarging another program that exploited Native Americans’ continued reliance on commercial hunting: the Indian trading-factory system. The factories were fur-trading posts, each constructed, financed,

and administered by the U.S. government, where salaried federal trading agents bought Indian hunters’ furs at retail prices and sold them manufactured goods at cost. Congress originally created the factories to drive foreign (principally British) fur traders out of business and thereby lessen foreign influence over the Indians. President Jefferson recognized that the factories could serve another useful purpose: through the extension of credit they could draw Native Americans into debt, which the government could then persuade their chiefs to discharge by selling land. During the first decade of the nineteenth century, the War Department expanded the number of factories from two to twelve, while Congress increased the factories’ capital from \$150,000 to \$300,000, raised the factories’ salary pool from \$8,000 to \$15,000, and created the office of superintendent of Indian trade to oversee the system. As Jefferson had hoped, treaty commissioners used factory debts to leverage land cessions from the Creeks (in 1802) and the Cherokees (1806–1807).

Expansionism and War

The acquisition of Indian land for the American farming population was the Jeffersonian Republicans’ chief policy objective. Between 1801 and 1810, federal officials negotiated thirty treaties with Native American nations and procured from them over 200,000 square miles of territory, at a cost of one to two cents per acre. The administration also sought to build roads linking Tennessee to Georgia; Natchez, Mississippi; and Mobile, Alabama, and needed easements from the southeastern Indian nations. In addition, during the short-lived French attempt to re-occupy Louisiana (1800–1803), President Jefferson began a concerted effort to purchase Indian land titles on the east bank of the Mississippi River to create a buffer zone of white settlements between the eastern United States and French Louisiana. Finally, in 1802 federal commissioners had obligated the United States to extinguish all Indian land claims in the state of Georgia in return for Georgia’s cession of its western lands (present-day Alabama and Mississippi) to the Union.

Therefore, in the early nineteenth century, federal commissioners repeatedly pressured the chiefs of the four largest

southeastern Indian nations for land and highway concessions. In 1802 and 1805, U.S. officials agreed to pay the Creek Indians approximately \$240,000 over ten years for all the lands between the Oconee and Ocmulgee rivers in Georgia. In 1805 the Chickasaws agreed to cede their claims to central Tennessee, influenced in part by bribes paid to tribal leaders, while in that same year the Choctaws ceded the southwestern corner of Mississippi and the southeastern corner of Alabama in return for the settlement of debts they owed to the fur-trading company of Forbes & Leslie. The Cherokees sold their claims to central Tennessee in a series of treaties and conventions, again accompanied by bribes, between 1805 and 1807.

In the Northwest Territory, Indiana territorial governor William Henry Harrison mounted an equally spirited campaign to liquidate the Great Lakes Indians' land claims. Between 1803 and 1809 he negotiated fifteen treaties with the Delawares, Kickapoos, Miamis, and other northern Woodland Indian nations, cheating or bribing their chiefs into selling southern Indiana, most of present-day Illinois, and parts of the future states of Wisconsin and Missouri to the United States. Other federal officials concurrently negotiated land cessions in northern Ohio and eastern Michigan from the Ojibwas and Wyandots (1805–1808).

Jeffersonian officials pushed the Woodland Indians so steadily and hard for land cessions that some finally pushed back. In 1807 Cherokee nationalists assassinated Doublehead (or Chuquilatague), an influential chief who had taken a leading role in the recent land cessions. At the same time the Shawnee prophet Tenskwatawa and his brother Tecumseh began organizing a new pan-Indian resistance movement in the Northwest, calling on their followers to give up the artifacts of white American civilization and resist future land sales to the United States. In 1811 Harrison used several skirmishes between Indians in the Northwest and white Americans to justify attacking Tecumseh's headquarters at Prophetstown. After defeating a small Indian force at Tippecanoe Creek (November 6, 1811), Harrison and his territorial militia destroyed Prophetstown, beginning a border war that merged with the following year's Anglo-American conflict.

During the War of 1812, over fifteen thousand Woodland and Plains Indians aligned themselves with Britain, whom they viewed as a reliable ally against American expansionism. These Native allies of the Crown included five thousand Sioux; several thousand Canadian Iroquois and Ojibwas; the members of Tecumseh and Tenskwatawa's Indian confeder-

ation; and four thousand Creek nativist insurgents known as the Red Sticks, whom Tecumseh recruited or inspired. In the first year of the war, Indian forces captured or destroyed several American frontier posts and settlements, including Chicago, Michilimackinac, and Fort Mims. They also destroyed or forced the evacuation of half the federal government's Indian trading factories. However, in 1813–1814 American regulars and militia, aided by 3,800 U.S.-allied Native American fighters—some from communities in the Northwest whose “accommodationist” leaders opposed Tecumseh's pan-Indian movement, others from southeastern Indian nations who were old military rivals of the Creeks—conducted a devastating counteroffensive. American volunteers under William Harrison and Isaac Shelby decisively defeated Tecumseh's confederates at the Battle of the Thames (Oct. 5, 1813), while U.S. troops under Andrew Jackson destroyed Red Stick Creek forces at the Battle of Horseshoe Bend (March 27, 1814).

From Civilization to Removal

After the end of the war, federal policy makers attempted to revive the Jeffersonian civilization policy while continuing to press the Woodland Indians for new land cessions. In 1819 Congress authorized regular federal funding for Indian education through the Indian Civilization Act, which appropriated \$10,000 yearly for the schooling of Native American children. The president and Senate also included education annuities in several new treaties signed with specific Indian nations, which collectively amounted to an additional \$35,000 per year. By 1830 philanthropists and missionaries had used these funds to open fifty-two day and boarding schools that enrolled over 1,500 Indian pupils.

However, concurrent political and economic changes were undermining federal support for the civilization policy and convincing a growing number of officials that the removal of the Woodland Indians from the eastern United States was both desirable and inevitable. The postwar growth of steamboat transportation, a boom in agricultural prices, and the expansion of cotton plantation agriculture and slavery into the lower southern states increased the potential value of Indian lands to white speculators and farmers. Though the U.S. government negotiated over one hundred Indian treaties between 1814 and 1829, and secured thereby the cession of more than 70 million acres of Native American land, American settlers' appetite for that land only increased. Moreover, the growth of western American settlements after the war led to the admission of five new trans-

Appalachian states to the Union, and their representatives in Congress almost uniformly opposed the civilization policy and favored the permanent separation of whites and Indians. The westerners scored their first policy victory in 1822, when Senator Thomas Hart Benton of Missouri convinced Congress to close the U.S.–Indian trading factories, which westerners considered expensive and wasteful.

Finally, support for the “civilization” of Native Americans waned even among former advocates of the policy. The decision of so many Indians to take Britain’s side in the War of 1812, and the cultural conservatism of most Woodland Indians—who sometimes adopted weaving or stock-raising but would not give up their languages or customs—suggested that the United States could not hope to assimilate its Native American population. Some officials, influenced by the new ideology of “scientific racism,” were coming to believe that such behavior was the result of innate and permanent racial differences, and that Indians might therefore be inherently unfit for civilized life. Such a view was espoused, or at least suggested, by Lewis Cass, the governor of Michigan Territory, and by Thomas McKenney, the last superintendent of Indian trade and the first superintendent of Indian affairs (1824–1830). By the 1820s McKenney and other philanthropists argued that proximity to white American society was actually harmful to Native Americans, leading only to alcoholism and other unhealthy conditions, and that the eastern Indians must either emigrate across the Mississippi River or become extinct.

Indian removal was by then an old idea, though few American policy makers had ever considered it a wholly practical one. At the end of the eighteenth century, some Woodland Indians had begun voluntarily migrating west of the Mississippi River, seeking better commercial hunting opportunities or refuge from belligerent white settlers. By 1828 nearly fourteen thousand Cherokees, Kickapoos, Delawares, Shawnees, and other eastern Indians had settled in Missouri and the Arkansas Valley. During his presidency Thomas Jefferson had proposed that all of the Woodland Indians follow this example and voluntarily move to a trans-Mississippi reservation, and in the mid-1820s President James Monroe and President John Quincy Adams recommended that Congress pass a formal act to encourage and fund Indian emigration. Several postwar treaties offered the southeastern Indians money and land if they moved west of the Mississippi River, though only a few thousand accepted the offer.

Full-scale removal became a reality due to two specific political developments. First, the southeastern Indian nations

began to assert their autonomy in ways that directly interfered with federal land acquisition and state sovereignty. In 1825 the Creek national council annulled a ten-million-acre land cession to the United States and executed William McIntosh, the chief who had arranged the sale. The incident produced a confrontation between the Creeks, the state of Georgia (on whose behalf federal commissioners had made the purchase), and the U.S. government that was resolved only by a new federal treaty with the Creeks (January 24, 1826) which paid them over \$200,000 for their remaining lands in Georgia. Eighteen months later, on July 26, 1827, the Cherokees issued their own political challenge: the national council set forth a tribal constitution and proclaimed the Cherokees a sovereign nation. Georgia responded by outlawing the Cherokee national government; extending its laws into the Cherokees’ homeland; and incorporating Cherokee lands into the state, even though this violated federal treaties and laws.

The other development was the election in 1828 of Andrew Jackson, a western military leader and politician, to the presidency (1829–1837). Jackson regarded the continued residence of independent Indians in the eastern United States as a threat to American national security and a hindrance to economic development, and he made removal the centerpiece of his Indian policy. In his first annual message to Congress, Jackson proposed an exchange of Indian lands in the east for reservations in the trans-Mississippi West, and shortly thereafter Jackson’s supporters in Congress, joined by a united Georgia delegation, introduced the Indian Removal Act. The bill authorized the president to create a western Indian territory (eventually comprising the future states of Kansas and Oklahoma) and to negotiate treaties of removal and land exchange with the eastern Woodland Indian nations. \$500,000 was appropriated for expenses. Protestant missionary groups and members of the National Republican Party mounted fierce opposition to the bill, the former because they believed removal would endanger their own evangelization efforts, the latter because they believed it would endanger the old “civilization” program or because they simply opposed Jackson. Despite its many opponents, however, the Indian Removal Act narrowly passed both houses of Congress and became law on May 26, 1830.

Removal, Resistance, and Reorganization

From the federal government’s standpoint, Indian removal proved a massive and expensive public enterprise. During Andrew Jackson’s presidency, the United States negotiated

seventy Indian treaties and purchased 100 million acres of Native American land, for which it paid \$68 million and swapped 32 million acres of reservation land in Indian Territory. It then relocated forty-six thousand Indian men, women, and children to reservations west of the Mississippi River. During the late 1830s and 1840s, Jackson's successors removed approximately another fifty thousand Woodland Indians from the eastern United States.

These statistics mask the great resistance that federal officials encountered and the enormous suffering they inflicted upon Native peoples in the course of executing the removal policy. The Choctaws, for instance, while voluntarily agreeing to remove in 1830, lost between two thousand and four thousand people to bad weather conditions and cholera during their emigration to Indian Territory. The Creeks agreed to sign a removal treaty in 1832 after commissioners gave them the option of staying in the east on individual land allotments, but Creek insurgents subsequently attacked white speculators who were defrauding Indian families of their allotments. In 1836 the U.S. Army forcibly expelled the Creek Nation from Alabama. As many as ten thousand Creeks died in the fighting or on the trail to the west. Fighting was also present during the U.S. government's efforts to remove the Seminoles from Florida. Seminole warriors denounced their nation's 1832–1833 removal treaties as frauds, and on December 28, 1835, they killed their agent and several U.S. soldiers. The war that followed (1835–1842) cost the United States \$20 million and resulted in the deaths of 1,500 American soldiers and one thousand Seminoles.

The most famous case of resistance to Indian removal began in 1830, when officials of the Cherokee Nation decided to fight in federal court against the expulsion of their people. Retaining former attorney general William Wirt as their lawyer, the Cherokees brought three cases in the U.S. Supreme Court against the state of Georgia, which had passed a series of laws aimed at destroying the Cherokees' autonomy. In the third case, *Worcester v. Georgia* (March 3, 1832), the Court ruled in the Cherokees' favor, declaring that federal laws and treaties shielded the nation from Georgia's jurisdiction. The Court also held that the Cherokees retained significant powers of national sovereignty. However, the ruling contained no provision for enforcement, and President Jackson was in any case unwilling to undermine his own removal policy. Instead, federal commissioners negotiated a removal treaty in December 1835 with a minority of Cherokee leaders, and in 1838–1839 federal

Under Thomas Jefferson's administration, U.S. expansion rapidly increased with the Louisiana Purchase and the subsequent policy of removal of Native Americans.

soldiers rounded up the Cherokees and interned them in camps. The Cherokees then migrated to the Indian Territory over the course of a brutally cold winter; about 4,500 Cherokees died as a consequence.

The removal of the northern Woodland Indians followed a dynamic similar to that of southern Indian removal. Federal commissioners extinguished virtually all Native American land claims in the Northwest Territory by 1848 and dispatched the former Indian residents to reservations in Iowa and present-day Kansas. Emigrant casualties were often very high—50 percent of the Winnebagoes (now Ho-Chunks), for instance, died during their journey to Iowa—and many groups chose instead to resist removal. The Senecas were able to delay Senate approval of their 1838 removal treaty, owing to allegations that the treaty was the product of bribery and

fraud, and they finally negotiated a new agreement in May 1842 which allowed them to keep two of their reservations in New York. Over 2,500 Potawatomis and several hundred Ojibwas and Ottawas fled to Canada rather than migrate to Indian Territory. And about two thousand Sauk and Fox Indians, led by Black Hawk, returned to their former homeland in Illinois, igniting a war with the U.S. government. Federal troops chased the “intruders” into Wisconsin Territory and cornered them at the Battle of Bad Axe (August 1, 1832), where American troops and gunboats killed at least 250 men, women, and children.

Removal also led to armed conflict between Natives in the trans-Mississippi West, as the removed Woodland Indians fought with the southern Plains Indians on whose lands they settled. The Osages fought a costly war with Cherokee immigrants (1817–1821), in which both sides stole horses and killed one another’s hunters, and in which the Cherokees burned Osage towns. In the early 1830s, Osage warriors raided the farms of removed Choctaws and Chickasaws in Indian Territory, while in the 1840s Delaware, Kickapoo, and Shawnee emigrants whom the Republic of Texas had expelled from its territory used the Choctaws’ and Chickasaws’ reservations as bases for retaliatory raids into Texas.

By 1837, however, the leaders of the removed southeastern Indian nations and their Comanche and Osage neighbors had begun (with the help of U.S. government commissioners) to organize multitribal councils to resolve such conflicts and to sign peace treaties and negotiate boundaries with one another.

As the federal government consolidated the eastern Indian nations in Indian Territory, Congress took steps to ensure that the uprooted Woodland Indians remained isolated and dependent on the U.S. government. In 1834 a new Trade and Intercourse Act barred all whites except traders, missionaries, and officials from Indian Territory. A subsequent 1847 law strengthened the federal ban on liquor sales to Indians, and, more significantly, gave the president discretion to divert tribal annuities from chiefs to specified individuals or welfare projects, thus undermining the authority of Native American leaders. Changes in the federal bureaucracy indicated the removed Indians’ new status as separate and dependent peoples: in 1834 Congress created a separate Indian Office within the War Department, and in 1849 Congress moved that office to the new Interior Department, signaling that Indians were no longer primarily subjects of military and diplomatic policy. Finally, while

missionaries and Indian agents endeavored to restart the old civilization policy in Indian Territory, many of the displaced Indians there were reluctant to take up farming, given their justifiable uncertainty about land tenure. Many also hesitated to place their children in mission schools, as some missionaries had supported removal. In 1842 there were only thirty-seven schools and 1,300 pupils in Indian Territory, figures lower than their 1830 counterparts. Commercial agriculture and English literacy grew only gradually among the inhabitants of Indian Territory, who understood quite well that the age of “expansion with honor”—of eventual Indian assimilation—was over, and a new era of conquest, isolation, and dependency had begun.

The Far West

The U.S. government most clearly displayed its renewed dedication to expansion and conquest in the region west of the Louisiana Purchase, where President James Polk (1845–1849) and his administration extended American jurisdiction over more than 800,000 square miles of territory and several hundred thousand Native Americans. In the Pacific Northwest, the United States had maintained a claim to the Oregon Country (the region bordered by the Rocky Mountains, Alaska, and California) since 1792. The federal government solidified this claim with the Lewis and Clark expedition, whose members spent the winter of 1805–1806 at Fort Clatsop in present-day Oregon, and through treaties with two of the region’s European claimants, Spain (1819) and Russia (1824). The United States then jointly administered the region with Great Britain for two decades. In the 1840s American farmers began to cross the continent on the Oregon Trail to settle on the Columbia and Willamette rivers, and they pressured the U.S. government formally to annex the Oregon Country. On June 15, 1846, the Polk administration signed a treaty with Britain dividing the region at the 49th parallel. Shortly thereafter, on November 29, 1847, Cayuse and Umatilla warriors killed fifteen white Americans, including missionaries Marcus and Narcissa Whitman, at Waiilatpu in present-day Washington. The so-called Whitman Massacre ignited a seven-year-long war between settlers and the Cayuse Nation (1848–1855) and induced Congress to create a territorial government for Oregon and to declare its authority to regulate Indian affairs in the region.

Meanwhile, in the southwest, Congress had in 1845 annexed the independent Republic of Texas, which helped lead to the outbreak of war between the United States and

Mexico on May 13, 1846. During the U.S.–Mexican War (1846–1848), American troops occupied New Mexico and California, and the Mexican government formally ceded these provinces to the United States in the Treaty of Guadalupe Hidalgo (February 2, 1848). By the end of that year, the American “empire of liberty” extended from the Atlantic Ocean to the Pacific, and at least half a million North American Indians resided, for better or worse, within the jurisdictional boundaries of the United States.

U.S. Indian Policy: Congress and the Executive, 1845-1877

The Indian policy enacted by the United States government between 1845 and 1877 had disastrous effects on the country's Indian nations. Prior to this period, the Cherokee relocation of 1838 had served as a turning point in the era of the Indian removal policy, which sought to move Indian nations out of the way and allocate their lands for white settlement. This policy ended in the 1840s with the relocation of most Indian nations from the white settled lands east of the Mississippi River and in Iowa, Missouri, Kansas, Nebraska, and other trans-Mississippi states. The removal policy included the acquisition of Indian lands by treaty for white settlement, and these treaties continued as whites moved west. The United States negotiated nine treaties for Indian lands in western Kansas alone from 1854-1855.

The U.S.-Mexican War (1846-1848), the Gold Rush, the Civil War (1861-1865), and the construction of the transcontinental railroad accelerated the westward movement of white settlers. This left the Plains, southwestern, and west coast tribes with the choice of fighting for their land and lives or surrendering, relocating themselves to small reservations, and facing the same fate as the removed Indians from the East. The period saw increasing levels of warfare, including several major Sioux uprisings, the Navajo War (1848-1868), the Modoc War (1872-1873), the Nez Perce War (1877), and others throughout the West. The California Gold Rush led to outright genocide against California's small Indian tribes, as Indians in the way of prospectors were systematically shot or driven from their homes and fields into the mountains, where they often starved or froze. The Sand Creek Massacre committed by Colorado militia against peaceful Cheyennes in November 1864 was the result of heightened settler racism against Indians. That same year, the Navajos and Apaches were forcibly removed to Bosque Redondo, a wasteland in northeastern New Mexico. Terrible actions such as those committed at Sand Creek produced outrage among the American public and led to federal reassessments of existing Indian policy.

The end of the Civil War for the first time saw a strong, centralized American nation with a large and trained mili-

tary capable of pacifying a frontier needed for new farms for its growing immigrant population. The United States extended the imperialist ideology of "union": a great American nation held together, if necessary, by military force on its borders.

The Indian System in the 1840s and 1850s

The policy of forced removal left millions of acres of prime farmland available, some of which extended out to the Plains. Once the removal of the eastern tribes was complete, the Office of Indian Affairs transferred from the War Department to the Interior Department in 1849. Resettled Indians, now temporarily living beyond white settlements in Nebraska, Kansas, and the Indian Territory, became the responsibility of Indian agents, and the Indian reservations became centers of political corruption rather than safe havens.

The U.S.-Mexican War gained the United States one-third of Mexico and opened these lands for settlement. This required the creation of new Indian agencies in these territories, and these agencies had to deal with the western tribes very differently from the way government had been used to dealing with the eastern tribes. Many of the southwest Indians, for example, had long histories of political relations with Mexican and Spanish authorities, of which the United States was ignorant. Similarly, the final settlement with Great Britain over the ownership of the Pacific Northwest in 1846 necessitated the creation of new Indian agencies in Oregon and Washington.

Prior to the election of Abraham Lincoln in 1860, a series of presidents, beginning with James K. Polk (1845-1849) and ending with James Buchanan (1857-1861), ineffectively tried to hold the United States together against the increasing division between the northern and southern states over the issue of slavery. The nation effectively abandoned any pretense of an Indian policy and left the reservation Indians at the mercy of greedy and corrupt Indian agents, most of whom had been granted their positions as reward for service to the party in power. Congress, preoccupied with the slavery question and content with the status quo, raised no objections to this so-called Indian system. As long as the

removed Indians remained peaceful and under the control of Indian agents, they were of no political concern. The treaty process, with agreements negotiated by the president and approved by the Senate, fed the Indian system, providing both money to the Indian tribes (to be administered by the dishonest Indian agents) and land for white settlement.

The Indian system penetrated throughout the federal government, providing illegally obtained money to officials at many levels. By the Lincoln years, thirteen large Indian superintendencies and nearly three dozen Indian agencies operated under the Office of Indian Affairs of the Department of the Interior. Thousands of jobs were available to those favored by the party in power. Federal agents administered millions of dollars in Indian contracts. Traders had exclusive licenses to trade with Indians on their reservations—and often used this privilege to cheat the Indians. The Senate bought land from starving Indians, and various land offices then dispersed these lands to white settlers. State and territorial governments also frequently sought to take advantage of the desperate Indians, and the U.S. Army was involved at some locations.

Lincoln and the Indians

The election of Abraham Lincoln as president had no immediate impact on the system. Lincoln took office as slaveholding states seceded from the Union, which made Indian policy a low priority in the early days of his administration. Lincoln, moreover, was a “westerner” who had, as a captain in the Black Hawk War of 1832, fought the Sac and Fox Indians in order to clear the state of Illinois (and Iowa and Wisconsin) for white settlement. Indian policy became important to Lincoln, however, due to its effects on the Civil War.

Just as the Civil War divided the United States, it also divided the Indian nations. The policy of Indian removal, the acquisition of Indian lands by forced treaty, and the corruption of the Indian system left many Indians with little affection for the federal government. The Confederacy, with varying degrees of success, attempted to exploit this situation and promised a better Indian policy, with more recognition of the tribes and less governmental interference in their lives. Given the strategic importance of the West in the Civil War, the Indian tribes, especially in Oklahoma and Kansas, might have been important allies of the South. In many instances, however, the attempts to obtain their assistance failed. Nevertheless, many Indians did fight for the South. After the war, these tribes were forced to sign new reconstruction

treaties in which they gave up most of their lands in what is now central and western Oklahoma, agreed to abolish slavery, and admitted thousands of blacks living among them as members of their respective tribes.

Another concern arose for the federal government. In the fall of 1862, the Santee (Dakota) Sioux of Minnesota rose in rebellion in the heartland of the Midwest, attacking farmers and villages while many settlers were off fighting in the Civil War. The grievances of the Dakotas stemmed directly from the corruption of the Indian system. They had lost their lands in a treaty process and been forced onto small reservations without adequate food. Local whites stole their horses and timber. Indian agents stole their food. The government ignored pleas for intervention. Fully aware that the United States was involved in the war, the Santee took the opportunity to attack. Lincoln then faced an Indian war in the West at the same time he faced a civil war with the South.

The United States hastily moved troops to Minnesota and crushed the uprising. The government removed the tribe to the Dakotas. Moreover, in order to set an example, the government held military trials for the warriors. Over three hundred were sentenced to hang, but Lincoln commuted most of the death sentences. He did, however, confirm the death sentences of thirty-eight of the warriors, and they were hanged in a public execution in Mankato on December 26, 1862. This was the largest mass execution in American history.

Other Indian tribes in Minnesota suffered during the war as well. Settlers used the war as an excuse to demand more Indian land in the state, and two thousand Winnebagos (Ho-Chunks) were removed. These removals, carried out in harsh climactic conditions, led to the deaths of hundreds of Indians.

The events in Minnesota and the Sand Creek massacre prompted public demands for investigation of the United States's Indian policy. These events set the stage for a general investigation by a joint congressional committee led by James R. Doolittle. The committee traveled across the West, interrogating agents and military commanders about conditions on reservations, alternatives to reservations, school and mission activities, the value of annuities, and other issues pertinent to Indian relations. The work by the Doolittle Committee prompted other investigations, and a number of public-minded American citizens became interested in the welfare of Native Americans. Lincoln's general, Ulysses S. Grant, decided to take drastic measures to reform U.S. Indian policy during his administration.

Ulysses S. Grant, His Army, and the "Peace Policy"

General Grant, president from 1869 to 1877, inherited a unified American nation and a huge army. No American at that time knew more about warfare than Grant, and he was determined to put a swift end to the Indian Wars. His former Union army was firmly under the control of two of his favorite generals, William Tecumseh Sherman and Phil Sheridan; greatly enlarged in numbers by the Civil War; and easily able to mobilize and fight anywhere in the United States. At the time he took office, Grant, like most other politicians of the era, favored a policy of gradual assimilation of the Indians, centered on the existing reservation system. Thus, his government used a "carrot and stick" approach. Indians settled peacefully on their reservations would see improved conditions, but Indians who resisted were to be swiftly defeated.

The construction of the first transcontinental railroad, which reached California in 1868, brought conflict with Plains Indians to a head. The 1860s and 1870s saw some of the most aggressive Indian warfare in U.S. history, reaching a peak with the destruction of George A. Custer's Seventh Cavalry at the hands of Cheyenne and Sioux warriors at the Battle of Little Bighorn in 1876.

Grant's policy toward Indians came from his frustration with the Indian system as it had operated under Lincoln and his predecessors. Since the whole system was hopelessly corrupt, a new policy had to be created that put a different set of institutions in control of the Indian reservations. Those who wanted to reform Indian policy turned to the churches. The government divided Indian reservations among different Christian denominations, with each denomination responsible for administering a fair and just Indian policy on those reservations in its care. The idea was that Christianity would take a leading role in the assimilation of Indians. Advocates pointed out that the churches did not have a history of corruption comparable to that of the Indian system, and that religious officials were seen (in their own eyes, at least) as more kindly and nurturing than government bureaucrats. The Office of Indian Affairs, in turn, was also to be managed more humanely and honestly.

The Office of Indian Affairs had existed in the Interior Department since 1849, but after the end of Grant's tenure as president, it grew into a large bureaucracy. While U.S. presidents occasionally took notice of Indian policy, it was not generally a central focus of their day-to-day concerns. In

its early days, it was mostly important only that the office was staffed with loyal officeholders and operated without causing any embarrassment to the party in power.

By the 1870s an Indian agent appointed by the Office of Indian Affairs had enormous power and could spend great sums of money. Each reservation retained a number of government employees and controlled significant resources. Indian agents appointed agency Indian chiefs; the agents promoted and rewarded "good" Indians (who supported the Indian agent) and lodged "bad" Indians in dingy reservation jails. Schools were established, both on reservations and in distant towns, and Indian students were forced to use the English language.

An Indian Peace Commission was appointed in 1867 and spent almost a year in the West, attempting to negotiate with the western tribes. With the Sioux wars raging, this was not possible, but the commission did issue a report largely blaming western whites for these wars. Directly addressing a debate to move the Office of Indian Affairs back to the War Department, the commission clearly stated that the underlying issue was whether the intent was to control completely the tribes or to work to assimilate them peacefully, while clearly urging the latter. The legacy of Grant's "peace policy" ultimately was the same forced assimilation process that the Office of Indian Affairs had begun. Corruption, although never entirely absent, might have lessened when the churches took control of the reservations, but it was not possible politically to entrust a governmental function to religious organizations. Consequently, the Department of the Interior regained control of the Indian reservations by the mid-1870s.

The U.S. Army as an Instrument of Executive Policy

The history of U.S. Indian policy was a violent one, and Indian wars were central to its various stages of development. While each Indian war was different, the common element uniting them was the willingness of the U.S. government, primarily the executive branch, to use military force to subdue any Indian resistance to the assimilation policy. Due to this, Indian nations had no way to assert their traditional laws or cultural practices without risking retaliation by the U.S. Army.

While the level of violence occurring rose and fell over time, it was in the post-Civil War period that army attacks on Indians were particularly important as an instrument of Indian policy. For Indians, it was clear that American forces were increasingly imprisoning them on their reservations,

President James Buchanan meets with members of the Pawnee and Ponca tribes. U.S. Indian policy under Buchanan and several of his predecessors relied on cronyism and corruption, with little concern for the Indians.

even though the army had no legal authority to do this. For the president and the executive branch, the very survival of the reservation system depended on military force to back up the power of individual Indian agents. In addition, the U.S. Army itself had interests as a branch of government. Its major focus during this period of international peace—which lasted until the Spanish-American War of 1898—was the pacification of the Indian nations. Budgets, recruitment, and promotions depended on the success or failure of this goal.

Dozens of wars defined the decades of 1860 through 1880, involving the Apaches, Navajos, Sioux, Cheyennes, Nez Percés, Modocs, Utes, and others. These wars peaked with the seizure of the Black Hills by gold miners, in violation of the Treaty of Laramie (1868). In 1876 the army moved against the Sioux, who were determined to fight to protect their ancestral lands. Lt. Colonel Custer, leading one column of troops in a concerted attack on the Sioux and Cheyennes, apparently believed he could capture the Democratic nomination for president with a daring attack on the Indians, mostly women and children, camped along the Little Bighorn River. He disregarded orders and led his troops into one of the few defeats of U.S. forces in the Indian wars. Custer was killed and his force destroyed in the battle.

While Indians had occasional victories, their numbers were small and they were heavily outnumbered by American

troops. In addition, increased settlement and military action destroyed the natural ecosystems that sustained the Great Plains hunts, killing off the buffalo and denying the tribes their sustenance.

Congress and the End of Treaty Making

After a final round of treaty making with Indian nations, the U.S. House of Representatives ended the two-hundred-year-old British and American policy in 1871 by declining to continue funding the treaty process. This was one of the most significant congressional actions in the history of U.S. Indian policy. The reason for this shift in policy reflected both petty politics as well as longstanding dissatisfaction with the treaty system. The Constitution leaves treaty-making power to the president, subject to ratification by the U.S. Senate. The House of Representatives is left out of the process, depriving congressional representatives of their share of the spoils of the system, as well as of any direct role in treaties of particular concern to individual congressional representatives. In terms of policy, the treaty system, as recognized universally in Indian law, puts the Indian nations on a nation-to-nation basis with the United States. Once the Indian tribes were placed under the control of the United States, their lands reduced to reservations, and a policy of assimilation adopted, politically powerful forces opposed the idea of the Indian tribes as nations. Ending the treaty process

made a powerful political statement that the Indian tribes were no longer recognized as sovereign nations. The tribes' continued existence stood in the way of the government acquiring the last of their lands, now needed as white settlement moved onto the prairies.

The immediate impact of this shift in Indian policy was not apparent. The U.S. courts continued to interpret existing treaties as nation-to-nation agreements. New agreements that formerly would have been called treaties were now called executive orders or acts of Congress and had basically the same effect under the law.

Ultimately, however, the abandonment of the treaty system by Congress undermined the status of the Indian nations in American law and promoted a policy of assimilation. By 1877 the power of the executive branch and Congress over Indians was increasing, as the autonomy of the Indian nations was declining.

U.S. Indian Policy: Congress and the Executive, 1871–1934

Federal Indian policy in the late nineteenth and early twentieth centuries focused on two complementary objectives: pacifying tribes residing west of the Mississippi River so that the expansion of Euro-American settlement could proceed without interruption and assimilating Native Americans into the majority society via education, Christianization, and individualization.

Peace Policy and Reform

Drawing on the recommendations of the Doolittle Committee and the U.S. Indian Peace Commission report of 1867, President Ulysses S. Grant introduced the so-called peace policy in 1869. The policy sought to enhance the honesty and efficiency of the Indian Office by allowing religious and humanitarian groups to take over the administration of reservations. The military, meanwhile, was responsible for forcing Indians onto the reservations and keeping them there so that the Christian administrators and teachers could “uplift” them and encourage their assimilation into the white man’s culture. During the 1870s, violence erupted across the Great Plains as warriors from several tribes resisted reservation confinement and the loss of their lands. By the end of 1876, however, the U.S. Army succeeded in defeating the Plains Indians and opening up vast tracks of land for settlement.

To provide much needed oversight to the administration of Indian affairs—which had a long history of dishonesty and corruption—Congress authorized the president to establish the Board of Indian Commissioners (BIC) on April 10, 1869. As part of the government’s ongoing efforts to weaken Indian sovereignty and tribal organization, the BIC recommended in its first annual report that the U.S. cease making treaties with Indian nations. The recommendation met with congressional approval, particularly in the House, where lawmakers had long nurtured a grudge about appropriating funds to fulfill treaty obligations which they had had no voice in ratifying. Accordingly, in the Indian Appropriations Act of 1871, the federal government declared that it would no longer recognize Indian peoples as independent nations with whom to contract by treaty, although existing treaties were still the law of the land.

Grant’s decision to enlist the support of the nation’s churches to help reform reservation conditions appeared to work well for a few years, but interdenominational rivalries and the pressures of political patronage undermined the promising start. Carl Schurz, the secretary of the interior under President Rutherford B. Hayes, questioned the effectiveness of allowing churches such a prominent role in selecting reservation personnel, and by the early 1880s the government had abandoned the practice. The assimilation agenda, meanwhile, continued its uneven advance as reformers both inside and outside of the government quarreled over the merits of transferring control over the Indian Office from the Interior Department to the War Department. Public outrage over the unjust confinement of the Ponca chief Standing Bear following his 1879 “escape” from Indian Territory, combined with the social evolutionary theories of anthropologists Lewis Henry Morgan and John Wesley Powell, gave momentum to calls for the “liberation” of Native Americans from government control; their complete cultural, political, and economic assimilation; and the dismantling of the despised reservation system. Commissioner of Indian Affairs John Q. Smith (1875–1877) argued that unless the Indians accepted the uncertain nature of their existence and adopted agriculture and other “civilized pursuits,” they were destined for a speedy extinction. In 1877 Indian Office commissioner Ezra Hayt (1877–1880) recommended several assimilation-oriented goals for Native Americans that the federal government pursued during the ensuing decade: the establishment of a compulsory common school system, the creation of Indian police forces under the direction of white officers, the promotion of agriculture, and the division of tribal lands into small individually owned allotments that would be inalienable for twenty years.

Education and Assimilation

During the 1870s and 1880s, the federal government made serious efforts to improve the educational programs available to Native Americans. Although education had long been a key tactic in the government’s general program for Indian assimilation, policymakers left the actual process in the hands

Beginning in 1883, the Lake Mohonk Conference in New York met annually to provide advice and oversight to federal Indian education and other reform efforts. The people who gathered there became some of the foremost proponents of reforming U.S. Indian policy.

of churches that operated missions among the Indians. Between 1870 and 1887, government appropriations for Indian education increased from \$140,000 to over \$1.2 million. The number of Indian children attending schools also expanded. In 1879 an average of 4,488 Indian children attended one of the 163 schools run by the Indian Office; by 1887 the average number attending Indian Office schools or one of the sixty-four schools operated by private agencies under government contract rose to 10,520. Among the most prominent of the off-reservation boarding schools was the Carlisle Indian Industrial School, founded in 1879 in Carlisle, Pennsylvania. Convinced that Indians were a product of their environment, Richard H. Pratt, the school's founder, sought to integrate his students into white society. To prepare them for this eventuality, he insisted that they cast off all manifestations of their Native cultures, including language, religion, and dress, and adopt those of the whites—to in effect, “kill the Indian to save the man.” Strict regimentation, vocational training, and close supervision, in Pratt's view, were necessary to ensure that students would not return to their Indian ways.

Although the Carlisle Indian Industrial School awakened public opinion that Indians were indeed capable of being educated and could take their places in white society, Pratt's model ran into opposition from reformers who questioned the humanity of his tactics. More importantly, off-reservation school graduates experienced serious difficulties adjusting to life back home. Over time, many reformers concluded that the government needed to place greater emphasis on educating children residing on reservations in order to bring larger numbers of people within the school's sphere of influence. Under the administration of Commissioner Thomas Jefferson Morgan (1889–1893), the Indian Office worked to systematize the patchwork educational arrangement so that reservation schools, boarding schools, and the national industrial schools like Carlisle were all working toward common

objectives and reinforcing each other. Morgan sought to impose a uniform course of study, similar teaching methods, and the use of standard textbooks so that the Indian schools would more closely resemble the public school system of the various states. Coeducation was another part of Morgan's plan, seen as the surest way to uplift Indian women from their inferior position in Native society. Like Pratt, however, Morgan insisted that Indian education be geared toward assimilation—teaching independence, self-reliance, and self-respect. Educators, he argued, should instruct their Indian students in their rights and duties as American citizens, that the United States (rather than a reservation) was their home, and that they should love their flag and country.

Complementing the BIC, the annual gatherings of the Lake Mohonk Conference in New York provided support, advice, and oversight to Indian educational policy and related reform efforts. The humanitarian-minded men and women who met at Lake Mohonk each year beginning in 1883 possessed no official status, but they exercised important influence over public opinion, aggressively advocating various reform measures in the press and in Washington, D.C. The Lake Mohonk participants, along with the Indian Rights Association (est. 1882) and the BIC, became the leading proponents of measures aimed at ensuring honest and efficient service and integrating Indians into the social, economic, and political realms of American life.

Policing and Law

While Indian Office educators were systematizing Indian schools, other reformers were making Native Americans amenable to following the laws of the United States. Whites argued that it was only fair that Indians comply with the rules and regulations that were the obligation of every other American, but reformers saw the law as a shield with which to protect the Indians' personal and property rights. In 1878 Congress authorized the establishment of the United States

Indian Police, and within three years the system was in operation at forty agencies and included 162 officers and 653 privates. On April 10, 1883, Indian Office commissioner Hiram Price (1881-1885) established courts to try Indian offenses, which granted Indian judges jurisdiction over thefts, destruction of property, and intoxication, as well as "threats" to the assimilation program such as polygamy and participating in certain dances. The issue of jurisdiction over more serious crimes committed on reservations came to the forefront in the case of the Sioux Indian Crow Dog, whom the territorial court of Dakota had sentenced to death for murdering Chief Spotted Tail. In 1883 the U.S. Supreme Court in *Ex Parte Crow Dog* ordered federal officials to release Crow Dog because the government lacked jurisdiction over reservation crimes committed by one Indian against another. To address this oversight, Congress in 1885 passed the Major Crimes Act, granting U.S. courts authority over cases involving murder, manslaughter, rape, assault with intent to kill, arson, burglary, and larceny committed by one Indian against another in Indian country. (The U.S. Supreme Court upheld the constitutionality of the act in *United States v. Kagama* [1886].) By asserting its jurisdiction over strictly internal crimes of Indians against Indians, the federal government struck a major blow to Indian sovereignty and opened the way for unlimited interference by the government in the affairs of Indian peoples.

Allotment

The passage on February 8, 1887, of the General Allotment Act (or Dawes Act) was the climax of the assimilation policy and another example of the government's desire to interfere in tribal life and organization. The allotment system (or severalty plan) sought to break up reservations and make individual landowners and farmers of the Indians, without reference to tribe or traditional community life. Reform groups such as the Indian Rights Association, the Lake Mohonk Conference, and the BIC were supportive of the measure, the BIC going so far as to refer to the day that President Grover Cleveland signed the legislation as "Indian emancipation day" (Lyman S. Tyler, *A History of Indian Policy*, 1973). To Native Americans, the Dawes Act was revolutionary, as they tended to think of land use in terms of community rather than for individual use or ownership. To land-hungry white settlers who coveted Indian lands, however, the Dawes Act provided millions of acres of "surplus" property (those reservation lands "left over" after all eligible Indians had received an allotment) closed to them prior to

the law's passage. As conceived, the law authorized the president to select reservations to be broken up and their lands allotted to individual Indians. To prevent the allottee from immediately selling his land, the Dawes Act called on the government to hold the land in trust for a period of twenty-five years, after which time the Indian landholder would receive a patent in fee. New allottees were also granted U.S. citizenship and by terms of the Fourteenth Amendment became citizens of a particular state. As a citizen with a patent in fee, the Indian was able to sell or do whatever else he wished with his land.

Despite the hopes of the Indian reform organizations, relatively few Indians actually farmed their allotments. That being the case, Congress passed legislation in 1891 that permitted Indians to lease their allotments to others (often non-Indians) to farm so that they would derive a small income from their property. By the creation of the Dawes Commission in 1893, and by the Curtis Act of June 28, 1898, the federal government extended the allotment policy to the so-called Five Civilized Tribes in the Indian Territory. The Curtis Act also abolished tribal laws and courts and brought all persons in the Indian Territory, regardless of race, under United States authority, thereby breaking up the tribal systems of the Cherokees, Choctaws, Chickasaws, Creeks, and Seminoles. Meanwhile, a clause in the Dawes Act permitted the secretary of the interior to purchase the tribes' surplus lands and open them to public sale. The Department of the Interior would hold the proceeds in trust for the tribe (subject to Congressional appropriation) for the education and welfare of its members. Because of pressures from speculators and farmers to buy the surplus lands, Indian landholdings declined from 155,632,312 acres in 1881 to 77,865,373 acres in 1900. In 1903 the U.S. Supreme Court ruled in *Lone Wolf v. Hitchcock* that Congress possessed the power to dispose of tribal lands without Indian consent, which accelerated the erosion of the once-vast Indian domain.

The first substantial change to the allotment process came in 1906 when Congress passed the Burke Act, which postponed Indian citizenship until the end of the twenty-five year trust period, thus reversing, or at least slowing down, the individualizing and Americanizing process of the Dawes Act. On the other hand, the law empowered the secretary of the interior to grant citizenship and land title to any allottee considered "competent and capable of managing his or her affairs." (Robert M. Kvasnicka and Herman J. Viola, *The Commissioners of Indian Affairs, 1824-1977*, 1979).

Commissioner Francis E. Leupp (1905–1909), however, lacked adequate criteria for judging the competency of Indian applicants for titles under the Burke Act, and relied primarily on the recommendations of reservation superintendents. Within two years, surveys indicated that over 60 percent of those “competent” Indians receiving fee simple titles had lost their land and squandered the proceeds.

On a more positive note, the deplorable state of Indian health care came under close government scrutiny during the first two decades of the twentieth century in response to reports of widespread tuberculosis and trachoma (an eye infection) on reservations. In 1873 the Indian Office had attempted to improve its efforts to provide medical assistance to Native peoples by establishing the Medical and Educational Division within its organization. Due to lack of funding, however, the Indian office terminated the medical section, and health care for Indians was left to the agency and school doctors. In 1909 the Indian Office appointed a medical supervisor to oversee health care services, and two years later an Indian health program became a regular part of the office’s responsibilities. Congressional appropriations for Indian health care grew steadily thereafter, and the passage in November 1921 of the Snyder Act authorized federal funds for the relief of distress and conservation of Indian health. In 1924, a separate medical division was established in the Indian Office.

Citizenship

The federal government actively encouraged American Indian participation in World War I (1914–1918) in hopes that military service, travel, and contact with white soldiers would promote assimilation. Approximately ten thousand to twelve thousand Native Americans served in the war, most through enlistment. Because of popular stereotypes that depicted Indian men as possessing inherent martial qualities, substantial numbers received dangerous assignments and Indian casualty rates exceeded those of other Americans serving in the American Expeditionary Force. Shortly after the U.S. entered the war, Commissioner of Indian Affairs Cato Sells (1913–1921) announced a new policy that sought to accelerate the assimilation process by requiring that all able-bodied Indians of less than half Indian blood be given full and complete control over their property. Sells then dispatched “competency commissions” to various reservations to identify adults of one-half or more Indian blood who were competent to receive patents in fee to their lands and “independence” from government supervision. Between

1916 and 1921, consequently, the Indian Office issued more than twenty thousand fee-simple patents compared to 9,894 in the period from 1906–1916. The predictable result of this was that many of the Indians released from federal supervision quickly disposed of their property, and in 1920 Secretary of the Interior Franklin K. Lane ordered the cessation of further broad-based issuances of patents in fee.

Following World War I, calls for a blanket citizenship measure for American Indians gained momentum. Advocates such as the Society of American Indians, for example, resolved that Native Americans deserved citizenship as a reward for their valuable contributions at home and at war. Although over half of the Native American population had secured citizenship prior to WWI (as a result of previous treaties, the Dawes Act, forced patenting, or intermarriage with citizens, or the like), in June 1924 Congress passed the Indian Citizenship Act that conveyed citizenship to the remaining 125,000 noncitizen Indians living in the United States.

Toward Reform

The 1920s witnessed the emergence of a diverse but influential reform movement that combined the efforts of the Indian Rights Association, the newly formed American Indian Defense Association, the Indian Welfare Committee of the General Federation of Women’s Clubs, and others. In response to mounting criticism of the government’s management of allotment and of Indian property in general, Secretary of the Interior Hubert Work established a national advisory committee known as the Advisory Council on Indian Affairs to examine the Indian Office and recommend changes. Its December 1923 report, commonly referred to as *The Indian Problem*, failed to satisfy the reformers, however, and in 1926 Lewis Meriam of the Institute for Government Research led a team of inspectors on a second survey of reservation conditions. Their 1928 report, *The Problem of Indian Administration* (or the *Meriam Report*), identified deplorable conditions in health, education, and economic welfare and called for larger congressional appropriations to improve the administration of the Indian Office. It also broke with the forced assimilation philosophy of the previous half-century and recommended a program based on attempting to understand Indian perspectives and to build on—rather than destroy—all that was Indian.

The task of implementing the many changes recommended in the *Meriam Report* fell to Secretary of the Interior Ray Lyman Wilbur and Commissioner of Indian Affairs Charles J. Rhoads (1929–1933). Together with his assistant

J. Henry Scattergood, Rhoads focused on promoting equality of opportunity and economic independence among Native Americans as necessities for them to become productive and self-sufficient participants in American society. The fundamental aim of the Indian Office, Commissioner Rhoads wrote in his 1929 annual report, was to make of the Indian a "self-supporting and self-respecting citizen" just as rapidly as possible (Kvasnicka and Viola). Once this important goal was accomplished, the federal government could eliminate the Indian Office altogether.

Rhoads and Scattergood proceeded cautiously in implementing the changes recommended in the *Meriam Report*. In March 1931 they executed a plan calling for the division of the Indian Office into five areas (health, education, agricultural extension and industry, forestry, and irrigation), each headed by qualified experts who exercised direct executive and administrative powers over their respective divisions. They also identified long-standing problem areas that required attention: reimbursable debts, safeguarding Indian properties through the establishment of tribal corporations and amending the allotment system, the settlement of Indian claims through creation of a special Indian Claims Commission, and the reclamation and irrigation of Indian lands. Programs for Indian health secured increased appropriations during the Rhoads-Scattergood era, and under the guidance of education director W. Carson Ryan, the Indian Office undertook a complete overhaul of Indian school curriculums and administration.

Unfortunately, the Great Depression that so devastated the American economy also derailed many of Rhoads's reform efforts. While the movement to promote closer federal-state cooperation in matters relating to Indian affairs advanced during the Hoover presidency, Congress did not give final approval to measures that provided funds for states to address the needs of off-reservation Indian communities until April 1934 with the passage of the Johnson-O'Malley

Act. Two months later, many of the reforms recommended in the *Meriam Report* and advanced by reformers and government officials for years received a significant boost with the passage of the Indian Reorganization Act. The act signaled a "New Deal" for American Indians and an end to the assimilation agenda of the previous half-century.

U.S. Indian Policy: Congress and the Executive, 1928–1946

By 1928 the Indian wars had been over for more than a quarter century. The amount of land in Native control had been reduced by two-thirds under the allotment policy, and the federal government sought to handle Indian affairs through a series of statuses, statutes, and legal decisions that could be applied to a variety of situations. Congress now originated the United States's Indian policy under the “plenary power doctrine,” which provided it with complete authority over Native issues. The Office of Indian Affairs (OIA) within the Department of the Interior was the executive agency responsible for implementing federal policies.

The subsequent two decades were characterized by a change in direction from the era of allotment and forced assimilation. By the 1920s these policies were generally discredited and largely decried by Native peoples and humanitarians. Demand for Native lands had diminished as the remaining reservation lands were seen by non-Indians as being of little use.

Contrary to Congress's intentions under the allotment policy, many Indians had not been assimilated into mainstream American society. The Native population had, in fact, begun to rebound from its turn-of-the-century low of 250,000 to an estimated 343,352 in 1930. A series of well-publicized outrages, the rise of pro-reform organizations, and the creation of an effective lobbying presence in the successful battle against the 1922 Bursum Bill worked to change the tenor of discussion regarding Indian policy.

Congressional testimony began to focus on ending the trust status between the government and Indian tribes and attacking the failures of the Department of the Interior to effectively regulate Indian affairs. While other studies and reports helped build the foundation for policy change—including the OIA's 1928 report on reservation irrigation and a 1929 report on reservation law and order—the end of allotment was heralded by *The Problem of Indian Administration*. This 1928 study, generally known as the *Meriam Report* after Lewis Meriam, its lead author, was commissioned by the Senate. The report was prepared by the Institute for Government Research, the predecessor to the

Brookings Institution, and its mission was to survey the conditions of American Indians. It documented Native people's horrendous economic situations, extreme social disorganization, inadequate housing, and poor health. It chastised the OIA and called for an end to the allotment policy, better health care and education, and more protection for Native property rights. Ray Wilbur, who became secretary of the interior the following year, attempted to make some changes, but major innovations in United States policy toward Native Americans were not implemented until the early 1930s.

John Collier and the Indian Reorganization Act

Change was happening on many political fronts in response to the Great Depression and emergence of the Roosevelt New Deal. This included a rebellion against the predominant nineteenth-century focus on the individual over the community and a growing belief in an increased role for government. These changes reached Indian Country with the 1934 Wheeler-Howard Act, also known as the Indian Reorganization Act (IRA), or the “Indian New Deal.”

The architects of the IRA were Secretary of the Interior Harold Ickes and OIA commissioner John Collier, both of whom took office in 1933. Both men held their offices for twelve years, which created a period of unusual stability in the administration of U.S. Indian policy. Collier was one of the few figures in United States–Native affairs who was—and remains—generally respected, even by those who disagreed with him. Prior to his appointment as commissioner, Collier already had a history of supporting Indian rights and cultures and was a strong believer in cooperative and communitarian values. He saw Native cultures as, among other things, the living embodiment of an alternative to his own society's increasingly individualistic values.

Upon taking office, Collier moved quickly to reform the delivery of Indian educational services and improve reservation conditions by directing New Deal relief funds to Indian communities. But his signature legislative accomplishment was the Indian Reorganization Act of 1934. Early in his tenure as commissioner, Collier drafted legislation that cov-

ered Indian self-government and education, the disposition of Indian lands, and the creation of a Court of Indian Affairs. (The latter idea was dropped as the bill was amended.) The hearings on the bill featured opposition by some who had business interests in the existing policy, the airing of intra-tribal disputes, testimony by state officials, and protests by pro-assimilation interest groups who accused Collier of harboring socialist and communist ideas.

Congress diluted provisions of Collier's original bill, thus weakening its support of Native culture, self-government, and land consolidation. Collier's allies were able to get this lesser version of the bill through Congress partly by remaining vague—and even contradictory—about what the legislation was supposed to accomplish. Nathan Margold, the Interior Department's solicitor, subsequently issued an opinion that tribal governments formed under the act would be based upon the tribe's original sovereignty. Margold and Indian leaders often argued that Native political authority was inherent and did not derive from powers delegated by Congress.

As it was passed, the law ended the allotment policy and slowed the removal of land and resources from tribal control. It created a \$10 million revolving fund for economic development, a preference for Indian employees at the OIA, and a mechanism by which tribes could create constitutional governments. However, the act also retained the United States's policy focus on the control of reservation land and resources.

Native Americans' reactions to Collier's proposal were mixed, partly because many correctly understood that the federal government remained committed to assimilation, although at a more gradual pace and (presumably) guided by the input of Indian people and tribal governments. Even so, the final legislation was a genuine attempt at reform that marked a clear departure from past policies by asserting the right of Native societies to continued existence and providing opportunities for Native peoples to exercise influence over their own affairs.

The IRA: A Critical Review

While the IRA ended allotment, Congress did not subscribe to Collier's goal of increased Native control of land, primarily for two reasons. First, land that had already been allotted continued to be held in trust by the Office of Indian Affairs for the individual Indian who owned the parcel. As allotments passed to ever-larger numbers of heirs, it became increasingly difficult for Native people to exercise control over land that was owned by dozens of people and adminis-

tered by the OIA under the trust principle. This fractionated ownership continues to be a problem for Native individuals and communities.

Second, the IRA set up a mechanism for the establishment of tribal governments modeled on U.S. government. This provision of the law was based on the principle that tribal sovereignty still existed in some form, but its implementation involved creating new tribal government institutions based upon the U.S. model. The law provided that the United States would work with Native nations to design the new governments and give Native individuals the opportunity to vote on their adoption. However, implementation was structured so that a clear majority of each reservation's residents had to participate in a vote and vote against the application of the IRA or a new tribal government was automatically implemented on their reservation.

Native Americans were often unfamiliar with the concept and practice of voting, hampered by distance and lack of communication, and unwilling to participate in the program of a foreign government. Because abstentions were counted as votes in favor of a new government, some tribal governments were created even though the majority of those who actively voted were against them. IRA constitutions also contained a provision giving the secretary of the interior the authority to accept or veto any action taken by the tribal governments formed under the law.

The creation of these governments—ninety-three in the first ten years—was clearly not an expression of tribal sovereignty, but of the power of the United States. Tribal governments formed under the IRA had to be approved by the OIA. Whether land and resources were held by individuals under the allotment policy or by a tribal government under the IRA, the OIA and, ultimately, Congress had the final say. About one-half of all tribes eventually created "IRA governments," which were typically headed by an elected tribal council. This process laid the groundwork for struggles over those governments' legitimacy that continue into the twenty-first century.

The largest Native nation, the Navajo (Diné), rejected an IRA government. In addition to the reasons noted above, the Navajos had a particularly bitter experience with the federal government's livestock reduction policies during the New Deal era. As the droughts of the 1930s swept western America, it became clear that the agricultural practices of the previous fifty years were not appropriate for arid and semi-arid lands. Soil erosion caused by farming methods tailored to a wetter environment and by overgrazing led to massive

dust storms. Part of the U.S. government's solution was to destroy livestock, and eventually half of all Navajo livestock was killed—often in front of their disbelieving owners. The issues of forced livestock reduction and the IRA governmental model were also closely linked for the Tohono O'odham (Papagos).

From the executive branch's point of view, IRA governments were preferable to traditional governments because they provided a clear authority structure that concentrated accountability and facilitated contracting. One reason for the passage of the new law was the traditional Navajo government's refusal to allow access to its lands for oil and gas development in the 1920s. In that case, the Indian commissioner appointed a new tribal government, which dutifully signed leases with Standard Oil.

The formation of IRA governments was partially sold to Congress and to the American public as giving Natives a vote in their own affairs. However, the basic thrusts of U.S. policy—assimilation of Native people and control of Native lands and resources—remained unchanged. Journalist Marjane Ambler called the period before 1970 the “Rubber-Stamp Era” in tribal government, as those governments, whether formed under the IRA or via other means, continued to provide United States–based institutions with nearly anything they requested.

The new IRA governments were created using each reservation as the unit of organization. U.S. administrators generally lacked knowledge of, or appreciation for, indigenous sociopolitical units. This created situations in which several distinct Native nations were lumped under one government, as was the case for the Arapahos and Shoshones on the Wind River reservation or the Mandans, Hidatsas, and Arikaras on the Fort Berthold reservation. On the other hand, Native nations with multiple reservations—such as the Apaches, Anishinabes (Chippewa), and Lakotas/Dakotas (Sioux)—ended up with multiple tribal governments that often acted independently of traditional alliances and cultural ties.

The new governments also worsened existing intratribal divisions, particularly between those who continued to value traditional cultures and those who were more acculturated to the dominant society. IRA governments were often created—and continue to operate—in addition to traditional governments already in place. IRA governments have typically been controlled by those more educated according to United States standards, and traditional people have often refused to become involved in governments imposed from

without. Over time, as tribal governments began to gain control over the federal government resources entering reservations, this often evolved into situations in which mixed-ancestry, acculturated Indians controlled tribal resources to the exclusion of other groups. This increased fragmentation and broke traditional community bonds. It also tended to unlink cultural norms that intertwined political activity, kinship, spirituality, and economic activity.

The Johnson-O'Malley Act and Other Reforms

Another important piece of legislation passed in 1934 was the Johnson-O'Malley Act. This act was a partial response to the *Meriam Report's* observations on the shortcomings in Native American education and provided important educational opportunities to Native individuals and communities. The act also provided funds for other purposes, including medical care and other social welfare purposes. It is considered an outgrowth of the progressive education movement begun by John Dewey, which encouraged the use of local materials and personal experiences in the education process.

The act was implemented through the OIA and provided funding to states for the education of Native youth within their boundaries. The funding was to be used for public day schools, which were an alternative to the government and religious boarding schools that had been utilized until that time. Native American children had often been forced to go to boarding schools that were far from their home communities, and these schools made every effort to wipe out Native cultures and languages, so there was little incentive for Indians to attend. By 1943 the changes created through implementation of the Johnson-O'Malley Act had helped to increase Indian school enrollment.

American Indians also benefited from some of the other New Deal programs passed into law by Congress, partly due to Collier's efforts to link these programs to reservations. The Emergency Conservation Work Act of 1933, for example, created what became the Civilian Conservation Corps (CCC). The CCC mobilized as many as half a million people at a time to work on projects on federal and state lands during the 1930s. Soon after its initial passage, the act's coverage was specifically extended to include Indians, and a total of eighty thousand Native people took part in CCC projects. This provided badly-needed employment on reservations.

Many Natives also took part in the Works Progress Administration's Federal Art Project. This participation was complemented in 1935 by Congress's creation of the Indian Arts and Crafts Board within the Department of the Interior.

Commissioner for Indian Affairs John S. Collier and the chiefs of the Flathead Indian tribe watch Secretary of the Interior Harold Ickes sign the Wheeler-Howard bill into law in 1935. Both Collier and Ickes were instrumental in creating the bill, also known as the Indian New Deal.

The board was designed to support economic development for tribes by expanding markets for arts and crafts created by American Indians and Alaska Natives. The board's role has been expanded and strengthened over the years. In the mid-1930s, the OIA and Congress also repealed laws that had restricted freedom of association, the use of Native languages in schools, and Indian religious ceremonies.

World War II and the Indian Claims Commission

As early as 1937, there were efforts in Congress to overturn the Indian Reorganization Act and remove Collier as commissioner. Senator Burton Wheeler, after whom the act was partially named, introduced legislation to repeal it, believing it moved Native people away from individualism and assimilation. The creation of new tribal governments was seen as separating Indians from the American mainstream, fostering communal land ownership, and encouraging socialist tendencies. Some tribal members and factions resented the continuation of federal control under the reservation system, which they saw as being reinforced with the end of allotment. Collier was repeatedly called to the Capitol to defend his agency. Eventually, he resigned his post in early 1945.

But the IRA continued to be the dominant congressional policy statement until the 1950s introduced the termination and relocation policies. Until then, U.S. policy involving Native Americans usually occurred on the sidelines of

Congress and the executive branch—overshadowed by the national focus on World War II (1939–1945) and the beginning of the Cold War which immediately followed. During World War II, the OIA was actually moved out of Washington, D.C., to make room for higher national priorities. The policies put in motion by the IRA also faltered due to lack of funding and the fact that the war and the wartime economy drew large numbers of Indians off the reservation. Many of the most educated never returned. While about twenty-five thousand American Indians served in the military, some Native nations—most notable the Iroquois—resisted Congress's application of the Selective Service Act of 1940 to their members.

By the end of the war, the IRA had altered the political landscape by creating a greater expectation of Native involvement in U.S. policy and the tribal governance institutions that eventually provided a basis for that involvement. Out of this arose one of the most important Native organizations to impact U.S. policy, the National Congress of American Indians (NCAI), which held its first convention in 1944. The NCAI was not the only Native organization formed in this period, but has clearly been one of the most important. Its goals included getting tribes to work together to impact U.S. policy, preserve indigenous cultures, and protect treaty rights. While the organization has been far from universally accepted in Indian Country or consistently

effective in Washington, its founding marked the first time that an intertribal institution directly linked tribal governments, tribal members, and the U.S. Congress.

One of the early results of NCAI lobbying was passage of legislation that created the Indian Claims Commission (ICC) in 1946. The ICC was a response to the fact that Native land claims could not be brought before the U.S. Court of Claims and was designed to create a mechanism that would lead to more equitable disposition of such claims. The commission studied, considered, and decided Native land claims and was supposed to settle situations in which lands had been taken from Native Americans illegally. Between 1946 and 1952, 850 claims were filed. The ICC allocated money that was designed to buy out land claims—eventually about \$800 million—but the land itself remained in non-Indian hands.

This type of mechanism had some shortcomings. In order to overcome federal sovereign immunity, a separate act of Congress was needed to allow a suit to be filed. Then a second act of Congress was necessary to appropriate funds if Native plaintiffs won the suit. Claims were often brought in a piecemeal fashion, further fragmenting and complicating the situation.

The Indian Claims Commission Act originally gave Native claimants only five years to file any claims they wished to bring, although that time period was later extended. The legislation originally provided for research assistance to expedite claims, which was later turned into the provision of loans that claimants had to pay back out of any award that they won. The only form of damages that the act provided was a monetary settlement, which precluded the return of any of the appropriated property. The amount of damages was set as of the time the land was illegally taken, which was often a century or more earlier, and this minimized the amount of money received by Native peoples.

The law passed partly because federal Indian policy was already shifting away from strengthening tribal governments and toward a renewed focus on assimilation. Republicans were now the majority in Congress, and they were anxious to undo many aspects of the New Deal era. The settling of Indian land claims would, Congress thought, end the focus on the past and clear the way for Indian individuals to become assimilated into the dominant society. Like other members of Congress, Senator Arthur Watkins, a primary proponent of the termination policy, believed that the Indian

Claims Commission was the route to freedom for Native people. Many Indian advocates disagreed, however, seeing the two decades after Collier left office as a period of little positive advancement for Native peoples.

U.S. Indian Policy: Congress and the Executive, 1944–1962

The 1930s and 1940s witnessed dramatic changes in federal Indian policy, brought about both by new legislation such as the Indian Reorganization Act (IRA) in 1934, and by the demographic and intellectual changes that resulted from the experience of Native peoples in World War II (1939–1945). The IRA, which provided tribes with the authority to establish governments on the corporate municipal model, and other policies promoted by John Collier, the commissioner of the Office of Indian Affairs (OIA) from 1933 to 1945, were departures from the long-term policies of detribalization, allotment, and assimilation. Collier's reforms, while never fully achieving the goals he envisioned or providing tribes with complete political autonomy, have generally been regarded as more respectful of Native culture and autonomy than previous policies. The reforms proposed under the IRA, however, were rejected by many Native communities, and, like many government policies, the act caused factionalism among Indian people. Highly assimilated Indians sometimes feared that the IRA's emphasis on communal values and tribal control of assets limited their individual freedom to advance economically. Others resisted the act because the types of tribal governments allowed under the legislation were typical of European or American political traditions and not necessarily suited to cultural traditions of the tribes.

While the IRA represented an attempt to give more emphasis to tribal values and cultures, the postwar era saw a revival of American concerns for national consensus and cultural conformity, brought on in part by the fears of the Cold War. Congress returned to policies aimed at breaking down tribal identities and encouraging total assimilation. After a period in which the executive branch, including President Franklin D. Roosevelt, Secretary of the Interior Harold D. Ickes, and Commissioner of Indian Affairs Collier had provided strong leadership on Indian policy, Congress came to dominate Indian affairs in the late 1940s and the 1950s. This shift was, in part, due to the rapid turnover in high-ranking positions in both the Interior Department and the OIA.

Many in Congress believed that the self-government provisions of the IRA should have enabled tribes to take con-

trol of their own affairs, but that progress toward this goal had been too slow under Collier's leadership. This change in direction also was related to a broader effort, by resurgent conservatives, to roll back the New Deal policies in general. Collier's tenure at the OIA had always been controversial, and in the spring of 1945, the House Interior Department appropriations subcommittee threatened massive budget cuts to OIA programs unless Collier resigned. Bowing to the pressure, Collier left the OIA in February 1946.

Indian Claims Commission

One of the first steps in implementing the new postwar policies was the creation of the Indian Claims Commission in 1946. There was growing awareness that Indian tribes had been wrongfully dispossessed of their property, and many Native leaders and their allies, including Collier, had called for compensation for their claims. Proponents of what would come to be called termination, however, approached this issue with the conviction that once all past injustices were addressed, the federal government could "get out of the Indian business" by ending any special responsibility it had for Indian affairs and the trust relationship it exercised over Indian lands.

The Indian Claims Commission Act established a three-person board (later expanded to five members) to hear cases brought by tribes against the federal government. Under the original provisions, all cases had to be filed within five years, and the commission would have up to ten years to decide a case; however, both deadlines were extended several times. Most of the cases filed dealt with land issues, but land would not be returned—the law specifically stated that all claims would be settled by monetary payments.

Land cases went through three phases. The first was the title phase, in which the tribe had to demonstrate their exclusive claim to the land that had been taken from them. If these conditions were met, the case proceeded to the value phase, where the commission determined the true value of the land at the time it was taken—not the current value at the time of the claim. The third phase involved what were called gratuitous payments. In this procedure, the commis-

sion looked at whatever payments or expenditures the government had ever made to or for the tribe that had not specifically been required by a treaty obligation. The amount of these so-called gratuitous payments would be deducted from any settlement paid to the tribe.

While it might appear that the bar for successfully presenting a case was set very high, the commission eventually paid out settlements of more than \$800 million in 285 of the approximately 850 cases filed. The average settlement was approximately \$3,000,000. If this was paid out to individual tribal members on a per capita basis, it usually ranged from a few hundred to a few thousand dollars per family. After extending the deadlines for filing and settling cases several times, Congress dissolved the commission in 1978, and cases still pending at that time were transferred to the U.S. Court of Claims. In some cases, the distribution of awards produced internal discord. The Bureau of Indian Affairs (as the Office of Indian Affairs was renamed in 1947) was given the responsibility of determining whether payments from successful cases should be made to the tribal government or paid out to individuals on a per capita basis.

Termination

Many members of Congress intended that once payment was made through the Indian Claims Commission for past injustices, the U.S. government would no longer have any obligations toward Indians that it did not have toward other citizens. Cutting the cost of government provided a convenient rationale. The Commission on Organization of the Executive Branch of the Government (also known as the Hoover Commission after its chair, former president Herbert Hoover) was charged with investigating ways to streamline government operations. In the matter of Indian policy, the Hoover Commission asserted that assimilation should be the ultimate policy goal. It recommended abolishing the Bureau of Indian Affairs (BIA) and ending its responsibilities or transferring them to other government agencies.

In 1947 Congress directed William Zimmerman, the acting commissioner of the BIA, to identify those tribes prepared to have the federal government's management and responsibilities terminated. Zimmerman listed several tribes in each of three categories: 1) those ready for immediate termination, 2) those that would be ready within ten years, and 3) those that would not be ready in the foreseeable future. Factors involved in making these distinctions included the degree of acculturation among the tribal people and their economic circumstances, the willingness of the tribe to have

federal responsibility terminated, and the ability and willingness of the states involved to take on the burden of providing services that were currently federal responsibilities. Tribes that were described as ready for immediate termination included the Klamath, the Osage, the Menominee, and the Flathead.

Dillon S. Myer, who served as commissioner of the BIA from 1950 to 1953, was a strong advocate of termination. Myer, who had supervised the internment camps for Japanese American citizens during World War II, saw the Indian reservations as prison camps from which the Indians needed to be liberated. He also replaced old-line BIA veterans with bureaucrats with little interest or knowledge of Indian affairs.

He believed that federal programs that provided any benefits for Indians that were not available to other American citizens gave Natives an unwelcome privileged status.

Congress began the push for termination in 1952 with passage of House Concurrent Resolution 698. The resolution directed the BIA to report on the ability of various tribes to manage their own affairs. As Zimmerman had done earlier, Myer categorized several tribes that were ready to be terminated immediately, others that might be ready soon, and a large number of tribes that were not close to being prepared for this step. Congress then began preparing termination proposals, the first of which was House Concurrent Resolution 108, passed in August 1953, which articulated the will of Congress as to the future direction of federal Indian policy. It called for a Native American to be subject to the same laws and entitled to the same "privileges and responsibilities" as any other U.S. citizen. It also called for ending the federal government's trust relationship with Native individuals and tribes as quickly as possible. When termination was carried out with any particular tribe, separate pieces of regular legislation were passed in each case. Each bill specified the ending of federal trust status for the former tribal members and their lands. Congress also usually dissolved the tribal governments. Any federal government services that were available to tribal citizens because of their Indian heritage were no longer available to members of terminated tribes. The federal government put enormous pressure on some tribes to accept termination.

In many cases, termination proved disastrous for tribes. The best-known examples took place in Oregon, with the Klamath tribe, and with the Menominees of Wisconsin. On the surface, both appeared to be likely candidates for successful termination. Both had a viable economic base provided

Wisconsin governor Patrick J. Lucey in 1972 signed a bill returning to the Menominees bonds they were forced to forfeit as a consequence of their disastrous termination.

by extensive timber resources. But for a variety of reasons, termination did not go smoothly. By the time the Menominee termination bill was passed, the majority of the tribal members actually opposed the measure. However, they found the momentum generated by the ongoing bureaucratic processes impossible to overcome. When the tribe was terminated, what had been the Menominee reservation became Menominee County in Wisconsin—the least populous county in the state, with the lowest per capita income and the highest unemployment. The county government had to create public services from scratch and set up a tax structure to pay for infrastructure and government services that had been a federal responsibility during the reservation era. Individual tribal members had been led to believe that their tribal hunting and fishing rights, guaranteed by earlier treaties, would continue to be honored, but they were not, and many tribal people were arrested by state game and fish officials for breaking wildlife regulations. In 1973 the federal government recognized the policy's failure and restored the tribal government and the federal trust relation of the Menominee tribe.

The Klamath situation was similar in many ways. The Klamath numbered about two thousand individuals, and their reservation encompassed more than 860,000 acres, including valuable timber land. Tribal members had an

option to retain their tribal relationship and place their share of the reservation lands in a private trust that would be administered for the tribe, or they could sever their tribal relationship and receive a one-time per capita payment of more than \$40,000. About three-fourths of the tribe opted for the per capita payment. Their share of the reservation lands were sold to private timber interests or to the federal government, which turned much of it into federal forests or wildlife refuges. Merchants in the area of the former reservation saw these per capita payouts as a gold mine waiting to be tapped, and through mismanagement and unscrupulous business practices, many of the Klamath people quickly lost both their land and their settlement money. As with the Menominees, the problems created by termination among the Klamaths were so apparent that the tribal organization and trust status were restored by federal legislation in 1978.

Opposition to Termination

The termination program made worse the factionalism that had previously existed within and among Indian groups. Some individuals, and particularly those who had embraced some aspects of majority cultural values, argued that Indians stood to benefit from the termination of federal authority over tribes and Indian individuals. The majority of tribal cit-

izens in most Indian communities, however, strongly opposed termination. The BIA maintained that a tribe had to consent to its termination, but the agency interpreted a Native individual not voting in a tribal referendum on the issue as a vote in favor of termination.

Between 1953 and 1960, Congress passed termination acts involving more than one hundred Indian tribes or bands, a total population of about thirteen thousand people (out of a total estimated Indian population of four hundred thousand in the United States), and reservation and allotted lands totaling approximately 1.3 million acres out of the total 43 million acres of Indian lands held in trust by the federal government. Opposition to the program, and the fear that it might be applied elsewhere, spurred various tribes and pan-Indian groups into action. One of the major pan-Indian groups involved in the fight against termination was the National Congress of American Indians (NCAI), founded in 1944. In the late 1940s and early 1950s, the NCAI began lobbying for several reforms, especially voting rights and civil equality. But the fight against termination led to a much greater mobilization of the organization. Joseph Garry, the chair of the Coeur d'Alene tribe in Idaho, became the most prominent spokesman for the opposition to termination. Leaders of the NCAI met in Washington for eight weeks while Congress debated the termination issue. Tribes from twenty-one states and the Alaska territory sent representatives to lobby against the policy, in what was thought to be the largest contingent of Native Americans ever to gather in the capitol.

In the early 1960s, two new groups emerged that also took up the fight against termination and for self-determination for Native peoples. The first of these was the American Indian Chicago Conference, which was held at the University of Chicago in June 1961. More than 450 Indian leaders from ninety different tribes met to discuss problems facing tribal peoples. They issued a "Declaration of Indian Purpose" that called for the abandonment of the termination program, among other reforms. Later that year, the National Indian Youth Council (NIYC) was formed at a meeting in Gallup, New Mexico. Many of the members of NIYC were college students from urban backgrounds. The emergence of articulate spokespeople who were skilled in the use of the political process and in attracting favorable media attention was a significant factor in the fight to get the Indian voice heard. Ironically, termination, which many of its supporters hoped would weaken tribal bonds, instead strengthened Native Americans' attachments to their own tribes and cultures and

also energized several pan-Indian groups. Opposition to termination was also a major factor in producing the various Indian activist groups that arose in the 1960s.

By the late 1950s, termination began to lose some of its appeal for many members of Congress. The strong opposition by Indian groups and advocates of Native rights had some impact. Many state governments had initially supported termination because ending federal trust status would bring the reservations under state legal jurisdiction. However, some states began to reconsider when they realized that the burden of providing education and social welfare services that had been federal responsibilities would now fall on them. Critics charged that termination was an ill-advised policy that had been rushed into effect. In 1956 President Dwight D. Eisenhower declared that no tribe would be terminated without its consent, and in 1958 Interior Secretary Fred Seaton confirmed that this was now the official policy of his department.

Relocation

During World War II, approximately one hundred thousand Indians had left reservation communities to serve in the military or work in war-related industries. After the war, the return of many of these people put severe economic strains on many reservations. In response, the BIA began to promote programs for relocating Indians to urban areas where job opportunities were greater. In 1948 the BIA began a program for the Navajos that became a prototype for the relocation services program. Placement offices were opened in Denver, Colorado; Salt Lake City, Utah; and Los Angeles, California. In 1950 the BIA expanded this program to serve all tribes, and relocation centers were established in several other major cities, mostly in the western United States. Between 1952 and 1960, the program relocated more than thirty-five thousand Indians to urban areas. Relocation was voluntary, but some Indian families reported being strongly pressured by BIA officials to leave the reservations. During the period the program was in operation, a larger number of Indians moved off the reservations on their own, independent of the BIA's efforts. Those who resettled were often not prepared for the culture shock of moving from a rural reservation to a major urban center. Those relocated under the BIA's auspices were given transportation to the city involved, free job training and placement services, free medical care for a year, assistance in obtaining housing, and a one month subsistence allowance. Many discovered, however, that these benefits never materialized, at least not fully.

Few relocated Natives found high-quality, well-paying jobs. However, some of those working in the cities were often better off in strictly economic terms than those who remained on, or returned to, poverty-stricken reservations. Many of the urbanized Indians who adapted best succeeded on their own, not as a result of the BIA's programs. Estimates differ on how many returned to the reservations, and the rates varied for different tribes, but it is generally thought that somewhere between 30 and 60 percent of those relocated returned to the reservations.

Economic Development

Even during the height of the termination era, both Congress and the executive branch agencies sought to promote economic development on the reservations. A secure economic base was thought to be necessary for a tribe to be able to manage its own affairs. In the late 1940s, the BIA developed plans for a long-term economic development effort on the Navajo-Hopi reservations, which became the Navajo-Hopi Rehabilitation Act of 1948. President Truman vetoed the first version of this bill because of concerns about some provisions that transferred jurisdiction over reservation lands to the states, but signed a revised bill in 1950. The bill called for over \$88 million in expenditures over a ten-year period for basic infrastructure improvements, soil and moisture conservation, education, business and industrial development, and job placement assistance for those who wished to leave the reservation. Congress also passed legislation in the 1950s addressing the problems caused to some Indian communities by the creation of federal irrigation projects in the West. As noted below, in the early 1960s, economic development funds from a variety of "New Frontier" and "Great Society" programs also began to reach the reservations. Some of these programs, however, such as dam and hydroelectric power projects, also cost Indians homes and lands.

Health and Education Issues

In July 1955 the programs of the Indian Health Service (IHS) were transferred to the United States Public Health Service. Fifty-nine hospitals and other medical facilities were involved in this transfer. Although significant problems remained, reservation health care improved markedly with this change. Funding for Indian health services increased dramatically; whereas appropriations for Indian health care totaled approximately \$5 million in 1940, funding grew to more than \$24 million in 1955 and more than \$71 million by 1965. The overall death rate for American Indians declined, as did the rate of fetal and infant mortality, and

there was a dramatic decrease in the number of tuberculosis cases and deaths from this disease. In addition to reservation health facilities, the IHS opened urban Indian health centers in several major cities, primarily in the West.

Willard Walcott Beatty was director of Indian education in the BIA under John Collier and remained in this position until 1952, providing constructive leadership even into the early years of the termination era. Beatty encouraged the inclusion of Indian subjects in school curriculum, as well as bilingual education and bilingual texts. However, reforms such as these fell out of favor in BIA schools during the height of the termination movement. Indian Commissioner Dillon Myer tried to put more emphasis on off-reservation boarding schools, as the government had done in the late nineteenth century, in order break down tribal bonds. On the reservations, he accelerated the placement of Indian children in nearby public schools whenever possible. Myer also attacked the Indian Arts and Crafts Board that Collier had created in 1934 to help preserve and pass on the traditional learning of various Indian artists.

As the drive for termination slowed in the late 1950s, more attention was paid to developing better schools on the reservations. Expenditures for remodeling and new school construction increased, but in many cases conditions were so bad that much more was needed, and Congress was unwilling to spend even greater sums.

Toward Self-Determination

Eisenhower's statement in 1956 that no tribe would be terminated from its relationship to the federal government without its permission might be seen as a first step toward the policy of self-determination, which became a characteristic of federal Indian policy in the 1960s. During the presidential campaign in 1960, both Richard M. Nixon and John F. Kennedy made positive statements regarding respect for Indian culture and tribal rights. After his election, Kennedy's choices of Stewart Udall as secretary of the interior and Phileo Nash as commissioner of Indian affairs were both regarded as positive appointments that brought leaders respectful of Indian rights to important policy-making positions. Early in his administration, Kennedy appointed a task force headed by W. W. Keeler, the principal chief of the Cherokee Nation, to make recommendations on Indian policy. Hearings held by the task force revealed the depth of the Native resistance to termination and the desire for economic development and a greater role for tribal governments in decision making.

The reforms suggested by this task force came to be called the “New Trail” in federal Indian policy. As Kennedy’s “New Frontier” reforms and President Lyndon B. Johnson’s “Great Society” programs emerged in the early 1960s, funding for health, education, and economic development programs on many Indian reservations increasingly came not through the traditional channels within the BIA but through programs in other federal agencies. This was not an entirely new development, as the transfer of some health, education, and welfare services for Indians to state and local agencies, or to federal agencies outside the BIA, had been a part of government policies as far back as the early twentieth century. Nash pushed to have Indian reservations covered by the Area Redevelopment Act of 1961, which was designed to help impoverished areas through various economic development programs. He also created the Division of Economic Development within the BIA to try to attract businesses and industry to Indian reservations to provide jobs.

By the early 1960s, public opinion and the will of Congress had brought forth dramatic changes in the approach to federal Indian policy. While elements of paternalism lingered, and bureaucratic inertia often slowed the pace of change, the federal government was clearly evolving a new approach to policy involving the Native peoples of the United States. Termination and relocation were on their way out, thanks to Native activism and the inherent flaws in the policies.

U.S. Indian Policy: Congress and the Executive, 1960–

Federal Indian policy underwent enormous change beginning in the late 1960s. The decade saw the quiet end of termination, which had sought to end the status of Indian tribes as sovereign nations, and the 1970s saw the rise of the self-determination era. “Self-determination” constitutes a stronger expression of congressional and executive branch support for the development of tribal governments, reservation economies, and Indian people, as well as recognition of the importance of tribal sovereignty. By 2008 upwards of 90 percent of the employees of the Bureau of Indian Affairs (BIA) and the Indian Health Service (IHS), the primary federal agencies charged with implementing and administering federal Indian affairs programs, were of American Indian descent, a dramatic change from the nineteenth and even the first half of the twentieth century. While express federal policy continues to favor tribal self-determination, the 1990s and the first decade of the twenty-first century offered a glimpse of what may be the next era of federal Indian policy as Congress continued to lower federal spending in Indian affairs.

Winding Down the Termination Era

At the beginning of the 1960s, Congress was moving away from the termination era of federal Indian policy, during which it had attempted termination of the federal-tribal relationship. While Congress had ceased enacting additional termination acts, as late as 1967 some members of Congress continued to seek (unsuccessfully) termination of tribes such as the Seneca Indian Nation and the Colville Confederated Tribes. Meanwhile, President John F. Kennedy’s commissioner of Indian affairs, Phileo Nash, oversaw the expansion of Indian affairs programs for education, economic development, employment assistance, and housing, for example. The Lyndon B. Johnson administration took the delivery of some Indian services away from the control of the BIA through the creation of special offices located in other federal agencies. Both the Kennedy and Johnson administrations sought to include Indians and Indian tribes in the large number of federal programs focused on social justice, reducing poverty, and supporting minorities. And by the 1970s, President

Richard M. Nixon had agreed to restore lands to Indians for the first time in American history—Blue Lake to the Taos Pueblo and Mount Adams to the Yakama Nation.

Yet despite the end of the termination era, Congress never addressed many of its harmful impacts, including the massive loss of tribal lands and other assets and the destruction of developing tribal governments. Over time, Congress began to enact “restoration acts,” in which tribes that had been terminated could petition for restoration as a federally recognized tribe. The first, the Menominee Restoration Act in 1973, served as the symbolic end of the termination policy. Other restoration acts also came in case-by-case fashion, with Congress requiring the petitioning terminated tribe to prove continuing tribal status before agreeing to restore it. Some tribes have never been restored, while some tribes’ restorations were ongoing in the first decade of the twenty-first century.

In 1977 the congressionally sanctioned American Indian Policy Review Commission published its Final Report, a mammoth review of all aspects of federal Indian policy, driven in large part by the work and research of American Indian people themselves. Though Congress and the executive branch did not adopt many of the recommendations made in the report, it served as a focal point for tribal advocates for decades to come.

One positive development of the termination era was the galvanization of tribal advocates. During the 1950s the National Congress of American Indians (NCAI) gained strength and influence by fighting the termination acts. In 1961 the NCAI published its “Declaration of Indian Purpose,” the first national statement of Indian policy from a tribal perspective. Also in 1961 the first national meeting of Indian people nationwide, the American Indian Chicago Conference, took place. Later in the decade, the American Indian Movement (AIM) emerged in Minneapolis to advocate for reforms in federal policies.

Indian Self-Determination

In 1968 President Johnson argued for a rejection of the termination era, an end to federal government paternalism in

In one of the largest transfers under the Native American Graves Protection and Repatriation Act (1990), hundreds of Indians march with a truck carrying two thousand skeletal remains of Jemez Pueblo Indian ancestors. Retrieved from Harvard University in 1999, the remains were reburied in Pecos National Historical Park.

Indian affairs, and a new goal of promoting “partnership and self help” (Newton, *Cohen’s Handbook of Federal Indian Law*, 2005). In 1970 President Nixon presented a powerful message to Congress arguing for a new era of tribal self-determination. His message offered several legislative proposals, including the concept of tribal self-governance and support for tribal economic development projects. Both houses of Congress created permanent committees to discuss Indian affairs, although only the Senate Committee of Indian Affairs remained active by 2008.

In 1975 Congress enacted the Indian Self-Determination and Educational Assistance Act. The act directed the secretary of interior to enter into self-determination “contracts” with Indian tribes called “638 contracts,” referencing the public law number of the act, when the tribe requested them. The BIA budget included line items for services provided to Indian tribes, such as identifying or confirming membership or enrollment, tribal courts, law enforcement, social services, or roads maintenance. The act allowed Indian tribes to enter into a 638 contract with the BIA to take over a specific set of these functions themselves, forcing the BIA to transmit the appropriated funds that it would have used to administer the program directly to the tribe. The proposal was not new. The original draft of the Indian Reorganization Act of 1934 included a very similar program, which was defeated by a

concerted effort of the BIA and others who argued that Indian tribes were not competent to handle their own affairs. Congress later expanded the 638 contracting model to Indian health care and Indian housing. The Native American Housing Assistance and Self-Determination Act (1988), for example, turned over hundreds of millions of dollars in federal housing money to tribal housing authorities or other tribally designated housing entities.

In 1988 Congress created a pilot project in which an Indian tribe could petition the secretary to become a self-governance tribe, taking over all of the programs administered by the federal government on behalf of the tribes. Each year the secretary selects up to twenty tribes based on their institutional capacities to handle the administrative burden. The self-governance tribes have been remarkably successful, leading some to argue that these self-governance contracts are a “declaration of independence for tribal governments” (Newton, *Cohen’s Handbook of Federal Indian Law*, 2005). In 1994 Congress made the project permanent.

Indian Civil Rights

In 1968, after years of intermittent hearings, Congress enacted the Indian Civil Rights Act, intending to extend the protections of the Bill of Rights to Indian people. In 1896 the Supreme Court’s decision in *Talton v. Mayes* held that the

Constitution did not apply to Indian tribes. Senator Sam Ervin of North Carolina, a passionate segregationist and opponent of President Johnson's "Great Society" legislative package, pushed the legislation for years. He held hearings over a seven-year period in which dozens of Indians and non-Indians alike presented selective and anecdotal evidence, often taken out of context, that tribal governments engaged in systematic violations of civil rights and that tribal government systems in general were abusive and undeveloped. Many of the hearings touched on the numerous lower court cases following *Talton* in which federal courts refused to apply civil rights protections against tribal government and official defendants. The Indian Civil Rights Act forwarded a slate of American constitutional rights protections that would thereafter apply to tribal governments and people under their jurisdiction. Tribal and federal opposition to the bill forced a few modifications to its list of constitutional rights, such as the elimination of an establishment clause, the right to counsel for indigent defendants, and the right to a grand jury indictment. Of course, many tribes already provided significant civil rights protections to those under their jurisdiction, but Congress was not persuaded.

Other provisions attached to the act remain significant in other contexts. The act limited the criminal punishment that a tribe could impose on those convicted of crimes in Indian Country to a maximum of six months in jail and a \$500 fine. Later amendments in 1986 expanded these limits to one year and \$5,000. The only enforcement mechanism contained in the act, however, was a provision allowing those convicted of crimes in tribal courts to file petitions for writs of *habeas corpus* in federal district court. The intent of Congress appeared to be that the act must be enforced in tribal forums, not federal courts. The legislative history of the act confirms that although Congress intended to extend civil rights protections such as due process and equal protection to tribal communities, it intended for the communities to take those broad legal concepts and interpret them in accordance with tribal custom and tradition. The act had, as a result, the accompanying benefit of legitimizing tribal dispute resolution forums such as tribal courts, encouraging the development of such courts and tribal laws.

The act also amended Public Law 280, which had extended state civil and criminal jurisdiction and laws into Indian Country in several states while allowing other states to opt in, all without tribal consent. The 1968 amendments provided that any other states that desired to take civil and criminal jurisdiction in Indian Country had to obtain tribal consent.

Moreover, the amendments allowed states to give authority back to the tribes. The act also contained provisions requiring the interior secretary to revise Felix S. Cohen's *Handbook of Federal Indian Law*—a model law and order code for tribal governments, including rules regarding the appointment of legal counsel by tribes. The project was originally completed in 1982 under the auspices of the American Indian Law Center, Inc., headed by Philip S. (Sam) Deloria.

Tribal Economic Development and Indian Gaming

Beginning with a provision in the Indian Reorganization Act that authorized Indian tribes to create special federal corporations for the purposes of engaging in business activities, Congress has long advocated that Indian tribes exploit business opportunities as a means to generate revenue to pay for government services. Because most Indian tribes are located in areas where there is no ready tax base (and because the Supreme Court has steadily limited tribal taxation authority over nonmembers), most tribal governments have no other option but to develop their business opportunities, such as they are.

After President Nixon's 1970 message to Congress, it was clear that while federal spending to allow tribes to reach that goal would be a significant factor, the long-term goal of Congress had to be support of tribal business activities that would allow tribes to pay their own way. In 1974 Congress passed the Indian Financing Act and, in 1985, the Indian Tribal Governmental Tax Status Act, to spur tribal economic development, but these measures were underfunded and fell far short of what was required to allow most tribes to generate significant revenues. As early as the late 1960s, enterprising—and desperate—Indian tribes began to open high-stakes bingo facilities with the eventual goal of expanding to Vegas-style casino gaming.

The advent of Indian gaming changed tribal-federal-state relations far beyond any policy of Congress or the executive branch. The federal government under the Jimmy Carter and Ronald Reagan administrations saw that gaming could earn tribes large sums of money, moving them toward self-sufficiency. The Reagan administration, in part following the lead of President Nixon, saw tribal gaming and economic development in general as part of a long-term strategy to replace federal appropriations. The BIA began to approve gaming management and development contracts. The Small Business Administration offered loan guarantees to Indian tribes needing capital to start gaming operations. The Department of Housing and Urban Development began to

fund the construction of multipurpose tribal government structures that could be used as gaming facilities. And the Indian Health Service provided funds and advice on sanitation services for the facilities. By the time the challenges from states and others to Indian gaming reached the Supreme Court in 1987, the federal government had provided so much support to Indian bingo operations that the Court was hard-pressed to find a compelling reason to deny tribes access to gaming. In the 1988 Indian Gaming Regulatory Act, Congress codified the Supreme Court's decision in *California v. Cabazon Band of Mission Indians* (1987), allowing high stakes bingo games without state regulation. However, Indian tribes were required to enter into a formal compacting arrangement with the states before they could begin Vegas-style gaming such as slot machines and poker. In 1996 the Supreme Court in *Seminole Tribe of Florida v. Florida* undermined the delicate political compromise of the gaming act in favor of state governments, but tribes have persevered through negotiation and creativity.

As of 2008 Indian gaming was a more than \$26 billion business, but the benefits of large scale gaming are poorly distributed. A few dozen tribes located near urban areas are earning the vast majority of the revenues, while most others have small profit margins. In fact, only about half of Indian tribes engage in gaming at all. Despite these limitations, even modest gaming tribes now have the revenue to provide significant governmental services. With the presence of the National Congress of American Indians and the National Indian Gaming Association, Indian tribes now have a voice in national politics and have been able to defeat most harmful congressional bills since the early 1990s.

Indian Culture and Education

Federal Indian policy since 1960 has seen a dramatic reversal of long-standing policies seeking either directly or indirectly to assimilate Indians into the larger American society. In the 1960s Congress began to expand federal programs for Indian education, Indian child welfare, Indian health care, and tribal cultural property. Some of these programs have been successful, while others have been victims of a lack of funding or legal machinations.

Federal legislation intended to improve Indian educational opportunities has not been very successful, in large part due to the failure of Congress to appropriate sufficient funding. Although President Bill Clinton acknowledged a federal duty to Indian education, progress has been slow. The implementation of the George W. Bush administration's No

Child Left Behind Act of 2001 has been nothing short of a disaster for Indians, for the law mandated school improvement targets without providing the resources to achieve them. In the realm of higher education, Congress's support of tribal community colleges through the Tribally Controlled College or University Assistance Act has been excellent, although federal appropriations per student have dropped in recent years.

In 1978 Congress enacted the Indian Child Welfare Act. This statute, one of the very few times Congress has ever stripped jurisdiction from state courts, mandates that any state court case involving an adoption or other action that could lead to the termination of parental rights of an Indian child must be transferred to a tribal court unless certain narrow exceptions are met. In any event, state courts must provide notice to Indian tribes with an interest in the child and offer them a chance to intervene. Congress had held hearings for years over the serious problem of state courts and social service agencies placing Indian children in non-Indian homes and terminating Indian parental rights as a matter of policy. Some experts testified that between 25 and 50 percent of all Indian children had been removed from their homes, leading to significantly increased drug and alcohol abuse and suicide rates for these children. The resistance of state courts, in particular, as well as conflicting federal and state statutory authority has hindered the efforts of Indian tribes to take control over the placement and adoption of their children in many instances. Because Congress did not authorize federal agency involvement or federal court jurisdiction over these cases, tribes must still adjudicate many cases in state courts, some of which remain hostile to, or ignorant of, tribal cultures.

In 1976 Congress enacted the Indian Health Care Improvement Act, which was designed to expand health care services to both urban and reservation Indians under the administration of the IHS. The work of the IHS has been exemplary, with Native mortality rates and infant mortality rates declining in significant numbers, but Indians still have the worst health of any demographic in the United States. According to the United States Civil Rights Commission, "persistent discrimination and neglect continue to deprive Native Americans of a health system sufficient to provide health care equivalent to that provided to the vast majority of Americans" (United States Commission on Civil Rights, *Broken Promises*, 2003).

Congress has taken several steps to prevent the continuing loss of tribal cultural property and languages since 1960,

beginning with the American Indian Religious Freedom Act. The act, a statement of policy that is unenforceable, states that it is the policy of the federal government not to interfere with Indian religious practices and sacred sites located on federal or tribal lands. In 1996 President Clinton issued an executive order requiring federal agencies to consult with Indian tribes before engaging in activities that might interfere with tribal religious practices. In 1990 Congress passed the Native American Graves Protection and Repatriation Act (NAGPRA), requiring federal agencies and museums to conduct an inventory of Indian remains and sacred objects in their possession. If an Indian tribe could prove that it was the origin of the remains or objects, then the agency or museum was obligated to repatriate them. But like many congressional initiatives in Indian affairs since 1960, this statute is limited in its application and subject to circumvention by federal agencies that have convinced federal courts to interpret the statute narrowly. Moreover, NAGPRA only applies to federally owned lands, leaving remains and sacred sites located on private or state-owned lands subject to the whims of those owners.

Other Federal Policies

Prior to the 1960s, Congress rarely incorporated Indian tribes into the national legislative picture, but that began to change, for example, in the 1964 Civil Rights Act, which exempted Indian tribes from its provisions in order to protect Indian preference in employment and contracting in Indian Country. Several environmental and employment statutes now include provisions authorizing Indian tribes to participate in their programs or exempting tribes from them, but many others are silent as to their application to Indian tribes. In these cases where Congress's intent is unclear, federal agencies make conflicting interpretations as to their application. For example, the National Labor Relations Board had decided in the 1970s that the National Labor Relations Act of 1935 did not apply to tribal businesses, but reversed its interpretation in 2005. The Equal Employment Rights Commission, long supportive of Indian preference in employment, began to bring employment discrimination suits against businesses located in Indian Country.

A

Article 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace and its honor is hereby pledged to keep it. The Indians desire peace and they now pledge their honor to maintain it.

Abbott, Lyman

Lyman Abbott (1835–1922) was a Congregationalist minister, advocate of social reform, and vocal proponent of the allotment of Indian lands and the dissolution of the reservations. Abbott had two primary platforms from which to disseminate his views on Indian policy: the Lake Mohonk Conference of Friends of the Indian, of which he was an active member, and the *Outlook* (originally called the *Christian Union*), the journal he edited from 1876 until his death. Combining a socially active form of Christianity with a belief that economic and social competition was morally good for everyone, Abbott argued that American Indians could survive in an evolving American society only through self-sufficiency and ambition. This required, in his eyes and those of many other Protestant reformers, the breaking up of reservations, the abolishment of treaties, the closing of Indians schools, and the eventual withdrawal of all government aid to Indians. He argued in editorials for the *Outlook* that if many Indians suffered as a result of such changes, then that was simply the way of all progress. Abbott's views were generally representative of those of the attendees of the Lake Mohonk Conference, a largely Protestant group of reform-minded individuals for whom the abolition of tribalism and the resultant shift from tribal control of land and property to private ownership were essential first steps in the readying of Indian people for citizenship. Abbott was one of the most outspoken and persistent of the reformers in placing capitalism at the heart of a Christian and morally sound American society.

Aboriginal Indian Title

In 1497, when John Cabot reached Newfoundland under a charter from King Henry VII of England, he declared to have “discovered” regions of America north of what Spain had claimed. By unilateral proclamation the English sovereign held an absolute “interest” in all aboriginal lands. European colonization of various regions of the world ignited a legal debate that continues into the twenty-first century: What allowed one nation to claim possession of lands that belonged to someone else?

The answer is the doctrine of discovery. European Christian countries claimed legal rights over indigenous non-Christian peoples immediately upon their “discovery” by Europeans. This became the legal grounds for European claims of sovereignty over Native peoples and lands. In the Proclamation of 1763, British colonizers in North America recognized that indigenous communities had inhabited and possessed their lands before the establishment of colonial governments. This preexisting collective Native property right was known as aboriginal Indian title. It acknowledged that tribal groups had a possessive interest, known as a usufruct right, to use and occupy land. They retained this right until it was extinguished explicitly by a legal settlement

or an agreement (such as a treaty) with the British crown or successor nation-state (the United States or Canada).

In 1783 the Treaty of Paris finalized the independence of the British North American colonies. The new United States recognized American Indians as prior occupants, but also claimed absolute sovereignty over all Native lands based upon the unbroken continuity from the English doctrine of discovery. The U.S. Constitution and Supreme Court adopted these fundamental legal precepts. In *Johnson v. M'Intosh* (1823), Chief Justice John Marshall observed that European Christian nations could assert superior dominion over Indian lands, but Native Americans retained a right of occupancy. After repeating false and ill-informed characterizations of Native culture espoused by European theorists, Marshall asserted that "conquest gives a title which the courts of the conqueror cannot deny." Ignoring the fact that almost all Indian land obtained by Europeans in the colonial era derived from purchase rather than conquest, he referred to aboriginal title as an "extravagant pretension." While the Court acknowledged the Indian "use right" of occupancy as a property right, this ruling impaired Native Americans' land rights and diminished their sovereignty.

This landmark decision put American Indian land rights on a tenuous legal foundation. In *Cherokee Nation v. Georgia* (1831), the Supreme Court declared that the United States claimed "a title independent of [Indian] will." And despite the assertion in *Mitchell v. United States* (1835) that the "Indian right of occupancy is considered as sacred as the fee-simple of the whites," this was never the case. Indian title was a lesser right than the complete ownership property interest of fee simple title. In addition, tribal groups could only sell their land titles to the federal government. Native American communities, without their consent, lost a very valuable property right to sell land to whomever they chose for whatever amount they wanted.

From its inception, the concept of aboriginal Indian title has been interpreted in different ways by judges and government officials, sometimes to bolster Native land claims, and sometimes to undermine them. On the one hand, as noted in *Johnson v. M'Intosh*, "the exclusive right of the United States to extinguish Indian title has never been doubted. And whether it be done by treaty, by the sword, by purchase, by the exercise of complete dominion adverse to the right of occupancy, or otherwise, its justness is not open to inquiry in the courts." On the other hand, in *Worcester v. Georgia* (1832), Chief Justice Marshall affirmed "Indian nations as distinct political communities, having territorial boundaries, within

which their authority is exclusive, and having a right to all the lands within those boundaries, which is not only acknowledged, but guaranteed by the United States."

Unfortunately for Native Americans, the positive affirmation of Indian title has rarely been sustained. While aboriginal title acknowledges that tribal groups have some legally recognized interest in their lands, the outcome of Native American land claim and compensation cases hangs on the varying interpretations of federal judges. Sometimes courts recognize Indian title as a legally compensable interest, but more often they have struck down Native American land claims, as was the case in the 1955 decision *Tee Hit Ton Indians v. United States*. The vagaries of aboriginal Indian title provide a key to understanding how federal Indian law and policy has favored non-Indian interests at the expense of Native American and Alaska Native land rights.

Abourezk, James

James G. Abourezk (1931–) was a prominent advocate for Native American interests in the United States Congress in the 1970s. Born to Lebanese immigrant parents, he grew up on the Rosebud Sioux reservation in South Dakota. He served in the U.S. House of Representatives (1971–1973) and Senate (1973–1979). Abourezk, a Democrat, was one of the few members of Congress with direct personal experience with Indian affairs, and he often spoke out in behalf of Indian interests.

In 1973 Abourezk helped negotiate an end to the Indian protest occupation of Wounded Knee. That same year, he introduced Senate Joint Resolution 133, which provided for

a federal commission to review all aspects of U.S. Indian policy. The bill led in 1975 to the creation of the American Indian Policy Review Commission, which established eleven task forces to conduct extensive reviews of federal policy areas, such as the federal-tribal relationship, tribal governments, Indian education, Indian health, and resource development. The commission submitted 206 recommendations to Congress in 1977, most of which did not get congressional approval. Among them was a call to replace the Bureau of Indian Affairs (BIA) with an independent Indian agency that would contract directly with tribes for the same services then provided by the BIA. The commission also recommended specific criteria for the formal recognition of tribes not then recognized by the federal government. In response, the Senate established the Select Committee on Indian Affairs and Congress adopted the recommended recognition criteria. Abourezk, who served as chair of the Select Committee, was also a strong supporter of the American Indian Religious Freedom Act of 1978.

Adams, Hank

Hank Adams (1944–) earned a reputation as an “activist’s activist” for his tireless efforts to advance tribal sovereignty. Born on the Fort Peck reservation in Montana, Adams grew up on the Quinault reservation in western Washington and began his career fighting for Northwest Indian fishing rights. As an organizer for the National Indian Youth Council, he planned “fish-ins” to protest state regulation and arranged for the participation of actor Marlon Brando, whose arrest helped draw national media attention to the controversy. In 1971 Adams was shot by an unknown assailant while tending nets on the Puyallup River, but he recovered and went on to participate in the major actions of the national Red Power movement, including the 1969 occupation of Alcatraz and the 1972 Trail of Broken Treaties caravan to Washington, D.C. He wrote but never took credit for the famous “Twenty

Points” that the caravan participants presented to the Nixon administration, demanding the full recognition of tribal sovereignty and a return to bilateral treaty relations with the U.S. government. He then helped negotiate compromises that ended the ensuing occupation of the Bureau of Indian Affairs building in Washington, D.C., and the 1973 standoff at Wounded Knee. He also participated in the American Indian Policy Review Commission during the mid-1970s and has remained active in the ongoing campaign to make self-determination a meaningful concept for Native Americans.

Adams, John Quincy

John Quincy Adams (1767–1848), who served as president of the United States from 1825 to 1829, often influenced U.S. Indian policy during his long political career. In most of his political posts, Adams dealt with issues of Native land sovereignty, treaty policy, and removal. By the end of his time in public service, he had become a severe critic of the United States’s removal policy.

Early in his political career, Adams agreed with those who wanted to extinguish Indian land rights. When he negotiated the Treaty of Ghent (1814), which ended the War of 1812, he resolutely denied Britain’s suggestion of creating a permanent Indian nation in the old Northwest. As secretary of state under President James Monroe, he defended Andrew Jackson’s execution of Seminole prisoners without trial in Florida.

The conflict between the state of Georgia and the Creek Indians in the 1820s first caused Adams to scrutinize Indian policy. Tensions between the two began long before Adams took office. In 1802 the federal government agreed to remove all Creeks (and Cherokees) from the state. However, when Adams assumed the presidency in 1825, the Creeks

still remained in Georgia. During that year, a small faction of Creeks led by William McIntosh ceded all of their lands to Georgia in the Treaty of Indian Springs. However, McIntosh had accepted a bribe and was related to George Troup, the governor of Georgia. For these reasons, Adams viewed the treaty as fraudulent and ordered new negotiations. The Treaty of Washington (1826) replaced the previous treaty and allowed the Creeks to remain on their lands until 1827.

The situation with the Creeks was important to Adams's evolving view of Native Americans for two reasons. First, he refused to support Georgia's aggressive removal pressure, instead insisting that removal should be voluntary. Many in the South and West strongly objected to this view. Second, the fraudulent nature of the Creek treaties caused Adams to question federal removal policies in general. Despite his realization that government policies were not always fair to the Indian people, however, he never wavered in his belief that Native Americans needed to adopt civilized ways and assimilate into American society.

Adams continued to challenge the removal policy for the rest of his career. Although he had not yet been elected to the House of Representatives when the vote was taken, most historians agree he would not have supported the Indian Removal Act of 1830. Moreover, Adams backed the Cherokees in their fight against removal from Georgia by presenting petitions and presiding over a day-long debate in their favor. In 1840 he opposed additional funding for the Second Seminole War. Finally, in 1841, Adams was offered the chairmanship of the House Indian Affairs Committee. By this time, he was so disillusioned with federal Indian policy that he turned it down.

Agriculture and Agricultural Policy

Agriculture has always played a central role in U.S. federal Indian policy. Influenced by ideas of social evolution and the benefits of agrarian life, federal officials ignored the existing agricultural practices of American Indians and imposed Western ones upon them. Such policy endeavors often failed and fractured American Indian communities. Officials often neglected to take into account the environmental restrictions of the Native land bases, and their efforts frequently represented a land grab rather than a sincere effort to assist American Indians in promoting their economic and social development.

Origins of Agricultural Policy, 1780–1840

The origin of agricultural policy dated to the beginning of the Republic. President Thomas Jefferson was perhaps the most well-known advocate of agriculture. Jefferson subscribed to the idea that societies followed a similar evolutionary path. Civilizations developed from hunters and gatherers to pastoralists or livestock herders and finally to agriculture. For Jefferson, American Indians represented the lowest level of human progress—the hunters. However, Jefferson believed that Indians could change. By introducing agriculture to them, Jefferson hoped to put them on the proper path of social development.

Such ideas were extremely popular in the United States. First, introducing Indians to agriculture was seen as representing a humanitarian solution to the "Indian problem." Beginning with President George Washington and his secretary of war, Henry Knox, federal officials sought a policy of "expansion with honor." Teaching American Indians to farm was kindhearted and cheaper than conducting bloody and expensive wars. Moreover, the American Revolutionary War (1775–1783) had nearly bankrupted the nation. Transforming Indians into farmers promised to open land to American farmers, providing a source of revenue. Jefferson reasoned that hunting peoples required large amounts of land in order to create a productive economy. Farming, in contrast to hunting, more efficiently used the American landscape. Once Indians had transformed into farmers, they would possess surplus lands, which he believed they would gladly sell to the United States.

For centuries before European contact, Native peoples from the Southwest to the eastern Woodlands extensively

farmed. Most American Indians grew what they referred to as the Three Sisters: corn, beans, and squash. The development of agriculture permitted Indians to live in concentrated settlements and conduct trade across the entire continent. American Indian oral traditions noted the cultural importance of agriculture. Many Natives recognized a spiritual figure named Corn Mother, who brought corn and the knowledge to grow it to the people. Often, she took corn from her skin and planted it in the ground. Further, the figures of Corn Mother and the Three Sisters revealed the kinship connections between the people, their crops, and their land. Agricultural goods and humans were related and dependent upon each other.

Although American Indians developed sophisticated irrigation networks and introduced crops to the Euro-American diet, thus sustaining European immigrants for centuries, American officials ignored these practices and imposed western ideas about agriculture on farming Indians. Unlike Europeans, women primarily farmed in American Indian communities. They possessed the knowledge needed to cultivate crops and provided the work to plow fields and harvest crops. When Europeans saw this division of labor, they described Indian women as “drudges” and Indian men as lazy. American agricultural policy intended to put Indian men to work in the fields and Indian women to work in the home. In addition to changing the Indian division of labor, U.S. agricultural policy altered Native land tenure. While tribal nations claimed specific land bases, individual Indians used communal agricultural lands. However, American agricultural policy sought to implant ideas about private land ownership among Indians.

Beginning in the late 1780s, the United States promoted agricultural development among the eastern Indian nations. In the Treaty of New York (1790), the United States pledged to provide farming tools and domesticated livestock to the Creek Nation. Missionaries also promoted agriculture among American Indians. In 1798 Quaker missionaries established a demonstration farm near a Seneca town under the leadership of Cornplanter. The Quakers provided agricultural implements and instruction to the Senecas. However, the Senecas stiffly resisted these efforts. Seneca men objected because agricultural work contradicted their ideas about masculinity. Moreover, Seneca women refused to confine their economic activities to the home. Instead, they declared that they would continue to farm, despite the Quakers’ best efforts.

In the early nineteenth century, some agricultural efforts, especially in the Southeast, proved successful. Beginning in

A central tenet of U.S. policy toward Indians encouraged the teaching of agriculture, but an engraving by John White of the town of Secota (North Carolina) in 1585 illustrates that many Indians already followed an agrarian lifestyle, though it differed from Western practices.

1802, Congress authorized \$15,000 to promote the “civilization” plan of Benjamin Hawkins, an American Indian agent working among the Creek. Hawkins used the money to introduce domesticated livestock; fences; tools of husbandry; and new agricultural crops, including peaches, flax, rice, wheat, barley, and a variety of fruits and cotton, to the so-called Five Tribes—the Creeks, Cherokees, Choctaws, Seminoles, and Chickasaws. Many southeastern Indians enthusiastically participated in agricultural development. Creek and Cherokee men, for instance, became the primary farmers in their respective communities, challenging the matriarchal nature of their societies. Moreover, many southeastern Indians adopted private property. Creeks fenced in their crops and purchased locks to protect their belongings. Finally, some southeastern Indians adopted the institution of slavery and the ownership of African Americans. The Creek leader Alexander McGillivray, for example, died in 1793 and

bequeathed sixty slaves to his family. By the 1830s the social and agricultural character of some southeastern Indians resembled that of their white Southern neighbors.

The federal policies that emphasized agriculture divided American Indian communities in the late eighteenth and early nineteenth centuries. In the Ohio Valley, Quakers established a demonstration farm in the Shawnee town of Wapakoneta, which was under the leadership of Black Hoof. The Shawnee prophet, Tenskwatawa, accused some of Black Hoof's followers of witchcraft because of their ties with the United States and its agricultural policies. Tenskwatawa's followers carried out the execution of some of these "witches," demonstrating the danger some American Indians faced when they adopted aspects of American agricultural policy.

Although the southeastern and northeastern tribes practiced similar agricultural practices as their white counterparts, this failed to protect them from the forced removal from their homelands to Indian Territory beyond the Mississippi River. While the removal opened land for the agricultural expansion of the American South and Midwest, it also forced American Indians to adjust to life in Indian Territory. Most adopted a subsistence-oriented agricultural economy; others reestablished their plantation slavery operations. Chickasaw farmers, for instance, purchased black slaves and grew large acreages of corn and cotton. By the beginning of the American Civil War (1861–1865), the Five Tribes had rebuilt their lives and agricultural economies in Indian Territory.

Agriculture and Indian Policy, 1850–1887

Beginning in the 1850s, American westward expansion facilitated a change in federal Indian policy. Rather than removing Indians west of the Mississippi River, federal officials concentrated them on smaller plots of land called reservations. The officials gravitated to this policy because once relocation was complete they were able to promote agricultural development to a captive Indian audience. The reservation, then, became a laboratory of social and economic change. It was believed that the successful agricultural development of the reservation would also produce self-sufficiency among American Indians. Reservation Indians, in theory, could wean themselves from government rations and annuities and produce for themselves.

In order to promote farming on Indian reservations, the federal government offered agricultural implements, seed, and fencing materials. Unfortunately, plows and hoes were often broken, worn out, or inadequate in number. Addi-

tionally, the federal government rarely provided enough seed to Indian farmers. Finally, the environmental conditions in the American West—grasshoppers, drought, and poor soils—made Native farming difficult. Still, some Indians produced thriving agricultural enterprises on reservations and were able to offset limited government expenditures. The multiple Indian nations living on Oregon's Grande Ronde reservation used farming to add to their food supplies and adapt to changing reservation conditions.

The Allotment Era, 1887–1934

By the 1880s federal officials expressed disappointment with American Indian agricultural development. Policy makers had hoped that reservations would undermine tribal identities and promote individualism and agricultural development among Natives. However, the removal policy failed to achieve these changes because the Indians resisted these efforts. To combat the ineffectiveness of previous policies, the officials of the Office of Indian Affairs (OIA), later the Bureau of Indian Affairs (BIA), believed that if they transformed Native environments they could convert American Indians.

Education programs established by the U.S. government represented an effort to achieve this goal. In the late 1870s, off-reservation boarding schools (the brainchild of former military officer Richard Henry Pratt) began to be established. Indian children were removed from their reservation homelands and placed in these far-away schools. Pratt located the first off-reservation boarding school in Carlisle, Pennsylvania, but later officials established schools in Nebraska, Oregon, Nevada, Kansas, and California. The boarding schools offered basic educational programs and devoted half of the day to vocational education. School curriculum emphasized farming, farm machinery, and related programs of study. Students had to pass a series of tasks in order to advance in each unit. Boarding schools also featured an "outing program," in which school administrators placed Indian students on farms during the summer. These students learned to work farms, applied their vocational education, and interacted with white Americans. The initial goal of the outing program was to assimilate Indian students into the American culture, but as the program moved west it became simply cheap child labor for western farmers. At California's Sherman Indian Institute, students worked for local farmers by picking oranges, lemons, and other citrus fruits.

In addition to boarding schools, federal officials introduced the policy of allotment, or giving private land plots to

individual Indian heads of household. In 1887 the U.S. Congress passed the General Allotment Act (commonly referred to as the Dawes Act), which permitted the U.S. president to select reservations for allotment. Then, government officials surveyed the reservations and divided them into sections. Once officials completed the survey, allotting agents distributed plots of land (usually 160 acres each) to male heads of household. The federal government held these land allotments in trust for twenty-five years. At the end of the trust period, Indians received a fee patent to their lands and U.S. citizenship. If farming a particular reservation was not possible, Indians received larger allotments of 320 acres for grazing livestock.

The allotment policy was extremely popular among non-Indians. Social reformers believed that the ownership of private property would lead to assimilation. Prospective white farmers were pleased that the government opened surplus lands for sale after allotment was complete. Railroad companies also stood to gain new lands, on which they could build new rail lines and thus open more of the country to industrial and agricultural development.

Perhaps surprisingly, some American Indians supported allotment. Though not happy to adopt the principles of private property and agriculture, Hupas, Omahas, Jicarilla Apaches, and Grand Ronde Indians believed allotment ensured control over their reservation homelands and offered protection against the greedy white ranchers. Others viewed agreeing to allotment as a way to demonstrate their apparent acceptance of government demands. By pledging support for allotment, Indian leaders hoped to gain favor with agents and relieve many of the pressing needs facing their constituencies.

Other Natives resisted allotment, especially in Indian Territory. In March 1886 representatives of thirteen Indian nations gathered in Eufaula to protest allotment, claiming it threatened their land bases and economies. After allotment became law, Caddo Indian chief Jake and Standing Bear, a Kiowa, went to Washington, D.C., and met with the secretary of the interior. These men argued that allotment undermined the economic base of Indian nations in Indian Territory, but their words were ignored. In 1892 congressional commissions negotiated eleven separate agreements—known collectively as the Jerome Agreement—with Native nations in Indian Territory that ceded fifteen million acres to the public domain. In 1901 Kiowa Lone Wolf led a final effort to resist allotment. Claiming that the Jerome Agreement violated the Treaty of Medicine Lodge Creek of

1867 (which said that three-fourths of Kiowa adult males had to assent to land cessions), Lone Wolf led a lawsuit against the commissioner of Indian affairs, Ethan Hitchcock. The case went to the Supreme Court, and in 1903 the Court ruled in *Lone Wolf v. Hitchcock* that Congress had the power to abolish treaties with American Indians and impose policy directives on them.

Almost as soon as Native Americans received their allotments, the federal government divested them of their land. Beginning in 1891 the United States permitted Indians to lease their allotments to non-Indians. That year, the United States Congress also allowed agents to lease the land of elderly or disabled allottees. OIA officials believed that white farmers served as good examples to Indians. By observing the actions of white farmers, Indians could see and then incorporate civilized ways. Moreover, many officials believed that white farmers were better prepared, both in knowledge and finances, to bring “wild” or unfarmed lands into cultivation. The resulting leasing policy demonstrated one of the most glaring problems with allotment. In the late nineteenth century, it was problematic for any farmer to make a living from 160 acres. Often it was not individual white farmers that were purchasing or leasing Indian allotments, but corporate farms or large cattle ranchers.

Pressures to open Indian lands to white settlers led to the passage of the Burke Act in 1906. It permitted the secretary of the interior to grant fee patents to “competent” American Indians before the end of the twenty-five year trust period. It also allowed Indians to sell all or parts of allotments that they had inherited. In order to hasten the process of granting Indians fee patents, the commissioner of Indian affairs sent “competency commissions” to reservations. These commissions decided which Indians were competent and then granted them their fee titles. Often, the amount of Indian ancestry an individual possessed, rather than farming ability, determined one’s competency. Government officials frequently granted fee patents to those with less than “one-half Indian blood.” The secretary of the interior also assumed more control of Indian lands. Laws granted the secretary the power to determine heirs to allotments and then authorized the sale of inherited allotments without the permission of the Indians. Finally, local white businessmen and farmers swindled American Indians out of their allotments. In some instances, local judges assumed guardianship over American Indian allottees and allotments. After charging their “wards” extremely high legal fees, the judges took Indian land as financial compensation. By 1934, when allotment ended,

American Indians had lost more than 70 percent of their land base.

Ironically, even as the federal government was seeking to end tribal ownership of Indian lands, it continued to promote Indian farming and agricultural development. In the mid-1910s, the Office of Indian Affairs sponsored agricultural fairs on reservations and offered cash prizes for Indians with the best crops. Indians enjoyed the fairs because they offered an opportunity for socialization and ceremonies. The federal government also urged Indians to farm during World War I (1914–1918). Although many Indians complied, the war also increased efforts to lease Indian lands. During the war the government lengthened the term of leases to five years in order to put land into what it considered more productive hands.

A New Era in American Indian Agricultural Policy, 1928–1945

By the late 1920s, many observers of Indian affairs questioned the agricultural policy of the U.S. In 1928 the government published the *Meriam Report*, an 872-page study of the condition of American Indians, which condemned many aspects of federal Indian policy. It argued that non-Indian government farmers failed to promote farming on reservations because they were poorly equipped to teach Indians how to farm. The report also criticized the government's attempts at Native education, which neglected to teach Indians how to develop their own farms. Finally, the report blamed the allotment policy for the poor condition of Indian agriculture. It was apparent that the Indian policies of the past had failed and the time had arrived for a new approach.

The Great Depression ushered in dramatic changes in agriculture and federal Indian policy. Across the United States, agricultural prices declined steeply, harming Indian and non-Indian farmers alike. The election of Franklin D. Roosevelt offered hope to a nation crippled by the Depression. In 1932 President Roosevelt appointed John Collier as commissioner of Indian affairs. Collier created an "Indian New Deal" to alleviate problems on Indian reservations. He emphasized cultural pluralism and cooperative economic ventures. In the early 1930s, Collier persuaded public works officials to create programs on reservations. The most influential public works project was the Indian Emergency Conservation Work (IECW) program, also called the Civilian Conservation Corps—Indian Division (CCC-ID). Under IECW, American Indians fixed land problems, usually caused by non-Indian farmers and ranchers exploiting

Indian lands. IECW projects hired Indians to work on soil conservation, soil erosion, and range management programs. Other public works programs sponsored irrigation development projects on Indian reservations.

The centerpiece of the Indian New Deal was the Indian Reorganization Act (IRA). Passed in 1934, the IRA targeted the failed policies of the past. First, it ended allotment. Additionally, it entrusted the secretary of the interior with protecting reservation rangeland. Although this was a positive step, the IRA still relied on the federal government to act as a guardian of, rather than an equal partner with, Indian communities. Finally, the act included steps for American Indians to use to create tribal governments and corporations to oversee local affairs. Cooperative cattle enterprises emerged as the most popular corporation formed under the IRA. Although individual Indians owned the livestock, they herded the cattle communally and pooled their labor during round-up and branding seasons. The San Carlos Apaches' "Social Security Herd" provided food and money for elderly residents who did not own cattle.

Still, the Indian New Deal held shades of government paternalism and "one size fits all" agricultural policies. Nowhere was this clearer than with the livestock reduction programs in the Southwest. In an effort to stem soil erosion in the drought-plagued region, Collier demanded that the Navajo reduce their sheep herds. Navajos objected to this proposal because sheep represented important cultural, social, and economic facets of their lives. Nevertheless, Collier went through with livestock reduction, diminishing Navajo sheep herds from 1.3 million head in 1930 to 465,000 in 1948. This reduction devastated the Navajo economy and their cultural practices. Moreover, it forced many tribe members to look outside the reservation for jobs and other economic opportunities.

American Indians and Agricultural Policy since 1945

After World War II (1939–1945), agriculture remained an important facet of federal Indian policy and American Indian economic choices. Many Natives took advantage of a revolving credit fund and cooperative cattle enterprises to develop farming and livestock operations. In addition, irrigation programs, 4-H clubs, and Veterans Administration programs assisted agricultural endeavors. The San Carlos Apache utilized scientific methods to improve their cooperative cattle program. They practiced soil conservation measures to stem erosion, used artificial insemination to improve

the quality of their cattle herd, and kept detailed progeny records of sires and dams. Yet several problems continued to plague American Indian farming endeavors. The demand for Indian land inflated prices. Beginning in the 1950s, under a policy of termination (severing the trust relationship between American Indians and the federal government), the government reduced the loans and revolving credit fund available for American Indian farmers. Finally, the complicated nature of inherited allotments (with multiple heirs) and the leasing of land to non-Indian farmers and ranchers limited the amount of land available to Indian farmers. These problems persisted in the 1960s and 1970s.

Despite the diminishing importance of farming in the 1970s, the BIA recently attempted to revitalize American Indian agriculture. In 1993 the U.S. Congress passed the American Indian Agricultural Resource Management Act. In an effort to develop Native agricultural endeavors, the act protected Indian trust lands, created more 4-H clubs and extension programs on reservations, and increased the amount of money available to lend (at a reduced interest rate) to Indian farmers. However, a 1999 report to the Senate Committee on Indian Affairs revealed that the act had failed to improve American Indian agriculture. The report stated that the credit fund lacked sufficient monies, American Indian farming land still lacked adequate protection, and the act did not address irrigation.

For more than 225 years, Jefferson's ideas about farming and agrarian life guided federal Indian policy. Federal officials hoped to assimilate Indians by introducing them to agriculture, which many considered the kindest and cheapest choice for dealing with Indians. Unfortunately, agricultural policy tended to reflect non-Indian desires to acquire Indian land rather than a humanitarian effort to help Indians. Ignoring existing agricultural traditions in Indian communities, officials threatened Native gender relations and sought to alter American Indian land use patterns. If anything, the agricultural development of non-Indians benefited from removal and allotment policies and led to substantial land loss in Indian communities. In the end, two centuries of U.S. agricultural policy contributed to contemporary poverty and unemployment problems on Indian reservations.

Akaka, Daniel

Daniel Kahikina Akaka is a Democratic United States senator representing Hawaii. Born September 11, 1924, in Honolulu, Hawaii, Akaka received a bachelor's and a master's degree in education from the University of Hawaii. He served in the U.S. Army Corps of Engineers from 1943 to 1947, and from 1953 to 1968 worked as a teacher and school administrator. After serving in the House of Representatives from 1977 to 1990, Akaka filled the Senate vacancy created by the death of Spark Matsunaga. He was then re-elected to the Senate in 1994, 2000, and 2006. Akaka is usually recognized as the first senator of Native Hawaiian ancestry.

Akaka has been active on many Senate committees, including the Senate Committee on Indian Affairs. He is an outspoken advocate of issues affecting Native Hawaiians, including health care and education. His most significant contribution to the Committee on Indian Affairs came in 1993 when he successfully sponsored United States Public Law 103–150, which called upon the United States to apol-

ogize for its complicity in the overthrow of the independent Kingdom of Hawaii in 1893.

In 2005 Akaka introduced Senate Bill 147, the Native Hawaiian Government Reorganization Act of 2005. This bill seeks to create an Office of Native Hawaiian Relations within the Department of the Interior to give Native Hawaiians a stronger voice in the governance of their state. It also calls for the creation of a Native Hawaiian Interagency Coordinating Group to play a role in the administration of federal programs important to Native Hawaiians. The U.S. House of Representatives passed the bill on October 24, 2007, and in early 2008 it was awaiting a vote in the U.S. Senate.

Alaska Native Brotherhood (ANB) and Alaska Native Sisterhood (ANS)

The Alaska Native Brotherhood (ANB), founded in 1912, along with its sister organization, the Alaska Native Sisterhood (ANS), provided a key organizational foundation for the landmark land claims and civil rights movements among Alaska Natives. Well before the U.S. Civil Rights Act of 1964, ANB and ANS leaders had already achieved important civil rights victories in their state, including the Alaska Anti-Discrimination Act of 1945. Although less influential by the early twenty-first century, the ANB and ANS remain important social and political institutions in Southeast Alaska.

The brotherhood and sisterhood were founded in southeast Alaska, where Tlingit, Haida, and Tsimshian leaders had been subjected to pressures to acculturate for a generation or

more. Despite adopting Christianity and other trappings of white civilization, Natives still suffered cruel discrimination and advancements on their lands and resources from white pioneers and stampedeers, who moved into the territory in large numbers beginning in the late nineteenth century. By 1910 the stresses of disease, discrimination, and loss of land were so great that Natives felt compelled to organize themselves to protect and promote their legal rights and well-being. Most of the ANB founders were influential lay ministers within the Presbyterian Church, including George Field, William Hobson, James C. Johnson, Eli Katanook, Paul Liberty, Frank Mercer, Frank Price, Peter Simpson, James Watson, Chester Worthington, and Ralph Young. The organization's objectives were to give aid to Indians and encourage education among them. To overcome divisions in the traditional social structure, which stressed local clan autonomy, the ANB and ANS were organized into dozens of camps (one or more in each major village) reporting to one Grand Camp, which sponsored a convention each fall to coordinate action. The early ANB leadership focused on "civilizing" members through acculturation (learning English and adopting Western habits) because a Native had to prove to a federal judge that he was "civilized" in order to obtain the right to vote. This burden was finally lifted in 1924 with passage of the American Indian Citizenship Act.

With citizenship and the vote in hand, ANB leadership under Louis and William Paul (William being the first Native elected to the Territorial Legislature in 1924) shifted to securing land rights and ending other forms of discrimination. An ANB resolution in 1929 launched a successful Tlingit and Haida land claims suit against the federal government and helped pave the way for the 1971 Alaska Native Claims Settlement Act. Other resolutions called for an end to discrimination, including in education, where Jim Crow policies of segregated schooling for Natives had long been in place. As with blacks in the South, this policy of "separate but equal" had proven unequal for Natives, whose facilities, course availability, and access to higher education were inferior to those of whites. Segregated theaters and restaurants, too, were commonplace in larger, multi-ethnic towns. The civil rights issue came to a head in 1944, when a young Eskimo woman, Alberta Schenck, was arrested and jailed for refusing to give up her seat in the whites-only section of a theater in Nome. With the backing of the governor and two Tlingit ANB leaders, Frank Peratrovich and Andrew Hope, both recently elected to the Territorial Legislature, the ANB and ANS lobbied successfully for passage of the Alaska Anti-

Discrimination Act in 1945. The most influential testimony during debate in the legislature came from ANS leader Elizabeth Peratrovich. In response to a leading senator opposed to the bill, who argued that “the races should be kept further apart. Who are these people, barely out of savagery, who want to associate with us whites, with 5,000 years of recorded civilization behind us?” Peratrovich admonished, “I would not have expected that I, who am barely out of savagery, would have to remind the gentlemen with 5,000 years of recorded civilization behind them of our Bill of Rights” (Nora M. Dauenhauer and Richard Dauenhauer, *Haa Kusteeyí, Our Culture: Tlingit Life Stories*, 1994). Her forceful oratory carried the day, and the legislation was passed and signed into law on February 16, 1945. Alaskans in the twenty-first century mark February 16 as Elizabeth Peratrovich Day, in honor of her role in the civil rights struggle. Similarly, the ANB and ANS are recognized for their leadership in Alaska’s pioneering civil rights movement and continuing work on behalf of Alaska Natives.

Alaska Native Claims Settlement Act of 1971

The Alaska Native Claims Settlement Act (ANCSA) was passed by Congress in 1971 in response to pressure from

Native groups that sought recognition of their land claims after the discovery of rich oil fields along the North Slope of the state. Alaska’s indigenous populations did not have treaties with the United States, and when oil companies wanted to build the Alaska pipeline down the middle of the state, they were blocked by indigenous claims of ownership of most of the state’s land and waters. These claims were pressed by groups such as the Alaska Native Brotherhood and the Alaska Federation of Natives.

The ANCSA followed the long-time U.S. policy of assimilating American Indians into mainstream society by altering traditional tribal structures. It encouraged over two hundred indigenous villages to incorporate, with individuals becoming “stockholders.” The act also set up twelve regional Native corporations and one corporation for Native people who had left the state. The stockholders in these corporations shared in both the risks and the revenues of corporate business ventures. All those with 25 percent or more Native “blood” qualified to participate in this process.

By the terms of the ANCSA, Native Alaskans also received \$962.5 million and clear title to 44 million acres of land—about one-ninth of Alaska’s total land. They gave up claims to 375 million acres, including two thousand miles of coastline. The federal government retained 217 million acres, and the State of Alaska received 102 million acres.

About eighty thousand Alaska Natives received one hundred shares of stock in a village corporation and one hundred shares in a regional corporation. Those not living in villages received stock in a regional corporation. Those born after 1971 did not receive stock, which has created conflict as younger generations have come of age.

The implementation of the ANCSA was fraught with problems, including slow distribution of land to the new corporations, fighting among village and regional corporations, and extensive conflict between the state government and Native shareholders. In particular, the selection of lands to be held by Native corporations was hotly contested. Between 1980 and 1984 alone, 266 cases reached the appellate level and were decided by the Department of the Interior’s administrative judges. Approximately half of the department’s decisions were later appealed to the federal district courts.

Over two hundred village corporations were formed, although some Alaska Natives have never considered the ANSCA or its corporations valid. Tribal governance changed, as existing governments were bypassed and the new corporations gained title to the land and its resources. The corporations themselves, however, had no government

powers. The result was often conflict between Native-controlled corporate and governmental entities, particularly when the issue was whether to contract with outsiders for resource extraction.

The ANCSA also brought changes to Alaska Natives' cultural practices and expectations. Indigenous people who had no experience with land ownership became shareholders in corporations, which then exercised control over both the land and its resources. People who had historically moved to different locations to take advantage of seasonal food sources were often unable to access those locations and bound to one particular village. The houses provided for village residents relied on cash-based energy sources and were often not built to withstand harsh winters, in contrast to those the Indians built when they were self-sufficient. Cultures that were based on an economic system of cooperation and sharing were suddenly expected to compete in the international market system. Some commentators criticized the merging of indigenous cultures and the modern corporation, and many observers predicted that the outcome of the ANCSA would be the alienation of land and resources from Native ownership.

As the new Native corporations began business in the 1970s, most combined financial goals with efforts to maintain some aspects of indigenous cultures. Some entered into contracts for the extraction of resources, and many made efforts to protect the regional environment. Congressional amendments to the ANCSA in the late 1970s were, among other things, designed to protect Native corporate assets from tax forfeitures and non-Indian ownership.

The act remained subject to legal disputes through the 1990s, particularly over whether Native corporate lands were defined as "Indian country" and whether their occupants were "tribes." Alaska Natives supported these designations, while the state opposed them. President George H. W. Bush's administration sided with the state, while President Bill Clinton's sided with Native peoples. In 1998 the U.S. Supreme Court decided in *Alaska v. Native Village of Venetie Tribal Government* that Native lands were not Indian Country.

Alaska Natives

Alaska Natives have a unique status among aboriginal peoples of the United States and are typically classified separately from "Lower 48" Indians in American Indian policy, relations, and law. This separate status is based in part on the anthropological view that Eskimos (Inupiaq and Yup'ik peoples of Alaska) and Aleuts (Unangan) comprise a population genetically distinct from Indians. Yet it is also a convenient geographical and political label that is applied as well to Athabaskans, Tlingits, Haidas, Tsimshians, and other Indian groups in the state. The federal government frequently created similar policies for all these groups, often as a sequel to Lower 48 Indian policy. All Alaska Natives are presumed to have migrated from the Old World between about 15,000 to 5,000 years ago (earlier for the Indians, later for the Eskimo-Aleut) either via Beringia (the land mass that linked Siberia and Western Alaska during the last ice age) or a coastal water route. At first contact the total Alaska Native population was approximately eighty thousand. In 2008 it was estimated at more than 100,000, though an increasing number of Natives lived out of state, and the percentage of Natives in Alaska's population was at an all time low, about 12 percent.

European explorers sailed the Alaskan coast in the mid-eighteenth century, but settlement did not occur until the Russians arrived in the early nineteenth century in search of valuable furs, especially sea otter. The Russian America Company, a state-sponsored monopoly, set up outposts in Sitka, Yakutat, Kodiak, and St. Michael, and conscripted Aleut hunters to harpoon sea mammals for their commercial trade. One group of Aleuts was even forced to resettle on the remote Pribilof Islands of Saint Paul and Saint George to harvest the coveted fur from the seals that bred there. Disease, the stress of relocation, and exploitation took a frightful toll on the Aleut and other Alaska Native populations located near Russian outposts. (The more northerly Yup'ik and Inupiaq Eskimos and interior Athabaskan Indians were less affected by Russian invasion.) Meanwhile, the well-organized Tlingits of the southeastern panhandle resisted Russian domination and destroyed original Russian forts

Alaskan Inuit boys carve walrus ivory. Subsistence and economic development remain primary concerns for Alaska Natives, who suffer disproportionately from poverty in rural areas.

at Sitka and Yakutat in 1802 and 1805, respectively. But the Russians retook Sitka in a fierce battle in 1804, and it became the hub of Russian America until the colony was sold to the United States in 1867. To this day many Alaska Natives maintain that Russia never established legal title to Alaska—through treaty, conquest, or occupation—and ruled little of the territory beyond their few coastal outposts. Furthermore, the Treaty of Cession by which the United States acquired Alaska from Russia recognized the aboriginal title of Alaska Native tribes. The treaty provided that “The Uncivilized tribes will be subject to such laws and regulations as the United States may, from time to time, adopt in regard to aboriginal tribes.” Aboriginal title was not formally extinguished until a century later, when Congress passed the 1971 Alaska Native Claims Settlement Act (ANCSA). But questions about the aboriginal and contemporary sovereignty of Alaska Native tribes remain.

U.S. “Ownership,” Law, and Policy

The United States bought Alaska from Russia in 1867 for \$7.2 million. The United States’ initial interests in the state were its fisheries, timber, oil (initially whale and herring, later crude), and mineral resources. Non-Native entrepreneurs, prospectors, and adventurers were eager to capitalize on the bounty of “the last frontier,” and conflicts over land and resource rights emerged as outsiders poured into the country. Friction was most intense in southeastern Alaska,

where Tlingits and Haidas continued to defend their lands and waters against advancing commercial fishing, canning, and mining operations. In western Alaska, northern Eskimos and Athabaskans had to contend with gold stampeders pouring into places like Nome and the Yukon-Klondike. By the 1880s the U.S. military was active in subduing Alaska Native resistance to white incursions, and the Natives petitioned the federal government to address their conflicts with the non-Natives who had no regard for their aboriginal rights. Congress finally recognized its obligation to Alaska Native rights in the 1884 Organic Act, which held that “Indians or other persons . . . shall not be disturbed in the possession of any lands actually in their use or occupation or now claimed by them but the terms under which such persons may acquire title to such lands is reserved for future legislation.” At the time, the act was scarcely enforced, but it served as a foundation for the Alaska Native land claims movement and Congress’s eventual settlement of Alaska Native title to their lands and resources in the 1971 ANCSA.

By the end of the nineteenth century, a civilian government had replaced the military authority in the Alaska Territory, and Natives were beginning to be “disciplined” and “civilized” through schools and churches. The Russian Orthodox Church continued to play a strong role in the old Russian strongholds, but was soon rivaled by Presbyterian, Episcopalian, Catholic, Moravian, Quaker, Salvation Army, and other missions in Native communities around the terri-

tory. Missionaries like the Presbyterian Sheldon Jackson, the first general agent of education in Alaska who helped set up the Sitka Mission School (later Sitka Industrial Training School and currently Sheldon Jackson College), and his protégé, John G. Brady, the territorial judge and governor, had enormous influence over the course of Alaska Native affairs during this period. Although supporters of the Organic Act, these leaders believed that the future well-being of Alaska Natives would be achieved by “elevating” them from “savagery” to civilized white ways. This meant abandoning the spirituality of animism for Christianity, and the nomadic practice of hunting-gathering for more settled lifestyles and industrial employment. Church and state were firmly entangled in this mission to domesticate Alaska Natives, as various denominations gained concessions to operate churches and schools in the numerous settlements throughout the vast territory. The result was that different denominations tended to concentrate in certain areas. For instance, the Friends Church was prominent in the Kotzebue Sound area, Moravians were prominent in the Yukon-Kuskokwim Delta, and Episcopalians congregated in the interior. Reindeer herding was also introduced as a way to encourage non-nomadic lifestyles. Secular schools did not arrive until the Bureau of Education began establishing them in the early 1900s.

As elsewhere in the country, progressive education for Native minorities did not provide equal opportunity. Alaska Natives continued to suffer discrimination and were denied basic rights, including citizenship and land ownership, as well as access to employment and other resources readily available to incoming non-Natives. The stress of discrimination and white incursions drove the Tlingit, Haida, and Tsimshian leaders of southeastern Alaska to found the Alaska Native Brotherhood (ANB) in 1912 (followed shortly thereafter by the Alaska Native Sisterhood [ANS]) to help promote Native civil rights. These rights included citizenship, land claims, integration, and freedom from discrimination. ANB and ANS camps were formed in nearly every village in southeastern Alaska, as well as in many other communities in the state. The early brotherhood was heavily influenced by the Presbyterian Church and stressed embracing Christian civilization as a means of improving the status of Alaska Natives. The ANB soon became a political force to be reckoned with as it fought to win citizenship and the right to vote for Natives. At its 1929 convention, led by the talented Tlingit lawyer and territorial legislator William Paul, the brotherhood helped launch a major land claims suit against

the U.S. government. This suit first had to be authorized by the federal government before it could proceed, which took until 1935, and then it had to endure one dismissal and three decades in the courts before finally being settled. Finally, in 1968 the U.S. Court of Claims awarded the Tlingits and Haidas \$7.5 million for the value of lands taken without compensation, less than 10 percent of the \$80 million the Natives had sought. The court also held that Indian title to some 2,634,744 acres of Alaska had not been extinguished. A major outcome of this suit was the creation of the regional Central Council of Tlingit and Haida Indian Tribes of Alaska, a federally recognized tribe, to administer settlement funds. Outstanding land claims were later rolled into the 1971 ANCSA.

The “Indian New Deal” of the Roosevelt administration, as implemented by Commissioner of Indian Affairs John Collier, brought renewed interest in tribal self-government. The Indian Reorganization Act of 1934 established provisions for Native Americans’ political self-government and economic self-determination, and in 1936 Natives successfully lobbied to extend the law to Alaska. Reformers believed that the mistakes of the Lower 48 states could be avoided in Alaska, where land loss had been comparatively minimal and traditional land and resource bases were still largely intact. The Alaska Reorganization Act allowed the secretary of the interior to designate lands used or occupied by Natives (that is, lands to which they had aboriginal title) as reserves. Given the problems that plagued reservations in the Lower 48 states, however, not everyone agreed that this was the best policy. There was also the issue of conflicts with non-Native interests. Thus, when Interior Secretary Harold Ickes proposed the first reservation encompassing the Athabaskan community of Venetie in 1943, many were alarmed by its size (1,408,000 acres) and the fact that some one hundred other proposed reservations would encompass nearly half of Alaska Territory. Territorial Governor Ernest Gruening and others who opposed the plan successfully appealed to the secretary to scale it back and to have impartial observers consider other solutions, such as financial compensation.

World War II (1939–1945) brought Alaska from the outskirts of American politics to the center stage of Pacific affairs. Japan invaded and briefly occupied the remote Aleutian islands of Attu and Kiska in 1942. The United States responded by evacuating nearby Aleut communities; investing heavily in defensive fortifications, communications, and transportation; and bringing in military and civil-

ian personnel throughout the territory. The now famous Alaska-Canada (Alcan) highway was constructed to help supply military outposts in the region. Although the overall security of Alaska was never threatened, the strategic importance of the territory became firmly established, and military build-up continued during the Cold War. This militarization spurred significant development and population growth in the state, often at the expense of Alaska Native lands, resources, and communities. No one suffered more than the evacuated Aleuts, however. They were given no warning before their removal from their homes in 1942; their communities were burned to the ground by the American military; and they were forcibly resettled to isolated, ill-equipped camps in dilapidated southeastern canneries far from their homelands. They lived in these camps until 1945 under conditions so desperate that 10 percent of the population perished. In 1988, after years of lobbying, Aleuts finally received a formal apology from Congress and financial compensation for their losses. In most areas, Alaska Natives continued to suffer discrimination—signs such as “No Dogs or Indians Allowed” were posted by some non-Native shop owners—until they secured passage of an antidiscrimination law in 1945, after a vigorous campaign lead by the ANB and ANS.

Alaska Statehood, Land Claims, and Subsistence

In 1946 Congress created the Indian Claims Commission to formally investigate Native claims. This was done so tribes would no longer have to secure a jurisdictional act from Congress (as the Tlingit and Haida had in 1935) before suing the government in the Court of Claims. Still the process of settling claims was slow. Relations became especially hostile after Alaska achieved statehood in 1959 and sought lands for its own development. The Alaska Statehood Act granted the new state more than 100 million acres of land, much of which had already been claimed by Native groups. Like the Organic Act of 1884, the Statehood Act disclaimed rights over Native lands but put the burden on Congress to settle the matter. Conflicts over land use and regulation of Alaska Native customary and traditional activities (such as hunting) became a growing source of tension. For example, in 1961 Inupiaq hunters staged a “duck-in” to protest enforcement of the International Migratory Bird Treaty between Canada, Mexico, and the United States, which prohibited their spring hunt of ducks, a critical food source. This may have been the first organized act of civil disobedience on the part of Alaska Natives, and it signaled their strong commitment

to maintaining their hunting and fishing rights as a foundation for their physical and cultural survival. That same year, the Inupiaq president of the Point Hope Village Council wrote to the Association of American Indian Affairs seeking legal and technical support to defend their land and resource rights. Around this time a movement known as Inupiat Paitot, or The People’s Heritage, began in response to the threat of Atomic Energy Commission testing and explosions (to create a deep port harbor) near Point Hope. This organization began publishing a newsletter under the editorship of Howard Rock. Rock eventually expanded it into a full-scale newspaper, the *Tundra Times*, which became the leading voice in Alaska Native news and advocacy from 1962–1997. Intervillage and interregional communication was greatly enhanced through this new medium, which helped garner the support of national advocacy organizations, such as the Association of American Indian Affairs and the Indian Rights Association.

In 1963 the U.S. Department of Interior’s Alaska Task Force on Native Affairs warned that the issue of aboriginal claims was continuing to be “sidestepped” and that a speedy and fair resolution was in order. It made specific recommendations for solving Alaska Native land claims, including individual and community land grants and the protection of use rights on additional lands for traditional food harvesting activities. But this solution was opposed by Native groups because it lacked monetary compensation for lands lost and did not give Native Alaskans rights to minerals and lands for which they maintained title. Meanwhile, Natives filed formal protests to state land selections on the basis of aboriginal claims, and in 1966 Secretary of the Interior Stewart Udall imposed a “land freeze” that prevented additional transfers until the question of aboriginal claims was settled. By 1967 twelve regional associations were established along geographic and cultural lines to pursue the respective land claims, and their leaders met to form the Alaska Federation of Natives (AFN), a statewide advocacy organization that remained a paramount force in Alaska Native affairs in the early twenty-first century.

The discovery of oil at Prudhoe Bay on Alaska’s arctic coast and the push to develop a trans-Alaska pipeline to transport the crude oil from the North Slope (Inupiaq Eskimo country) to the Gulf of Alaska (crossing Athabaskan and Alutiiq lands and waters) ultimately compelled the federal government to settle Alaska Native land claims once and for all. The 1971 ANCSA was not a treaty or a court judgment but rather a unilateral legislative solution to land

claims. Despite input by the Alaska Federation of Natives (AFN) and other groups, a significant number of Alaska Natives opposed it. Even so, the settlement was generous by prior standards, with Natives gaining title to 10 percent of the state's lands and \$962 million in compensation for lands lost. In exchange, Congress extinguished aboriginal land, hunting, and fishing rights. More importantly, rather than pay out the compensation monies to individuals or tribal governments, the ANCSA created a new set of institutions to manage the lands and money awarded: twelve Alaska Native regional corporations (a thirteenth was later added for nonresident Alaska Natives) and some 220 village business corporations. Alaska Natives born prior to the passage of the ANCSA were given one hundred shares in both their regional and village corporations. ANCSA corporations were designed so that Natives could collectively adapt and prosper in the capitalist-industrial economy. As AFN president Emil Notti put it, the ANCSA was to bring Native people into the economic mainstream in a way that reservations and trust payments had not. Some critics saw corporations as a clever means of pursuing both assimilation and termination, like the General Allotment Act (Dawes Act) of the nineteenth century, but with a twentieth-century emphasis on business development rather than farming. Others saw the ANCSA framework as the best means for Alaska Natives to control their own destiny. Some corporations, such as Sealaska (Tlingits, Haidas, and nonreservation Tsimshians), succeeded, even making the Fortune 500 list of successful companies, but many others struggled to create jobs and profit in Alaska's challenging business environment.

Initial local investment strategies proved risky in Alaska's boom-and-bust natural resource economy, ending in bankruptcy in some cases. For this reason, many corporations shifted investment outside the state to reduce their vulnerability, thus limiting local investment and employment. But unlike other corporations, Alaska Native corporations have remained headquartered and rooted in the state, giving Alaska's economy a measure of stability and the corporations themselves a measure of political influence as pillars in the state's economy. It is perhaps still too early to declare the ANCSA a broad success or failure; indeed the results thus far have been mixed. The ANCSA left many issues unresolved: some Native communities did not receive recognition, land, or compensation; Alaska Natives born after 1971 had questionable status since they did not receive stock in the corporations; the original law stated that Alaska Native stock could be sold to non-Natives after twenty years (though 1991

amendments to ANCSA clarified inheritance rules); and the continuing needs of Natives for subsistence resources were left for the state and the secretary of the interior to consider. While the ANCSA formally extinguished subsistence rights for Alaska Natives, the federal government did promise to safeguard their needs through legislation at a later date.

The subsistence issue has proven particularly difficult. Prior to the ANCSA, Alaska Natives largely managed their own subsistence, hunting, fishing, and gathering according to custom and tradition, with minimal state intervention. In 1972 this self-management system came under threat with passage of the Marine Mammal Protection Act, which banned hunting of threatened sea mammals. Coastal Alaska Natives still dependent on marine mammals succeeded in negotiating an exemption from the ban. Whales, too, became subject to an international hunting ban, with exceptions granted to Alaskan Eskimo communities who organized themselves as the Alaska Eskimo Whaling Commission (AEWC) in 1977. The AEWC sought to protect their subsistence interests through a co-management arrangement overseen by the National Oceanic and Atmospheric Administration (NOAA).

More contention surrounded other fish and game, however, which were increasingly regulated by the state for commercial and recreational interests rather than Alaska Native subsistence needs. As the post-ANCSA industrial economy developed and Alaska's population grew, competition for fish and wildlife resources increased. Alaska Natives, whose aboriginal hunting and fishing rights were extinguished, pushed the federal government to safeguard their continuing subsistence needs as promised in the ANCSA. Congress attempted to fulfill this promise through Section VIII of the 1980 Alaska National Interest Lands Conservation Act (ANILCA). But the state and non-Native interests successfully lobbied against any subsistence preferences for Natives, and a "rural preference" compromise was reached instead. This meant that if allocations of wild resources were necessary, subsistence users living in rural Alaska (basically all communities outside greater Anchorage, Fairbanks, Juneau, and Ketchikan) would have priority use of them.

This compromise has proven both tense and fragile. Initially, the state passed a similar law, but it was later declared unconstitutional by the Alaska Supreme Court because it arbitrarily discriminated against (urban) users according to geography of residence. In response, the federal government threatened to take over management of subsistence resources unless the state complied with the ANILCA's rural prefer-

ence. The federal government eventually did take over management of subsistence on federal lands in 1990, creating a tenuous and patchwork dual management system. Katie John, an Athabaskan elder denied subsistence hunting and fishing rights under state law, filed a successful suit against the federal government to extend ANILCA protections to inland subsistence fisheries surrounded by federal lands. Nonetheless, overall subsistence protections for Natives seem to be eroding. While a rural preference initially benefited most Natives in the state, rural communities have become increasingly non-Native since 1980, and a rising majority of Alaska Natives now reside in urban areas, where no subsistence priority exists. Various fixes to the rural-urban, Native-non-Native divides have been proposed, but to date no remedy has proven politically workable beyond the state-federal dual management regime. Subsistence remains a critical issue for Alaska Natives as customary and traditional subsistence lifeways are still important to identity, well-being, self-determination, and cultural survival, even if not completely necessary for physical survival.

Subsistence rights are also involved in broader concerns about environmental justice in the state. Alaska Natives are now involved in national environmental movements concerned with issues such as climate change and wilderness protection. For instance, since the 1980s, the U.S. Congress has attempted several times to open up the Arctic National Wildlife Refuge (ANWR) for oil drilling. Athabaskan Indians, whose lands border the ANWR and who subsist on the Porcupine caribou herd that passes through the refuge, have successfully protested against the opening, assisted by national environmental groups like the Sierra Club, the National Resources Defense Council, and the World Wildlife Fund, among others. In contrast, some Inupiaq groups, which depend on the industrial oil economy, have favored the opening of the ANWR but are opposed to offshore drilling in areas that threaten their subsistence base of marine mammals. Alaska Natives also have opposed environmental groups, such as the Sea Shepherd Society and Greenpeace, who criticize the Natives' subsistence whaling, and have supported the Makah Tribe of Washington when their right to hunt the gray whale was reinstated by the International Whaling Commission.

Sovereignty, Federal Recognition, and Economic Development

Sovereignty, subsistence, health, and economic opportunity are dominant concerns among contemporary Alaska

Natives. The sovereign status of Alaska Native village governments, organized under the Indian Reorganization Act, was supported in 1993 by Secretary of the Interior Bruce Babbitt's decision to list 226 Alaska Native communities as federally recognized tribes. The "inherent sovereign powers" of these tribes "over their members and territory" were underscored in a 1998 Executive Order (#13084) by President Bill Clinton. Federal recognition of tribes and amendments to the ANCSA has brought new economic opportunities to Alaska Native tribes and corporations. In particular, Native 8(a) provisions give priorities in federal contracting to federally recognized tribes in order to remove barriers to Native economic development created by past government policies. These Native 8(a) provisions have brought much-needed goods, services, and jobs to rural Alaska, and a measure of economic stability to Alaska Native tribes and corporations. In addition, the status of Alaska Native communities as tribes allows them to contract with the federal government for other services, such as health care and education. For instance, the Tanana Chiefs Conference (an Interior Alaska Athabaskan organization) contracts with the federal government to operate an Indian Health Service clinic called the Chief Andrew Isaac Health Center in Fairbanks; in Nome, the Norton Sound Health Corporation administers health services to Seward Peninsula Alaska Natives; and in Anchorage, the Alaska Native Medical Center is available to Alaska Natives from all over the state and offers more intensive medical treatment that cannot be obtained in the villages.

Tribal status also allows Alaska Natives to claim certain items from museums and other institutions that hold collections of Alaska Native human remains and artifacts under the 1990 Native American Graves Protection and Repatriation Act (NAGPRA). Artifacts that can be claimed include associated and unassociated funerary objects, sacred objects, and objects of cultural patrimony (objects that are considered to be "owned" by groups of people such as religious societies or clans and for which no single individual can claim ownership). Many museums and institutions in the United States hold Alaska Native artifacts, including the Smithsonian Institution, which houses approximately eighteen thousand of them. Some of these artifacts have been and will be returned under the NAGPRA. Because of cultural differences, some Alaska Native groups concentrate their efforts on claiming human remains so that they may be reburied. Others, such as those in the Alaskan Southeast, have focused on objects of cultural patrimony that are central to their

identity and status. The awareness and return of these items from museums across the United States has led to the development of Alaska Native museums and cultural centers. Among them are the Barrow Inupiat Heritage Center; the Alutiiq Museum and Archaeological Repository (Kodiak); the Simon Paneak Memorial Museum (Anaktuvak Pass); the Huslia Cultural Center; the Kenaitze Indian Tribe Center (K'beq)/Tribal Archives (Kenai); the Southeast Alaska Indian Cultural Center; and the relatively new Alaska Native Heritage Center (Anchorage).

Still, economic and infrastructural disparities between rural and urban Alaska continue to plague policy makers. Some have declared a “bush crisis” as poverty rates among rural households approach 30 percent and unemployment levels reach as high as 75 percent. In 1998 Congress created the Denali Commission to address rural Alaska concerns by investing in critical community infrastructure, especially health care, sanitation, and energy facilities, as well as employment assistance. The commission has its own competitive grant process and a variety of partnerships with tribal, federal, state, and local governments.

Education

The quality and support of education in rural Native villages also remains a challenge even after Alaska Natives won a successful lawsuit against the state in *Tobeluk v. Lind*, also known as the “Molly Hootch” case. This case was settled in 1976 when the state agreed to build high schools in 126 Alaska Native villages that previously had to send their children away to boarding schools in order to obtain a high school degree. In addition, some educational funding for Alaska Natives is available under the federal Johnson-O'Malley (JOM) Act of 1934, through grants given by the Bureau of Indian Affairs Office of Indian Education Programs (BIA-OIEP). The BIA-OIEP contracts with tribes, tribal organizations, school districts, and state education agencies (SEAs) for the education of Alaska Native and American Indian students. Indian students from age three through twelfth grade, except those enrolled in BIA or sectarian schools, are eligible for benefits under the JOM contract if they possess one-fourth or more Indian blood. Other funding for Alaska Native education comes from the U.S. Department of Education and the State of Alaska. Unfortunately, while the Alaska Native rate of graduation is over 80 percent in rural schools, 60 percent drop out of urban schools, and overall Native students score much lower than average on standardized tests such as the SAT (Scholastic Aptitude Test) or the

ACT (American College Test). A study by the Education Task Force for Alaska Native Commission, based upon 1990 demographic data, states that the reasons for this low achievement level include the poor economic situation of many Native students; endemic medical and social problems; the difficulty of succeeding in a system based on the values of another culture and managed to a large extent by people from another culture; and, for rural Alaska Natives, limitations thought to be inherent in small schools.

About 60 percent of Alaska's small schools offer bilingual education programs and 80 percent offer instruction in community history and cultural traditions. Bilingual education programs in the state have some support through the Alaska State Bilingual Association, an organization that sponsors the annual Bilingual Multicultural Education/Equity Conference (BMEEC). Conference topics include best practices for bilingual education instruction and ways to encourage proficiency in Alaska Native “heritage language and culture.” In addition, the State of Alaska mandates bilingual education for each school district that has eight or more “limited English proficiency” students. Finally, the Alaska state legislature established the Alaska Native Language Center (ANLC) in 1972 to document and cultivate the state's twenty Alaska Native languages. Staffed by a number of linguists and Alaska Native language speakers, the ANLC publishes dictionaries, grammar texts, and bilingual books in Alaska Native languages. The ANLC also offers instruction in the major Alaska Native languages, such as Central Yup'ik Eskimo, Inupiaq Eskimo, and Gwich'in Athabaskan. Individual or small group instruction is also available in other Athabaskan languages, Siberian Yup'ik, Alutiiq, Aleut, and Tlingit.

Alaska Native Politics

Alaska Native sovereignty and self-determination are growing but remain constrained in comparison to Indian tribes of the Lower 48. The extinguishment of aboriginal land rights under the ANCSA, combined with the transfer of land to Native corporations (excepting one reservation at Metlakatla), has limited tribes' control over “Indian Country.” In an increasingly non-Native and urban-oriented state and global economy, the future well-being of Alaska Natives is tied to their effectiveness in political processes at the state, federal, and international levels. The Alaska Federation of Natives (AFN), the major Native lobbying force behind the ANCSA and the ANILCA, continues to be the central Native force in Alaska state politics. Its member-

ship is comprised of 178 Native villages and the thirteen regional ANCSA corporations that advocate through a single governing board and president. At the state level, the AFN is active in the legislature, particularly on issues such as education, subsistence, health, resource development, and employment. For instance, at its annual fall convention in 2006, the AFN passed resolutions on these topics, including one urging a reduction in greenhouse gas emissions and one asking the state to include rural school districts in the Power Cost Equalization Program, which supplies funds to offset increased costs for fuel in rural areas due to transportation.

Despite the many problems that still face Alaska Natives, similar to problems faced by indigenous peoples throughout the world, they now have a history of empowering themselves through organizations such as the AFN. In addition, Inupiat and Yupiit Eskimos in Alaska participate as members of the Inuit Circumpolar Conference (ICC), an international, ethnonational organization comprised of approximately 160,000 Inuit in Alaska, Canada, Greenland, and Russia. Established in 1977 by Inupiaq Eskimo leader Eben Hopson, the ICC seeks to preserve a common Inuit heritage and to give a strong international voice to Inuit circumpolar concerns. The ICC advocates on key issues affecting these groups across national boundaries, including environmental contamination; climate change; language loss; promotion of Inuit rights through national and international policies and regulations; development of long-term policies that safeguard the Arctic environment; and more equal partnerships in the political, economic, and social development of Arctic regions. The ICC holds a conference every four years, with delegates from the four participating nations meeting over a period of one week to pass resolutions on concerns of all indigenous residents of the North. This international coordination has helped bring critical issues such as climate change impacts and arctic pollution to the attention of policy makers around the world. Other international indigenous organizations with Alaska Native delegates include the Arctic Athabaskan Council, formed by Athabaskan Indians in the United States and Canada, and a host of international forums, such as the United Nations Permanent Forum on Indigenous Issues. These organizations allow Alaska Natives to fight against international, national, state, and even local government policies that would diminish their rights; to convince lawmakers to protect the rights that they still hold; and to encourage productive working relationships with government officials, scientists, and teachers for the benefit of all Alaska Natives.

Alaska v. Native Village of Venetie Tribal Government (1998)

See *Alaska Natives*.

Alcatraz Island, Seizure of (1969)

The seizure of Alcatraz Island on November 20, 1969, by American Indian activists was one of the most important Native efforts to gain political empowerment and self-determination. After the federal prison on Alcatraz, once the home of the ancient Costanoan and Ohlone people, was shut down in 1963, a group of Native Americans filed an unsuccessful lawsuit claiming the island under a Sioux treaty that gave them the right to unused federal land. On March 9, 1964, Allen Cottier, president of the American Indian Council, led Sioux Indians in a brief occupation of the island. Before their removal, they demanded that Alcatraz be used for a Native American cultural center and university. Cottier's protest inspired Native American students at San Francisco State University. Under the leadership of Richard Oakes, the students formed the Student Kouncil of Intertribal Nations (SKINS), which became instrumental in the subsequent occupation of Alcatraz. LaNada Boyer coordinated the activities of this and other groups as the Red Power movement blossomed during the 1960s.

In the pre-dawn hours of November 20, 1969, a group of about eighty American Indians, mostly college students, sailed over to Alcatraz and seized control of the island. They proclaimed that the island had been reclaimed on behalf of all Native Americans by right of discovery, that the white man's claims would be settled for \$24 in glass beads and red cloth, and that the houses of the four island caretakers would be held in trust by the "bureau of Caucasian affairs." The U.S. Coast Guard immediately established a blockade around Alcatraz, but the federal government did not attempt to remove the demonstrators because they were nonviolent.

The Indians sought a university-like educational and cultural complex on the island with financing provided by the federal government. While lookouts watched for federal officers, the protestors planted trees, fixed the plumbing and electricity in the prison's buildings, and prepared meals for the many families on the island. They organized themselves into a group called the Indians of All Tribes, elected a seven-member council, established residency requirements, published a newsletter, and broadcast a weekly radio program. The protest garnered enormous publicity and struck a nerve among Indians who wanted to dramatize their plight. The easily penetrated blockade allowed many people, such as Indian scholar and activist Vine Deloria Jr., to visit the island to show support and to live there for a time.

By early 1970 the Indians on Alcatraz became fragmented as groups rose in opposition to Oakes, students returned to school, and counterculture people who not been involved from the beginning moved to the island. Oakes left the island after his daughter died in a fall down a stairwell. On June 11, 1971, a government force of fifteen marshals recaptured Alcatraz without resistance, removing the six men, four women, and five children who remained. The occupation of Alcatraz forced the U.S. government to take seriously the grievances of American Indians. After the occupation, the Red Power movement moved on to protest actions in Washington, D.C., (Trail of Broken Treaties) and at Wounded Knee.

Alcohol

The U.S. government regulated the commerce of liquor among the Indians from the beginning of the republic until 1953. Many Indian leaders recognized the dangers of alcohol and approved of the forms of regulation, which included fines and imprisonment for traders selling or introducing alcohol in Indian Country, and fines and imprisonment for Indians caught drinking alcohol. Complete prohibition was attempted at times, even after the Twenty-First Amendment repealing nationwide prohibition was passed. The various changes to the prohibition laws reflected the government's changing Indian policies, and the alcohol laws followed the existing policy. Alcohol is now viewed as a public health issue for Indians and tribes.

Popular culture has produced the myth of the drunken Indian—one who cannot hold his liquor, and who, when drunk, attacks innocent white settlers. This myth allowed the government to consider its regulation of alcohol as good for both Indians and whites. The myth of the drunken Indian also includes the belief that alcohol affects Indians differently than whites—that there is some type of a genetic disposition to alcohol abuse in Indians—but multiple studies have

found no difference in the way Indians metabolize alcohol. Many Indians, prior to European contact, had little cultural context for drinking. For some tribes, the use of fermented beverages was a seasonal tradition, based on crop production and limited and controlled by time and custom. However, many Indians learned drinking behavior by interaction with whites. The people who had the most contact with the Indians, such as soldiers, trappers, traders, and miners, often exhibited antisocial drinking behavior, and Native drinkers sometimes emulated these examples.

While the United States government attempted to control the sale to and abuse of alcohol, it occasionally used ardent (strong) spirits to achieve its ends. The U.S. negotiated hundreds of treaties with the American Indian tribes; in many cases federal negotiators used alcohol in those negotiations as a means to persuade Indians to agree to land cessions.

Early Policy

The colonies entered into trading agreements with local Indian tribes, and such agreements often included limits on the use of alcohol in trade, such as prohibiting traders from selling alcohol to the tribes or regulating its dispensation. Alcohol became a regular and profitable part of trade in the seventeenth and eighteenth centuries, but Indian leaders recognized its potentially destructive effects. Handsome Lake, an Iroquois leader, and other Native prophets warned against the dangers of alcohol and called for abstinence.

Early in 1802 President Thomas Jefferson asked Congress to pass legislation prohibiting liquor consumption by Indians. Jefferson did this at the Indians' request, as the Indians were aware of the negative effects alcohol had on their communities. Jefferson believed such legislation would also have a benefit for the white citizens of the country, as there would be fewer interactions with drunken Indians, which sometimes led to violence. Traders, however, did not want regulations because the alcohol trade was profitable. As historian Richard White has pointed out, alcohol was a product with "elastic" demand; it was the one commodity that Native trading partners sought in increasing amounts. Congress agreed with the president and passed legislation to regulate trade and interaction with the Indian tribes in an effort to preserve peace on the frontiers. The bill authorized the president to take measures to prevent the selling or distributing of spirituous liquors among Indians. All details were left to the president's discretion—when to prohibit, what to prohibit, how to prohibit, and to whom it should be prohibited.

Twenty years later Congress, recognizing that more specific regulatory legislation was needed, passed a bill allowing military officers, Indian agents, and territorial governors to search traders' goods when they suspected that liquor or spirits were being brought into Indian Country. If ardent spirits were found, the law required a forfeiture of all goods.

Trade and Intercourse Act of 1834

The commissioner of Indian affairs was given the responsibility of regulating alcohol. The act creating the office included a clause that prohibited the introduction of liquor and ardent spirits into Indian Country, but it failed to provide for any course of action or penalty if such spirits *were* introduced. Congress responded by passing the Trade and Intercourse Act of 1834 on June 30, which included regulations on the liquor trade. The act provided for a penalty of \$500 for anyone who "shall sell, exchange, or give, barter, or dispose of, any spirituous liquor or wine to an Indian, (in Indian country)." If a person introduced or tried to introduce liquor to Indian Country, he could be fined \$300, although an exception was made for liquor and wine necessary for the officers and troops of the United States. If any federal government official had reason to suspect or was informed that someone was about to introduce liquor, he was allowed to search the person's stores and belongings. If liquor was found, all the property of that person was seized and forfeited, with one half being disbursed to the government and one half to the informer. Additionally, any person employed by the government or any Indian could take and destroy ardent spirits or wine found in Indian Country.

The government, however, did not have the resources to enforce the law in an effective way. Additionally, liquor opened up opportunities for the trade in furs, and traders were willing to take the risk of fines and forfeiture for the large profits to be made from that commerce.

The 1834 act controlled alcohol regulation in Indian country for the next 120 years. In 1847 Congress amended the act by increasing penalties against traders who violated it. It also started penalizing Indians for their consumption of alcohol. Penalties for alcohol-related offenses included imprisonment of up to two years for someone convicted of selling liquor, and up to one year for someone convicted of introducing or attempting to introduce liquor. Indians were considered competent witnesses in these cases. The government also prohibited the distribution of annuities or goods to Indians while the Indians were under the influence of liquor, or if the agent believed that there was liquor in con-

venient reach of the Indians. And no annuities were to be distributed until the tribal chiefs agreed to use their influence to prevent the introduction and sale of liquor on their land.

In its original form, Congress's prohibition only applied to sales in Indian Country and not to individual Indians. Consequently, Indians residing or traveling outside Indian Country could still legally buy alcohol in towns that allowed the sale of spirits. Amendments to the act in 1862 and 1864 provided that no person could sell or provide liquor to any Indian under the supervision of an Indian agent, in or out of Indian Country.

Allotment Policy

In 1887 the federal government passed the General Allotment Act, or Dawes Act. Under the act, individual Indians would be given their own land, and an Indian with a land allotment would become a citizen after twenty-five years. Questions arose regarding the policy: if allotted Indians were citizens, were they subject to the Indian prohibition laws? Also, if the land was now owned individually by Indians, was it still considered Indian Country under the prohibition law? Local courts found that prohibition laws did not apply to Indians with allotments, although Indian agents on the reservations argued that they should. Congress again amended the Trade and Intercourse Act in 1897 and made it illegal for anyone to sell any type of intoxicant to "any Indian to whom allotment of land has been made while the title to the same shall be held in trust by the government" and refined the definition of Indian Country to include allotted land held in trust by the government.

The United States Supreme Court considered the issue in the case of *Matter of Heff* (1905). Albert Heff was convicted of selling liquor to an Indian in Kansas who had received his allotment under the General Allotment Act, and Heff appealed by arguing that the law did not apply because the Indian buyer was a citizen of Kansas and the United States. The Supreme Court found that allotment made the Indian a citizen of the state and subjected him to the laws of the state, of which regulating liquor was normally one. The Court held that if the power was held by the state, the federal government could not regulate in that area, and the act of 1897 therefore did not apply. The Heff case was officially overruled in *United States v. Nice* in 1916. In that case, the defendant sold whiskey to an allotted Indian in South Dakota. In overruling the *Matter of Heff*, the Court found, "As, therefore, these allottees remain tribal Indians and under national guardianship, the power of Congress to regulate or

prohibit the sale of intoxicating liquor to them, as it does by the act of 1897, is not debatable." The commissioner of Indian affairs approved of the decision, as it allowed the department to enforce liquor regulations on all Indians, allotted or not.

The New Deal

National prohibition went into effect in 1920. When it was repealed in 1933, it was not clear if Indian prohibition was also repealed. Although all Indians had become citizens by an act of Congress in 1924, Congress wanted the prohibition laws involving them to continue. It did recognize that the definition of Indian Country needed to be changed, as the lands ceded by the Indians under treaty in the 1800s were now likely to be settled almost completely by whites, who no longer needed or wanted prohibition, and that the allotted lands now held by whites should no longer be considered as Indian Country. Congress did seek to allow those whites with former Indian lands now outside the reservations to buy liquor, and so a law passed in 1934 revoked the application of the special Indian liquor laws to lands no longer held by Indians. Secretary of Interior Harold Ickes believed that Indians on reservations should still be treated differently, however, and should continue to be subjected to the Indian prohibition laws. Prohibition thus remained the government's policy for Indians on reservations throughout the nation, although enforcement remained a problem as bootlegging and smuggling continued to be profitable.

After World War II (1939–1945), many Indian veterans complained to the government that they had been able to obtain liquor while serving in the armed forces but could not legally drink at home. Prohibition, they argued, discriminated against Native people. Various Indian tribes passed resolutions urging that the sale of liquor be permitted to Indians off the reservations. Congress finally revoked Indian prohibition in 1953, declaring that the prohibitions against the sale and use of liquor would not apply in any area that was not Indian Country, or to any acts within Indian Country, which followed state and tribal law. Indians could drink off the reservations, and on reservations alcohol use would be subject to tribal regulations. Most tribes adopted prohibition laws, but they were not imposed on them by the government.

Self-Determination

Indian self-determination became federal policy beginning in the 1960s and 1970s. During this era, the main focus on alcohol changed from one of enforcement of laws through

punishment to one of health care, treatment, and prevention. The Self-Determination and Education Assistance Act of 1975 allowed tribes to contract with the federal government for the delivery of health services, including alcohol and substance abuse treatments and programs. Other laws and amendments, such as the Indian Health Care Improvement Act in 1976 and the Indian Substance Abuse Amendments of 1992, gave the tribes more involvement in creating health services culturally related to Indians. Programs dealing with alcohol use and crime prevention were also funded by the federal government.

Recognizing that substance abuse—including alcoholism—was an extremely severe problem affecting Indians physically, mentally, and economically, and acknowledging that the Bureau of Indian Affairs was not adequately dealing with the problem, Congress passed the Indian Alcohol and Substance Abuse Prevention and Treatment Act (IASAPTA) in 1986. IASAPTA and later amendments provided authority and resources for tribes to develop and implement alcohol abuse treatment programs at the tribal level. This included programs focused on fetal alcohol effects and fetal alcohol syndrome, a major health issue for Indian women and children. The federal government's involvement was to assist the tribes in confronting the effects of alcohol use.

Although most Native Americans do not abuse alcohol, many tribes still suffer the effects of alcohol abuse among their members, and it is a continuing health care issue that involves the tribes, the medical community, and the federal government. Studies and surveys have found that alcohol contributes to homicides, suicides, and motor vehicle accidents, and is a factor in producing higher mortality rates among Native people. Medical and sociological studies have looked at alcohol use of specific tribes over time, and many theories have been put forth about the causes of alcohol use and abuse. However, there is no clear singular explanation for the problem. Poverty, depression, unemployment, and lack of self-esteem are all possible effects of colonialism and are likely factors associated with alcohol abuse. Tribal governments are treating the issue as a medical, cultural, and spiritual problem.

All Indian Pueblo Council

The All Indian Pueblo Council was organized at the Santo Domingo pueblo in New Mexico on November 5, 1922, to defend the integrity of Pueblo lands, communal life, and tribal traditions. In particular, the council worked to defeat the Bursum Bill, which was introduced in Congress to ratify the land titles of non-Indians who had moved onto Pueblo territory and to place Pueblo water rights under the jurisdiction of the state courts. Such legislation would have resulted in the Pueblos losing much of their land.

When information regarding the bill became available, John Collier, a sociologist and Indian rights activist, alerted the Pueblos. The All Indian Pueblo Council drafted "An Appeal by the Pueblo Indians of New Mexico to the People of the United States." In the appeal, the council claimed the Bursum Bill would destroy communal life, customs, land, and tribal traditions (including Pueblo dances, which were thought by many whites to be immoral). A delegation from the council went to Washington, D.C., with Collier to testify before the Senate Committee on Public Lands. As a result of their efforts, as well as public outcry from other activists,

the Bursum Bill was defeated. In 1924 Congress passed the Pueblo Lands Act, a compromise bill that established a Pueblo land board to determine and protect the boundaries of Pueblo landholdings. The law gave the land board the power to examine the claims of non-Indian settlers on Pueblo land and evict those who did not possess legitimate titles.

An All Indian Pueblo Council, Inc. was subsequently established in 1969 as a social service organization to provide the nineteen Pueblo communities of New Mexico with various social, educational, and health programs.

Allotment in Severalty

Allotment in severalty refers to the division of tribal land into smaller individually owned units (allotments) owned in fee simple title. Starting with the Trade and Intercourse Act of 1790, the federal government began a policy of recognizing “Indian Country,” or the land to the west of the territorial borders of the United States. Land in Indian Country was recognized as belonging to a tribe until acquired by the federal government. American citizens could not buy land directly from Indians, only from the government. The process of allotment converted tribal land into privately owned sections of land that could in turn be sold to other Indians or to settlers.

The first allotments were assigned in the 1800s to members of southeastern tribes. To make land available for an influx of settlers, the federal government’s policy was to relocate (remove) the southeastern tribes to new lands west of the Mississippi River. When the tribes were removed, some Indians were given private title (an allotment) to land they farmed. Allotments were also granted to chiefs who cooperated with the federal government. This was part of an attempt at “peace with honor” with Native tribes as the American population expanded and moved west.

In the 1850s, however, the boundary between white settlement and Indian Country broke down. Reservations were established in hopes of eliminating conflict among Indians and non-Indians and avoid the destruction of the former. Most treaties in the 1850s contained provisions for the future

allotment of the lands set aside for a reservation. Most of the new reservations were west of the Mississippi River, and they continued to be created throughout the nineteenth and early twentieth centuries.

After the Civil War (1861–1865), white settlement continued to push west and by the census of 1890 there was no defined “frontier.” The United States Army had defeated the western tribes and removed them to reservations. The amount of territory available to tribes for hunting declined. In 1881 the area of Indian land totaled 155.6 million acres, much of it arid, and by 1890 the Indian population had declined to less than 300,000. By the late 1800s, the U.S. government became concerned with how to handle settler demands for Indian land while protecting the welfare of the Indian population.

During the 1880s and 1890s, policy debates were dominated by Indian reform organizations based mostly in the Northeast. Influenced by evangelical Protestantism, these groups believed that dividing reservations into privately owned farms would break the power of the Indian chiefs, encourage Indians to become farmers, and hasten the spread of protestant Christianity among Indians. The basis of this belief was a largely inaccurate model of Indian societies popular among social scientists in the 1880s. Each tribe was different, but families often had a recognized use right to land they farmed, and most tribes were far less hierarchical than the reformers believed. Reformers also saw allotment as a way of protecting Indian lands from further loss to trespassing white settlers.

The high point of this movement was Congress’s passage of the General Allotment (Dawes) Act of 1887. The law, which was approved with little opposition, authorized the president to divide a reservation into 160-acre holdings and assign the allotments to the heads of a family. Each person receiving an allotment became a citizen of the United States. Indians who did not live on a reservation could receive an allotment from the public domain. Several tribes, including the so-called Five Tribes in the Indian Territory (the Cherokees, Chickasaws, Choctaws, Creeks, and Seminoles), the Osages, and the Senecas in New York, were not subject to the Dawes Act. To protect Indians unfamiliar with market transactions from fraud or abuse, allotments were to be held in trust for a twenty-five-year period, during which time they could not be leased, sold, taxed, or willed to an heir. At the end of that period, an allottee received full title to his land (a patent in fee). Unallotted land (called surplus land) either remained in tribal control or was sold to the federal

government for sale to non-Indians. Before 1903, any tribe that held its land by treaty had to consent to the sale of surplus lands to the federal government. After the Supreme Court's decision in *Lone Wolf v. Hitchcock* that year, however, lands could be sold without a tribe's consent.

The Five Tribes in Oklahoma

Although the five major tribes in the Indian Territory were exempt from the Dawes Act, political pressure developed to open their lands in what is present-day eastern Oklahoma. Only the tribes could own property in the Indian Territory, although many non-Indians lived there. In 1898 Congress passed the Curtis Act, which dissolved tribal governments in the territory and called for the division of tribal lands among members of the tribe.

The last tribe to divide its lands and cease to govern them was the Creeks, who ratified an allotment agreement in 1901. In total, 15.8 million acres were allotted to 101,506 members of the Five Tribes. Originally, in the Indian Territory a part of each Indian's allotment was held in trust as a "homestead," but the rest could immediately be sold. In 1908 Congress removed all restrictions on the sale of homesteads for tribe members who were half or more non-Indian.

Amendments to the Dawes Act

In 1891 Congress amended the Dawes Act so that each adult received an allotment of 80 acres rather than each head of household receiving 160 acres. More importantly, the amendment allowed the commissioner of Indian affairs to lease allotments to white farmers. In 1902 Congress allowed the commissioner to authorize the sale of heirship allotments, which were allotments of deceased Indians that had been divided among multiple heirs and held in trust status.

A key change in how allotments were administered came with the Burke Act of 1906. The act allowed the Office of Indian Affairs to end the trust period before the end of twenty-five years, or to extend its term. An Indian did not become a citizen until granted a patent in fee (fee simple title), at which time he was no longer treated as a ward of the federal government. In 1907 Congress authorized the commissioner of Indian affairs to sell the allotments of individuals while the land was still in trust status and place the money in a restricted account for the benefit of the allottee. In 1910 Congress allowed Indians in trust status to make wills, in order to prevent the wasteful division of small plots of land among multiple heirs. The effect of these changes

was to make Indians and their property subject to direct bureaucratic supervision on a case-by-case basis. In the years from 1917 to 1920, the Office of Indian Affairs moved to grant a large number of Indians fee simple title and citizenship and end their supervision by the federal government.

Implementation of the Dawes Act

The first reservations to be allotted after the passage of the Dawes Act were in areas then being developed for commercial agriculture. As settlement began in drier areas of the West after 1900, settlers and their representatives in Congress placed more pressure on the Office of Indian Affairs to allot new reservations, since this opened surplus land for sale to whites. Reservations in areas where there was little pressure from outside interests to purchase land or where Indians were using most of the land, such as in the Southwest, were typically not allotted.

The number of allotments issued varied greatly from year to year. Excluding lands of the Five Tribes, 3.7 million acres were allotted between 1888 and 1899. Most of these were on reservations in western Oklahoma, the eastern plains states (Minnesota, the Dakotas, and Iowa), and the western portions of Washington and Oregon. The busiest period for allotment was from 1900 to 1916, when 14.7 million acres were allotted, many on large reservations in the western plains states. The pace then slowed; only 5.4 million acres were allotted from 1916 to 1934.

The uneven process of allotment resulted in all Indians on some reservations receiving their allotments at the same time. On others, especially larger reservations in the West, allotments were issued gradually over many years. Surplus lands sometimes opened to white settlers before Indians received allotments elsewhere on the reservation.

In all, roughly 25.4 million acres were allotted to Indians under the Dawes Act or by special legislation from 1887 to 1933, including 1.6 million acres of land taken from the public domain. Of this total, 16.1 million acres remained in trust status in 1934. Another 15.8 million acres were allotted to members of the Five Tribes between 1897 and 1902, of which 1.4 million acres remained in trust status in 1934.

During this era most tribes lost land, but a few—mainly in New Mexico and Arizona—gained substantial amounts from the public domain, so the total figure is a net of gains and losses. Much of the land loss was from the sale or transfer of surplus lands to the federal government, as well as the removal of individual lands from trust status. Federally recognized land holdings fell from 155.6 million acres in 1890

to 52.6 million acres in 1934, including individual land in trust status (17.6 million acres).

Consequences of the Allotment Policy

The allotment policy as carried out by the federal government in the late nineteenth and early twentieth centuries is often criticized as having mostly failed to promote economic development among Indians. One consequence of the allotment policy was that tribal lands were reduced to 34.3 million acres by 1934, and millions more acres remained under federal supervision. There is no record of how much of the land removed from trust status was still owned by Indians, but a large part of it was undoubtedly sold.

The selling of land was not always against an Indian's best interest, but sometimes land was sold or restrictions against sale removed without the consent of the allottee. Land could also be sold for Indians by agents without their consent. Too often the result was that allottees were defrauded of their land. Heirship lands were a particular problem, since multiple owners of a small parcel could not always agree on what to do with the allotment. Often the only solution was to lease or sell it. For members of the Five Tribes, the terms of their allotment allowed for the immediate sale of all or part of the land allotted. A large number lost their land quickly.

The government sought to justify allotment as a way to promote Indian farming, but a number of Indians were already farmers or ranchers on reservation lands before allotment. The number of Natives working the land instead declined in the early twentieth century. In 1910 there were more than 3.1 million acres of Indian farms in Oklahoma and the ten states with the most allotments. This total declined to less than 2.4 million acres in 1930. The Office of Indian Affairs failed to adequately train Indians to be farmers, left them with little access to credit for improvements or machinery, and sometimes divided reservations into fragmented holdings that were hard to farm efficiently.

The sale of surplus lands and allotted land left some reservations dotted with non-Indian farmers, and in some cases tribal cohesion was weakened. On other allotted reservations, tribes remained united, however.

The obvious economic and health problems of Indians in the 1920s led some to advocate major reforms of Indian programs. The *Meriam Report* of 1927 advocated a restructuring within the existing policy framework. The onset of the Great Depression and the election of Franklin D. Roosevelt in 1932, however, resulted in more drastic institutional change. One section of the Indian Reorganization Act of 1934

ended the allotment of Indian reservations. Problems related to the administration of individual allotted lands held in trust, however, continued throughout the twentieth century.

American Fur Company

John Jacob Astor founded the American Fur Company in 1808 in an attempt to compete with other large fur trading companies, such as the North West Company and the Hudson's Bay Company. The American Fur Company eventually branched out into the Pacific Fur Company and the South West Company. The Pacific Fur Company handled operations in Oregon country, and the South West Company oversaw the Midwestern fur trade.

The American Fur Company established trading posts in the Great Lakes region and traded with many American Indians. The company also established a post in Astoria, Oregon. The War of 1812 (1812–1814) hurt the company, as it lost its Pacific Fur Company and South West Company

branches to the British, who seized Fort Astoria as well. Fortunately for Astor, Congress passed a bill in 1817 that excluded foreign traders from the United States, and the American Fur Company's financial situation recovered. It held a monopoly over the fur trade in many regions, particularly in the Midwest and around the Great Lakes, and was one of the first American trusts. The company often bought out or otherwise put smaller companies out of business.

An example of how the company operated can be found by looking at the Great Lakes region. The American Fur Company's Northern Department was stationed on Mackinac Island, which is strategically located in the Straits of Mackinac, where Michigan's Lower and Upper Peninsulas meet, as do Lakes Huron and Michigan. Great Lakes furs were sent to London, and the company then imported goods to trade with the Indians, such as cloth, utensils, tools, and guns. Elsewhere in the Great Lakes area the fur trade was just as lucrative. In Minnesota and Wisconsin the company was divided into several smaller outfits to handle the volume of the trade. Many of the men in charge of these operations held considerable influence over local Indian affairs, particularly amongst the growing number of Indians who intermarried with the French-Canadian, Scottish, and American traders. The American fur trade would not have been as successful without the help of the Indians, who took part directly by trading for European goods and showing trappers where to hunt.

Astor used his political connections to his advantage. For example, Senator Thomas Hart Benton pushed through the abolition of the War Department's factory system, which competed with Astor's fur trading posts. The company also frequently lobbied Congress for increased regulation of trade and alcohol. When they traded with Indians, fur traders frequently were confronted by missionaries who detested their use of alcohol.

In 1834 John Jacob Astor left the company because he foresaw the decline in the popularity of fur in fashion. The company split into separate parts, and the Pacific Fur Company became independent while the midwestern portion of the company continued under the name American Fur Company. However, it was a losing enterprise, and many trading posts closed, which cut off a source of revenue for the Indians who traded furs at those posts. In addition, new competition surfaced, as did new fashions, such as silk. The American Fur Company had always had serious rivals in the North West Company and the Hudson's Bay Company, and the competition never slowed down. The American Fur

Company folded in 1842. However, during its peak it was one of the largest companies in the United States and helped propel John Jacob Astor into the position of one of the wealthiest men in American history.

American Horse

The Oglala Lakota (Sioux) chief American Horse the Younger (c. 1840–1908; Washicun Tashanka) was born in the Black Hills region of present-day South Dakota. He was the nephew of American Horse the Elder (also known as Ironshield or Washicun Tashanka), who was one of the primary leaders of the Lakota forces at the Battle of Little Bighorn on June 25, 1876.

In 1866, during conflicts with the U.S. Army over the Bozeman Trail, American Horse rose to prominence as a leader among his people. Later, convinced that U.S. domination of his homeland was inevitable, he counseled peace and cooperation with the government. In 1887 American Horse was of one of the Lakota chiefs who signed a treaty with the Crooks Commission that reduced the Great Sioux reservation in South Dakota by about one-half. Many of the Lakotas resisted this agreement.

Resentment over the U.S. government's treatment of the tribe and hard times brought on by drought and inadequate rations made the Lakotas on the Pine Ridge reservation especially interested in reports of a new Indian messiah in the West in the late 1880s. In the fall of 1889, American Horse participated in a council of leaders that sent a delegation to meet with Wovoka, the prophet of the Ghost Dance religion. However, when they returned American Horse resisted the adoption of the new religion. In the crisis-filled atmosphere leading up to the Wounded Knee massacre in December 1890, he tried to exert a calming influence on the people at Pine Ridge.

In 1891 American Horse was part of a large delegation of Lakota leaders who traveled to Washington, D.C., to present

the grievances of the tribe to the U.S. government. He died on the Pine Ridge reservation in South Dakota in 1908.

American Indian Chicago Conference

Held at the University of Chicago in June 1961, the American Indian Chicago Conference was a seminal event that helped spark Indian activism during the 1960s. With the encouragement of the administration of President John F. Kennedy, anthropologists Sol Tax, Nancy O. Lurie, and Chicago American Indian Center chief Robert Rietz organized the event as a forum for diverse Native American groups to discuss common problems and recommend solutions. The National Congress of American Indians (NCAI) endorsed the conference and influential Indian leaders D'Arcy McNickle, Helen Peterson, John Rainer, and Clarence Wesley set the program agenda. Ultimately, 460 participants convened in Chicago, representing a broad cross-section of Indian peoples, including members from western reservation tribes, unacknowledged communities, eastern groups, and urban areas.

The conference delegates produced "The Declaration of Indian Purpose," a manifesto that strongly rejected the forced assimilation agenda of the 1950s, emphasized Indian desire to preserve their cultures, and called for self-determination in planning and implementing policy. The declaration further demanded government officials respect treaty rights and called for greater federal assistance in education, industrial development, and welfare services. An unexpected outgrowth of the conference occurred when college-educated participants, dissatisfied with the moderate approach of older tribal leaders within the NCAI, formed the National Indian Youth Council (NIYC) in Gallup, New Mexico, later that summer. The NIYC went on later to lead the Red Power movement. As the largest intertribal meeting of the era, the Chicago conference raised awareness of Indian issues, sig-

naled a new Indian desire to handle their own affairs, and helped bring an end to forced assimilation policies.

American Indian Defense Association (AIDA)

John Collier founded the American Indian Defense Association (AIDA) in 1923 for the purposes of protecting the religious freedom and tribal property of Native Americans and revitalizing their life and culture. Collier formed the organization after receiving a tour of Native American communities in the early 1920s from Antonio Luhan, a member of the Taos Pueblo in New Mexico. The AIDA membership consisted of middle- and upper-class white people dedicated to Indian rights. By 1932 the organization had 1,700 members.

The AIDA attempted to consolidate various Indian interest groups, particularly the Pueblo people. It lobbied Congress to address problems associated with Indian poverty, to grant Indians greater cultural and religious freedom, and to recognize tribal organizations as legitimate negotiators in policy making. In part due to Collier's efforts in the AIDA, President Franklin D. Roosevelt appointed him the new commissioner of Indian affairs in 1933. In 1934 Collier introduced the "Indian New Deal" with passage of the Indian Reorganization Act of 1934 (also known as the Wheeler-Howard Act). The Indian Reorganization Act reversed the General Allotment Act, or Dawes Act, of 1887, in which the United States had divided Indian territories into tracts and allotted them to individuals. Between 1887 and 1934, the government had used the Dawes Act to take away over 90 million acres of tribal land that had been guaranteed to tribes by treaties under federal law.

In 1936 the AIDA merged with the National Association of Indian Affairs to form the Association of American Indian Affairs, which remained in existence in the early twenty-first century.

American Indian Federation (AIF)

The Indian Reorganization Act's (IRA) planned redirection of federal Indian policy provoked concern and opposition among some Native Americans. On June 8, 1934, as the IRA moved toward congressional approval, a small group of Native Americans assembled in Washington, D.C., founded the American Indian Federation (AIF), and encouraged tribal communities to reject the IRA. Under the presidency of Joseph Bruner (Creek), AIF membership peaked at 3,500 by the time of the organization's dissolution in 1942.

The AIF insisted that federal Indian policy as established and applied by Washington over the previous fifty years still best served Native Americans. Most AIF members were examples of the acculturation program embedded in current policy—highly educated, prosperous, and engaged directly in the broader society. They believed that Indians had to adopt the positive traits and values of white society, secure a sound education, and accept Christianity for their material success and their own survival in modern America, and they maintained that existing federal policy, once tweaked, would ensure this progress. AIF members claimed that the inclusion and true equality of Native peoples in the mainstream population required the abolition of the Office of Indian Affairs and all federal guardianship programs.

The AIF position countered the view of “traditionalist” Indians who saw in the IRA an opportunity to resurrect the cultures of their ancestors. The new federal policy sanctioned traditional religious ceremonies such as the Sun Dance and peyote use, two features of tribal spirituality outlawed by the government decades earlier. Traditionalists wanted tribal lands held in common ownership as in the past, a position taken by the IRA. Moreover, IRA provisions and projects provided by the larger, national New Deal assured Indians of substantial improvements in Indian health care, tribal economics, and educational opportunities.

The AIF battled the traditionalists throughout the 1930s, and as long as the AIF message remained fixed on its fundamental arguments, membership continued to rise. But some individuals within the AIF challenged the IRA as a communist-inspired plan created purposely by persons within the executive branch of government, chiefly Commissioner of Indian Affairs John Collier. Central to their opposition was the IRA's provision for Indian lands to be returned to common ownership rather than remain privately owned. AIF members such as Elwood Towner and Alice Lee Jemison complained that the current Indian Education Service openly praised the model of education employed within the Soviet Union. At their most extreme, Jemison, Towner, and a few others in the AIF openly associated themselves with American fascist groups such as the German-American Bund, the Silver Shirt Legion, and the James True Associates. Although not supportive of the racism central to Nazi ideology, they found among the American fascists a similar anti-communist sentiment and expected to use those newfound connections and financial support to advance the anticommunist argument against the IRA. It was this association in the late 1930s, just as Nazi Germany was moving Europe toward war, which fractured the AIF internally and brought the watchful eyes of the federal government upon the organization.

The federation actually accomplished little in its short existence. Arguments for or against the IRA and other reform programs emanating from Washington were typically fought within individual tribal groups, among tribal members, and for reasons most often unique to themselves, their particular circumstances, and their own long-term relationship with the federal government. The AIF, however, succeeded in giving a united voice to a large segment of well-accultured American Indians and was, in part, responsible for the government abandoning the IRA for a renewed focus on Indian assimilation as the post–World War II policy.

American Indian Law Center (AILC)

The American Indian Law Center (AILC), located in Albuquerque, New Mexico, is the oldest Indian-controlled research and policy organization in the United States. The AILC grew out of the University of New Mexico's creation in 1967 of the Special Scholarship Program in Law for American Indians. The center was separated from the university in 1977 and became an independent, non-profit organization. It is still housed at the university and maintains close ties to it.

The AILC conducts training for lawyers and judges, assists in drafting model codes, and serves as court administrator for the Southwest Intertribal Court of Appeals. Its most significant program, however, is the Pre-Law Summer Institute (PLSI), which began as the Special Scholarship Program. The PLSI was designed as an eight-week summer course to encourage and prepare Indians for law school. When it began in 1967, fewer than twenty-five Indian attorneys and fifteen law students were identified in the entire United States. Over the forty years of its existence, the number of Indian attorneys has grown to several thousand and the number of Indian law students is in the hundreds. Approximately one-half of these attorneys and law students are graduates of the PLSI.

Former commissioner of Indian affairs Robert L. Bennett served as AILC's director from its founding until his retirement in 1972. Philip S. (Sam) Deloria served as director from 1972 until 2007, when he retired and was replaced by Helen Padilla.

American Indian Movement (AIM)

The American Indian Movement (AIM) was founded in 1968 by Chippewa Indians Clyde Bellecourt, Eddie Banai, Dennis Banks, and Mary Jane Wilson. The organization arose out of concerns of Native Americans in Minneapolis, Minnesota, over the living conditions of city-dwelling Indians. AIM members coordinated a patrol to monitor police activities in Indian neighborhoods and to prevent unjust arrests and police mistreatment of Indian residents. AIM ultimately extended its area of concern to include reform of relations between Indians and the federal government. To this end, AIM carried out the 1970 occupation of Mt. Rushmore and the Trail of Broken Treaties caravan to Washington, D.C., in 1972. The latter ended with the seven-day occupation of the Bureau of Indian Affairs (BIA) headquarters building.

Alcatraz, the Mayflower II, and the Trail of Broken Treaties

In June 1970, Dennis Banks and other AIM members traveled to San Francisco to lend support to the American Indian students who had occupied Alcatraz Island. The students occupied the island in November 1969 and held it until July 1971. Incorporated as Indians of All Tribes, the group demanded that title to Alcatraz be returned to the Indians and that an Indian university, cultural center, museum, and training school be built on the site of the former federal prison. Their mantra was "Indian self-determination without termination."

AIM members remained on the island for approximately two weeks, giving advice on security and logistics. AIM leaders learned from the Alcatraz Island occupiers as well. They saw that the use of the national and international media could be used to hold the federal law enforcement agencies at bay.

On November 26, 1970, AIM, led by Russell Means, seized control of the Mayflower II, a replica of the original *Mayflower*, in Plymouth, Massachusetts. Means and members of twenty-five Indian tribes proclaimed Thanksgiving a national day of mourning to protest the taking of Native American lands by white colonists. They credited the occupation of Alcatraz Island as the symbol of a newly awakened desire of the Indians for unity and authority in the white world.

American Indian Movement leader Russell Means, left, and Clyde Bellecourt, right, speak after the shooting death of an AIM member by Bureau of Indian Affairs police near Pine Ridge, South Dakota, in 1973.

In 1972 AIM organized a national cross-country caravan known as the Trail of Broken Treaties, a nationwide protest march on Washington, D.C. The march originated on Alcatraz Island following the death of Richard Oakes, spokesperson for the Alcatraz takeover, and resulted in the seventy-one hour occupation of the BIA headquarters. Here AIM leaders presented a twenty-point manifesto demanding redress of wrongs against Indian nations and peoples.

“Red Power” and AIM

The Red Power movement received its impetus from the Black Power movement of the 1950s and 1960s and began with the 1969 occupation of Alcatraz Island. Young Indians, particularly those attending colleges under the government’s Office of Economic Opportunity (OEO) programs, began to see what could be accomplished through protest activities and media attention. Unlike the Black Power movement, the

Red Power movement originally focused on nonviolent confrontation, such as the takeover of abandoned federal facilities. Once weapons and violent tactics were introduced, however, the Red Power movement was targeted by the Federal Bureau of Investigation (FBI) for elimination.

AIM rose to prominence in Red Power protests after the occupation of Alcatraz Island and exercised a great deal of influence in the movement. AIM protest activities and strategies moved through Indian communities via Indian social and kin networks, and through the “powwow circuit,” which passed information along to Indian families engaged in travel between the cities and reservations. Perhaps the most important factor was the manipulation of the news media—AIM leadership became particularly skillful at encouraging journalists to dramatize Indian problems and protests.

The involvement of urban Indian individuals and groups such as AIM in protest actions sited on reservations exacerbated tensions that already existed inside Indian communities. These tensions were not only between urban and reservation Indians, or between AIM and tribal governments, they also arose out of the political divisions on reservations themselves. All of these tensions became magnified as the activism of the 1970s progressed. The tone of protest became less celebratory and more violent. No single event of the Red Power movement era illustrated the combination of Indian grievances and community tensions more clearly than the events on the Pine Ridge reservation in the spring of 1973, a ten-week siege which came to be known as Wounded Knee.

Wounded Knee (1973)

The conflict at Wounded Knee, a small town on the Pine Ridge reservation in South Dakota, was both a high- and low-water mark for the American Indian Movement. In the spring of 1972, the BIA backed the questionable election of Richard “Dickey” Wilson as tribal chair of the Oglala Sioux Nation. Wilson practiced nepotism in allocating jobs and tribal funds, and, as a result, traditionalists had no voice in tribal government and were left jobless and destitute. They turned to AIM for support. Wilson offered a threat and a challenge to AIM leader Dennis Banks, stating that he would cut off Bank’s Indian hair braids if Banks set foot on the Pine Ridge reservation. By February 1973 a major confrontation was brewing, and by the end of the month armed Indians, aided by AIM, had occupied the reservation.

The goals of the occupation, as outlined by AIM leaders, included supporting the reformation of tribal government

and bringing attention to Native American grievances. AIM leaders specifically wanted a hearing to take place concerning treaty violations by the U.S. government and the reinstitution of treaty making and treaty rights that had formally ended in 1871. Gunfire was exchanged between government forces and AIM security throughout the occupation. U.S. marshal Lloyd Grimm received an injury that paralyzed him from the waist down. A Cherokee Indian, Frank Clearwater, received a fatal wound while asleep on a cot in an occupied church. Lawrence Lamont, a Lakota resident of the Pine Ridge reservation, was shot and killed on April 26th. Following the two deaths, both sides agreed upon a tenuous cease-fire.

The U.S. government and the AIM leadership developed a series of proposals that were rejected by one side or the other. In late March an agreement was signed. The terms of the agreement stated that the Wounded Knee occupiers would agree to lay down their weapons, and Russell Means and any occupiers with outstanding warrants would be arrested. By May 8, 1973, the takeover had ended. Hunger, lack of electricity, low morale, and the inability to bring new Indian blood onto the Wounded Knee compound ultimately doomed the occupation, which lasted a total of seventy-one days. Many of the AIM members involved in Wounded Knee spent the next years in courtrooms, in hiding, or in prison as a result of that siege and the later 1975 shootout with FBI agents at the Jumping Bull compound.

Over four hundred people were arrested at Wounded Knee. Seven defendants were charged with major conspiracy and 127 were faced with charges of breaking and entering, larceny, conspiracy, and interfering with federal marshals. Ninety-seven persons were charged and tried in the tribal courts of the Oglala Sioux for riot or unlawful assembly as defined in the tribal code.

After Wounded Knee

Following the Wounded Knee occupation, AIM leaders were either in prison or hiding in the United States or Canada. They had failed to develop a funding base, and, more importantly, caught up in the media frenzy surrounding them, they did not seek out or train a next generation of activists that could resurrect AIM and reinvigorate the Red Power movement.

The final blow to the American Indian Movement came in June 1975 when two FBI agents, Jack Coler and Ron Williams, entered the Jumping Bull compound on the Pine Ridge reservation in South Dakota. Coler and Williams were

allegedly in pursuit of Jimmy Eagle, an Indian they were attempting to serve with a warrant in connection with the theft of a pair of cowboy boots. Driving an unmarked vehicle, Coler and Williams entered the compound where members of AIM, who had been invited by the Jumping Bull elders, were camped. For reasons that remain unclear, gunfire broke out. When the shooting ceased, Coler and Williams were dead, both shot through the head at close range. A young Indian named Joe Stuntz was also killed, shot by a sniper bullet. The government charged and convicted Leonard Peltier for the death of the two FBI agents.

The American Indian Movement as a unified national organization ceased to exist by the early twenty-first century. Competing incarnations under various versions of the name continued to advocate for the interests of American Indians, as did many of the original members and leaders of AIM.

American Indian Policy Review Commission (AIPRC)

In 1975 Congress passed Public Law 93-580, which established the American Indian Policy Review Commission (AIPRC). Under the leadership of Senator James Abourezk (D-S.D.), the AIPRC's eleven members headed research task

forces that held public hearings, interviewed tribal leaders, and conducted field investigations in Indian Country. The commission studied the status and living conditions of American Indians and tribes in order to make recommendations to Congress and the Bureau of Indian Affairs (BIA) for improving their situation. After two years, the commission presented its two-volume, 923-page report to Congress in May 1977.

The report's findings influenced Congress to enact legislation instrumental to improving American Indians' quality of life, including the Indian Child Welfare Act of 1978 and the Joint Resolution on American Indian Religious Freedom (1978). The Senate created a Committee on Indian Affairs, which replaced the AIPRC; the Department of Education created an Office of Indian Education. The Department of the Interior elevated the position of commissioner of Indian affairs to that of assistant secretary of Indian affairs, and the BIA prepared criteria for the recognition of previously unrecognized tribes. Also at the AIPRC's recommendation, Congress restored the tribal status of tribes subjected to the mid-1950s policies of termination, which had removed significant portions of tribal lands from trust status, extended state jurisdiction in some regions, and ended direct government relationships with 109 tribes.

The AIPRC's report also led to a renewed emphasis on the idea of the "trust relationship" in American Indian affairs. This idea highlighted principles of tribal sovereignty and self-determination and made possible much of the tribal growth and development evident by the early twenty-first century.

American Indian Religious Freedom Act (AIRFA; 1978)

The American Indian Religious Freedom Act of 1978 (AIRFA) was a joint resolution of the Senate and House of Representatives (42 U.S.C. 1996) passed during the early self-determination era of U.S. policy toward Native Americans. While AIRFA was much-heralded, it actually had no enforcement provision. Rather it was a broad policy statement declaring that "the lack of a clear, comprehensive, and consistent federal policy has often resulted in the abridgement of religious freedom for traditional American Indians." The resolution went on to affirm that "it shall be the policy of the United States to protect and preserve for American Indians their inherent right of freedom to believe, express, and exercise" their traditional religions, including "access to sites, use and possession of sacred objects, and the freedom to worship through ceremonials and traditional rites." AIRFA ended by requiring federal departments to "evaluate their policies and procedures in consultation with native traditional religious leaders" and report back to Congress.

AIRFA was a reaction to the history of repression of American Indian spiritual beliefs and practices that reached back to the founding of the United States. While the First Amendment to the U.S. Constitution guarantees free exercise of religion, that right had never been extended to include the religious practices of the continent's indigenous populations. The active repression of those practices in the 1800s was part of the larger U.S. policy of erasing Native cultures and assimilating Native individuals into the mainstream culture. This repression ranged from refusal to let Native court witnesses take an oath using an eagle feather to massacring dozens of Lakota (Sioux) at Wounded Knee, South Dakota, in 1890, in an attempt to stop the practice of the Ghost Dance. As a result, indigenous religions went underground, and Indians became highly protective of their practices and of the exact locations of many sacred sites.

AIRFA was the result of years of lobbying by Native organizations and tribal governments in an effort to gain protection of their beliefs, practices, and sacred sites. It was partly necessary because, in many situations, reservations did not include sites of critical spiritual significance. This made it difficult or impossible for Native practitioners to legally access state, federal, and private property in order to continue centuries-old practices.

While the evaluation of federal policies and procedures that AIRFA mandated was completed by the Native American Rights Fund, the American Indian Law Center, and the Native American Religious Advisory Board, the resolution was a disappointment. Its author, Rep. Morris Udall (D-Ariz.), observed that AIRFA was toothless and did not change any law. And because it was not enforceable, it was basically ignored, particularly at first.

Federal court decisions stated that attempts by Indians to practice their spiritual beliefs under AIRFA violated the establishment clause of the First Amendment to the U.S. Constitution. That clause forbids government support of any particular religious practice. Because a high proportion of sacred sites are located on lands controlled by federal agencies, federal permission for Native religious practices in the interest of “free exercise” of religion became labeled as a forbidden “establishment” of religion. For example, in 1980, Navajo requests for exclusive use of the Rainbow Bridge area in Utah during ceremonies were blocked on this basis in *Badoni v. Higginson* (1981).

In one of the best-known cases drawing on AIRFA, the U.S. Supreme Court held in 1988 in *Lyng v. Northwest Indian Cemetery Protective Association* that the federal government could pave a six-mile section of a dirt logging road in California. The road, known as the “G-O Road,” traversed lands controlled by the U.S. Forest Service. The area was central to the Yurok, Karok, and Tolowa tribes, which used it for ceremonies and as a training and renewal ground for its youth and spiritual leaders. In effect, the Court said that American Indians had a right to their *beliefs*, but not to the ability to *practice* those beliefs.

In reaction to the *Lyng* decision and to a 1990 decision regarding religious use of peyote (*Employment Division v. Smith*), AIRFA was amended in 1993 with broad support from a variety of religious organizations. The amendment reinstated the need to prove that there was a “compelling government interest” before freedom of religious exercise could be abridged. In 1994, further amendments designed to protect sacred sites, Indian prisoners’ rights to religious practices, and the acquisition and use of bird and animal parts in religious ceremonies failed to pass. But an amendment designed to protect the use of peyote, a hallucinogen derived from certain cacti, in traditional ceremonies succeeded. In 1996, President Clinton issued Executive Order 13007, which attempted to further define federal agencies’ responsibilities to “accommodate access to and ceremonial use of Indian

sacred sites” and “avoid adversely affecting the physical integrity of such sacred sites.”

Most major land management agencies, including the National Park Service, U.S. Forest Service, and Bureau of Land Management, have moved toward greater compliance with the spirit of AIRFA. For example, the National Forest Service has protected the Medicine Wheel site in Wyoming, and the National Park Service has cooperated with Indian communities in discouraging rock climbing at Devil’s Tower National Monument during June, a key ceremonial time. AIRFA is also considered a predecessor to the Native American Graves Protection and Repatriation Act of 1990.

Other practices and places have, however, not been protected. A federally supported astronomical observatory was built on Mount Graham in Arizona, a site sacred to the Apache. Bear Butte (Mato Paha) is managed as a South Dakota State Park. It is the most sacred location on the Great Plains, used ceremonially by over thirty indigenous nations. Despite Indian protests, a campground and large amphitheater were built near the butte in 2006 to accommodate visitors to the Sturgis Motorcycle Rally.

In short, AIRFA is an important policy statement, but the resolution of controversies involving American Indian religious freedom continues to be accomplished on a case-by-case basis.

American Revolutionary War (1775–1783)

The American Revolutionary War ended in a political and military triumph for the Americans who rebelled against the British Crown. Its impact on Native Americans was less clear. Some Indian nations, like the Six Nations of Iroquois, suffered immense hardship during the conflict, their fields and towns destroyed by American troops, and hundreds of men, women, and children killed by injury or starvation. Others, like the Chickasaws, participated in the fighting but suffered no ill effects from the war itself. Still others, like the Plains Indian tribes, heard little of the revolution and were more concerned with the smallpox epidemic that swept through the Americas during the war. In the long term, however, the war had negative consequences for Native North Americans: it caused many white Americans to regard Indians as an enemy race fit only for expulsion or elimination, and they therefore began laying the perceptual foundation for the U.S. government's nineteenth-century Indian removal policy.

Indian Recruitment and Native Agendas

From the very start of the war, both British officers and American officials recruited Indian warriors into their armies. In 1775 Mahicans from the town of Stockbridge, Massachusetts, volunteered for service with the Continental Army, while Mohawk warriors fought American soldiers in the Saint Lawrence Valley during the Quebec campaign of 1775–1776. In subsequent years both armies employed Native Americans as scouts, auxiliaries, and line soldiers, paying them usually in trade goods and military equipment such as guns, medals, and uniforms. The two armies also periodically bought corn, meat, and other supplies from Native American men and women.

Britain's superior military resources, however, allowed its officers and agents to offer larger payments to Indian recruits. In addition, the British government had by 1775 developed a network of experienced Indian agents, commissaries, and traders with close ties to Indian communities. Native American warriors were therefore likelier to heed British agents' requests for military assistance than those of unfamiliar rebel agents. Finally, several Indian nations, like the Shawnees and Cherokees, had standing grievances against the American colonists, who had stolen their land in shady deals, murdered Indian travelers, and poached game

from tribal hunting preserves. These factors helped ensure that more Native Americans would ally with King George III than with George Washington. During the course of the conflict, at least twelve thousand Iroquois, Great Lakes, and southeastern Indians fought against the rebels, while only about one-tenth that number—mainly from small Indian nations like the Catawbas, Oneidas, and Penobscots—fought on the side of the United States.

The Destructive War: The Cherokees, the Ohio Valley, and the Six Nations

The first major military operation involving large numbers of Native Americans was the Cherokee campaign of 1776. Early that year, Cherokee warriors raided and plundered white settlements on the southeastern frontier. The Americans attributed the attacks to British instigation, but the Cherokee raiders were actually protesting their chiefs' recent land sales and displaying solidarity with Shawnee warriors who had asked them to join a pan-Indian military confederation. The governments of Virginia and North and South Carolina did not inquire into the Cherokees' motives, instead authorizing state militia to invade Cherokee country in the summer and fall and destroy over forty towns, along with orchards and cornfields. Cherokee chiefs sued for peace, but a militant faction known as the Chickamaugas continued to fight the Americans until the end of the war. Southern state militias thus continued to burn Cherokee towns in retaliation for Chickamauga raids. The Cherokees endured new American invasions every year from 1779 to 1782.

Meanwhile, warriors from the Northwest Indian nations—the Shawnees, Wyandots, Ojibwes, and others—conducted a simultaneous offensive against the new white settlements in central Kentucky and the frontier villages of southwestern Pennsylvania. From 1776 to 1778, Shawnee and allied Indian gunmen attacked farmsteads and travelers in the Ohio Valley and returned home with prisoners, plunder, and scalps. Frontier settlers responded by building block-houses, organizing patrols, and conducting the occasional attack on Native American noncombatants (like Edward Hand's murder of thirty Delaware women in the 1778 "squaw campaign"). In 1778–1779 Virginia militia under George Rogers Clark captured the British-held towns of Kaskaskia, Cahokia, and Vincennes, leading to a temporary halt of Indian raids. During the early 1780s, however, Iroquois and Lakes Indian warriors, reinforced with British troops and Loyalist militia, destroyed or besieged American settlements like Bryan's Station, Kentucky, and Hannastown,

Pennsylvania. Kentucky and Pennsylvania militia burned Delaware and Shawnee towns in retaliation; in one notorious incident in 1782, Pennsylvania militia slaughtered ninety-five pacifist Moravian Delawares in the village of Gnadenhutten, in present-day Ohio.

In the northeast, the Six Nations of Iroquois initially proclaimed their neutrality, but by 1777 the nations of the Iroquois League had chosen sides. The Oneida and Tuscarora nations allied themselves with the United States, while the majority of Iroquois, including the English-educated Mohawk Joseph Brant, elected to fight for the British. Iroquois warriors fought on both sides at the Battle of Oriskany (1777), when American and Oneida militia halted Barry St. Leger's advance from Oswego to Albany. In 1778, Mohawk and Seneca warriors destroyed the American settlements at Cherry Valley, New York, and in Pennsylvania's Wyoming Valley, killing five hundred people and provoking the most devastating American reprisal of the war. Between July and September 1779, Continental Army soldiers under Daniel Brodhead and John Sullivan invaded the Iroquois homeland in western New York, destroying over forty towns, killing over one thousand Iroquois, and forcing the survivors to take refuge at Fort Niagara. Iroquois warriors continued to raid American frontier settlements until 1782, but the Iroquois never recovered from the blow that Brodhead and Sullivan had inflicted.

The Peripheries of Revolution

The war had a less dramatic impact on the rest of Native North America. In the lower South, the wartime disruption of the fur trade led to the lack of basic necessities for many southeastern Indians, making it easier for British agents to recruit gunmen with promises of gifts and medals. Indian superintendent John Stuart recruited over one thousand Creek warriors, including the biracial, English-educated Alexander McGillivray, as military allies. Creek gunmen participated in the capture of Augusta, Georgia, in 1779, and the defense of Pensacola, Florida (1781), and Savannah, Georgia (1782). Meanwhile, British agents induced several hundred Choctaw and Chickasaw warriors to harass Spanish shipping on the Mississippi River. The American soldiers themselves had few Indian allies in the region, with the noteworthy exception of the Catawbans, who supplied rebel troops with food, allowed militia leader Thomas Sumter to use their reservation as his headquarters, and contributed warriors to the 1776 Cherokee campaign and to Carolina militias' partisan war with the Loyalists.

West of the Mississippi River the war had little impact, though several hundred Sauk, Sioux, and Ojibwe warriors did help British soldiers make an unsuccessful attack on Spanish-held Saint Louis in 1780. For the trans-Mississippi Indians, the most important event of the era was the smallpox epidemic that swept out of Mexico City in 1779 and spread across the Americas from Hudson's Bay, Canada, to Peru, killing at least sixty thousand Native Americans before it subsided in early 1783.

The War and Anti-Indian Sentiment

The political outcome of the Revolutionary War—that is, the establishment of an independent American republic—was in many respects its most dire consequence for Native North Americans. The alliance or co-belligerence of most of the trans-Appalachian Indians with Britain caused many white Americans to label them an enemy race that needed to be expelled from the United States. American political leaders encouraged this view by referring to Woodland Indian military tactics such as guerilla raids, surprise attacks, and the scalping or torture of captives, as atrocities and by using them as recruitment propaganda, even though American soldiers employed the same tactics against Indians. At the war's end both the U.S. Congress and the state governments demanded that the trans-Appalachian Indians cede millions of acres of land to the United States, as compensation for their "atrocities."

Great Britain, for its part, was in a poor position to help its former Indian confederates. By the Treaty of Paris (1783), the British government not only gave the United States its independence, but also surrendered to it all Crown claims south of the Great Lakes. Effectively, this withdrew British protection from over 100,000 Native Americans residing between the Appalachian Mountains and the Mississippi River. News of the treaty provoked dismay and concern among many Indian leaders; one told British officers that "in endeavoring to assist you it seems we have wrought our own ruin" (Detroit Indian Council Minutes, 28 June 1783, Historical Collections of the Michigan Pioneer and Historical Society, 1876–1912). In 1784 the governor of Canada gave a large land reserve on the Grand River (in present-day Ontario) to 1,800 Loyalist Iroquois, Delawares, and Nanticokes, all of whom had fled from the United States during the war. In addition, until 1796 Britain occupied eight forts in the northwestern United States, from which British traders continued to supply Indian warriors with goods and advice. These small tokens of British gratitude and

concern were only useful, however, to a minority of George III’s Indian allies.

Meanwhile, those few Indians who had allied themselves with the United States found their former allies were not grateful. State governments sought land cessions from the Penobscots, Stockbridges, Oneidas, and other Indian nations that had supported them during the war, confident that these “friendly” Indians would not use force against them or seek help from the British government that they had helped white Americans defeat.

Anderson, David

David W. Anderson (1953–) is a Choctaw and Ojibwe Indian who was assistant secretary of the U.S. Bureau of Indian Affairs from 2004–2005. Chosen for the position because of his background as an entrepreneur and philanthropist, while in office Anderson became involved in a controversy over a gambling company now known as Lakes Entertainment. He was a former associate of the owner, Lyle Berman. Although Anderson and Berman had not been in business together for ten years, Anderson was criticized for the relationship and agreed not to involve himself in any gambling issues as assistant secretary. He instead focused on

other ways of improving the lives of Native Americans. Anderson is also the owner of the well-known Famous Dave restaurant chain.

Anderson, Wallace “Mad Bear”

Wallace “Mad Bear” Anderson (1927–1985) was a member of the Bear Clan of the Tuscarora Nation of the Iroquois Confederacy. Anderson was an influential medicine man and leader and a longtime champion of Indian rights. He served with the Navy during World War II and later in the merchant marines before retiring in 1977.

During the 1950s Anderson participated in the initial “unity caravans” among northern Indian traditionalists. In 1957, he helped the Mohawks fend off a New York State income tax on the grounds of Indian sovereignty on Indian reservations. He led a protest group of several hundred Indians from the St. Regis Reservation to the Massena, New York, courthouse, where they tore up summonses for non-payment of state taxes.

In April 1958, Anderson led a stand against land seizures planned by the New York Power Authority, which intended to expropriate 1,383 acres of Tuscarora land for the building of a reservoir. When the Tuscaroras refused to accept the state’s purchasing offer, armed state troopers and police invaded their lands. The troops were met by a nonviolent front of 150 Indians, led by Anderson, blocking the road. Anderson and other leaders were arrested, but the media attention forced the power company to back down. The *Buffalo Courier Express* reported that Anderson was primarily responsible for the tribe’s decision to physically confront the power company and police. Anderson also participated in the declaration of sovereignty on the Six Nations (Haudenosaunee) Reserve that resulted in an armed stand-off with the Canadian Mounted Police.

In 1967, Anderson helped form the Native American Indian Unity Caravan that originated on the Tonawanda Seneca Indian reservation and crossed North America. The caravan was supported by over twenty tribal communities and became the driving force for the founding of the North

American Indian Traveling College, which provided cultural and educational training and resources to isolated tribal communities.

Anderson continued to pursue his quest for recognition of indigenous sovereignty, even addressing the United Nations on the issue. He died in 1985 and was buried on the Tuscarora Indian reservation.

Annuities

Annuities were funds or goods paid by the United States to American Indian tribes for an agreed-upon period of time, usually in exchange for the cession of land. They were usually contracted through negotiated treaties, and in some cases the U.S. offered to make the payments in perpetuity. The federal government included annuities provisions in its earliest treaties, including the 1778 accord with the Delawares, and continued to make promised annuity payments long after it abandoned the practice of treaty making in 1871. While it is impossible to determine the total annuities paid out by the U.S. government over the years, in 1947 Felix S. Cohen, a student of American Indian law, estimated that the total figure paid out for Indian lands, including annuities and other payments, to be over \$800 million.

Exactly what form an annuity took depended largely on the circumstances of the agreement. Payments could be in the form of cash, or they might be paid in kind with such items as cloth, food staples, household tools, hunting weapons and accessories, or farm implements. Most annuity payments ranged from a few hundred dollars to several thousand per year. Indians generally traveled to the same location—usually an Indian office agency—once a year to receive their annuity payments from the superintendent or agent. In 1834 Congress passed another in a series of trade and intercourse acts; this one directed the Indian office to tender payments to the chief, or a person designated by the tribe, for redistribution to the tribal members. In 1847 Congress, hoping to eliminate the influence of tribal chiefs, gave the president or the secretary of war the discretion to pay annuities directly to the heads of Native families, to other individuals entitled to receive them, or to other recipients acceptable to a tribe. In

one of its many efforts to control Natives, the government often threatened to cut off the supply of annuity payments to get a tribe to conform to its demands.

The annuity system was beset with problems for almost the entire period of its use. For example, as the Office of Indian Affairs allowed Indians to settle their accounts with traders at the site where the annuities were paid, the cash often ended up in the traders' pockets. A more common and intractable problem was the fact that dishonest agents often skimmed the best annuity items for themselves or cheated their customers in other ways. The presence of whiskey peddlers at annuity payment locations posed another major complication. They were attracted by the large amounts of government goods and cash, and they tried to take advantage of the Indians if they could get them to drink. These dealings often provoked ill-feelings and occasionally violence between the Native customers and their suppliers. Due to these issues, advocates for reform of the Indian Office occasionally called on the government to abandon the use of annuities.

One significant consequence of the annuity system was that some Native communities became dependent on the payments, particularly if they had been removed to reservations and had no means to continue their traditional practice of hunting. Many of the land cession treaties contained provisions in which the government promised to provide goods in kind to assist the tribe in a transition to a farming lifestyle. The government hoped that adopting this facet of "civilization" would prepare the Indians for assimilation at some point in the future, thereby ending the existence of tribal identities. In several cases, the government negotiated an end to annuity payments with the allotment of tribal lands in the late eighteenth and early nineteenth centuries.

Anthropology and Ethnology

Since the birth of American anthropology (the study of human beings) and ethnology (the branch of anthropology that studies the races, origins, distribution, and characteristics

of different human cultures), practitioners have helped to formulate or influence federal Indian policy and law. Following the example of noted ethnologist, philosopher, and president Thomas Jefferson, the majority of ethnologists and anthropologists in the United States were self-taught amateurs until the twentieth century when anthropology became an accepted academic field of study.

Lewis Henry Morgan and Indian Removal

The government policy of removing Native Americans from their traditional lands and sending them to inhabit more distant territories originated in the early nineteenth century. The concept was first formed by Thomas Jefferson during his tenure as president from 1801–1809, but was forcefully implemented by President Andrew Jackson, who served from 1829–1837. Proponents of Indian removal advocated the “civilization” of Native people. This could only be done, they believed, by distancing indigenous populations from corrupt white society. Yet many proponents of Indian removal only wanted Native land and gave little thought to the needs of the Native people. With the passage of the Indian Removal Act of 1830, the president acquired the power to remove Indians from their traditional lands. Natives from both the northern and southern United States were sent west across the Mississippi River.

Lewis Henry Morgan, the famed and controversial father of American anthropology, encountered the politics of Indian removal in 1846. Morgan had been interested in Native people since his days at Union College in Auburn, New York, but even though he was “Chief Sachem” in the Grand Order of the Iroquois, a fraternal society he organized, he had never before met an indigenous person. He soon found that his romanticized ideas and meeting and interviewing real Native people were not the same.

Morgan met his first Indian in a bookstore in Albany, New York. Ely S. Parker, later a brigadier general in the United States Army and, after that, the commissioner of Indian affairs, was the sixteen-year-old Seneca interpreter for a delegation of elder Seneca chiefs in Albany meeting with the governor. Morgan interviewed Parker, and Parker invited Morgan to visit his reservation, Tonawanda, near Buffalo. In 1845 Morgan traveled to Tonawanda to collect information on the political organization of the Iroquois. He left several days later resolved to save the Seneca on the Tonawanda reservation, a community that had been in existence since the eighteenth century, from being removed from their traditional territory to new lands in Kansas.

The Ogden Land Company purchased the Tonawanda reservation through a fraudulent treaty in an attempt to remove the Seneca from their ancestral land and resettle them out west. Morgan, along with other members of the Grand Order of the Iroquois, became personally involved in a campaign to save the reservation. The Seneca petitioned President James K. Polk (1845–1849), who decided to suspend the execution of the treaties pending further examination by the Senate.

News of the intended forced removal of the Seneca circulated throughout New York, mostly through the efforts of the Grand Order of the Iroquois. In 1846 hundreds of people met in the courthouse at Batavia. A memorial on behalf of the Senecas was brought to the floor. Morgan distinguished himself at the gathering by the enthusiasm he displayed for the cause. Delegates to the meeting appointed him to travel to Washington, D.C., to deliver a memorial to the president and the Senate. Upon Morgan’s return to New York, however, his involvement in the Tonawanda case faded. In 1857, ten years after Morgan visited the Senate, Ely S. Parker negotiated a settlement with Congress that allowed the Seneca to repurchase acreage sold to the Ogden Land Company.

While no longer active in the Tonawanda case, Lewis H. Morgan’s interest in the Iroquois remained. In 1851 he published his first work, *League of the Ho-de-ne-sau-nee or Iroquois*, the first ethnography written in the United States. In 1861 Morgan vigorously lobbied to be appointed commissioner of Indian affairs, but did not receive the post. Despite this defeat, Morgan served in the New York State Assembly from 1861–1867 and in the state Senate from 1868–1869. As chair of the Senate Committee on Indian Affairs, Morgan used his position to introduce legislation to conserve timber on reservations, to increase benefits for Indian education, and to air the grievances of many of the tribes remaining in New York.

John Wesley Powell and Indian Assimilation

By the late 1840s, public support of removal began to lessen as more Americans, infused with the spirit of abolitionism, began to rethink the rights of minorities. This compelled the U.S. government to adopt a new solution to solve the “Indian problem.” Relocation was replaced by a policy of isolating Indians on reservations in order to prepare them for assimilation into the majority society.

President Grover Cleveland (1885–1889) signed the Dawes General Allotment Act into law on February 8, 1887. The act, a key tool in the policy of assimilation, reflected a

Major John Wesley Powell founded the Bureau of Ethnology, which sponsored field work and research on Indian culture and how it fit into the evolution of human society.

decade of campaigning by Christian reform groups who believed that communal land holding stood in the way of civilization. Reformers hoped that the responsibilities of citizenship and of land ownership would induce Natives to assimilate into white society. The act required reservations to be surveyed and dissolved, and then the land re-allotted to individual Indians. The government held the allotted lands in trust for twenty-five years, after which sole ownership and U.S. citizenship fell to the Indians. The commissioner of Indian affairs, Thomas J. Morgan, also suggested renaming Indians with suitable Anglicized names and sending Native youths to boarding schools.

John Wesley Powell, a self-trained geologist and anthropologist, agreed with the policy of assimilation. Powell, a cultural evolutionist, believed that every human society progressed through three distinct stages of development: savagery, barbarism, and civilization. Powell's views were possibly influenced by British anthropologist Edward B. Tylor,

who believed that humanity passed through a staged evolution, in which education led to the advancement of these "primitive children." In Powell's opinion, despite centuries of contact, Indians remained savages. Their assimilation into American society would, however, further advance them to a civilized end. He believed that the road to assimilation was threefold: removal of the Indians from their traditional lands, allotting Indians property as individuals, and educating Native youths in boarding schools.

In 1879 Powell was named the first director of the Bureau of Ethnology, giving him the power he needed to advance his views. Under his direction, the bureau (later renamed the Bureau of American Ethnology) became the primary sponsor of anthropological research in the United States. Powell allotted the bureau's resources to fund many aspiring anthropologists, including James Mooney, who wrote influential ethnographies on the Ghost Dance and the Eastern Band of Cherokees; Albert Gatschet, a linguist who studied the language and culture of the Klamath people of southern Oregon; Mathilda Stevenson, the first woman anthropologist hired by the bureau, who researched the tribal relations of the Zunis to other tribes in the American Southwest; Frank Cushing, who lived with and became the first participant observer of the Zunis; and Francis La Flesche, the first Native man to become an anthropologist and to study the music and ritual of his own people, the Omahas. The anthropologists employed at the bureau published the findings of their numerous studies in the Bureau of Ethnology's Annual Reports, Bulletins, Contributions to North American Ethnology, and Miscellaneous Publications. The content of these publications reflected the contemporary interests in the field of anthropology, although they were mainly restricted in scope to the Americas. More established scholars, like Lewis Henry Morgan, also published their research findings in bureau publications.

Conceiving the mission of the bureau to be political in nature, Powell proposed that his staff would first untangle and classify the mess of treaties and land cessions that the Indians had signed with the government; later they would travel to Indian reservations to learn Native languages and customs in order to make assimilation easier. His influence over the direction of anthropology expanded when he and his staff founded the Anthropological Society of Washington and later helped to organize the American Anthropological Association in 1902. For much of the 1880s, Powell set the parameters within which intellectual discussions of Native people were held.

While Powell held considerable influence over the anthropological community, he continued to exercise caution when dealing with politicians. He never exposed the bureau to public scrutiny, choosing instead to lobby lawmakers privately. He often inserted his own political views about Native assimilation in bureau reports presented to Congress and responded to requests from individuals.

In 1893 nearing the end of both his career and his life, Powell published a reflective essay entitled "Are Our Indians Becoming Extinct?" Powell was convinced that despite their declining population, Indians were on the verge of progress through the process of being absorbed into non-Native society. By the time of Powell's essay, Native people across the nation farmed their own land, spoke English, and attended church regularly. Assimilation was working and soon, according to Powell, the condition of savagery would be eradicated from the United States forever.

John Wesley Powell died on May 28, 1903. His tenure as the director of the Bureau of American Ethnology saw the organization become the premier institution of anthropological research in the country. He also helped to shape the organization's mission of gathering information to aid in the federal policy of Indian assimilation. Following his death, however, anthropologists began to rethink assimilation policies and federal policy changed yet again.

Edward Sapir and the Indian New Deal

In 1928 Lewis Meriam, a member of the Brookings Institute, and a team of nine specialists published *The Problem of Indian Administration*, a report that examined the efficiency of federal programs for Native Americans and the living conditions of Native peoples on government reservations. Meriam's report emphasized the need for a reorganization of the Indian service and highlighted the Office of Indian Affairs' (OIA) need for more money and a better-trained staff. Although a seemingly moderate report, the findings led to a shake-up at the OIA, later renamed the Bureau of Indian Affairs (BIA).

In 1933 John Collier, a progressive and pro-Native activist, received the appointment of commissioner of Indian affairs. Collier made great changes to federal Indian policy. He left behind the policies of allotment and assimilation in favor of what he referred to as "an Indian New Deal," and used the talents of the anthropological community in the formulation of this new deal.

Along with two important pieces of legislation, the Wheeler-Howard Act and the Johnson-O'Malley Bill, Collier's new deal provided Native people with a number of

very significant changes. The new commissioner closed boarding schools and replaced them with day schools that emphasized training in Indian languages. He then prohibited the sale of Indian lands and instituted a number of make-work conservation projects to help the desperate economic situation that many Native people found themselves in during the Great Depression. Next, he ordered reservation and agency superintendents to respect tribal customs, dismissed corrupt and incompetent officeholders in the OIA, and changed the nature of government on the reservations, replacing federal interference with greater autonomy for the tribes. The Wheeler-Howard Act repealed allotment and authorized land settlement talks with the Native tribes, while the Johnson-O'Malley Bill allowed the secretary of the interior to negotiate agreements with the states for health care and education services for the tribes.

Collier relied upon the expertise of the anthropological community to formulate his wide-reaching reforms. Arguing that the specialized skills of anthropologists should be utilized in public sector programs, Collier organized an Applied Anthropology Unit within the OIA. Anthropologists, acting as liaisons between Native American groups and the OIA, observed the leadership and patterns of government on reservations and made recommendations on the establishment of tribal charters and constitutions. Collier's applied anthropologists did not always agree with his views, however, and many left the projects they had been hired to complete. Collier had better luck in future attempts at including the anthropological community in his work, primarily because he allowed them to study Native people without the burden of producing policy. In 1934 the Office of Indian Affairs decided that a written and printed form of the Navajo language needed to be devised and taught to OIA officials and Navajo students. To complete this work, Collier needed a strong linguist, as the Navajo language was reputed to be one of the hardest to learn.

Collier commissioned Edward Sapir, a linguist and student of Franz Boas, the father of academic anthropology in the United States, to write a Navajo worker's handbook to introduce the Navajo language to OIA employees. Two fieldworkers, Berard Haile, a specialist on Navajo education, and Gladys Reichard, a linguist, joined the project. The work began promisingly. Reichard conducted a summer school with Navajo students to test how difficult it would be to teach them to read and write their language, while Haile and Sapir simplified an existing Navajo orthography (writing system). In 1938 a heart condition compelled Sapir to with-

draw from his official association with the project, although he continued to send Haile Navajo verbal conjugations and parts of a book they had planned to write together. Sapir died in 1939.

The following year, the first Navajo reader appeared. World War II (1939–1945), however, ended Collier's expensive New Deal initiatives and his career. His resignation from office in 1945 ushered in the beginning of another era in federal Indian policy, one in which anthropologists continued to play a major role.

Erminie Wheeler-Voegelin and Indian Termination

John Collier's policy of expanded Native self-determination had many powerful critics. Following his resignation, these detractors reversed Collier's progressive policy, replacing it with the federal policy of Indian termination. Proponents of termination desired to "free" Native people from their "Indian" status, assimilating them once and for all into white society. To do this, the BIA, under the influence of Dillon S. Myer, the commissioner of Indian affairs from 1950–1953, attempted to repeal laws that set Natives apart from other citizens, end BIA services for Indians, "free" Native groups from federal supervision and guardianship, and terminate federal responsibility for specific tribes. Anthropologists protested against these changes. Many began working against the BIA and termination by becoming expert defense witnesses for the Indian Claims Commission (ICC), established in August 1946. Other anthropologists began working for the government to determine whether specific tribes had a historical basis to their claims against the United States.

Collier had proposed the ICC during his tenure, but it had little support. The ICC was a special congressionally-created tribunal of three people with judicial authority. It was appointed to redress Native grievances and to provide compensation for broken land treaties. Terminationists supported the ICC because they felt that ending Native peoples' lawsuits against the U.S. government would allow federally recognized tribes to end their unfinished federal business before the BIA disbanded them. Native advocates supported the ICC because they believed it would bring the plight of Native people to a national stage.

Carl Voegelin and Erminie Wheeler-Voegelin were both involved with the ICC. This husband and wife duo, anthropologists at Indiana University, began working for the government in 1953. In that same year, Indiana University received a grant from the Justice Department to examine the historical documents in the Great Lakes region and deter-

mine the validity of the land claims made by Native groups against the government. Voegelin served as the director of the project and Wheeler-Voegelin as associate director. The Voegelins worked diligently on the project, eventually forming a conference group. Forty-eight specialists attended the first Ohio Valley Historic Indian conference in 1954. This group of anthropologists and historians continued to meet annually and, at Wheeler-Voegelin's insistence, the small student publication of the Ohio Valley Historic Indian conference became the journal *Ethnohistory*. The conference group itself later became the American Society for Ethnohistory.

Wheeler-Voegelin encouraged interdisciplinary learning through the new ethnohistorical methodology. The Justice Department, pleased with the results that her team produced, awarded her another grant to continue the project's work. She repeatedly traveled to Washington, D.C., to testify as an expert witness in front of the ICC. Wheeler-Voegelin and her team attempted to uncover and to present the "truth" to the commission, free of political angles. She testified before the committee for the last time in 1969. The work she had undertaken on behalf of the government led to the emergence of ethnohistory, a discipline that combined the research and narrative techniques of historians with the theoretical contributions of anthropologists. This new research method treated Native cultures with dignity and respect and allotted to them the historical significance they deserved. In less capable hands, the formidable position of government researcher and expert prosecution witness could have been disastrous for Native people. Thanks to Wheeler-Voegelin, however, many tribes received settlements to their claims.

The ICC helped Native Americans receive the land settlements they deserved and focused attention on the history of Native people in the United States. During its existence, the ICC heard 617 claims. In 1978, when the legislation that created the commission came up for renewal, Congress allowed it to lapse. Although the disastrous policy of termination ended in 1970, the continued fear of termination rallied Native people and supporters alike to call for increased government accountability.

Conclusion

Throughout the late nineteenth and into the mid-twentieth centuries, anthropologists and ethnologists formulated and influenced federal Indian policy and law. Some, such as Lewis Henry Morgan, entered politics themselves, while others, such as John Wesley Powell, influenced policy discreetly without appearing in the public eye. With the dawn of the

twentieth century, the U.S. government began hiring anthropologists, firstly to help save tribal language and culture, and eventually to help terminate the federal relationship with, and responsibility for, Native people. Although the role of anthropologists was called into question by members of the Native community, namely by Vine Deloria Jr. and the American Indian Movement during the 1960s, anthropology's influence over policy did not end. The end of the twentieth century witnessed anthropologists becoming tribal activists and helping Native people in court cases and in the community.

Apache Wars (1860–1886)

The United States annexed most of northern Mexico during the U.S.–Mexican War of 1846–1848 and the Gadsden

Purchase that followed in 1853. The newly seized areas contained the heartland of Apacheria, the region that would later become southern Arizona and New Mexico, and the Apaches then faced both the United States and Mexico in the contest for the control of the borderlands.

The fragmented Apache society consisted of a congregation of extended families, bands, clans, and tribes. In the mid-1800s the main divisions included the Jicarillas, Mescaleros, Chiricahuas, and the Western Apaches. Apache groups did not share united political authority or social frameworks, but they did recognize a certain shared identity built on similar languages, a common culture, and an interconnected living space. They controlled and exploited their neighbors through a mixture of trading and raiding.

At first, the few Anglos in the region offered the Apaches an opportunity for lucrative trade. However, as more Americans arrived and established permanent bases, the Apaches realized that the Americans intended to occupy their homelands. It was this U.S. intrusion and the threat of settler colonialism that brought on the United States–Apache wars. In 1860, miners assaulted the band of perhaps the most influential Chiricahua Apache leader, Mangas Coloradas. Three years later Mangas was taken prisoner during negotiations. Soldiers taunted him and burned his feet, and when Mangas responded he was shot and killed. In 1861 another important Chiricahua Apache leader, Cochise, made a narrow escape. Lieutenant George Bascom of the U.S. Army invited him and several of his relatives for a parley and then arrested them, thinking, wrongly, that the Apaches had stolen some cattle and kidnapped a young boy. Cochise claimed innocence, but while he managed to get away, his relatives were not so lucky. The army executed them after negotiations with Cochise, who had captured some Anglos after escaping, did not materialize. In New Mexico the U.S. government interned Mescaleros and Navajos for years in concentration camp-like conditions at Bosque Redondo.

Through the late 1860s the army tried to contain what it saw as a general Apache menace in southern Arizona and New Mexico. Projecting military power into a region lacking manufacturing bases and efficient transportation linkages was difficult, however. Soldiers were poorly prepared for warfare in the Southwest. They were outsiders, originally from Europe or the eastern United States, who often had little military experience or training. Furthermore, they were scattered amongst small posts, unfamiliar with the terrain, dependant on outside supplies, and unaccustomed to the

Geronimo and many of his followers fled a peace conference in March 1886 rather than return to a reservation. Five thousand U.S. soldiers followed after them until Geronimo's final surrender later that year.

highly mobile and skillful Apache way of guerrilla war. For some officers the solution was the enlistment of Apache soldiers to handle offensive operations against other Apaches. The army's strategy of targeting enemy villages and supplies and the Apaches' hit-and-run tactics made the wars a cruel and vicious affair. The government and white civilians labeled all free Apaches as outlaws, or "hostiles," and any group thought to be Apaches became a target for Anglo aggression.

In 1871 a joint force of Hispanics, whites, and Tohono O'odham Indians from Tucson ambushed and slaughtered Apaches at an encampment near Camp Grant in Arizona. The survivors protested, in part because they had camped near Grant under the promise of military protection. Frustrated that the Apaches had not submitted to U.S. control and appalled by outrages like the massacre at Camp Grant, the federal government planned new initiatives. First, in 1871 and 1872 peace emissaries Vincent Colyer and General Oliver O. Howard toured the region and made reservation pacts with several Apache tribes. Second, the army launched the Tonto Basin offensive to target those Western Apaches who did not want to cooperate with the government. The offensive totally exterminated some Apache groups and drove others into reservation confinement. By 1874 there were few if any free Apaches on American soil.

Having seemingly won the war, the federal government drove the Western Apaches, Chiricahuas, and other Indians

in the area to the vicinity of San Carlos, Arizona. This proved disastrous. Not only did bands who detested each other have to live in close proximity, but the government wanted to make the Apaches sedentary farmers and thus sought to terminate most hunting and all raiding and warfare, the primary avenues for Apache men to gain status and wealth. Farming was also often hampered by inferior land; inadequate knowledge, seeds, tools, and supplies; and Apache reluctance to see farming as a man's vocation. Living in captivity, the Apaches faced the embezzlement of their rations and funds, disease, poverty, hunger, and unrest.

One disillusioned man was the Chiricahua Victorio. When the government refused to let him relocate from San Carlos, Victorio began a guerrilla campaign that shocked the borderlands. The Mexicans finally defeated Victorio's group in the Battle of Tres Castillos on October 1880.

In San Carlos, the government worried that a popular Ghost Dance movement led by a Western Apache shaman named Noch-ay-del-klinne amounted to a call to arms against all whites. After the army tried to arrest the shaman, a fight erupted between the troops and the shaman's Apache followers. Soon, fear of a general uprising swept across the region and the army overreacted with a show of force as troops from all directions poured into the Southwest. Many terrified and suspicious Chiricahuas and Western Apaches fled into the Sierra Madre mountain range. In 1882, around sixty renegade Indians came out of hiding and were defeated by the U.S. cavalry in the Battle of Big Dry Wash.

In the 1880s, the military's aggressive hunts became increasingly ineffective against small Apache bands that often made rapid raids onto U.S. soil to obtain women, guns, ammunition, supplies, and horses, and then hid in the Sierra Madre in Mexico. For instance, during the summer of 1881 the remnants of Victorio's group led by aged warrior Nana rode a thousand miles in southern New Mexico and Arizona, killed many Americans, captured hundreds of horses and mules, fought several skirmishes with the soldiers—winning most of them—and eluded over one thousand soldiers and civilians chasing them before returning to the Sierra Madre. The army invaded the Sierra Madre in 1883 and convinced the Chiricahuas to return to the San Carlos reservation. By 1885, however, the uneasy cooperation between civilian and military management had turned San Carlos into a hotbed of rumors, accusations, and cliques. Dissatisfied and distrustful, Chiricahua war leader and shaman Geronimo and his followers left the reservation. Most surrendered in the March 1886 peace conference, but Geronimo had second thoughts and fled. Following a fruitless campaign, in which five thousand soldiers chased approximately forty Apaches, the army resorted to negotiating with Geronimo in Mexico. Their efforts proved successful and Geronimo surrendered on September 1886 and was imprisoned in Florida. Seen as a military threat, all reservation Chiricahuas were also exiled to Florida as prisoners of war for twenty-seven years. The Chiricahuas were the last group of “free” Indians to offer systematic armed resistance to U.S. rule. With their surrender, the U.S.–indigeno wars ended and the United States had a secure grip of the continent.

Apess, William

William Apess (1798–c. 1839), a Christian convert of Pequot ancestry, became a leader of the Massachusetts Mashpee tribe as a minister, writer, and political activist. Between 1829 and 1836, he published five books, with the last advocating for the rights of the Mashpee Indians. His *Indian Nullification of the Unconstitutional Laws of Massachusetts Relative to the Mashpee Tribe* (1835) addressed the Mashpees' grievances against Massachusetts.

In 1789 the Mashpees lost their right to self-government and self-determination after Gideon Hawley, a Congregationalist missionary, argued for his appointment as the Mashpees' guardian in order to prevent further racial intermixing between the Pequots, African Americans, and Hessians. When Apess arrived at Mashpee—the only surviving Indian town in Massachusetts—four decades later, the state had imposed three white overseers and Reverend Phineas Fish as guardians for the tribe. These men exercised power and control over the Mashpees' land and lives.

Apess helped the Mashpees fight against the state's appointment of the overseers and helped the tribe regain its civil and political rights. He achieved this by drawing up a list of their grievances, publicizing them in the press, and winning public support for their cause. Apess and the Mashpees also fought to protect the natural resources on their land from being confiscated by locals and to prevent overseers from binding them out in employment to non-Indians. By March 1834 the state abolished the overseer position and granted Mashpee citizens self-governance. Nothing is known of Apess's later life, but he is remembered as a powerful and articulate critic of the American mistreatment of Native peoples.

Archaeological Resources Protection Act (ARPA; 1979)

Congress enacted the Archaeological Resources Protection Act (ARPA) in 1979 to end the problems of illegal excavation of archaeological sites and the subsequent black market sales of artifacts and human remains looted from those sites. The earlier Antiquities Act of 1906 was unsuccessful in these goals, primarily because of unclear provisions. ARPA addresses the problem of illegal excavation by requiring that a permit be obtained and relevant tribal authorities be notified and consulted before any excavation begins on federal or tribal lands. The details of the permit procedures vary depending on the circumstances and are governed by a set of uniform regulations jointly issued by the departments of agriculture, defense, and the interior, as well as the chair of the Tennessee Valley Authority. ARPA also prohibits archaeological resources from being excavated, transported, purchased, or sold without the proper permissions.

Violations of ARPA can result in criminal and civil penalties, which are decided upon according to the value of the archaeological resource involved and the cost of restoring and repairing both the resource and the site from which it was taken. ARPA also provides that any goods or fees collected as a result of illegal excavation on tribal lands must be given to the tribe. A number of people have been criminally prosecuted for violating ARPA.

Many Indians are offended by the statute, particularly because it defines an "archaeological resource" to include human remains that are at least one hundred years old. The statute also provides that archaeological resources are the property of the United States. Many Indians protest the concept that human remains can ever be defined as someone's property. The Native American Graves Protection and Repatriation Act (NAGPRA), passed in 1990, addressed this aspect of ARPA by establishing procedures for returning human remains to the appropriate tribe.

Army, United States (1784-1890)

During the United States's expansion over the North American continent, the nation's army represented the power of the federal government and executed multifaceted tasks. Soldiers explored unsettled areas, enforced laws on behalf of civilian authorities, provided relief for migrants and security for railroad construction crews, and helped build roads and telegraph lines. The military presence was a magnet for new settlers who saw profitable business possibilities in the many military posts and villages. Most importantly, however, the regular army engaged in more numerous and diverse interaction with the indigenous peoples than any other group of whites. The War Department was solely responsible for Indian affairs until 1849, after which authority transferred to the Department of the Interior. Although it was poorly funded, hugely unpopular, and relatively small, the army was expected to defeat and control indigenous tribes from Florida to Arizona and from the Pacific Northwest to the eastern shores of the Great Lakes, thus ensuring that U.S. dominion over the continent would become a reality.

The Army and the Republic

Throughout its history the United States has had two armies: the volunteer citizen army, variably called militia, National Guard, or Organized Reserves, and the regular U.S. Army. Although the former institution can trace its roots to the Continental Army formed in 1775 to fight in the American Revolutionary War (1775-1783), Congress created the regular army in June 1784. During the decades following independence, the army's status remained uncertain and contested by many influential parties who believed the United States should be at heart a country that avoided foreign conflicts. Men like President Thomas Jefferson were openly hostile or indifferent to the army and considered the military profession altogether unnecessary, preferring instead to rely on the citizen militia. A regular army could become politicized and represent a threat to democracy, they claimed. Also, the deep class divide between the officers and enlisted men seemed inappropriate and contrary to the principles of the republic. Furthermore, the army rarely enjoyed any support or attention from the general populace outside

the zones of Indian conflict. Soldiers were often ridiculed as too lazy to work, while officers were accused of representing an incompetent and arrogant aristocracy. Ignoring popular sentiment, however, the federal government wanted its own troops to handle Indian affairs, providing reason enough for the army's continued existence.

Before the Civil War (1861–1865), regular army strength during peace time varied from a few thousand men to a little over ten thousand. When the army was reorganized in 1866, Congress fixed its size at 54,000 men. To many the cost of such a large institution appeared to outweigh its usefulness. Southern representatives, for example, bitter over army participation in Reconstruction, argued for a smaller force. By 1874 army size was cut to twenty-five thousand enlisted men and two thousand officers. The army's reorganization created regiments, companies, and troops, and geographic divisions, districts, and subdistricts. Army command remained less clear cut and subject to rivalry. The ultimate head of the army hierarchy was the president of the United States, who held overall authority as commander in chief under the Constitution. The power of Congress was also considerable because it directed army spending through annual allotments.

Army Personnel

The army was divided by a strict class division between officers and enlisted men. Enlisted soldiers were all volunteers, generally from the poorer classes of society. White soldiers were typically either industrial laborers or recent immigrants from Europe, chiefly Irish and German, although men from almost every European nation served. For the laborer, the army offered a means to survive during economically uncertain times, while for the immigrant it functioned as a way to adjust to American society, earn pay, and learn the culture and language. Desertion, however, remained high. Some men had no intention of serving in the first place and merely wanted a free ride to the West, and many others quickly grew tired of daily living in military villages. The constant manual labor required by the poor condition of the villages and the need to improve the infrastructure in the colonized regions hurt the professional pride of some soldiers, who felt reduced in status to common laborers. The monotony of post life, lack of comforts and adequate nutrition, exhausting and unpredictable military campaigns, poor pay when compared to civilian life, and harsh discipline and oppressive justice administered by the officers also did not increase the attraction of military life. Many soldiers sought pleasure in

A nineteenth-century U.S. Cavalry recruitment poster calls for Indian fighters, who were often recruited directly from reservations.

gambling and drinking, while an estimated one-third of the men in the post–Civil War army deserted before their five-year enlistments expired.

Army officers were mostly native-born and middle-class men. When the army was first organized, most officers originated from New England, but by the early 1800s the middle states had the largest representation, followed by the South. After the Civil War, southern officers almost disappeared, whereas the Northeast dominated. Ohio, Pennsylvania, and New York became the most common birthplaces of officers.

The military academy at West Point, founded in 1802, gave the army a basic institution for the training and development of leadership skills. The number of West Point graduates in the officer corps rose from less than 15 percent in 1817 to more than 76 percent in 1860. Critics claimed the academy was un-American, training a military elite distanced from the values of the American society. Although highly competitive individuals, the officers formed a broth-

erhood, a refined and intellectual group bound together by a high sense of morale, manners, and honor that saw themselves representing the best elements of American civilization. In many families the military evolved into a lifelong career and way of life. It was not unusual that daughters of officers married into the army while sons sought an army career themselves.

During the Civil War, the army established regiments for black soldiers that continued to exist after the war. These “Buffalo” soldiers served under white officers and occupied military villages with white troops, as did locally hired indigenous soldiers, or Indian scouts. While both black and indigenous soldiers suffered from social prejudice and discrimination inside and outside army villages, black soldiers experienced greater equality with white troops. Native American soldiers were randomly hired, largely depending on the needs and desires of local commanders. Often enlisted from reservations, they worked for shorter periods than white or black soldiers, but received the same salaries. On the Plains the military employed hundreds of Pawnee, Cheyenne, and Crow men in offensives against the Lakota–Cheyenne–Arapaho alliance, while in the Southwest many Yavapais, Navajos, and Pimas at times found themselves on the military payroll. In terms of operational diversity, numbers of enlistees, and the army’s dependence on the soldiers’ performance, however, the Apaches served as the most comprehensive example of indigenous participation in the army.

The Army and Indian Policy

Throughout the Indian war period, the army struggled to construct a consistent policy for controlling conflict with indigenous tribes. That the government offered few concrete guidelines was partly because the nation believed that indigenous peoples were a vanishing race and continental expansion was the inevitable course of history. The next Indian war was always imagined to be the last, and these battles were considered insignificant even by many army officers, as the colonial/frontier mission never occupied center stage in the minds of most military planners. Instead their efforts were directed at studying European armies or how to deal with Reconstruction, labor disputes, or disasters such as the Chicago fire of 1871. In addition, the army fought more “traditional” wars from 1812 to 1814 against the British, from 1846 to 1847 against Mexico, and within its own borders during the Civil War. By the time of the last foreign conflict of the century—the Spanish–American War (1898), the age of military conflict with Indians had come to an end.

From the army perspective, indigenous peoples stood in the way of civilization and progress. Accordingly, their fate should be either removal to the West, or, when that became increasingly difficult after available land began to run out in the mid-1800s, accommodation, marginalization, or disappearance. If tribes tried to maintain their sovereignty and resist the expansion of white settlement, the army labeled them as enemies and deemed them subject to “military punishment.” The army believed that the Indians paid attention only to force and thus had to be defeated in battle. Only after their power was crushed could the Indians supposedly start adapting to American society under white supervision. When officers were appointed reservation agents, they exercised considerable power over the domestic lives of indigenous men and women. They often tried to alter the existing structures of work and family life to speed up indigenous assimilation into white culture.

Some officers respected their adversaries and tried to understand the Indians’ position. Often the army kept white settlers from harassing indigenous villages. Soldiers saw how settlers robbed the Indians of land, exploited their labor, and contributed to growing alcoholism and desperate poverty among Natives. They witnessed firsthand how the government failed to abide by treaties, neglected to provide necessary rations, or embezzled the Indians’ funds. Such corruption was most often attributed to civilian Indian agents who usually controlled the reservations. This divided system of management over Indian affairs, with civilians controlling the Indians inside the reservations and the army controlling them on the outside, proved a constant matter of debate. Often motions to remove the Office of Indian Affairs from the Interior Department and shift it back to the War Department were started in Congress, but no changes were made. This frustrated army officers, who liked to imagine they could handle the “Indian problem” better and more swiftly if only they had full control of the issue.

The Conquest

For more than a century, the army was kept busy by Indian campaigns. After 1784 it moved into the disputed territory between the Ohio River and the Great Lakes and made the U.S. presence known by constructing army posts and patrolling the area. Under the command of General Anthony Wayne, the army won an important victory over the Indians in the region in the Battle of Fallen Timbers in 1794. The War of 1812 (1812–1814) involved a conflict not only against the British but also a massive Indian war, the United

States defeating Indian resistance and killing famous Shawnee leader Tecumseh, after which American control of the Northwest Territory was secure.

During the next decades, the army engaged in executing the government's removal policy, officially authorized by the Indian Removal Act in 1830. This policy promised a permanent Indian Territory west of the Mississippi on the lands of the Louisiana Purchase, where eastern tribes could settle in exchange for giving up their homelands. It was the army's mission to organize the removal or, as in the case of the Creeks and the Cherokees, to compel submission. In 1832 a full-scale war, the Black Hawk War, broke out between U.S. troops and the Sac and Fox when the Indians objected to efforts to remove them from their lands in Illinois. In 1835 the United States became engaged in a bitter war with the Seminoles in Florida; only after seven years and hundreds of casualties was the army able to bring about the relocation of most of the tribe to the Indian Territory.

Frontier military posts represented conquest and an offensive move into Native lands to American Indians. Military villages were centers of American power, providing security to invading settlers, railroads, businessmen, and government officials, and offering troops supply bases from which to conduct their campaigns. After the Civil War, the army was scattered in more than two hundred such villages from the Mexican border to Canada. Usually these villages were small, one to three company posts, usually housing from 50 to 150 enlisted men and a handful of officers, as well as a congregation of civilian employees and army wives. Before the early 1900s, military villages differed widely in their design and use of building materials. What they had in common was that most were built by enlisted labor and from local materials. The village center was a large parade ground usually with the officers' housing on one side and the enlisted men's barracks on the other. Officers, who frequently had the means to furnish and beautify their homes to more closely replicate eastern middle-class standards, lived in one- or two-family houses assigned according to rank. While colonels got five rooms, second lieutenants had only one. Enlisted men lived in large barracks where there was no privacy and where two men oftentimes were forced to share a bunk. Some villages had no houses or barracks, only tents.

Ideally, the forts held enough men to provide troops for field operations, as well as to protect various strategic locations. In practice, however, the army's small size in comparison to the vastness of its areas of operation and its number of duties hampered the troops' efficiency. During the

post-Civil War era, the army engaged in major campaigns on the Plains against mounted combatants, most formidably the loose Lakota-Cheyenne-Arapaho alliance in the north and the Comanches, Kiowas, and Cheyennes in the south. Battles at Washita in 1868 and Summit Springs in 1869, and the Red River War (1874–1875) were among the major conflicts on the south-central Plains. The conflict over the Bozeman Trail in the late 1860s and the Great Sioux War of 1876–1877, during which Lieutenant Colonel George Armstrong Custer's Seventh Cavalry was annihilated in the Battle of the Little Bighorn, formed the key events in the northern Plains, along with the 1890 massacre at Wounded Knee where the army, frantic over a messianic Ghost Dance movement, slaughtered a group of Lakotas.

In the Southwest, Navajo military power was broken during their imprisonment at Bosque Redondo in the 1860s. The wars against the Apaches gradually intensified after the United States took the region from Mexico after the U.S.-Mexican War in 1846–1848. Led by such men as Cochise, Victorio, and Geronimo, the Apaches kept thousands of soldiers occupied until the mid-1880s. General Nelson Miles finally nullified the Apaches military power by shipping the Chiricahua Apaches to Florida as prisoners of war.

The army also took part in several individual confrontations outside of the Plains and Southwest with indigenous groups trying to hold on to their land bases and political sovereignty. Examples include the Modoc War (1872–1873) and the flight of the Nez Perce, during which General Oliver O. Howard chased the Indians all over the Pacific Northwest before finally catching them just south of the Canadian border.

Usually the army fought unconventional warfare with conventional methods. The campaigns were often cruel and indiscriminate, with both indigenous noncombatants and combatants becoming targets. The shortage of knowledge concerning the terrain, weather, and the enemy, in addition to lack of military experience and training and numerous desertions, plagued the troops. This was especially true when the army moved west of the Mississippi River. The terrain in the Plains and the Southwest and the guerilla tactics of the enemy confused white officers and soldiers. Additionally, the army often lacked mobility. Heavy columns of infantry and cavalry, locked to slow-moving supply trains, crawled about the vast western distances in search of Indians who could scatter and vanish almost instantly if they wished. Soon the army came to believe that the Indians would rather flee than confront heavy military concentrations. This presumption

proved costly on some occasions. For instance, in 1876 the army organized three massive columns that approached the heartlands of the Lakota-Cheyenne-Arapaho alliance. This time, however, the Indians chose to fight, which stunned the leading officers, General George Crook and Lieutenant Colonel George Armstrong Custer. While Crook was badly shaken at Rosebud, Custer led his troops into the army's single worst defeat in the history of U.S.-indigenous wars at Little Bighorn.

Adaptation to different fighting tactics depended a great deal on individual commanders at the local level. For example, after realizing that the enemy was more vulnerable and less mobile during the winter, many officers began to favor winter campaigns. Also, some officers came to believe that determined pursuit and converging columns could catch the enemy and force him to fight. This was tested in the Southwest in 1872-1873, when Crook employed small converging columns composed of white regulars and locally hired indigenous soldiers. The mobility of the columns was increased by the use of pack mule. These troops proved effective in targeting villages and caused considerable casualties for the Yavapais and Western Apaches before driving the survivors to reservations.

Although the army had always relied on indigenous allies to an extent, during the post-Civil War years the army's dependence on Native soldiers, most notably Apaches, Pawnees, and Cheyennes, increased. Indigenous men were used as an active fighting force at times, such as during the U.S.-Apache wars in 1885-1886. These Indians were given the sole responsibility for offensive operations, while white and black soldiers were relegated to defensive positions. In the 1890s the army organized a short-lived experimentation of indigenous companies.

As the United States rose as an international political force during the 1890s, the continental conquest came to an end and the sovereignty and military power of indigenous peoples was broken. Much of this defeat was due to new European diseases introduced to a Native population with no natural immunity to them and the sheer force and numbers of colonizers who took the Indian lands. The U.S. Army, however, was also a factor in the conquering of the indigenous tribes. Having no coherent Indian policy to follow or any overall strategy for fighting the Indian wars, the army had often chased Indians into reservation confinement, thus ending their freedom and altering their lifestyles and culture. On others occasions, however, the army offered indigenous people protection against settler greed and provided many

Natives their introduction to the American labor force by hiring them as soldiers.

Art

Over the years, U.S. Indian policy has often been represented in, and perhaps at times influenced by, artistic depictions of Native American history and culture. For some works, the impact of art on policy is readily apparent and intentional; for others, the influence is more tangential and suggestive.

Some artists have used their work to promote a singular vision of how the United States should treat Native Americans. Others have depicted idealized or exaggerated views of significant events in the history of U.S.-Indian relations in order to shock, explain, inspire, or justify. Just as U.S. policy makers rationalized the treatment of American Indians—from removal to isolation on reservations and forced acculturation at boarding schools—art, in every popular medium, has visually presented reasons for policies and actions at the federal level. Presentations of Indian life and action, along with sweeping panoramas of open spaces awaiting the hand of civilization, have helped to justify federal policy.

In earlier days, U.S. policy makers and citizens often based their perceptions of Indian culture on images, literature, and hearsay. Making matters more complicated, many of these depictions were created by artists who had little familiarity with Native culture. Conversely, artists such as George Catlin in the nineteenth century traveled among Native peoples and painted them on location.

Over time, the American public developed expectations of what they wanted to see when presented with an image of an Indian. Artistic depictions of Native Americans were popularized in various ways. Some of these creations made their way onto or into postage stamps, coins, advertisements for Wild West shows, novels and history books, cyclorama exhibits, parlors and stereographic viewers, and American saloons and bars. Artists, sculptors, and writers fixed an image of American Indians in the minds of non-Indians, and by the end of the nineteenth century Americans generally expected depictions of Indians to represent people from the Plains cultures. Depictions of Native people from the Pacific Northwest or the Southeast, for example, challenged the stereotype of Native culture that had developed in American art, and so they were overlooked by the American public.

The Frontier and American Art

Policy formulation at the national level is one thing; execution at the local level is another. It was at the local level, on the “frontier” as historian Frederick Jackson Turner explained in 1893, that the policies of the federal government were implemented. Turner’s paper, “The Significance of the Frontier in American History,” presented to the American Historical Association at the 1893 World’s Fair in Chicago, espoused the idea that the frontier as a process had ended and, as a location, was no more. He described the frontier as “the meeting point between savagery and civiliza-

tion” and explained how the frontier began with “the Indian and the hunter,” and then passed through several stages as the West was explored, settled, colonized, and then industrialized by white Americans. As this occurred, Turner argued, Indian societies and cultures disintegrated. There is no more succinct expression of the underlying artistic themes that represented U.S. policy actions in the nineteenth century and early twentieth century. Art depicting U.S.-Indian relations must therefore be viewed with Turner’s description of the American mental construction of the frontier in mind.

Long before Turner delivered his thesis, George Berkeley, an Irish-born philosopher and Anglican bishop, wrote a poem on education in the colonies entitled “On the Prospect of Planting Arts and Learning in America” (1726). The final stanza began, “Westward the course of empire takes its way.” Because Berkeley was a well-known and respected thinker, the poem received widespread popular attention. In 1860, when Congress asked the renowned painter Emanuel Leutze to decorate a stairway in the National Capitol Building, he chose that line as the title of his painting. More popularly known as *Westward Ho*, the painting graphically encapsulates the breaching of the frontier (and Indian lands) as much as Turner’s words did in defining the frontier. More emphatic in its message on the fate of the Indian within the history of U.S. policy was *American Progress* (1872) by John Gast. Gast portrayed the advancing white civilization and its technology, the railroad and the telegraph line, moving from right to left across the canvas. On the far left side of the painting Indians and wildlife flee the encroaching Americans.

The Noble and Ignoble Savage

In the nineteenth century, portrayals of Indians and their cultures were represented in a sort of dichotomy. On the one hand were the representations of the savage, ignoble Indian—that is, works emphasizing the cruelty and barbarity of the Native foe. In doing so, they helped assuage guilt about eradication, removal, and reservations. Anyone viewing George Wimar’s painting *The Attack on the Immigrant Train* (1856) thought twice before heading west, because the painting helped encourage the fear that Indians would be the most frightening and difficult challenge faced on the western trails. In fact, disease, starvation, and natural obstacles killed many more American pioneers than Native assailants.

Another common subject was the white American, typically a woman, taken captive by blood-thirsty Indians. John Vanderlyn’s 1804 depiction of the death of Jane McCrea during the Revolutionary War set a standard for such genre.

John Gast's "American Progress" (1872) depicts the advance of white civilization and technology while Native Americans flee. Such idealized images encouraged settlement in the West at the expense of Native inhabitants.

Henry Farney's 1885 painting *The Captive* and Irving Couse's 1892 painting of the same title each portray a solitary white captive, bound and stoically awaiting a frightening fate. These portrayals also helped ensure that the racial tension between Indian and non-Indian continued and that policymakers did not forget that Native Americans were a violent force to be overawed and subdued.

On the other side of the dichotomy was the theme of the disappearing "noble savage." It was designed to bemoan the loss of a romantic natural past and to clarify the need to incorporate Indians into civilized American culture before they became extinct. For some artists, the passing of the Indian represented what was being sacrificed by expansion, industrialization, and urbanization. Although some of these depictions were idealized, even those artists who offered a more realistic portfolio, such as George Catlin, wanted to capture Indian life before it disappeared. Catlin offered a broad panoply of over five hundred portraits and representations of Native life on the Great Plains and in the Southeast. In 1841 he published a two-volume work, *Letters and Notes on the Manners, Customs, and Condition of the North American Indian*, illustrated with engravings of many of his works. Catlin claimed in the book that the purpose of his paintings was to "rescue" the memory of the Indians, because they

were "doomed and must perish." His paintings of buffalo hunts and wide vistas of flat and fertile-looking lands encouraged viewers to respond in one of two ways. The first response was to suggest that the old ways were falling away and that Indians would have to give up their tribal lands and assimilate into white society. The second response invited white Americans to head westward and replace the dying Indian race in those open spaces.

Albert Bierstadt also depicted romanticized western terrains awaiting white civilization. *The Rocky Mountains, Landers Peak*, painted in 1859, depicts an Indian village in the grandeur of an unspoiled land. Bierstadt's works, by idealizing western lands and inviting settlers into them, served as justification for taking Indian lands. The absence of Natives in some of the landscapes of artists of this time suggested to Americans that the land was vacant, beautiful, and there for the taking.

Other artists, such as Frederick Remington and Charles Russell, helped fantasize the death and destruction that resulted from the westward expansion. Remington's paintings *Fall of the Cowboy* (1895) and *Rounded Up* (1901) typified the western genre, showing the "Old West" in dramatic and idealized fashion and the Indian as the dangerous but disappearing threat to American order and expansion.

Portrayals of untouched land and heroic pioneers not only helped to justify the wisdom of relocation and battle, but also firmly implanted in settlers' minds that they were the leading edge of civilization. Popular art such as photography and dime novel etchings, railroad maps, and *Harper's Weekly* cartoon engravings helped stir friction between settlers fired up by inaccurate and often violent depictions of Native life and culture and Indians whose land was suffering from the encroachment by American settlers. Conflicts between Indians and settlers further emphasized for whites the need to "civilize" the "savage."

Other artists were willing to challenge the status quo of glorifying American expansion. Thomas Nast, one of the most significant political cartoonists in the history of American journalism, offered two cartoons that typified his incisive and creative ability to tell a story in lines. The first, an 1886 cartoon, portrays an Indian representing the Cherokee Nation held down Gulliver-style by white exploiters, such as ranchers and Indian agents. The second, an 1890 cartoon entitled "The Reason for the Outbreak," a reference to the Wounded Knee massacre, shows a portly, well-dressed "Indian Agent" next to a skeletal warrior and his tattered teepee. The messages in these drawings are unmistakable, but they were still unable to influence a change in the policies then in place.

As the field of photography expanded, American photographers did with chemicals and exposure what painters and sculptors did with their media. Edward S. Curtis captured people and places not only with an artistic flair, but with spirit in mind as well. Curtis took over forty thousand photographs of Native peoples all over the North American continent and published a twenty-volume encyclopedia entitled *The North American Indian (1907–1930)*.

The National Capitol Building

The clearest demonstration of the connection between art and U.S. Indian policy can be found at one of the epicenters of federal policy: the National Capitol Building. It is filled with art in all forms, much of it depicting the history of Indian relations with the United States. Indian cultures are woven into the headdress and robes worn by the Statue of Freedom atop the Capitol dome, and they crown the pediment of the Senate East Wing facade. Depictions of Native Americans stand in marble and rest in reliefs. A stranger to this land, seeing all this art and unaware of the history of the last two centuries, might conclude that Indians have been special and honored peoples within these boundaries rather

than people often marginalized by the government and shunted into isolation on reservations.

American Indian portrayals were first introduced to the Capitol in 1825. John G. Chapman's *Baptism of Pocahontas* (1840) was the one of the first pieces of art to depict the theme of religious conversion of the Indians, ironically in a government building committed to the idea of religious freedom and pluralism. John Vanderlyn's *Landing of Columbus* (1846) portrayed Christopher Columbus and his men standing under a ray of light while Indians cowered in the shadows behind trees. It supported the idea that European explorers came armed with the right to take land and the duty to convert Native peoples to Christianity and that the United States was the proper successor to that right and duty. Canvases by William H. Powell in 1853 on Hernan Desoto and by Albert Bierstadt in 1874 on the discovery of the Hudson River added to the idea that the conquest of the Americas was a legal and moral act that helped lead to the founding of a blessed empire.

In 1863 a sculpture by Thomas Campbell, *Statue of Freedom*, was placed atop the Capitol dome, not accidentally facing westward. The female figure's crown, originally designed as a slave's freedom cap, was replaced at the insistence of Congress with a Romanesque helmet. Campbell, however, included an Indian-style feathered adornment and cloaked the figure in Indian robes. Campbell's creation on the pediment of the Senate entrance, *Progress of Civilization* (erected in 1863), captures in stone what Turner did verbally and Leutze did in oils. From the right to the left, an Indian family is shown in poses of resignation. The pioneer carving out the "wilderness" stands beside the central figure "America." To her left are a soldier, a merchant, two youths, a teacher and student, and a mechanic, who represent completed civilization. American culture, it implies, triumphed over that of the American Indian.

John C. Ewers, a noted American ethnologist, observed in the 1960s in his paper "Fact and Fiction in the Documentary Art of the American West" that "a fictitious picture can do more harm than a false statement, for it may be retained in the viewer's memory long after written words are forgotten." That the first drawing of *Custer's Last Stand* appeared in the *New York Daily Graphic* on July 19, 1876, by an artist who had never been west of New Jersey, had never seen an Indian, had never been in a battle, and had never seen Custer only lends credence to Ewers's observation. The 1896 Anheuser-Busch lithograph of Otto Becker's painting *Custer's Last Fight* is one of the most widely recognized

paintings in U.S. history. However, its glorification of the arrogant commander who disobeyed orders in order to attain personal glory demonstrates how artists could transform the true meaning of an event from one in which Native people violently attempted to resist the intrusion of trespassers onto their lands, leading to the near-destruction of their culture, into an exercise in patriotic martyrdom at the hands of violent savages.

By 1890 the Indian wars were over, the American Indian population had reached its demographic low point, and Frederick Jackson Turner would soon declare the frontier closed. The General Allotment Act (Dawes Act) of 1887, which would result in a vast seizure of Indian land, was in the first stages of implementation. Indians were being forced to abandon their languages and cultures in boarding schools. The mythologization of the conquest of the West was also in its early stages, and American artists, along with dime store novelists, Wild West show entrepreneurs, and, later, filmmakers, were primary contributors to continuing the themes of the conquest of the frontier and the decline and fall of the noble and ignoble savage.

American Indian Artistic Responses

Native Americans had their own views on what they were encountering from the United States, and they were just as adept in representing their own messages in pictures. Native biographic art—pictographs, winter counts, and ledger art—was highly personalized and could be composed of decorated rocks, robes, shields, hides, and, later on, ledger books, paper, canvas, and muslin. This art form told of individual Native acts during combat with Indian and non-Indian opponents. Today, examples of this art form are highly valued for their ethnohistorical value as much as for their artistic form.

Several significant pictographic collections show the effects of federal policy. Two of them, the Southern Cheyenne Dog Soldier Society ledger and the Oglala Amos Bad Heart Bull ledger, are especially important. The Dog Soldier Society ledger is an account of several warriors in their battles with U.S. Army soldiers and settlers in the Central Plains after the Civil War. Many of the drawings are matched to corroborate Cheyenne oral history and tradition. Amos Bad Heart Bull's 415 drawings in a single ledger book capture Oglala Sioux history from precontact to the year of his death in 1913. These drawings portray warfare, tribal organizations, regalia, dances, and customs. Helen Blish's analysis and editing of the drawings helped preserve a

detailed picture of Lakota life for both Lakota and non-Indian audiences.

Native art produced from the 1870s into the twentieth century was generally influenced by the unbridled expansion into Indian lands after the Civil War. Art in the early reservation period tends to have a more collective nature, because Indian artists felt compelled to capture graphically as much culture, lifestyle, and history as possible. Indian art from this time clearly shows longing for the days before the arrival of white Americans.

Throughout the twentieth century and into the twenty-first century, American Indians have created works of art that address their individual and collective relationships with the U.S. government. In many instances, American Indian artists have focused on expressing their own personal and cultural identities in their work, which, when considered in the light of federal assimilation policies, are powerful statements of cultural resistance. Although some works confront the topic overtly, others have multiple layers of meaning, sometimes masked in humor, as a way to engage the audience initially at the visceral level before cleverly communicating a deeper and more poignant message. Still other works are inherently political statements simply by their existence, whether they were created for the market or for personal use within the community. Objects such as pottery, basketry, and even pow-wow clothing are elegant reminders of American Indian cultural survival, despite generations of harsh government policies and legislation.

As the American Indian fine art movement matured in the mid-twentieth century, artists increasingly began to work in styles and to address issues reflecting the artistic movements of the period. For example, Fritz Scholder (Luiseno, 1937–2005), who taught at the Institute of American Indian Arts in Santa Fe, New Mexico, painted and created graphic images of American Indians in a pop art style that attempted to counterbalance the romantic and stereotypical images of Indian people. In doing so, Scholder often had his subjects confront viewers and challenge them to rethink what they know about American Indians. By using bright, garish colors, Scholder allowed his work to immediately capture the viewer's attention, but the compositions are not pastoral or calm. The anonymous figures pulsate with an unexpected energy and vitality. In one of his more iconic works, Scholder depicted a figure, clearly identifiable as an Indian, wrapped in an American flag. Painted after the occupations of Alcatraz and Wounded Knee, the work affirms that Indians are also Americans—in fact, the First Americans—and that

David Bradley's "Treaty Dollar" mimics the form of a U.S. dollar bill, but interposes Sitting Bull's face at the center, flanked by mirror images of Lt. Col. George Armstrong Custer. The work refers to the federal government's purchase of Indian lands for little money in return.

the flag is symbolic of American Indians' collective view of the sacredness of the land, regardless of the government policies that it represents.

Bob Haozous (Warm Springs Chiricahua Apache, 1943–) is a contemporary American Indian sculptor whose work has at times confronted U.S. policy toward American Indians and indigenous people. Haozous, the son of the acclaimed sculptor Allan Houser, one of the most influential American Indian artists of the twentieth century, is an instructor at the Institute of American Indian Arts. Haozous considers his work to be politically oriented and a rejection of stereotypical imagery and thought. His most controversial work, and perhaps his most significant, is *Cultural Crossroads of the Americas* (1997), which sits on the campus of the University of New Mexico in Albuquerque. The sculpture is cut-steel, fabricated to resemble a billboard in form, scale, and placement. The stencil-like images on one side evoke the figural images from Mesoamerican codices, while the other side is filled with a smoke-belching coal plant and skyscrapers topped with icons of contemporary America, including a dollar sign, a McDonald's arch, a cross, and the Statue of Liberty. Haozous originally intended to include concertina wire to represent the reservations, but this aspect was not realized in the final installation. The work inspires questions about the political boundaries as well as the government and social policies that have led to this moment in which indigenous people, caretakers of the land, no longer have the ability to migrate as they choose and the natural and social environment suffers as a consequence of those failed policies.

Another highly successful contemporary American Indian artist who frequently challenges government policies and legislation in his work is David Bradley (White Earth Chippewa,

1954–). Bradley often works in a folk art narrative style, and many of his paintings reference non-Indian art and artists. A large number of his works also critique the appropriation of American Indian art and culture by non-Indian people, and his reverse referencing is an empowering statement. Bradley sometimes works in series, creating variations on a particular theme. In one such series, *Treaty Dollar*, the rectangular paintings are reminiscent of dollar bills, although the imagery is completely different. In some versions, Bradley substitutes a portrait of Sitting Bull for George Washington, flanked by images of Lt. Col. George Armstrong Custer along with other depictions of Plains Indians on horseback and frontier-era forts with dates referring to the Laramie Treaty of 1868 or the Battle of the Little Bighorn in 1876. These highly successful paintings comment on the federal government's reservation policy and question its ability to purchase land in return for a pittance (the paintings are always one dollar denominations)—the policy that has kept Indians in a cycle of poverty and dependent on the government.

Contemporary American Indian art is a dynamic field and the artists described here are but a few of the talented Native Americans who are creating works that comment on and challenge federal legislation affecting American Indians. Other artists work with various traditional media, and still others work in photography, film, literature, music, dance, and performance art. In their own way, each addresses the issues noted here with an energy and vitality that reflects contemporary American Indian life.

Articles of Confederation

The Articles of Confederation was the original governing document of the United States of America, in effect from 1781 until 1789, when the U.S. Constitution was ratified. The Articles set up a loose confederation style of government, with the states retaining significant power. The Articles

gave the national Congress “the sole and exclusive rights and power of . . . regulating the trade and managing all affairs with the Indians, not members of any of the States, provided that the legislative right of any State, within its own limits be not infringed or violated.”

The 1780s were characterized by turmoil on the fringes of the thirteen new states and by conflict between the states and the national government. The national government attempted to institute a unified foreign policy, while the states continued to set their own policies toward Native nations in their immediate areas. The situation was exacerbated by the colonists’ strong desire for land after the American Revolutionary War (1775–1783); constant boundary disputes involving Native nations, the states, the national government, Britain, and Spain; and British attempts to pacify their former Indian allies whose interests had been ignored in the treaty process that ended the war.

The need for peace on the fragile new nation’s edges was a critical policy issue during this period. In an effort to manage Indian affairs, the Continental Congress made repeated attempts to establish the national government’s authority. These included:

- a 1783 proclamation prohibiting “settlement on lands inhabited or claimed by Indians” outside state boundaries without the permission of Congress
- the 1786 Ordinance for the Regulation of Indian Affairs, which reasserted this prohibition and made it the law
- the Northwest Ordinance in 1787, which established the Northwest Territory

None of these efforts was successful in curtailing illegal settlement, ending states’ mistreatment of Indians, or effectively asserting national authority. In both the North and South, the late 1780s were characterized by constant threats of warfare due to colonists trespassing on Indian lands.

New York, North Carolina, and Georgia were particularly determined to deal with American Indians independently of the new national government. The State of New York, for example, granted Iroquois Confederacy lands to its former soldiers, whereas the national government negotiated the 1784 Treaty of Fort Stanwix, which guaranteed national protection of Iroquois lands against seizures or encroachments.

The U.S. government under the Articles of Confederation, with a weak national government facing strong state governments, proved unworkable. This led to the 1787 Philadelphia Convention, which was designed to amend the Articles, but instead led to the drafting of the U.S. Constitution.

Assimilation and Acculturation

Assimilation and acculturation are terms that feature prominently in the history of United States Indian policy and law. Although closely allied and often combined, they refer to fundamentally different processes. Technically speaking, assimilation is a social process and acculturation is a cultural process. Although not always explicit in policy discussions, that distinction has proven useful for analytical purposes because it highlights two very different approaches to the management of Indian affairs.

Assimilation occurs when individuals from a subordinate group, such as the Zunis or Iroquois, are absorbed into a dominant group, such as Euro-Americans. Acculturation takes place when the subordinate group learns the dominant group's language, values, habits, and practices. Either process can occur voluntarily or through coercion. Different members of a community acculturate or assimilate at different rates and to different degrees. This was a matter of great scholarly interest in the 1950s and 1960s, and acculturation studies greatly influenced policy making at the time. Social scientists now recognize the ethnocentric assumptions that underpinned much of that work. Nonetheless, the studies had a lasting impact on Native American communities.

When used in the context of U.S. Indian policy and law, acculturation and assimilation signal very different ways of interpreting facts on the ground and envisioning the future. During periods when acculturation was the main objective, policy makers and reformers devised policies and programs to "civilize" the Indians, yet keep them apart from whites. When assimilation was their goal, they took steps to erode tribal or communal identity and incorporate Indians into mainstream society as individuals. The prevailing wants, needs, and attitudes of the white American mainstream

determined which approach they favored. Only rarely did anyone take into account the wishes of those Native Americans affected.

The Civilization Program

During the colonial period, the nations that vied for control of North America viewed Native Americans as landowners, potential military allies or enemies, trading partners, and laborers rather than as candidates for assimilation. The French and British used the notion of "civilization" to justify their exploitation of the Indians and took limited steps to convert them to Christianity and educate them in European ways. They also introduced trade goods such as kettles and metal tools, which the Indians readily accepted. The British hoped the creation of a demand for such goods would ease their acquisition of Indian lands, and the French hoped it would bind the Indians to them as partners in the fur trade.

Many tribes allied with the British during the American Revolutionary War (1775–1783). In the immediate aftermath, the Continental Congress treated all Indians as defeated enemies and operated on the assumption that they had forfeited their rights to the land when the British signed the Treaty of Paris in 1783. An Ordinance for the Regulation of Indian Affairs created an Indian Department to oversee trade with the Indians in 1786, but it was up to Henry Knox, secretary of war (1785–1794) under President George Washington (1789–1797), to develop a framework for Indian policy. Acculturation was at the heart of that framework.

Knox sought to manage the nation's westward expansion in a just, peaceful, humane, and cost-effective way and successfully advocated a return to the pre-Revolution practice of negotiating with the Indians for their lands. He believed that it would be immoral and contradictory to the ideals of the new republic to wait for the Indians to eventually and inevitably disappear when by civilizing them they could be saved. Washington shared Knox's Enlightenment faith in the progress of humankind from a state of savagery to civilization and supported his policy initiatives. Reflecting the ethnocentrism of the time, both men believed Native Americans existed at a lower stage of development but, by adopting a Euro-American way of life, could progress to being civilized.

As had his colonial predecessors, Knox used the notion of civilization to justify westward expansion. In a 1789 report on the Creeks, he argued that a policy that introduced agriculture and the arts of civilization to the Indians would encourage them to abandon their tribalism and traditional

lifeways, adopt private property, and become farmers. From the Treaty of New York, signed with the Creek in 1790, and the Treaty of Holston, signed with the Cherokee in 1791, onward, nearly all treaties contained provisions that promoted agriculture. Soon thereafter, treaties also began to include provisions for conversion to Christianity and education. In the 1790s Congress passed three trade and intercourse acts that sought to protect the tribes in the meantime by regulating commerce and contact with white settlers. The 1796 act also provided for the distribution of agricultural implements and other goods and the appointment of agents to oversee the civilization program. These four elements—promotion of agriculture, conversion to Christianity, education, and restricted contact between Indians and whites—were the cornerstones of federal Indian policy well into the nineteenth century and influenced aspects of it beyond that.

The civilization program of Knox and Washington was institutionalized in the factory system of trading posts established in 1796. These trading posts, they reasoned, would further the acquisition of Indian lands and the Indians' acculturation by fostering a demand for consumer goods. Such a demand could only be satisfied by the Indians ceding their lands and adopting agriculture and private property.

Knox's policies received their fullest extent during the administration of President Thomas Jefferson (1801–1809). Jefferson, like Knox and Washington, was a product of the Enlightenment. He recognized in the Indians the “natural man” spoken of by eighteenth century philosophers and felt morally obliged to introduce them to agriculture and the domestic arts and thereby prepare them to adopt the American way of life. Jefferson and his secretary of war, Henry Dearborn, believed that stripping the Indians of their land was an essential step in elevating them to this highest state of civilization. Jefferson, like Knox before him, occasionally advocated intermarriage between Indians and whites as a means of hastening acculturation. Some Native Americans, most notably the Cherokee, began to adopt Western agricultural methods and tools and embrace other Euro-American practices, but many more resisted. When it became clear they could not balance the aspirations of the civilization program with the escalating demands of a rapidly increasing settler population and economy, Jefferson resorted to more coercive means to achieve his objectives.

In 1830, during the presidency of Andrew Jackson (1829–1837), Congress changed tactics and passed the Indian Removal Act. This paved the way for relocating the remaining eastern tribes to Indian Territory west of the Mississippi

River. Once there they would be free to acculturate at their own pace under the guidance of Christian missionaries and educators, or so the argument went. Many of those tribes had already undergone extensive acculturation. Such was the case with the Cherokees, Choctaws, Chickasaws, Creeks, and Seminoles, who came to be known collectively as the Five Civilized Tribes in recognition of that fact. Most eastern tribes did not want to relocate and resisted. Some did so with force, as did the Seminoles in what became the Second Seminole War (1835–1842). The Cherokees fought their removal through the courts, and the Supreme Court ultimately decided in their favor in *Worcester v. Georgia* (1832). Andrew Jackson ignored that ruling and supported the state of Georgia in removing the Cherokees, many of whom were already relatively acculturated, west of the Mississippi.

The addition of Texas, Oregon, and most of the present-day American Southwest to the United States in the 1840s prompted increasing numbers of white settlers to push west. Rather than keep whites out of Indian Country, the government used treaties to extinguish tribal territorial claims and isolate the Indians on reservations. Typical of this process were the treaties forged with the Cheyennes, Lakotas, Crows, and other northern Plains groups at Fort Laramie in 1851 and with the Comanches, Kiowas, Apaches, and other southern groups at Fort Atkinson in 1853. Just as removal did in the east, these treaties opened vast swaths of land in the west for white settlement. They also promised the tribes protection against criminal acts committed by the whites and annuities, goods, and services intended to hasten their acculturation. Many of the Indians who signed the treaties did so under duress or because they saw no other way forward in an increasingly white-dominated world. Despite the legal aura that enveloped the treaties, the U.S. government often failed to deliver the goods and services agreed upon, which impeded acculturation and led to decades of legal wrangling in the twentieth century.

The renewed westward movement of settlers after the Civil War (1861–1865) put to rest the notion that Indians and whites could be kept apart and that there was time for the Indians to gradually acculturate. President Ulysses S. Grant (1869–1877) responded to that new reality with his Peace Policy of the 1870s. This new separation and acculturation strategy relied on a board of commissioners to oversee Indian affairs. It also allocated administrative responsibility for each Indian agency to one of several religious denominations, which was to promote the Indians' acculturation. Grant's approach originated in the idealism of the

Reconstruction era, but nonetheless failed to resolve the so-called Indian problem.

The Assimilation Campaign

By the late 1870s, Congress was grappling with the unexpectedly high cost of maintaining the Indians on reservations and looking for new ways to streamline the system and thereby reduce the fiscal burden. In 1879 a series of crises focused the public's attention on failures in the reservation system. Those, coupled with the budgetary concerns, precipitated a shift to assimilation as the federal policy objective. Business leaders and settlers who coveted Indian lands and their resources strongly supported that change in emphasis.

By the 1880s the reservations and tribal land base had become the targets of a three-pronged attack on tribal identity. The policy objective was to speed the Indians' assimilation by undermining their tribal ties. Policy makers aimed to accomplish that by eroding the tribal land base, providing what was deemed the right sort of education to Indian children, and promoting citizenship. This furthered an ongoing, federally backed campaign to "Christianize" the Indians, suppress their traditional religious practices and forms of marriage, and undermine their political and economic institutions.

Henry Teller, commissioner of Indian affairs from 1882 to 1885, and reformers like anthropologist Alice Fletcher, favored education as a means to speed assimilation. Consequently, education was taken out of the hands of the missionaries and placed under professional control. Leading the way were two boarding schools, the Hampton Institute in Virginia and the newly founded Carlisle Industrial Training School in Pennsylvania. These and similar schools prohibited the use of Native languages and forced Indian children to learn and speak English. They taught reading, writing, and arithmetic and prepared Indian students to become self-sufficient members of American society by offering them training in manual skills. Thomas Jefferson Morgan, commissioner of Indian affairs from 1889 to 1893, spearheaded educational reform aimed at speeding the Indian's assimilation into the American mainstream, advocating that day schools be opened on all reservations. In 1894 William Hailmann, superintendent of Indian education, took matters one step further. He proposed integrating Indian children into the public school system where they could benefit from the civilizing influences of their white peers.

Tribal lands, however, remained the main barrier to assimilation in the minds of many. In addition to wanting to

reduce the tribal land base to save money and undermine tribalism, the government wanted to make more land available to white settlers. This conveniently meshed with a strategic desire to turn the Indians into self-sufficient farmers and ranchers who would soon blend into the general population. Carl Schurz, Helen Hunt Jackson, and other reformers, many of them participants in the Lake Mohonk Conference, pressured Congress to abolish the reservation system, arguing that it contributed to the Indian's "lack of progress."

The General Allotment Act of 1887 was a cornerstone of the assimilation program. Also known as the Dawes Severalty Act, it reflected an assumption that Indians could be incorporated into mainstream society. Moreover, it addressed the issues of land, education, and citizenship, all in one piece of legislation. The act provided for the breaking up of reservations into smaller parcels of land—allotments—that were then given to individual Indians. Land that was left over was considered "surplus" and could be sold to non-Indians.

The New Realism

Just after the turn of century, the New Realism of Theodore Roosevelt and the Rough Riders replaced the assimilationist consensus of the 1880s and 1890s. During the preceding period, Indians were seen as steadily progressing to a higher state of development. In the new century, lower expectations prevailed and Indians were treated as incapable of more than limited progress. Francis Leupp, commissioner of Indian affairs (1905–1909) during Theodore Roosevelt's presidency (1901–1909), felt that it was foolish to expect too much out of the Indian. Landownership and citizenship, he argued, would not produce equality and racial integration. Consequently, the assimilation program should aim to improve rather than transform the Indian. Leupp believed that the Indian's "backwardness" could not be completely overcome and they would simply have to accept outside control in the name of progress.

In 1906 Congress passed the Burke Act to address perceived inadequacies in the Dawes Act, including its failure to provide the Indians with the necessary financial resources to develop their allotted lands and thereby ensure their survival. The Burke Act gave the federal government more control over Indian resources. While it created new protections for the Indians, it also smoothed the way for the removal of federal restrictions on Indian lands, which made those lands subject to taxation and enabled their Indian owners to sell them to whites.

The most tangible outcome of the Dawes and Burke acts was the transfer of millions of acres of land from Indians to non-Indians. As commissioner of Indian affairs, Robert G. Valentine (1909–1912) furthered that agenda with the 1910 Omnibus Act. The Omnibus Act provided for Competency Commissions to identify those Indians acculturated enough to manage their own affairs. Many of the Indians who were ruled “competent” then sold their land to non-Indians.

In 1917 Commissioner Cato Sells (1913–1920) redefined assimilation as the process of freeing Indians to seek their own destiny in the expanding society. Daily interaction with white people was now deemed more critical for assimilation than landownership and economic independence.

The New Deal Era

In the early 1920s, groups such as the American Indian Defense Association, headed by John Collier, began to counter the increasingly extreme assimilationist legislation put forth by individuals seeking to terminate federal responsibility for the Indians with calls for Indian self-determination. Due in part to the pressures exerted by reformers like Collier, the Office of Indian Affairs (OIA) asked the Institute for Government Research, predecessor to the Brookings Institution, to review federal Indian policy and make recommendations for its improvement. The institute reported its findings in a report entitled *The Problem of Indian Administration* (1928). Now known as the *Meriam Report*, it was highly critical of federal policy. It strongly condemned the administrative emphasis on Indian property rather than Indian persons and recommended that the government adopt a policy of cultural pluralism in place of the then current assimilationist approach. During the Herbert Hoover presidential administration (1929–1933) some of the *Meriam Report's* recommendations were implemented, particularly in the areas of health care and education. Nonetheless, little was done to halt the erosion of the Indian land base or strengthen tribal government.

Much changed during John Collier's tenure as commissioner of Indian affairs (1933–1945). He introduced the 1934 Indian Reorganization Act (IRA; also known as the Wheeler-Howard Act), which encouraged tribes to adopt constitutions and bylaws and provided for their corporate economic organization. Although the final version represented a compromise between advocates of self-determination and those of assimilation, the abolition of the allotment system and provisions designed to strengthen tribal government entailed a break with the past. In passing the legisla-

tion, Congress had resisted what it perceived as measures that would prolong Native Americans' special status, urging instead that they be assimilated into American life as full and equal participants. Critics of the IRA nonetheless point to its continuing paternalism and aggressive promotion of American models of governance as evidence that assimilation was, indeed, its aim.

Termination and Relocation

Congress created the Indian Claims Commission in 1946 to settle claims levied against the federal government by Native Americans. Although touted as a major victory for the Indians, in reality it merely paved the way for the termination of federal responsibility over them by clearing the backlog of tribal claims deriving from treaty violations and land seizures. The wealth generated for the tribes by the claims settlements strengthened the position of those legislators pushing for termination, and in 1947 Acting Commissioner William Zimmerman told a Senate committee that tribes like the Menominees and Klamaths were sufficiently acculturated to be removed from federal jurisdiction.

By the early 1950s, a desire to cut federal spending in the aftermath of World War II (1939–1945) and promote national unity during the Cold War put assimilation back on the agenda. In 1953 two major pieces of legislation were signed that had rapid assimilation as their objective. House Concurrent Resolution 108 called for the termination of federal control over the Indians in several states and on several reservations, and 67 U.S. Stat. 588 gave five states civil and criminal jurisdiction over the Indians within their borders. In 1954 termination bills were introduced for several tribes. By 1961 federal control over the Menominees, Klamaths, and a number other tribes had been terminated.

Meanwhile, Commissioner Dillon S. Myer (1950–1953) took steps to resolve the unemployment problem on reservations by instituting measures that encouraged young Indians to relocate to urban industrial areas. More than sixty-one thousand Indians relocated under the program between 1950 and 1967, joining many others who had already moved to cities. Myer's successor as commissioner, Glenn Emmons (1953–1961), continued the relocation program, but by the late 1950s nearly half those enrolled in the program had returned to their reservations. In 1956 Congress passed the Indian Vocational Training Act, which provided Native Americans with off-reservation vocational training and on-the-job training nearer to home. While this legislation provided a means for Native Americans to improve their eco-

nomic situation, it nonetheless reflected an assimilationist agenda.

1961 Onward

In the early 1960s, the same liberal social currents that gave rise to the antiwar, Red Power, and Civil Rights movements and the War on Poverty caused federal policy to once again turn away from assimilation. While many of the programs developed thereafter would have the effect of acculturation, their ostensible aim was tribal self-determination. By the 1970s the pressures exerted by Indian activists and their supporters were yielding results. In 1973, in recognition of the disastrous consequences of the termination policies of the 1950s, Congress passed the Menominee Restoration Act. In 1975 it passed the Indian Self-Determination and Education Assistance Act, which restored a large degree of self-governance to the tribes. Then, in 1978 it passed the American Indian Religious Freedom Act to protect the religious practices of Native Americans. The movement toward Indian self-determination was also furthered by a series of Supreme Court decisions that upheld tribal sovereignty. Thus, by the 1980s federal Indian policy had come full circle to an acknowledgement of the tribal sovereignty of Native American peoples. Many Native Americans, for their part, were trying to “walk in two worlds,” preserving significant aspects of their traditional tribal culture, while at the same time integrating themselves into American society and the global economy.

Association on American Indian Affairs (AAIA)

The Association on American Indian Affairs (AAIA) is the oldest continuing advocacy organization for the welfare of Indians and Alaska Natives in the United States. The AAIA strives to protect Native sovereignty, as well as the constitutional, legal, and human rights of individual Indians, and works to preserve Native culture, languages, and traditions.

The organization also endeavors to promote economic and community development, protect tribal natural resources, and improve the health and education level of Native Americans.

The organization originated in 1922, when a group of non-Indians in New York founded the Eastern Association of Indian Affairs (EAIA) to successfully join other Indian advocacy groups in defeating the notorious Bursum Bill, which was designed to enable non-Indian individuals to claim Pueblo land in New Mexico. In 1939, under the leadership of Oliver La Farge, the Eastern Association of Indian Affairs (EAIA) merged with the New Mexico Association of Indian Affairs (NAIA) and the American Indian Defense Association (AIDA) to form the American Association of Indian Affairs.

After defeating the Bursum Bill, the association assisted other tribes facing allotment and began focusing on broader Native American issues. The group worked to promote the social and economic potential of Native American communities without destroying the indigenous cultures. By the early 1970s, the group had turned its attention to promoting tribal self-determination through education, health, and economic development programs. After 1988 the AAIA began to experience financial difficulties and its activities were reduced.

As of early 2008, the AAIA was working to establish partnerships with other Indian tribes and Native organizations with similar missions. The AAIA works on a national level to influence federal Indian policy and is active at the grassroots level in specific Indian communities administering health and educational programs

Atkin, Edmond

Superintendent of Indian affairs for the southern district of North America from 1758 to 1761, Edmond Atkin

(1707–1761) provided one of the first attempts to centralize Great Britain's Indian policy. After working as a deerskin trader in South Carolina, Atkin returned to England in the early 1750s. There he published the "Historical Account of the Revolt of the Choctaw Indians in the Late War from the French to the British Alliance and of Their Return Since to That of the French" (1753). This essay illuminated the historical problems that had hindered Britain's Indian policies and established Atkin as an expert on Indian policy.

Atkin returned to the subject in 1755 during the French and Indian War (1754–1763), as many British officials realized that France's Indian regulations provided them with loyal Native allies and thus concrete diplomatic benefits. In his "Indians of the Southern Colonial Frontier" (1755), Atkin detailed an Indian policy designed to counteract the advantages enjoyed by the French and Spanish. By subsidizing and centralizing the deerskin trade, Atkin believed lasting alliances could be forged with the southeastern Indians.

In 1758 Atkin returned to South Carolina as the superintendent of Indian affairs for the southern colonies. Though forces such as traders unwilling to adhere to formal policies, the hesitancy of Native Americans to trust and embrace British officials, and a shortage of trade goods limited Atkin's efforts to obtain Native allies, his trading regulations cut short the ability of colonial governments to shape Indian policies and deal with Native nations directly. He resigned in 1761 after a largely ineffectual tenure, and he died soon after.

Attakullakulla (Little Carpenter)

Attakullakulla (Attacullaculla) (c. 1715–c.1780) was called Little Carpenter because of his small stature and his ability to construct diplomatic treaties. He first came to prominence in 1730 when he accompanied Alexander Cuming, a British treaty commissioner, to England, where he signed one of the

first Cherokee treaties with Great Britain. By the early 1750s, Attakullakulla, renowned for his oratorical skills, had been appointed principal speaker for the Cherokee Nation. In the Treaty of Broad River (1756), he agreed to a Cherokee land cession in exchange for the English promise to build forts in Cherokee territory to protect their women and children while the men were away at war. Although opposed by fellow Cherokees for doing so, he honored treaty promises to the English. However, he played the colonies of South Carolina and Virginia against each other to secure fair trading practices for his people.

In an attempt to prevent the outbreak of the Anglo-Cherokee War (1758–1761), Attakullakulla moved into Fort Loudon to delay its siege. Later in the war, he saved the life of John Stuart and was instrumental in Stuart's appointment as superintendent of the southern Indians. Attakullakulla represented the Cherokees at the Southern Indian Conference (1764) that ratified the Proclamation of

1763. This royal decree established an imaginary line at the Appalachian Mountains beyond which colonists were not allowed to settle. He developed a strategy for Cherokee national survival by settling people with dual Cherokee-British citizenship on his nation's perimeters to bar trespassers and act as cultural intermediaries. Attakullakulla was the primary negotiator of the Transylvania Purchase (1775), which ceded large portions of Cherokee territory to Tennessee and Kentucky. The treaty was later nullified by British and American governments when Attakullakulla claimed the treaty was represented to him as a lease, not a sale.

B

Article 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace and its honor is hereby pledged to keep it. The Indians desire peace and they now pledge their honor to maintain it.

Bacon's Rebellion (1675–1677)

Bacon's Rebellion was both a frontier and a civil war that began in 1675 in colonial Virginia. In the years before, relations between Indians and colonists had been tense. Both still remembered the destructive wars between the Powhatans and the English that ended in 1646. Led by Governor William Berkeley, colonial elites looked to maintain peace. The colonists hoped that their Native allies would act as a buffer to warn them in the event of an attack from hostile Indians. Many Indian leaders had a similar outlook, as they believed their friendship with the English would deter their Native enemies.

A growing class of poor, white, unmarried men threatened to upset this delicate balance. These colonists were mainly tenant farmers who had served their time as indentured servants and now wished to own land. They saw Indians as a nuisance, and they thought Berkeley's policies prized the rights of "savages" over those of Englishmen. When settling the backcountry, they bullied Indians into selling land and allowed their livestock to feast on Native crops.

In July 1675, a dispute between a Potomac River planter and some Doeg Indians turned violent. Using this incident as a call to arms, colonists first attacked the Doegs, and then massacred a group of Susquehannocks, who had been on friendly terms with Virginia. Angered by this unprovoked attack, the Susquehannocks began to raid English settlements. Berkeley and the colonial assembly hoped to quiet this growing crisis, and in March 1676, they decided to build nine forts along the frontier. Many colonists rejected this defensive strategy and flocked to a new leader, a fiery young aristocrat named Nathaniel Bacon. Backed by an army of

discontented settlers, Bacon launched attacks on the neighboring Indian communities, targeting not only the Susquehannocks but also the Pamunkeys and Occaneechees, Virginia's allies who had no part in the original dispute.

Berkeley condemned this indiscriminate bloodshed and branded Bacon a traitor. In response, Bacon declared war on Berkeley's government. The war against Indians quickly became a war between Virginians. Men who disliked Berkeley sided with Bacon, and Bacon urged all the less influential Virginians (white freemen, white servants, and black slaves) to join him. Throughout the summer of 1676, the rebels raided the estates of the governor's supporters and continued to battle Indians. In September, Bacon invaded the capital of Jamestown and proudly paraded forty-five Pamunkey captives. Despite its early successes, the revolt fell apart after Bacon died of dysentery that October.

In May 1677, the Pamunkeys and several other tribes signed the Treaty of Middle Plantation, which was supposed to restore colonial-Indian relations to their pre-war status. But the English soon violated the treaty's terms. No longer seeing these English-allied Indians as a vital buffer, colonial leaders began to claim even greater authority over them, pressuring tribes to move onto ever-shrinking tracts of land that would become some of the first reservations. Bacon's Rebellion accelerated the trend of eroding Indian power, and revealed the deep currents of racial animosity within Virginian society.

Banks, Dennis

Dennis J. Banks (1937–) cofounded and led the American Indian Movement (AIM). Banks was born on the Leech Lake reservation in Minnesota. While on probation for forgery, he violated parole and was sent to Minnesota's Stillwater State Prison in 1967. Banks spent most of his time in prison reading about the African American Civil Rights movement and Indian treaties.

Banks left prison with a determination to improve the lives of urban Indians. In July 1968 he joined with other Native Americans to form AIM. Modeled on the Black Panther movement, AIM took an aggressive approach to civil rights. It made national headlines when a number of activists, including Banks, occupied Alcatraz Island from 1969–1971. Before the 1972 presidential election, Banks led an AIM caravan—the Trail of Broken Treaties—to Washington, D.C. Banks was the primary force behind AIM's most famous action, the 1973 siege at Wounded Knee, South Dakota. The incident turned Banks into one of the most famous spokespersons for Native American rights. In 1974 Banks faced trial for his actions at Wounded Knee but the charges were dismissed. Shortly thereafter, he faced charges relating to the burning down of the Custer, South Dakota, courthouse during a protest against the judicial system. Banks fled to California and spent ten years avoiding prison under the protection of Governor Jerry Brown. During that time, he helped found the Deganawidah-Quetzalcoatl (D-Q) University, a Native-run college. In 1985 he surrendered to South Dakota authorities and spent eighteen months in prison.

In recent years, Banks has worked as an actor, writer, and entrepreneur. He continues to be a prominent spokesperson on Native issues.

Bannock War (1878)

In 1878 the Bannocks and Northern Paiutes fought a brief but bitter war against the United States. The primary causes of the war were the continued white intrusions on the Big Camas Prairie (in what is modern-day Idaho), guaranteed to the Bannocks when their reservation was established in 1867–1868; and the forced consolidation of various Indians at the Fort Hall reservation, which produced tensions between the Bannocks and the growing number of Shoshones. Friction developed between the Bannocks and Shoshones because the former regarded much of the land near Fort Hall as theirs, and because the Shoshones were more willing than the Bannocks to replace the traditional Indian lifestyle with farming.

Other factors helped bring on the conflict, including the scarceness of rations at the reservation, which compelled the Bannocks to fight rather than starve, and a skirmish between Bannocks and white poachers. Most white casualties during the fighting were settlers whose farms were attacked because the Bannocks desperately needed food. The unpopularity of certain Indian agents in the region was also a factor. Another was a spiritual revitalization phenomenon that swept the West during the 1870s. The Ghost Dance movement provided a messianic approach to the challenge of trying to preserve the Native American way of life or adapting to life within white society. The frequency with which the warriors invoked supernatural powers to assist them reflected the Ghost Dance influence. Related to the Ghost Dance was the Bannocks' growing consciousness of their "Indianness," which was moving them beyond a purely tribal identification. Indeed, the war is perhaps misnamed because the Bannocks successfully encouraged a number of Paiutes and other Indians to join them against the whites. As Shoshonean peoples, the Bannocks and Paiutes were closely related, and some authorities consider the Bannocks to be a branch of the Paiutes.

The warring Indians had several objectives. An immediate goal was to secure food, but the war also represented another protest by Native Americans against forced socialization to a white lifestyle. For their part, whites wanted the Indians to stop "roaming." Groups of armed hunters could easily be misidentified as war parties. Ultimately, however, white greed for land was a primary reason for hostility toward Indians not confined narrowly to reservations.

A number of battles and skirmishes between the Indians and troops commanded by General Oliver O. Howard occurred over a wide area that embraced several states and territories. Many of the Indian casualties were suffered at Charles' Ford, Wyoming. Because a number of those killed were women and children, the fight is sometimes considered a massacre. The army's figures for Bannocks and others killed or wounded in the war were seventy-eight and sixty-six, respectively, but the real numbers may well have been triple those cited. Forty whites were killed, and eighteen were wounded.

After the war of 1878, the Bannocks adapted to life at Fort Hall, making some accommodations to the economic system outside the reservation while controlling the extent of their assimilation to white society.

Banyacya, Thomas, Sr.

Thomas Banyacya (1909–1999), a Hopi elder and spiritual leader, was born into the Fox, Coyote, and Wolf Clan on his mother's side and the Corn and the Water clans on his father's side. It was from his father's lineage that he received his name, Banyacya, which can be translated as "corn in the fields standing in water after the rains." As a youth Banyacya was given the Anglican name Thomas Jenkins, but later in life he reclaimed his birth name as a symbol of his commitment to the Hopi life and culture.

In the 1940s Banyacya spent seven years in prison for refusing to register for the draft. He was deeply involved with protests against the Peabody Coal Company, which in 1968 carried out ecologically destructive strip mining on the Hopi sacred lands. While some tribal members saw this as an economic opportunity for the tribe, Banyacya saw it, and other forms of mining, as an assault on Mother Earth. He warned

Hopi leaders that signing the contract with Peabody Mining Company would bring severe punishment from the Creator including drought, disease, earthquakes, and ultimately the end of the Hopi Fourth World. He was also noted for leading opposition to uranium mining on Native lands.

Banyacya appeared before a meeting of the United Nations in 1992 and warned world leaders to stop their destruction of the earth and of the indigenous peoples, claiming that natural disasters would result if they did not. He predicted that the Great Spirit would begin its retaliation in 1997. Late in his life Banyacya drafted the Hopi Declaration of Peace that ends with the statement, "The True Hopi People declare that Hopi power be a force which will bring about world change" (Banyacya, *Hopi Prophecies and Predictions for the New Age*, 1989).

Beatty, Willard W.

Willard Walcott Beatty (1891–1961) was appointed director of education for the Office of Indian Education in 1936 and served until 1952. He supported the child-centered and scientific approach to education espoused by the Progressive Education movement. Beatty also became the driving force in the education programs of what was referred to as the Indian New Deal, a progressive change in federal policy towards Indians brought about by Commissioner of Indian Affairs John Collier. Beatty asked Indian educators to be knowledgeable and respectful of their students' tribal backgrounds and to make Indian education more culturally sensitive.

Beatty served as president of the Progressive Education Association from 1933 to 1937. In 1936 he began a fortnightly bulletin, *Indian Education*, to disseminate his policies and educational methods to Indian teachers of the Office of Indian Education. The change that Beatty and Collier advocated from the assimilationist goals of the allotment period is shown in the 1938 introduction to the Civil Service Examination for positions in the Indian School Service. It noted that the "primary objective" was "to give students an understanding and appreciation of their tribal lore, art, music, and community organization." In his memoirs,

Collier noted that he and Beatty “intended that school life become bilingual, and that the schools should serve adult and child alike” (Willard Beatty, *Education for Cultural Change*, 1951). Beatty supported the phasing out of Indian boarding schools and the development of culturally sensitive day schools that were community centers.

Beatty resigned in 1952 as federal policy reverted to assimilating Indians and terminating their reservations. He later served as a deputy director of education for the United Nations Educational, Scientific, and Cultural Organization (UNESCO) and associate program director for Save the Children.

Beaver Wars (1639–1701)

The term “Beaver Wars” has been employed by scholars to describe seventeenth-century conflicts between the Five Nations of the Iroquois League and their neighbors around the Great Lakes and in the Ohio Country. Since hunters had depleted the beaver stocks in their home territory by the late 1630s, Iroquois warriors sought to control the fur trade through the conquest or destruction of their rivals around lakes Ontario and Erie, and, later, as far away as present-day Illinois. By 1701 the Five Nations had exhausted their resources and sued their many enemies for peace.

The Beaver Wars began with Iroquois victories over the Wenros in 1639 and the Petuns in 1643 that extended Iroquois dominion as far as Lake Erie. Iroquois winter raids in 1648–1649 north of Lake Ontario resulted in the dispersal of the once-mighty Hurons. In 1653–1654, Iroquois appetite for furs and European trade goods led to the destruction of the Erie Nation.

Their northern and western enemies defeated, the Iroquois next attacked the Susquehannocks, ancient enemies that resided in the Susquehanna River basin. The Susquehannock war stemmed from internal Iroquois politics. The four western nations of the Iroquois League—

Oneidas, Onondagas, Cayugas, and Senecas—were jealous of the fifth league member, the Mohawks, due to the Mohawks’ easy access to Dutch traders at Fort Orange. Since the league prohibited wars against member nations, the western Iroquois had to find furs elsewhere. The Susquehannocks, armed by Dutch traders on the Delaware River and by the colonial government of Maryland, were a logical target. Although the well-armed Susquehannocks held the upper hand throughout much of the war, they succumbed to the Iroquois after twenty years of brutal conflict.

By the 1680s Iroquois appetite for trade goods forced them farther west in search of furs. Iroquois warriors drove Algonquian groups such as the Miamis and Illinois into the upper Great Lakes region, took their furs, and captured thousands of prisoners over the course of a decade. These Five Nations western triumphs were short lived, however. At the height of the Iroquois’ military success, their western Algonquian foes allied themselves with the French. In time, French soldiers and their newly emboldened native allies put an end to the Iroquois’ bloody western raids and took the Beaver Wars to the heart of the Iroquois’ lands. French and Algonquian warriors burned Schenectady (1690) and Onondaga (1696) during King William’s War, the imperial war between England and France into which the Iroquois–French war merged. Although the war between the European belligerents ended in 1697, French and Indian raids against the Iroquois continued. By the onset of the eighteenth century, exhausted by sixty years of continuous warfare, Iroquois chiefs sought peace.

In 1701 Onondaga speaker Teganissorens negotiated peace with France and its Indian allies in Montreal. Simultaneously, another Onondaga-led delegation convened a peace council with New York authorities at Albany. At both treaty councils, Iroquois diplomats declared the league’s neutrality in future imperial conflicts between England and France and abandoned their efforts to dominate western hunting grounds. While the 1701 peace humbled the Iroquois, it also preserved the league’s vital role in imperial politics.

The Beaver Wars impacted French and British imperial policies well into the eighteenth century. For the French, the end of the Beaver Wars permitted them to strengthen the Indian fur trade alliances that sustained the colonial economy in the Great Lakes region and provided a defensive buffer against British expansion. British colonial governors used their historic alliance with the Iroquois League, the Covenant Chain, to claim for the Crown millions of acres of western land that their Five Nations allies had won from

rival Great Lakes region tribes. The league had been weakened militarily, socially, and culturally by the Beaver Wars, but as the struggle for empire between France and Britain continued, the Iroquois could still tip the balance of power by allying itself with one empire or the other.

Until recently, economic interpretations of the Beaver Wars dominated most discussion on the Iroquois' seveneenth-century wars. George T. Hunt, for instance, argued that the Iroquois wanted access to the firearms and other European goods that their enemies used to great advantage against them. Francis Jennings placed the Beaver Wars into a larger imperial context when he argued that the British used their alliance with the Iroquois, as well as the Indians' vast territorial acquisitions, to support their own claims to native land. Daniel K. Richter attributed some economic motives to the Iroquois, but his primary belief was that the Iroquois fought "mourning wars," conflicts intended to replenish the depleted population of their towns through prisoner adoption. José Antônio Brandão, unlike Richter, discarded economic considerations altogether when linking the Iroquois' wars with major epidemics among the Five Nations that forced them to capture and adopt prisoners to increase their population. Interpretations of the Beaver Wars continued to be revised to add more weight to indigenous motivations for action into the early twenty-first century.

Beeson, John

During the Indian-settler conflicts in the Rogue River Valley of Oregon in the 1850s, one settler published a stir-

ring defense of Native rights. John Beeson, an English-born farmer and Methodist humanitarian, moved from Illinois to southern Oregon in 1853, drawn there by the prospect of improving his circumstances. He arrived in the region during a gold rush, which attracted hundreds of fortune seekers who often violated Indian lands, and threatened and killed resistant Natives. Violent conflict brought political pressure to remove Indians, which resulted in a treaty in 1853 and the establishment of a local reservation. More violence followed, as miners and settlers demanded the complete removal or extermination of the Indians in the Rogue River Valley. An especially terrible attack on women and children in 1856 stimulated Beeson, who had been an active abolitionist in Illinois and had argued publicly in Oregon for humane treatment of Native people, to write several strong letters to the *Oregon Statesman*, the *True Californian*, and the *New York Tribune* charging that volunteer militia members had committed genocidal acts on Rogue River Valley Indian camps. National journals were uninterested in his reports.

Beeson's advocacy for Indians made him an outcast among Oregon settlers, forcing him to leave the region. Outraged at the fate of Rogue River Valley Indians and determined to tell the outside world, Beeson wrote and self-published *A Plea for the Indians: with Facts and Features of the Late War in Oregon* in New York in 1857. Beeson's 143-page book argued for humane treatment of Native people and for wholesale reform of federal Indian policies, but it had little effect on conditions in Oregon or U.S.-Indian affairs. Beeson continued to argue for Indian rights as a member of the Indian Aid Association in Philadelphia. He returned to Oregon in the 1870s and died there in 1889.

Bellecourt, Clyde

Clyde Bellecourt (1936–) is a cofounder of the American Indian Movement (AIM), which developed into an organization committed to reforming relations between Indians

and the federal government. Born May 8, 1936, on the White Earth Indian reservation in Minnesota, Bellecourt is a member of the Anishinabe Ojibwe (Chippewa) tribe. His name translates into "Thunder before the Storm." In 1968, Bellecourt formed and became national director of AIM. Two years later, he founded the Legal Rights Center in Minneapolis to provide legal aid to the indigent. In 1972, he founded the Heart of the Earth Survival School, a charter school for Native American children that teaches Indian culture as well as traditional subjects. In 1973, Bellecourt participated for seventy-one days in an occupation of the Pine Ridge reservation town of Wounded Knee, South Dakota, in a standoff with federal authorities. In 1975 he founded the Federation of Native American Controlled Survival Schools. Four years later, he formed the American Indian Opportunities Industrialization Center (OIC), the first Indian OIC, which offers job training and technical education.

In 1984, an AIM tribunal in California condemned Bellecourt for crimes that included drug use and trafficking. In 1986 he went to federal prison for twenty-two months after pleading guilty to selling LSD to undercover agents. Despite these troubles, he continued his activism. During the 1991 World Series between the Minnesota Twins and the Atlanta Braves, Bellecourt led demonstrations protesting the use of Indian nicknames by sports teams, a practice he has since continued.

In 2000, activist Russell Means, perhaps the best-known AIM member, charged that Bellecourt and his brother, Vernon, had engineered the execution-style slaying of AIM member Anna Mae Pictou-Aquash in 1975 at Pine Ridge. The Bellecourts denied the allegations. The Bellecourts founded the National American Indian Movement in 2003, while Means is affiliated with the rival International Confederation of Autonomous AIM. Both groups claim to be the true AIM.

Bellecourt, Vernon

Vernon Bellecourt (1931–2007), a White Earth Anishinabe Ojibwe, helped lead the American Indian Movement (AIM). A prosperous realtor, Bellecourt admired the actions of his brother, Clyde, on behalf of Indians and founded an AIM chapter in Denver. The group addressed Indian sovereignty, respect for treaties, protection for Indian religious freedom, and reorganization of the Bureau of Indian Affairs (BIA). Bellecourt garnered public attention as the spokesperson for AIM's 1972 Trail of Broken Treaties protest caravan to Washington, D.C., which culminated in the occupation of the BIA offices. He briefly joined in the 1973 occupation of Wounded Knee, during which time he raised funds for AIM and again served as a spokesperson.

In November 1994 the Denver chapter of AIM charged Bellecourt with sabotaging the organization's principles and activities by allegedly working with adversaries of Native Americans. The charges stemmed from his support for the federal Act for the Protection of Indian Arts and Crafts (1990) and the Native American Free Exercise of Religion Act (1993), as well as a list of other grievances. Critics of these acts charged they were attempts to empower the federal government to define who was an Indian and to set the conditions under which Native American spirituality could be practiced. The Denver chapter of AIM banished him for life, but he remained a member of the AIM Grand Governing Council.

As chair of the National Coalition on Racism in Sport and Media, Bellecourt protested against the use of Native American mascots and logos by sports teams. He viewed such characters as Chief Wahoo of the Cleveland Indians baseball team as attempts to demean and trivialize Native American culture. Bellecourt died on October 13, 2007, in Minneapolis, Minnesota.

Bennett, Robert L.

Robert L. Bennett (1912–2002), an Oneida Indian and commissioner of Indian affairs from 1966–1969, was the first American Indian to head the Bureau of Indian Affairs (BIA) since the late 1800s. He grew up in Wisconsin, began working for the BIA in 1933, and earned a law degree in 1941. During the 1950s, Bennett helped to block Senator Arthur Watkins' attempt to terminate the Ute Indian tribe. Along with Francis McKinley, a member of the Ute tribal council, Bennett created and carried out a plan whereby only mixed-blood Utes were terminated.

When he was appointed commissioner in 1966, Bennett was serving as a BIA area director. He was known for opposing government paternalism and promoting economic development on reservations. Some wondered if Bennett, a life-long BIA bureaucrat, could provide fresh and creative leadership. Congress confirmed him with the expectation that he would cooperate with its termination program, which sought to assimilate Indians into mainstream American society. Bennett worked instead to strengthen tribal governments and to convert the BIA into a professional service agency.

In 1966 Bennett ruled that the Navajo tribe could not develop lands that the Hopi tribe also claimed. This "Bennett Freeze" was not lifted until 2006. Bennett temporarily lost some credibility with the National Congress of American Indians in 1967 when he promoted the Lyndon B. Johnson administration's Omnibus Bill for Indian economic development. He made Indian education a priority and worked with the National Indian Youth Council. Bennett resigned in 1969, shortly after Johnson left office. From 1970 to 1975, he served as director of the American Indian Law Center at the University of New Mexico.

Bent, Charles

Charles Bent (1799–1847) was born in Virginia, but shortly after his birth his family moved to St. Louis, Missouri. In 1822 he went to work for the Missouri Fur Company, becoming a partner by 1825. While working for this company, he gained experience in dealing with Indians and served for a time as a subagent for the Iowa tribe. In 1828 Charles and his brother William joined with Ceran St. Vrain in a new fur company to trade in the southwest. In 1833 the company, known as Bent, St. Vrain and Company, built Bent's Fort on the north bank of the Colorado River near present-day La Junta, Colorado, on the mountain branch of the Santa Fe Trail. Because of their good reputation for dealing fairly with the Indians, the Bent brothers were given much credit for maintaining peace along the trail. In 1835 Charles Bent moved to the Taos area in present-day New Mexico and became involved in land speculation. When the United States took control of New Mexico during the United States–Mexico War (1846–1848), Bent became the territorial governor. Because of tensions with the Indians in the area, he urged the U.S. government to send agents to the various tribes and to build forts there as soon as possible, but this was not done for several years. In early 1847, dissident Mexicans and some Pueblo Indians in the territory rose in revolt against U.S. control, and in the resultant fighting, Charles Bent was killed on January 19, 1847.

Big Elk (Ong-pa-ton-ga)

Big Elk (Ong-pa-ton-ga) was born in 1765 in the principal village of the Omaha (U'maha) Nation, located between present-day Omaha, Nebraska, and Sioux City, Iowa. As a young man, Big Elk joined other Omahas in battle against their traditional enemy, the Pawnees. He earned a reputation as a brave and skilled warrior, and also as a fair man in decision making.

Big Elk succeeded Black Bird as the principal chief of the Omahas in 1820, a critical time for the tribe as an increasing number of American settlers migrated across their traditional lands. In 1821 and 1837, Big Elk traveled to Washington, D.C., to negotiate treaties between the Omahas and the American government. His oratorical skill was described as spellbinding. On one such visit to Washington he was quoted as saying, "Do not grieve. Misfortunes will happen to the wisest and best of men. Death will come, always out of season. It is the command of the Great Spirit, and all nations and people must obey. What is past and what cannot be prevented should not be grieved for . . . Misfortunes do not flourish particularly in our lives—they grow everywhere" (Herman J. Viola, *Diplomats in Buckskins: A History of Indian Delegations in Washington City*, 1995).

In 1820, the superintendent of Indian affairs, Thomas L. McKenney, commissioned accomplished portraitist Charles Bird King to paint Native American dignitaries who came to Washington to confer with government officials. King painted Big Elk's portrait during his first visit in 1821. That now-famous painting is on display in the Smithsonian American Art Museum.

Big Foot (Si Tanka)

Big Foot (Si Tanka) (c. 1825–1890) was a war chief among the Minniconjou Lakotas (Sioux) at the height of the Plains Indian wars. He was a great hunter, a skilled horseman, and, in his youth, a fierce warrior. He was also known for his skill as a political and diplomatic representative for his people in negotiations with other Indian nations and with the U.S. government.

Big Foot became tribal chief upon the death of his father, Lone Horn, in 1874. At this time the U.S. government was forcefully negotiating treaties with Indian nations that sought to reduce their traditional hunting grounds and restrict them to reservations. The Natives resisted, and Indian prophets created a spiritual revitalization movement that became known as the Ghost Dance religion. Big Foot served

as one of the movement's leaders. The U.S. government became alarmed that the Ghost Dance might signal the beginning of a new round of Indian warfare.

In December 1890 Big Foot led a group of followers to the Pine Ridge reservation to show his peaceful intentions. On December 28, 1890, an army detachment intercepted the group and instructed them to camp overnight at Wounded Knee Creek in South Dakota. The following morning Big Foot and some 150 to 200 of his followers, who had been largely disarmed, were massacred by the reconstituted 7th U.S. Cavalry. Big Foot was suffering from a serious illness, perhaps pneumonia, and was unable to fight. He was among the first to be killed.

Bill of Rights

The first ten amendments to the Constitution of the United States comprise the Bill of Rights, which was ratified in 1791. The first eight of these amendments establish protections for individual rights, such as freedom of speech, freedom of the press, freedom of religion, due process of law, and protection from unreasonable search and seizure. In *Barron v. Mayor & City Council of Baltimore* (1833), the U.S. Supreme Court ruled that the Bill of Rights applied only to the federal government, and not to the states. Beginning in 1897, however, the Court held in a series of cases that most, but not all, of the protections of the Bill of Rights also applied to the states because they had been incorporated by the due process clause of the Fourteenth Amendment, which was ratified in 1868. As of mid-2008, there were only five provisions of the Bill of Rights that have not been incorporated and thus do not apply to the states: the right to bear arms, the right not to have soldiers quartered in homes, the right to a grand jury in criminal cases, the right to a jury trial in certain civil cases, and the prohibition of excessive fines.

Indians who maintained tribal relations were not citizens under the original Constitution or the Fourteenth Amendment. To the extent that constitutional protections were

available to citizens, those protections did not extend to tribal Indians until the Indian Citizenship Act of 1924 made all Indians citizens of the United States.

Nonetheless, the Bill of Rights generally protects “persons” and not just U.S. citizens. Both the federal government and the states are therefore bound by the Bill of Rights in their dealings with Indians. During much of the history of U.S.-tribal relations, however, federal courts allowed the government to ignore the protections of the Bill of Rights. For example, the Kiowa Lone Wolf claimed that the allotment of his reservation and the sale of the surplus lands were in violation of the Fifth Amendment. Regardless, the U.S. Supreme Court held in *Lone Wolf v. Hitchcock* (1903) that the federal government had plenary (complete) power to do as it pleased with Indian property. Once the allotment period ended in 1934, however, federal courts began to hold the federal government to constitutional standards. In *United States v. Creek Nation* (1935), the Supreme Court ruled that the United States could not take lands to which Indian tribes held recognized title without the payment of just compensation. And in *United States v. Sioux Nation* (1980), the Supreme Court rejected the *Lone Wolf* decision that congressional actions were not subject to judicial review.

Although federal and state governments are bound by the Bill of Rights, tribal governments are not. Concerns arose in the 1960s that tribal governments and tribal courts were not adequately protecting the rights of Indian citizens. Senator Sam Ervin (D-N.C.) spent much of the 1960s pushing passage of the Indian Civil Rights Act (ICRA). His initial proposal to make tribal governments subject to all constitutional constraints was rejected in light of concerns over preserving traditional tribal governmental structures. As ultimately enacted in 1968, the ICRA guarantees that persons subject to tribal governmental authority enjoy many of the same rights as those in the Bill of Rights. The ICRA, however, does not make the Bill of Rights itself applicable to tribal governments.

Black Elk

Black Elk (c. 1863–1950) was an Oglala Sioux spiritual leader. At age nine he received a vision in which Thunderbeings, sacred Sioux spirits, told him he would have great powers that would enable him to cure people and to help them in battle. This vision, and others throughout his life, set him apart as a holy man and a healer.

Black Elk participated in the Battle of Little Bighorn (1876) and, one year later, witnessed the murder of Lakota leader Crazy Horse. In 1886 he joined Buffalo Bill's Wild West Show and traveled Europe. He returned to live at the Pine Ridge reservation in South Dakota, where his reputation as a powerful holy man grew. On December 29, 1890, he witnessed the massacre at Wounded Knee when soldiers opened fire on a group of Indians who were practicing the Ghost Dance.

After converting to Catholicism in 1904, Black Elk adapted his traditional practices to the changing cultural realities of reservation life in the twentieth century. Even so, he maintained the qualities of a Lakota holy man: charity, kindness, generosity, and the belief that sacredness in all of its forms was the most profound expression of reality.

In 1930 he described his early life to John Neihardt, who retold his story in the book *Black Elk Speaks*. Its popularity helped lay the groundwork for a change in the perceptions of Indians in popular culture and law. In 1947 Black Elk was interviewed by Joseph Epes Brown, whose book *The Sacred Pipe* recorded the holy man's teachings about the traditional Lakota religion.

Despite the difficulty of coping with the dramatic changes that took place in his lifetime, Black Elk served as an example of how many Native Americans were able to live meaningful and profound lives.

Black Hawk (Makataimeshekiakiak)

Black Hawk (Makataimeshekiakiak) (1763–1838) was a Sauk warrior and anti-American spokesman born in northwestern Illinois. He grew to adulthood as Americans poured into the upper Mississippi River Valley. During his lifetime he witnessed the Sauk economy weaken, village leaders sign away tribal lands, and government officials interfere with everyday Indian life. In an effort to preserve Sauk traditions, he led his supporters into the disastrous war named after him.

During the War of 1812, Black Hawk led hundreds of his tribe to fight alongside the British against the Americans. During Black Hawk's absence, tribal leaders chose Keokuk, a younger man, to defend the community of Saukenuk. This led to bitter disagreements between the two as Keokuk agreed to negotiate with the Americans, while Black Hawk rejected any accommodation. In 1831 the United States forced the Sauks and Mesquakies west beyond the Mississippi River, but in April 1832 Black Hawk led 1,500 to 2,000 Indians back into Illinois. This set off the war that bears his name. When the fighting ended, only about three hundred Indians had survived. Black Hawk surrendered, and after a year in federal custody American officials released him and the other leaders of his revolt. In 1838 Black Hawk died in Iowa. In 1833 an Illinois newsman published his remarks as *Black Hawk's Autobiography*. While not entirely Black Hawk's words, it is one of only a few collections of recorded statements from an Indian who lived in the early nineteenth century.

Black Hawk War (1832)

The 1832 Black Hawk War was the first of several frontier conflicts between the United States and tribal people resulting from President Andrew Jackson's 1830 Indian Removal Policy. It pitted elements of the Sauk, Mesquakie, Potawatomi, and Ho-Chunk (Winnebago) tribes in Illinois

and present-day Wisconsin against U.S. Army forces and Illinois militia troops.

The conflict resulted from nearly thirty years of misunderstanding and tensions between tribal people in the upper Mississippi Valley and intruding settlers and their government. Sauk relations with the United States began badly when in 1804 American officials tried to prevent the Sauk from raiding their traditional enemies, the Osage tribe. That same year William Henry Harrison duped a few tribal leaders into signing a treaty that surrendered all of their land east of the Mississippi River. This agreement brought confusion later because it allowed the Sauks to live on their land until 1829 when the government sold it. Throughout that time Indian leaders rejected or tried to ignore the treaty.

These early strained relations did not improve as American settlers arrived in Illinois Territory. So when the War of 1812 broke out, British officers had little difficulty in recruiting Indians to join them in fighting against the Americans. Black Hawk, a respected Sauk war leader, gathered and led Indian warriors from Illinois and Iowa to campaign. During his absence American militiamen threatened Saukenuk, the largest Sauk community at the time. Frightened village leaders chose a Sauk named Keokuk to defend their town. Their action began an often bitter competition between Black Hawk and Keokuk for preeminence and led to clear divisions within the tribe.

At the end of the War of 1812, American negotiators forced the tribes of the upper Mississippi Valley to accept treaties of peace and friendship. Gradually federal officials realized that Keokuk spoke for the moderates in both tribes, so they began to support him in his struggle with Black Hawk for tribal influence. During the 1820s the efforts of these two men to direct tribal affairs intensified and created deep divisions among the Sauks and Mesquakies.

Expanded settlement in Illinois increased frontier tension and violence. In 1825 American officials held a multiracial peace council in Prairie du Chien, Wisconsin. There tribal leaders signed a treaty promising to end retaliatory raids and accept U.S. mediation of intertribal disputes. Sauk traditionalists such as Black Hawk denounced this as an abandonment of tribal culture, focusing their anger on Keokuk. Two years later Illinois governor Ninian Edwards demanded that the federal government move the Indians out of that state. Soon after settlers began moving into Saukenuk while the Indians traveled west of the Mississippi on their winter hunt.

Intertribal raiding among the area tribes kept tension high. When the Menominees and Dakotas (Sioux) mur-

The Sauk and Fox Indians, led by Black Hawk, were defeated by General Henry Atkinson's forces in 1832. The Black Hawk War was the first, but not last, conflict caused by President Andrew Jackson's Indian removal policy.

dered a delegation of unarmed Mesquakie leaders seeking peace, American officials intervened to prevent retaliation. This further angered families of the victims. Gradually anti-American Sauks and Mesquakies formed a vocal minority opposition group. They rejected the 1804 treaty of cession, objected to the possible sale of lead lands in Iowa, and promised to return to Saukenuk each year. By this time American officials had begun calling them the British Band because of their War of 1812 actions against the United States.

When the Sauks tried to reoccupy their village in 1831, Illinois authorities called out the militia and threatened to exterminate the villagers. General Edmund P. Gaines intervened with U.S. troops. He forced Black Hawk and the other leaders to agree to stay west of the Mississippi and to accept Keokuk's leadership. This only postponed trouble. During a miserable winter in Iowa, Black Hawk received an invitation from the Winnebago prophet, White Cloud (Wabokieshiek), to return to Illinois and settle at the prophet's village on the Rock River. That same winter Napope, one of the young Sauk chiefs, visited British officers at Malden in Canada. On his return he lied, claiming that the British had promised military support if a war began. This news prompted leaders of the British Band to return to Illinois the next spring.

In early April 1832 the Indians moved back into Illinois. At that point the British Band included less than five hundred armed men accompanied by elderly people, women, and children for perhaps a total of 1,800 people. They moved

up the Rock River Valley expecting a welcome from Potawatomi and Ho-Chunk villages there. On April 16 and again on April 24 General Henry Atkinson, who commanded American troops in the region, sent emissaries who urged Black Hawk to lead the Indians back to Iowa. Still expecting aid from tribes in the area, the leaders rejected this advice, but within a few days they learned that other Indians had no intention of helping them.

On May 14, before the British Band leaders could act, Illinois militiamen under Major Isaiah Stillman attacked. The defenders terrorized the militiamen who fled. This incident ended efforts to seek a peaceful solution, and Atkinson led U.S. troops and militia units after the Indians, who fled north into Wisconsin. Mostly the war that followed consisted of Indian raids and unsuccessful pursuits by the American force. By July 1832, with many of its members nearing starvation, the British Band headed west toward the Mississippi. On July 19 the militia found their trail, and two days later the volunteers overtook the fugitives at the Wisconsin River, attacking as the Indians fled across it. That set off a race toward the Mississippi River, where on August 2, 1832, Atkinson's force overtook and nearly destroyed the British Band. When the fighting ended, no more than three hundred of the Indians had survived. The government pushed all but a few leaders into Iowa. Black Hawk, the Winnebago prophet, and several other chiefs spent the next year in federal custody before being returned to Iowa. In late summer 1832, General Winfield Scott forced Sauk and Mesquakie leaders to sign a treaty surrendering a fifty-mile-wide strip of tribal lands in

Iowa. This was the first of several cessions which eventually forced the tribes out of Iowa.

Black Hills

The Black Hills occupy the southwest corner of South Dakota and sprawl into neighboring Wyoming. They are sacred to many tribes, including the Cheyennes, Arapahos, Kiowas, Kiowa-Arapahos, and Lakotas. The Cheyennes and Arapahos, who are closely connected, hold several places within the Black Hills to be sacred, including Bear Butte, the Great Race Track, and Devils Tower. Indeed, Bear Butte is one of the most sacred places for the Cheyennes. Bear Butte and Devils Tower are also sacred to the Kiowas.

The Sioux, and particularly the Lakota (one of the three linguistic subdivisions of the Sioux), also have strong religious connections to a number of places within the Black Hills. According to Sioux creation stories, their people emerged from Wind Cave in the Black Hills. Thus the Black Hills, or Paha Sapa in the Lakota language, are central not only to their religion, but also to their very existence as a people. The Lakotas refer to Paha Sapa as “The Heart of Everything That Is,” and the relationship between them is a mutual one. They protect one another, placing responsibilities on each other and granting benefits.

The Black Hills are also at the core of an almost 150-year-long dispute between the people of the Sioux Nation and the people of the United States. Archaeological records document that the Sioux occupied the Black Hills by the 1770s, after driving many other tribes out of the area. The westward expansion of the United States in the nineteenth century resulted in conflicts between settlers and Indians, including the Sioux. Those conflicts were worsened by mis-

understandings between the two groups, particularly over patterns of land ownership. The settlers kept spreading westward into what they saw as unsettled territory, and the Indians were continually pushed out of what they viewed as their ancestral lands.

In 1851 the United States and several Indian tribes entered into the Treaty of Fort Laramie, which specifically reserved the Black Hills for the Sioux, as the Sioux refused to cede the land to the United States. Shortly after the treaty, gold was discovered in Montana and gold seekers carved out an illegal shortcut through Lakota territory. The resulting conflicts erupted into the Powder River War, also known as Red Cloud's War. The Sioux won, forcing the United States to surrender and negotiate what became known as the second Treaty of Fort Laramie (1868). Again, the treaty reserved the Black Hills for the Great Sioux Nation. The treaty required the United States to keep trespassers out of the Black Hills and also provided that any future land cession would require the signatures of three-fourths of the tribe's adult males.

Less than a decade later, the United States was in violation of these treaty obligations. In 1874 Lt. Col. George Armstrong Custer led an expedition into the Black Hills and confirmed reports of the existence of gold. The United States sent the Allison Commission to negotiate for the Black Hills, and when those negotiations failed, the federal government began a strategy designed to force the Sioux to agree to their terms. This strategy included a decision by the president and other top governmental officials to cease enforcing the ban on white settlers in the Black Hills, attempts to starve the Sioux into submission by restricting their treaty-guaranteed hunting and fishing expeditions, and stopping food and other payments required under the terms of the 1868 treaty.

The Sioux revolted against the restrictions, and the U.S. military began a campaign to force the Sioux back to the reservations. Although the hostilities included some Indian successes, such as the Battle of Little Bighorn in which Custer was killed, the Indians were largely unsuccessful in their resistance. In 1876 Congress dispatched the Manypenny Commission to the Sioux to collect sufficient signatures to cede the Black Hills. The commission obtained the signatures of approximately 10 percent of the adult males, far short of the 75 percent required by the treaty. Despite the commission's failure, Congress passed a statute in 1877 abrogating the 1868 Treaty of Fort Laramie and stripping the Sioux of the Black Hills.

Within three years, the Sioux began seeking the return of the Black Hills. Relations between the Sioux and the United States continued to worsen, culminating in the massacre at Wounded Knee on December 29, 1890. At least 150 Sioux (some scholars place the figure much higher), mostly unarmed noncombatants, were killed by the U.S. military during the massacre. Despite this, the Sioux would not renounce their claim.

In 1920 Congress passed a statute waiving the sovereign immunity of the United States and allowing the Sioux to file a claim in the U.S. Court of Claims seeking restitution for the loss of the Black Hills. That suit was filed in 1923 and dismissed on technical grounds in 1942. The tribe tried again after Congress created the Indian Claims Commission in 1946. The purpose of the Indian Claims Commission was to investigate claims filed by Indian tribes alleging wrongful takings of land. The commission was given the ability to award monetary compensation for any taking it determined was wrongful, but was not authorized to actually return the land itself as compensation.

The Sioux Nation's lawsuit followed a long and difficult route, complicated by poor legal representation and requiring two congressional statutes to extend the timeframe for pursuing the lawsuit. In 1980 the U.S. Supreme Court upheld the judgment of the claims court, declaring that the United States had violated the 1868 Treaty of Fort Laramie when it seized the Black Hills. In the course of affirming the claims court's decision, Justice Harry Blackmun, writing for the Supreme Court, repeated the claims court's declaration that a "more ripe and rank case of dishonorable dealings will never, in all probability, be found in our history." The Court upheld the award of \$17.5 million. The award itself was insultingly small, as it included only simple, not compound, interest and it did not account for the estimated \$1 billion taken out of the Homestake Gold Mine in the Black Hills. The Court included only the value of the gold wrongfully removed by white trespassers prior to the 1877 statute, an amount estimated at \$450,000. When the 5 percent interest was added to the amount of the judgment, the total award came to \$106 million.

For the Sioux and the Lakotas, however, no amount of money could compensate for the loss of Paha Sapa. They wanted the land itself back, not what they viewed as a pay-off. The Sioux refused the money, which still rests in the U.S. Treasury earning interest. As of 2008, the amount was estimated at \$400 million and climbing. Unfortunately for the Sioux, they never had a chance of getting the land returned

through the Indian Claims Commission process. The commission was empowered only to award monetary damages, and no other viable legal avenues exist to seek the return of the land. Efforts to file suit in federal court seeking return of the land have failed, as have attempts to claim access to the land on religious grounds.

One such effort in 1981 was the American Indian Movement's (AIM) establishment and occupation of Yellow Thunder Camp on eight hundred acres of public-use land in the Black Hills. AIM had obtained a permit to camp on the site, and it also applied for permission to construct more than eighty permanent structures. Despite the fact that the Black Hills Sioux Nation Council withdrew its support for the occupation after less than a week, the camp existed for years while AIM litigated the U.S. Forest Service's denial of the permit to build permanent structures. Federal courts eventually upheld the Forest Service's decision and the camp was abandoned.

In the mid- to late 1980s, several bills were introduced in Congress to return significant portions of the Black Hills to the Sioux, including one in 1985 by Senator Bill Bradley (D-NJ), the former Knicks basketball player. Bradley became interested in the Black Hills situation both because of the merits of the situation and as a result of his friendships with a number of Indian people, whom he met during basketball camps he sponsored on the Pine Ridge reservation. This and other legislative efforts to return the Black Hills also failed, however, largely as a result of opposition by South Dakota officials; the complicated task of balancing the public and private interests in the region, which encompass both economic and recreational interests; and disputes among the Sioux themselves about how to proceed.

Black Kettle (Motavato)

Black Kettle (Motavato) (c.1803–1868), a Southern Cheyenne leader, signed treaties on behalf of his people during the turbulent middle years of the nineteenth century. He is remembered for his commitment to peace with the whites and for his tragic death.

The 1851 Fort Laramie Treaty, which he signed, guaranteed the Cheyennes hunting grounds in Kansas and Colorado in exchange for significant land cessions. When the Gold Rush began in 1848, triggering a flood of settlers into the area, government agents induced some, but not all, Cheyenne leaders to sign the 1861 Treaty of Fort Wise. That further reduced their territory and created a reservation on Sand Creek in eastern Colorado. The new reservation failed to meet the Cheyennes' subsistence needs and some began raiding settlements. The whites retaliated and conflict spread. Desiring peace, Black Kettle led his band back to Sand Creek. Despite assurances to the contrary, Colonel Chivington's Colorado Volunteers attacked their village on November 29, 1864, killing approximately 150 men, women, and children. Black Kettle survived and continued to promote peace.

The government then moved the Cheyennes to a reservation in southwestern Kansas and shortly thereafter to the Indian Territory. Some refused to go; others went but left when they did not receive the provisions promised. Some resumed raiding. Lt. Col. George A. Custer allegedly followed a raiding party to Black Kettle's village on the Washita River. While the raiders may have sheltered there, it is by no means certain they were members of his band. Custer ignored the white and American flags flying over Black Kettle's tepee to signal his "friendly" status and attacked at dawn on November 27, 1868. Black Kettle and many others (estimates vary) died in what some have called a massacre because of the seemingly indiscriminate killing of noncombatants. The public outcry that followed prompted a congressional inquiry.

Blood Quantum

Blood quantum is the idea that the degree of racial inheritance for an individual is measurable and significant to one's identity. The concept assumes that an individual's race determines physical, intellectual, or emotional characteristics. The blood quantum of an individual—that is, the percentage of ancestry that is white, American Indian, Asian, African, or some other race—holds implications for the social, economic, and political rights of a person as well as their status in the community. As its origin and use have determined numerous federal policies concerning peoples of indigenous descent, it remains a controversial issue for Native Americans.

Historical Overview

The origins of blood quantum are directly linked to the institution of slavery. Paralleling the development of slavery is the establishment and separation of races on the basis of physical characteristics. Europeans believed skin color, along with other outward biological characteristics, defined racial and social inferiority. Peoples of nonwhite racial ancestry were thought to possess inferior intellectual, moral, and social qualities in direct opposition to the superior qualities that automatically existed within "white" Europeans.

Over time blood quantum came to be used to track racial ancestry and define legal rights. In 1705 the colony of Virginia enacted laws to deny civil liberties to any person of African descent, mulatto, or American Indian. The law also applied to future generations, defining children, grandchildren, and great grandchildren as inferior members of society based on racial ancestry. Other colonies adopted similar laws, using blood quantum to define the extent of participation and privileges associated with full citizenship and racial status to other nonwhite races, including Native Americans.

Warfare against, and the isolation and confinement of, Native American tribes were seen as justified under the building of an American civilization that believed in the superiority of its racial makeup. Removal of indigenous populations under the authority of the Indian Removal Act of 1830 provided one solution for physically separating the races. After the Removal era, the U.S. government isolated American Indians on reservations. Another effort at separation was the passage of laws prohibiting marriages between Euro-Americans and “inferior” races. Earlier, North Carolina passed a code that forbade marriages between whites and Indians, people of African descent, or of mixed ancestry to the third generation. Racial identity had become closely attached to blood quantum.

After the Civil War (1861–1865), other racial questions arose about whether “inferior races” could be assimilated into American society and whether they would be a benefit to America’s national progress. With the acceptance of Charles Darwin’s evolutionary principles, many people believed that all societies followed similar paths from primitive to more complex in biological and social development. The belief held that inferior races would either be assimilated into the superior society or become extinct.

Native Americans

By the 1880s most Native American societies had been placed on reservations. For policy makers, reservations were considered a refuge for a declining inferior race that could be salvaged by forcing them out of their “primitive state” and requiring they interact with the “civilized” world. Using principles drawn from evolution and scientific racism, the federal government from 1880 to 1934 instituted a policy of forced assimilation that sought to destroy Native American cultures.

Blood quantum became a centerpiece in many federal forced assimilation policies, which were rooted in the racial belief that biological characteristics, mental attributes, and cultural capabilities were imparted through the blood of each individual race. Blood quantum, along with other social markers of Euro-American society, was used by the Office of Indian Affairs to track “civilized progress.” “Full bloods” often were deemed racially incapable of managing their own affairs, while “mixed-bloods” were considered more competent, usually because of the infusion of “white blood.”

By the nineteenth century blood quantum not only was used to calculate the degree of “Indianness,” but also was used increasingly in the management of Indian affairs. It was used to decide the degree and number of rights and benefits

granted to enrolled tribal members. As Indian policy evolved, blood quantum expanded to determine eligibility for federal resources and services, determine tribal membership, and outline economic and political benefits.

After the passage of the 1934 Indian Reorganization Act (IRA), blood quantum requirements for tribal membership were increasingly turned over to individual tribal governments. Many tribal constitutions—authorized by the IRA and encouraged by the Office of Indian Affairs (later renamed the Bureau of Indian Affairs)—adopted blood quantum as a criteria for defining ethnic identity, tribal enrollment, tribal citizenship, and eligibility for certain rights. Blood quantum standards have since become internalized among Native communities, who use it as a test for defining “Indianness.”

Recent research, however, concludes that there is little genetic distinction between America’s indigenous peoples. Tribal boundaries and ethnic differences did not hinder reproductive exchange between indigenous distinct societies. Thus, prior to having blood quantum imposed to define racial and community identity, kinship rather than biology was the core component of both social and individual ethnic affiliation. Every aboriginal society employed adoption, marriage, capture, and naturalization to incorporate individuals and groups from foreign societies, including Africans, Europeans, and other non-Natives. Such processes worked to negate genetic distinctions. Although the incorporation of people from distinct societies continued after being placed on reservations, most Native American societies, politically and socially, replaced these social mechanisms for defining their communities with blood quantum as major criteria.

The consequences of employing blood quantum continued to generate controversy. By the early twenty-first century, issues such as child custody cases, eligibility for health care and benefits, political and criminal jurisdiction, land claims settlements, local and federal taxation, royalties from resources, and per capita payments still had an element of blood quantum as part of the decision process. In 1990 for example, the passage of the Act for the Protection of American Indian Arts and Crafts deemed it a criminal offense for anyone not enrolled in a federally recognized tribe to identify themselves as Indian while selling art.

The implications of using blood quantum are evident in every aspect of contemporary Native American life. A Certificate of Degree of Indian Blood (CDIB) or a Certificate of Degree of Alaska Native Blood is issued to

determine citizenship in a specific federally recognized tribe or indigenous community. In some cases, only enrolled members with a CDIB are entitled to rights and resources. In 1985 Congress passed the Quarter Blood Amendment Act to determine which Native students are eligible for Indian education programs and tuition-free assistance at Bureau of Indian Affairs or contract schools. The act requires that the quarter-blood requirement be met with a Certificate of Indian Blood.

Native American demographic data reveal that from the twentieth century forward, there continues to be an increasing mixture between tribal members and non-Indian people. These trends have accelerated, raising concerns by some about preserving tribal biological and cultural purity. Some reservation tribal leaders argue that tribal constitutions should be amended to remove enrolled members who marry non-Indians or raise blood quantum levels on the premise that such measures are vital toward protecting the purity of Indian blood. Some ignore principles of kinship affiliation and other cultural practices for the incorporation of other people and adopt blood quantum as a “traditionalist belief.” In other documented instances, the prospect of increasing casino profits has convinced tribes to set higher blood quantum standards to eliminate members from tribal enrollments and thus ensure the profits need be spread among fewer individuals. This is generally referred to as “disenrollment.”

In 2000 a proposal was put forth to significantly alter the manner by which the Bureau of Indian Affairs calculates and invalidates a Certificate of Degree of Indian Blood or Certificate of Degree of Alaska Native Blood. The proposed change that received the most criticism amongst the Indians was limiting the calculation of “Indian blood” to only federally recognized tribes, effectively eliminating any ancestry from terminated tribes, a state-recognized tribal entity, or Native ancestry from other sources.

Such proposals and efforts run counter to contemporary Native American ethnic and demographic realities. Native peoples continue to intermarry with nonenrolled tribal members and reside apart from the place of their birth, making it more difficult to meet blood quantum standards as well as altering tribal identity. In addition, many individuals and communities—many of partial Native American descent—are seeking recognition. These trends ensure that blood quantum and its utility for establishing federally recognized tribal identity will be actively debated into the twenty-first century.

Conclusion

Despite the controversies that exist in indigenous communities over the internalization of blood quantum, most federally recognized tribes use it as a major criteria for determining tribal membership and eligibility for services. Blood quantum has divorced thousands of people from their Native American ethnic heritage by legally defining who is or is not a recognized person of Native American descent. For some individuals, blood quantum is a policy designed to “statistically exterminate” remaining Native American peoples. For others, it is a mechanism to legitimately define who may claim to be Native American. Blood quantum, as a concept, will remain a contested issue in the cultural and political landscape of Native North America.

Board of Indian Commissioners

The formation of the Board of Indian Commissioners (BIC) began when William Welsh, a wealthy Episcopal merchant from Philadelphia, and several other religious reformers called upon President Ulysses S. Grant and Congress in March 1869 to reform federal Indian policy. Specifically, Welsh wanted to mobilize Christians to help end corruption in the Office of Indian Affairs (OIA) and “civilize,” Christianize, and eventually make citizens of American Indians. Grant and Secretary of Interior Jacob D. Cox supported Welsh’s ideas. Congress authorized the president to form the BIC to oversee the Indian office in April 1869, and in June Grant issued an executive order creating the BIC and describing its duties. The BIC was relegated to work with the OIA on a variety of tasks, but primarily it was authorized to investigate and end corruption in the purchase of supplies for Indian reservations.

Nine northern Republican laymen, active in their Protestant denominations and the Young Men’s Christian Association, made up the first BIC. Service was voluntary, pro bono, and apolitical, though the board members functioned as advocates for the president’s Peace Policy. The BIC called for the establishment of schools with Christian teachers, the movement of Indians onto small reservations, the end of the cash annuity system, and a reservation judiciary, all in the hopes of preventing wars on the United States’ western frontiers. In an effort to ensure that Indian agencies were managed by honest men, the board recommended that they be parceled out among the Christian denominations. The board’s reformers blamed whites as the main inhibitors of Indian “civilization.” Nevertheless, they did not oppose white encroachment in the name of “progress.” They ultimately promoted the assimilation of the Indian to avoid Native extinction at the expense of Native culture.

Not unlike most OIA programs, the board almost immediately faced controversy. Some, including Commissioner of Indian Affairs Ely S. Parker and Secretary of Interior Columbus Delano, suggested that the role of the commissioners was chiefly advisory. Welsh, the board’s chair, believed that the organization should have the authority to take immediate action to correct what he saw as fairly obvious cases of financial dishonesty and mismanagement. This led to friction between the board and Parker. Welsh resigned after only a month as chair because he believed the BIC would not be allowed to share power equally with the secretary of interior. As an act of political vengeance, Welsh later brought

corruption charges against Parker. Though found innocent, Parker resigned.

The BIC made some strides towards reform under the Peace Policy. Chaired by Pittsburgh industrialist Felix Brunot for five years, the board promoted several of its objectives. In 1871 Congress ended the practice of conducting its relations with tribes through treaties, a policy recommended by the BIC. Delano and Parker asked the board to instead make “articles of convention” with various western Indian nations that Grant could then quickly approve.

Commissioners also oversaw annuity distributions and saved the government large amounts of money by rejecting bad supplies and inflated invoices. They disallowed almost 10 percent of contract monies from July 1873 to February 1874. Commissioners visited tribes throughout the West to negotiate agreements, determine annuities, and investigate the living conditions on the reservations.

BIC chair Felix Brunot worked tirelessly to bring reform to the OIA, but he and the rest of the board grew tired of their lack of influence. In 1873, as the Peace Policy’s popularity and the economy both waned, the entire original BIC resigned in protest. Grant appointed new members, but neither the BIC nor reform advocates ever regained strong influence in Washington.

Under Grant and his successor, Rutherford B. Hayes, the BIC supported consolidating reservations, giving Natives title to their own lands, and forming Native police forces for reservations. BIC member Ezra Hayt became Hayes’ commissioner of Indian affairs. By this time the commissioners were now recommending that boarding schools replace reservation day schools. The board also called for the allotment of Indian lands to individual tribal members, thus trying to break tribal identity by negotiating with Natives as individuals. The commissioners promoted equality of land allotments between Native men and women and argued for fair compensation for American Indian lands.

Every year from 1882 to 1916, the famed Lake Mohonk Conference of Friends of the Indian was held in New York in conjunction with the annual BIC meeting. The reformers called for equal treatment for Natives under the law, eventual Indian citizenship, and civil service reform for Native people. In 1913 the BIC supported investigations into treaty violations and promoted a system for Indian nations to file claims against the government. This helped lay the foundation for the idea of an Indian Claims Commission, which was established in 1946. In 1933 President Franklin Roosevelt disbanded the BIC and placed Indian affairs into

the hands of John Collier and his allies, individuals who held completely different ideas and objectives about how the United States ought to deal with its Native population.

Bonnin, Gertrude

Gertrude Simmons Bonnin (1876–1938), also known as Zitkala-Sa (Red Bird), a Yankton Sioux, is best known for her autobiographical narratives and her recounting of oral traditions. However, she spent her adult life fighting for American Indian rights. Her articles in *The Atlantic Monthly*, published in the early 1900s, expressed the indignation she felt over American Indians’ treatment in the United States. The positions she held with the Society of American Indians (SAI) gave her the influence to serve as a political spokeswoman and reformer for Native causes, and her writing, political lobbying, and activism influenced several areas of American Indian law.

Ironically, Bonnin’s work both supported and opposed the government’s assimilation programs. While the SAI operated on the principle of assimilation, it attempted to restore Indian autonomy through political reform. Bonnin’s lobbying efforts led to Colorado’s passage of the Crowley Bill (1917), making it the first state to prohibit the use of peyote, a substance derived from cacti that produces hallucinations.

Bonnin’s public speaking and lobbying efforts influenced Charles Curtis, a Kaw Indian congressman, to introduce the Indian Citizenship Act, which passed in 1924. This bill made every American Indian a citizen of the United States with the right to vote. In 1926 Bonnin formed the National

Council of American Indians, a pan-Indian political organization that united tribes to help fight for Indian rights.

In “Oklahoma’s Poor Rich Indians: An Orgy of Graft, Exploitation of the Five Civilized Tribes, Legalized Robbery” (1924), Bonnin’s investigation of robberies, land thefts, and oil-motivated murders committed against Indians in Oklahoma pressured Congress to enact reforms.

Bonnin’s introduction of American Indians’ concerns to the general public through her activism and writing paved the way for later pan-Indian movements.

Boone, Daniel

Daniel Boone (1734–1820), an American frontiersman, was born in Berks, Pennsylvania; grew up in western North Carolina on the banks of the Yadkin River; and died in Missouri. He lived in the same community as well-known explorer and surveyor Christopher Gist (Sequoyah) in Wilkes County, North Carolina, and met his wife, Rebecca Bryan, there. Boone gained fame not only as an intrepid pioneer, paving the way for settlers through the Cumberland Gap, but also for his skill in fighting Indians. This warrior reputation was launched when he fought on the British side during the French and Indian War (1754–1763).

In 1775 Boone founded the Boonesborough settlement, which was attacked by the Shawnee in resistance to settler expansion. Between 1777 and 1778, Boone and twenty-six of his companions were captured by the Shawnees, in part as retaliation for the murder of the Shawnee leader Cornstalk, and in part because the Shawnees sided with the British in the American Revolutionary War (1775–1783) against the settlers. Boone was adopted by the Shawnee chief Black Fish during his captivity, and he managed to escape after three months. During the war, Boone was elected to the Virginia General Assembly, where he served three terms. He was part of an expedition led by George Rogers Clark in 1782 that was notorious for its savage attacks against the Shawnees.

Boone died in Missouri at the age of eighty-five. His adventures became legendary even while he was still living, and he has become a part of American legend through ballads, songs, books, television portrayals, and movies.

Bosque Redondo

The term Bosque Redondo means “round wood.” To the Navajo people, however, these words hold a much more bitter meaning: “the suffering times.”

In 1862 the United States was deeply involved in the Civil War (1861–1865), and thousands of Americans took the opportunity to flee the war-torn lands and head west, across Indian lands. In the territory of New Mexico, settlers, and later the U.S. cavalry, met fierce resistance from the Navajo and Mescalero Apache people who fought to maintain control of their traditional lands and way of life. In an effort to remove the Indians from the path of the westward bound settlers, the army made war on them. In 1862 General James H. Carleton was placed in command of the military in Arizona and New Mexico. Carleton made it his first priority to conquer the Mescalero Apaches and Navajos.

In 1852 General Carleton visited the Bosque Redondo trading post in Arizona. The old post had served as a meeting place where the Spanish and Mexicans traded with the

Apaches and Comanches. Because of the isolation of the post, Carleton felt that Bosque Redondo would be an excellent site for an Indian reservation on which to incarcerate the resistant Apaches and Navajos. President Abraham Lincoln approved Carleton’s request for the thirteen-thousand-acre reservation, and Fort Sumner was built nearby.

General Carleton next began a search for a military officer to carry out a campaign to kill or capture resistant Apache and Navajo warriors. He found his man in Colonel Kit Carson. From 1863 to 1864, Carson carried out the assignment with the same zeal and professionalism that he had exhibited during the Civil War. He turned his full attention to the Navajos and delivered Carleton’s ultimatum: “Surrender or die.” A pitched battle raged between the Navajo and Carson’s men. Carson launched expeditions to destroy the Navajo economic livelihood. He ordered his men to cut down all the trees, wheat, and corn growing in Canyon de Chelly. His men pillaged Native crops and slaughtered their sheep herds, the economic mainstay of many Navajo people. Those Navajos not killed in battle were starved into submission and forced to march a desperate journey, known as The Long Walk, into captivity. It was an extremely difficult passage for the Navajos, made mostly on foot. The march took almost two months to complete. Ultimately, the number of internees increased to between nine and ten thousand individuals.

The Navajo leader Manuelito (1818–1894) and his forces held out against capture for a considerable time. He eventually allowed his remaining warriors to surrender only after a prolonged army pursuit. Another important Navajo warrior, Barboncito (1820–1871), fought alongside Manuelito but was captured and taken to Bosque Redondo.

Life at Bosque Redondo was harsh. One objective of the federal government was to teach the residents of the reservation to farm like Anglos. However, conditions at Bosque Redondo made this goal difficult to achieve. Shelter consisted of holes in the ground covered by tree branches and leaves. Indian women were repeatedly raped by the soldiers and syphilis spread rapidly among the Navajos. Food was always difficult to obtain and the water supply was nothing more than a polluted creek. Approximately three thousand of the internees died from dysentery and other diseases. In 1865 most of the Mescalero Apaches eluded their military guards and abandoned the reservation.

Incarceration at Bosque Redondo ended when the U.S. government acknowledged Navajo sovereignty in the Treaty of 1868. The treaty set aside 3.5 million acres of land in New

Mexico, Arizona, and Utah, but amounted to less than one-fifth of the tribe's former holdings and was mostly barren, dry, and unsuitable for agriculture. Those Navajos who survived the Bosque Redondo internment returned to Deneta (the Navajo homeland). The procession of survivors was ten miles long.

Boudinot, Elias

Elias Boudinot (Buck Watie) (1804–1839), originally named Gallegina ("Mule Deer"), bridged the Anglo-American and Native American worlds as an associate of the American Missionary Board and clerk of the Cherokee National Council. Boudinot was a committed advocate of education and the Christian religion in the effort to "civilize" his fellow Native Americans. Indeed, Boudinot showed his own commitment to assimilation early in life when he adopted the name of the former leader of the American Bible Society and later married Harriet Ruggles Gold, a non-Cherokee, in 1826. The mixed union shocked the Connecticut community, and to escape the hostility, Boudinot returned to the Cherokee Nation.

Boudinot was an articulate and provocative spokesman for the Cherokees. He was editor of the *Cherokee Phoenix*, a Cherokee newspaper that highlighted the great accomplishments of Native American culture. He also used the newspaper as a forum to defend the rights of the Cherokee people against those who wanted to remove the Cherokees to the West.

When the Georgia legislature purported to extend its jurisdiction over Cherokee territory, the Cherokees brought a suit that would enjoin the state's actions. In *Cherokee Nation v. Georgia* (1831), four Supreme Court justices recognized the validity of Cherokee claims, but declined to hear the case on the ground that the Cherokees lacked substantial stand-

ing. The case was inconclusive. In a later case, *Worcester v. Georgia* (1832), in which a Georgia court sentenced Samuel Austin Worcester to four years in prison for refusing to secure a license from the state to reside in the Cherokee Nation, the Supreme Court held that the Cherokee Nation was a sovereign nation and that Georgia's encroachments on its territory and autonomy were unconstitutional.

Congress and President Jackson were unwilling to enforce the Court's ruling, however, and some Cherokees, including Boudinot, began to push for removal, believing that it was the only way for their society and civilization to survive. Boudinot; his uncle, Major Ridge; and his cousin, John Ridge, became leaders of what was known as the Treaty Party. John Ross, principal chief of the Cherokee Nation, and the Cherokee National Council opposed removal, and animosities developed between Ross's supporters and the Treaty Party. Under pressure from Ross, Boudinot resigned as editor of the *Cherokee Phoenix*. In December 1835 a minority of proremoval Treaty Party supporters met at New Echota to negotiate the relocation of the Cherokee Nation. The agreement they signed, the Treaty of New Echota, provided for an exchange of the Cherokee homeland in the Southeast for a large parcel of land in the Indian Territory. Many Cherokees, especially Ross, rejected the treaty and denounced as traitors those who signed it. Twice during the 1820s the Cherokee Nation had passed laws providing for the death of those who ceded tribal land without the authority of the Cherokee government. In 1839 a group of Cherokees loyal to Ross killed Boudinot and the two Ridges for their part in negotiating the Treaty of New Echota.

Boudinot, Elias Cornelius

Elias Cornelius Boudinot (1835–1890), a Cherokee lawyer and businessman, became an influential critic of tribal sovereignty in the late nineteenth century. He was the son of Elias Boudinot, editor of the *Cherokee Phoenix* and a leader of the proremoval Treaty Party. When his father was killed by fellow Cherokees in 1839 for having signed the Treaty of New Echota, which required the removal of the tribe to the Indian Territory, Boudinot went to live with white relatives in New England. He later practiced law and ran a newspaper near Indian Territory. He fought for the Confederacy in the Civil War (1861–1865) under his uncle, Stand Watie. Boudinot served as a Cherokee delegate to the Confederate Congress.

After the war, Boudinot gained prominence by arguing that the Indian Territory should be opened to white settlers. Separate tribal nations, he believed, could not survive in the face of an expanding modern America. It would be best, he insisted, if the federal government threw aside the treaties and allowed Indian communities to be absorbed into the United States. He broadcast these views widely in newspapers and as a lobbyist in Washington. Boudinot offered a Cherokee voice in support of policies like allotment (the United States plan to divide and distribute the communal lands of the tribes to individuals), that the Cherokee government opposed. In the late 1870s, Boudinot helped to inspire “boomers,” organized squatters who invaded Indian Territory in an effort to gain control of unused tribal property.

Boudinot left his mark on American Indian legal history as the individual behind the *Cherokee Tobacco Case* (1871). In the late 1860s, Boudinot established a tobacco processing factory in the Cherokee Nation. He attempted to market his product in neighboring states without first paying federal excise taxes, believing he could avoid this burden under a provision of the Cherokees’ 1866 treaty. The legal case that grew out of this situation eventually went to the Supreme Court, where Boudinot lost. The Court’s ruling helped to establish the principle that Congress could override Indian treaties.

Bowl

Bowl (1756–1839), also known as Chief Bowles or Chief Duwali, was the principal chief of a Texas tribe of Cherokees. He was born in North Carolina to a Cherokee mother and a Scottish father and rose to become chief in the western North Carolina Cherokee village of Running Water. In 1794 Bowl became involved in a violent altercation with white settlers traveling down the Tennessee River. After a settler killed a Cherokee, Bowl and his followers retaliated, killing five white men in an event that came to be known as the Muscle Shoals Massacre. The incident led the Cherokee National Council to condemn Bowl.

Although the United States government cleared him of the charges, Bowl fled North Carolina and settled in Missouri’s St. Francis River Valley. From there, he and his people moved through Arkansas during the early 1800s until they settled in the eastern Texas town of Nacogdoches. There, Bowl became the chief of a collection of villages and tried multiple times to secure ownership of Cherokee lands from the Mexican government. When Texas became independent, Bowl was guaranteed possession of lands through a treaty negotiated and signed by his friend, Sam Houston. The friendship, as well as the promise of the land, ended when the Texas Legislature invalidated the treaty. Outraged, Bowl attempted to align with Mexico, bringing cries of treason from the new Texas president, Mirabeau B. Lamar, who ordered the expulsion of the Cherokees. Bowl and his people resisted, and in July 1839, Bowl was killed in the resulting Battle of Neches.

Bowlegs, Billy

Known as "the Alligator Chief" by his fellow Seminoles, Billy Bowlegs (1810–1864) was an effective military and diplomatic leader who rose to prominence during the second and third Seminole wars (1835–1842; 1857–1858).

In the 1830s, a multilingual Bowlegs forged beneficial ties with the Spanish in Cuba. These connections helped the Seminoles avoid dependence on their American neighbors, who wanted their Florida lands and their African American allies. After signing the 1832 Treaty of Payne's Landing, Bowlegs reversed his position and rejected the treaty because it called for the Seminoles to be removed from Florida. After the end of the resulting Second Seminole War, he became a leader of the postwar resistance. He used guerilla tactics to resist the onslaught of settlers who came to Florida after the 1842 Armed Occupation Act was passed.

In the 1850s Bowlegs represented the Florida Seminoles in several negotiations with the United States. In an 1852 meeting with President Millard Fillmore, Bowlegs declared that the Florida Seminoles would not remove to Indian Territory. The United States spent much of the Third Seminole War trying to capture Bowlegs, which it eventually did. In 1858 the Seminole chief Wild Cat returned from Indian Territory with an offer of \$10,000 plus \$1,000 per person to induce Bowlegs and his followers to remove west. After a period of resistance, Bowlegs agreed and relocated to the Seminole lands in the Indian Territory.

Bowlegs sided with the Union during the American Civil War (1861–1865). He enlisted in the U.S. Army in 1862 and saw considerable action in Indian Territory and Kansas. He died of smallpox in 1864.

Bowles, William Augustus

A Maryland-born Loyalist during the American Revolutionary War (1775–1783), William Augustus Bowles (1763–1805) spent most of the latter part of his life defying Spanish and American officials and trying to create a new Indian community in Florida.

When the Revolutionary War began, a thirteen-year-old Bowles enlisted as an ensign in the Maryland Loyalists Battalion. After being discharged for dereliction of duty while in Pensacola, Florida, he lived for a time with the Creek Indians, most of whom supported the British. Bowles rejoined the British Army, but then fled to the Bahamas. He later returned to the Creeks in Florida to oppose the Indian trade monopoly held by the Panton and Leslie Company and the increasing influence of chief Alexander McGillivray, who was friendly with Spain and the United States.

Bowles angered many Creeks when he began to trade along the Chattahoochee River, and he took refuge in the Bahamas before again returning to Florida, where he tried to create an independent Indian state. In 1799 he declared himself "Director General" of the "State of Muskogee" and attracted a mix of Native, white, and black followers. Many of Bowles' followers were disillusioned by McGillivray's leadership and by the general trends in Creek society toward greater centralization and increased reliance on the marketplace and slave labor. In 1800 Bowles declared war on Spain and continued his campaign against Florida authorities.

Bowles married two Indian women—one Creek and the other Cherokee. He reputedly could speak at least three Native dialects. He was arrested in 1803 and died in a Havana prison in 1805.

Boyer, LaNada (Means)

LaNada Boyer (1947–), a Shoshone-Bannock, is from the Fort Hall Indian reservation in Idaho and was one of the original Indian students who occupied Alcatraz Island on November 19, 1969. The occupation was an attempt by

young American Indian college students to focus the nation's attention on the government's failed termination policy, the violation of Indian treaty rights, and the abandonment of thousands of Indians who had been relocated to urban areas.

Boyer, then LaNada Means, moved to the San Francisco Bay Area as part of the U.S. government relocation program that was intended to detribalize Indians, abolish Indian reservations, and assimilate reservation Indians into the urban population. During the Alcatraz occupation, Boyer commuted daily from the island to the University of California, Berkeley, to continue her studies, and completed her master's degree in public administration, graduating with honors in 1971.

As chair of the Indian student group from Berkeley, she coordinated with Richard Oakes (Mohawk), a student at San Francisco State University, in the takeover of Alcatraz and maintained a strong leadership role throughout the nineteen-month occupation. In addition to being an organizer and leader on the island, Boyer traveled throughout the United States giving lectures and raising support for the occupiers.

Boyer developed her political ideology from her life experiences in Native American boarding schools, life on an Indian reservation, and as a victim of the federal relocation program. She saw first-hand that Natives were being deprived of their basic dignity. Children were beaten for speaking their native language, practicing their culture, and following their own religions. She believed that Indians did not enjoy basic civil liberties or protection through the American court system.

As the first Native American student at Berkeley, Boyer played a leading role in the establishment of the Native American Studies program in 1968. In 1999 she completed her doctorate in political science at Idaho State University, the first member of her tribe to attain that level of education.

Later in her life, Boyer served a two-year term as a member of the Shoshone-Bannock Tribal Business Council. She directed two tribal health clinics in Nevada and northern California. Boyer has also served with many local and national Indian organizations, including the United Native Americans, Indians of All Tribes, the Bay Area Native American Council (BANAC), the Native American Rights Fund, the Bannock Shoshone Legal Research Project, and the National Head Start Policy Board.

Bozeman Trail War (1865–1868)

The Bozeman Trail was a shortcut from Fort Laramie on the Oregon Trail to Virginia City and the gold fields of Montana. It was established in 1863 by John Bozeman and John Jacobs and followed a route used by American Indians across the prime hunting grounds of the Powder River country.

The Bozeman Trail War (1865–1868) was fought to close the trail, which crossed land promised to the Lakotas (Sioux) by the 1851 Fort Laramie Treaty. The war is sometimes called "Red Cloud's War" or the "Powder River War" and was the only time American Indians defeated the United States in a major war. Red Cloud was the triumphant Lakota leader, and the war elevated a young warrior named Crazy Horse to prominence.

In spring 1866, U.S. representatives met with the Lakotas at Fort Laramie, ostensibly to discuss the possibility of negotiating a treaty that would allow forts to be built along the Bozeman Trail. During the meeting, federal troops arrived at the fort with both the orders and the supplies to build the forts. The Indians, led by Red Cloud, were outraged at this double-dealing and left the negotiations.

Despite Indian objections and attacks on those who constructed the trail, three forts were built: Fort Reno near modern-day Buffalo, Wyoming; Fort Phil Kearny near modern-day Sheridan, Wyoming; and Fort C. F. Smith, near modern-day St. Xavier, Montana, on the Crow reservation. By the end of 1866, continual attacks by Lakota, Cheyenne, and Arapaho warriors had effectively closed the Bozeman Trail to nonmilitary travel. Although most attacks were minor, there were 150 deaths by the end of November, and anyone who left a fort for any reason was at risk.

U.S. soldiers—most of them new recruits—under the command of Colonel Henry Carrington maintained the forts along the trail. In December 1866, Captain William Fetterman and eighty others were drawn outside Fort Phil Kearny and into a trap set by Crazy Horse and about two thousand warriors. All of the soldiers were killed.

American Horse, chief of the Oglala Lakotas, rose to prominence during the Bozeman Trail War. The conflict was the only time Indians won a major war against the United States. It was fought over land promised to the Lakotas in an 1851 treaty.

The killing of Fetterman's command was the worst defeat the U.S. had suffered by western Indians and led to a heated policy dispute in Washington, D.C. The Department of War and General William Tecumseh Sherman, the Civil War general and head of the western military, thought the Indians should be exterminated. Others, centered in the Department of the Interior, thought they should be reformed and acculturated through the reservation policy.

Congress passed a law in July 1867 that authorized a peace commission but reserved the option to deal with Indian issues militarily. The next month, in the Wagon Box Fight near Fort Smith, U.S. soldiers survived only because they had new, repeating rifles.

In 1868, U.S. negotiators reached Fort Laramie, where the treaty that guaranteed the abandonment of the Bozeman Trail and its forts was signed. Fort Phil Kearny was burned to the ground before its soldiers were out of sight, and the Lakotas regained control of the Powder River country.

Brant, Joseph

As a Mohawk leader, interpreter, war chief, diplomat, and British Indian Department officer, Joseph Brant (c. 1742–1807; Thayendanegea) used his linguistic skills, family connections, charisma, cunning, and British education to lead northeastern Indians in Native struggles against the encroachment of American settlers during the revolutionary period.

Although scholars disagree over the exact date and place of Brant's birth, one thing is clear: he spent his boyhood years in Canajoharie, a powerful Mohawk town in present-day upstate New York. Brant came from a prominent Mohawk family that, by the time of his birth, practiced a form of Iroquois Christianity. When Brant's older sister, Molly, became the common-law wife of Sir William Johnson, the British superintendent of Indian affairs, Joseph Brant and the rest of his family gained even greater prestige and power. The union of Johnson and Molly Brant also proved advantageous for both the Mohawks, who obtained a healthy share of British goods and favors, and the British Empire, which acquired military and political support from the Iroquois.

Impressed with Brant's potential as a go-between for the British, Johnson sent him to Eleazar Wheelock's Moor Indian Charity School (present-day Dartmouth College). Throughout his life, Brant made use of his knowledge of English culture and the English language to further the interests of the Six Nations (the Iroquois confederacy consisting of the Oneidas, Tuscaroras, Onondagas, Cayugas, Senecas, and Mohawks).

Convinced that the survival and continued well-being of the Six Nations depended on an alliance with the British, Brant fought with the British against the Americans during the American Revolutionary War (1775–1783). For Brant and other Native Americans, the Treaty of Paris (1783) that

brought a formal end to hostilities between the British and Americans did not end the war. In fact, the terms of the treaty represented a new fight for Native Americans. The United States saw the Mississippi River as its new western boundary. The British agreed to cede the lands to the Americans, and from the perspective of the American government, this meant that as allies of the British, Indians also lost any claim to the land. But neither Brant nor any other American Indian participated in the peace negotiations in Paris, and the treaty terms angered Native peoples, especially those who lived on land that the Americans declared to now be the public property of the U.S. government.

After the revolution, Brant sought to unify the Iroquois with Indians in northwestern New York to stop the westward movement of American settlers. Ultimately, Brant failed both in his quest to create a sustained pan-Indian defense and in his goal of preventing the expansion of American territory. Brant's death in 1807 represented the passing of an Indian leader whose ability to maneuver within and between British and Indian cultures made him one of the most famous Native American Indians of his generation.

Brant, Mary (Molly)

Comfortable operating among British colonists and the Iroquois peoples of the northeast, Mary (Molly) Brant (c. 1736–1796) fashioned herself into an intercultural broker, and became one of the eighteenth century's most influential Native American women. Born into an influential Mohawk family in a matrilineal culture that valued the role of women as political figures, Molly, as she was generally known, held a great deal of prestige and political power. In 1759 she married Sir William Johnson, the British superintendent of Indian affairs for the Northern Department, which strengthened her authority among the Iroquois and the British. By

marrying Johnson, she gained easy access to European gifts that she distributed to the Iroquois confederacy, known as the Six Nations, to help maintain their allegiance to the British.

After Johnson's death in 1774, Brant maintained her position as a cultural go-between by providing British military strategists with intelligence on American troop movements. In exchange for her efforts to preserve the loyalty of the Six Nations to the British and for the intelligence she shared, the British supplied her with goods and money so that she could maintain and continue to build a vast network of connections among the Oneidas, Tuscaroras, Onondagas, Cayugas, Senecas, and Mohawks. After the American Revolutionary War (1775–1783), Brant moved to Cataraqui (present-day Kingston, Ontario), where she received a pension of one hundred pounds a year from the British government until her death in 1796. Like her younger brother Joseph Brant, who was a well-respected Mohawk leader, diplomat, and interpreter, Molly used her familiarity with British culture in an effort to preserve the lands and political sovereignty of the Iroquois people.

Bridges, Alvin “Al” J.

Alvin J. Bridges (c.1922–1982), a fishing-rights activist and Native traditionalist of Nisqually, Duwamish, and Puyallup heritage, was born in Gig Harbor, Washington. Bridges fought for Native fishing rights and sovereignty. He helped bring about the Boldt decision (1974) that affirmed the right of many tribes to fish in Washington state. Many protests Bridges participated in occurred on the lower Nisqually River at Frank's Landing, a center of the controversy in the 1960s and 1970s. The fishing rights battle was rooted in treaties of 1854 and 1855 that gave several Northwest tribes the right to fish and hunt in all their “usual and accustomed” places and the efforts of the state of Washington to regulate

their fishing. The activists' fight to preserve fishing rights also represented an affirmation of tribal sovereignty.

Al Bridges was one of the first to participate in "fish-ins," during which people fished in open defiance of state agents. Fish-ins attracted national attention, the participation of celebrities, and often included violent confrontations with state game wardens and fisheries enforcement officers; Bridges was incarcerated many times. Some people branded him a renegade for fighting for off-reservation rights.

Bridges also was a traditionalist and a director of the Survival of American Indians Association, a group dedicated to preserving Native identity, culture, and customs. His home at Frank's Landing was a gathering place for traditionalists and activists. Bridges' wife, Maiselle, and his daughters played critical roles as strategists, organizers, and activists.

Bronson, Ruth Muskrat

Born in the Delaware District of Indian Territory, Ruth Muskrat Bronson (1897–1982) lived through the Oklahoma statehood movement that dismantled institutions of the Cherokee Nation, broke up the Cherokee land base, and conveyed U.S. citizenship upon western Cherokees. These events profoundly shaped her philosophy as a leader in national Indian affairs. First as a college student and then during her nineteen years with the Education Division of the Office of Indian Affairs, Bronson worked towards empowering a new generation of Indian leaders.

From 1945–1956, Bronson helped build the newly established National Congress of American Indians (NCAI) into an organization of national significance. In 1957 she moved to the Southwest, where she spent the remainder of her life supporting community development projects among the San Carol Apaches and the Tohono O'odhams.

Throughout her lifetime, Bronson insisted that American Indians were entitled to a dual set of rights: their treaty or indigenous rights and their rights as U.S. citizens. Her years with the NCAI best exemplify her efforts to make federal Indian policy and law honor this dual legal status. As an

NCAI officeholder, Bronson spoke out repeatedly against legal and rhetorical assaults on tribal sovereignty and Indian civil rights. Although she worked on behalf of many tribes in these years, two struggles in particular—the Tlingit and Haida land claims in southeast Alaska and the fight to allow Indian tribes the right to hire legal counsel of their own choosing—stand out by virtue of Bronson's extensive commitment to them.

Brophy, William A.

William Aloysius Brophy (1903–1962) was the thirty-fourth commissioner of Indian affairs, holding the office from 1945 until 1947. He was born in New York City and educated in New York and Chicago. He worked as a clerk on shipping lines before moving to New Mexico and entering the University of New Mexico. He graduated with a law degree from the University of Colorado in 1931. Returning to New Mexico, he served as assistant city attorney in Albuquerque from 1932 until 1934, and then as a special attorney for the Pueblo Indians. In that capacity, he appeared twice before the Supreme Court in *United States v. Santa Fe Railroad Company* (1941) and *Toledo v. Pueblo de Jemez* (1954).

Brophy moved to Washington, D.C., in 1942 to work on Puerto Rican matters. He was appointed commissioner of Indian affairs in March 1945 by President Harry S. Truman. Brophy was ill for most of his term, but he did preside over the reorganization of the Office of Indian Affairs into the Bureau of Indian Affairs. During Brophy's illness, direction of the bureau's work was carried out by his deputy, William Zimmerman Jr. Brophy's health finally failed, and he tendered his resignation on December 31, 1947.

In his retirement Brophy worked on the Commission on the Rights, Liberties, and Responsibilities of the American Indian and voiced his support for compensating tribes for their land claims. He resigned from the commission to become a legal consultant on Indian policy. Brophy had long

campaigned for resources to treat tuberculosis on Indian reservations; ironically, he succumbed to the disease on March 24, 1962.

Brown, Eddie F.

Eddie Frank Brown (1945–) of the Pascua Yaqui Tribe and Tohono O'odham Nation served as assistant secretary of the Department of the Interior for Indian affairs from June 1989 to July 1993. Brown was nominated for the position by Arizona senator John McCain because of Brown's work directing the Arizona Department of Economic Security and the Bureau of Indian Affairs' Division of Social Service.

As assistant secretary Brown worked to restructure the Office of Indian Education Programs and garner more funding for its work. Brown's administration also established the offices of Gaming, Trust Review, and Audit and Evaluation. As of early 2008, Brown held a position chairing the American Indian Studies program at Arizona State University.

Bruce, Louis R.

Louis Rooks Bruce Jr. (1905–1989), commissioner of Indian affairs from 1969–1973, was known for transforming the Bureau of Indian Affairs (BIA). He grew up on the St. Regis Mohawk reservation and graduated from Syracuse University in 1930. Bruce served as New York State director

for Indian projects for the National Youth Administration and in several other positions before President Richard Nixon appointed him to the position of commissioner of Indian affairs.

Bruce helped found the National Congress of American Indians and advised several presidents. As commissioner, Bruce placed American Indians in top positions within the BIA and made strengthening tribal self-determination and sovereignty his priority. He was blamed for the occupation of the BIA headquarters during the 1972 Trail of Broken Treaties caravan to Washington, D.C., and lost his job soon thereafter. In 1976–1977 he served on the American Indian Policy Review Commission.

Brunot, Felix Reville

Felix Reville Brunot (1820–1898) served as a member of the Board of Indian Commissioners (BIC) and was an advocate for the fair treatment of Indians by the U.S. government. Beginning in 1847, Brunot invested in a steel mill and embarked on a career in Christian philanthropy. He served on the Sanitary Commission during the Civil War (1861–1865), as a Sunday school superintendent, and as a trustee of the Philadelphia Divinity School. He fought for temperance and Sabbath legislation, and supported the Christian Amendment Movement in the 1860s. In 1869 Brunot accepted a position on the newly established BIC and participated in the creation of the Grant administration's Peace Policy.

As the second chair of the BIC, Brunot devoted his full attention to Indian affairs. Known as a pragmatist and compromiser, he led the BIC as they traveled to meet with Indian groups, evaluated policy, negotiated treaties, and monitored contractors and government expenditures. Brunot and the BIC supported removal and reservation programs, as well as railroad company efforts to secure right-of-way privileges through Indian lands. The most important functions of the BIC included investigating Indian Office finances and fraud

allegations, and serving as a liaison to the religious organizations that were crucial to Grant's Peace Policy objectives. Brunot waged political battles against Interior Secretary Jacob Cox and Indian Affairs Commissioner Ely Parker as he sought to maintain and expand the BIC's role. However, by 1874 it was clear that the BIC would not be the vehicle for reform that he had anticipated. The board, following Brunot's lead, resigned en masse.

Buffalo

Buffalo—or, more appropriately bison—lived in large numbers on the North American continent until their near extinction in the late nineteenth century. Their habitat was mostly the grasslands of the plains and prairies, but at least temporarily extended into the boreal forests to the north and into the woodlands of eastern North America. Indigenous peoples hunted bison from time immemorial. On the Plains, buffalo became one of the main resources for those who relied on hunting and gathering as well as for agricultural peoples. While early peoples had hunted buffalo herds by stalking individual animals in winter and chasing herds over cliffs (so-called buffalo jumps) or into corrals, the introduction of the horse in the early eighteenth century enabled Plains Indians to stage well-organized horseback buffalo hunts. The significance of the bison as a resource for food, shelter, tools, and many other cultural aspects was paralleled by its significance in Plains Indian cosmologies and religions.

Near Extinction

Early French, Spanish, British, and American travelers and traders encountered and hunted buffalo; however, large-scale hunting (for the supplying of trading posts, for example) was mostly left to Native American groups until the 1850s. Some scholars argue that the combination of the horse and the

commercial hunting by Native groups was already overexploiting the buffalo, and that the bison-centered economy of Plains Indians after the adoption of the horse was not sustainable. While the commercial hunting for, and trade in, buffalo hides by Native groups had grown since the advent of steamboats on the Missouri in the early 1830s, the mass production of bison hides did not occur until the 1870s, when an industrialized tanning method was developed. Buffalo leather was cheap, durable, and elastic. It was used in the burgeoning manufacturing industry as belt material and uniform material for expanding colonial armies. Due to the great demand for buffalo hides, as well as the availability of more powerful rifles after the Civil War (1861–1865), American bison hunters killed millions of buffalo in the 1860s and 1870s. By the early 1880s, the buffalo were at the brink of extinction. Many scholars report that it was these American hunters that brought the end to the bison herds; whether the indigenous hunting would have been unsustainable or not cannot ever be known.

The collapse of the bison population went hand in hand with the subjugation of the last sovereign Plains Indians nations. The consequences of this ecological disaster for Native peoples were very clear to the army commanders, who welcomed them. With their main food source gone, Plains Indians were to become dependent on the United States for assistance, and therefore had to give up their sovereignty. Generals Philip H. Sheridan and William Tecumseh Sherman argued that only an extermination of the buffalo could assure that the Indians would become “civilized.” Colonel Richard I. Dodge is reported to have held the opinion that “every buffalo dead is an Indian gone” (David D. Smits, “The Frontier Army and the Destruction of the Buffalo: 1865–1883,” *The Western Historical Quarterly* [Autumn, 1994]). While there is no evidence of a planned, direct involvement of the army in the near extinction of the bison—it did not give direct orders to buffalo hunters or have its soldiers engage in the enterprise—commanders indirectly supported the commercial hunting by providing protection and sometimes supplying ammunition to the hunters.

Conservation

Between 1871 and 1876, several bills were introduced in Congress to regulate or limit buffalo hunting in order to protect bison from extinction. None of these bills became law. The opposition to these measures came from the two government agencies concerned with Indian policies: the

Buffalo were essential to the Plains Indians' way of life. This George Catlin painting (1835) depicts Sioux Indians on a hunt.

Department of War and the Department of the Interior. Both saw the conservation of bison as opposed to their interests in “civilizing” American Indian nations. The protection of the species thus remained largely a matter of private initiative.

Aside from Yellowstone National Park, two principle herds were built from the remaining few animals, one in Montana and one in South Dakota. Both efforts involved to a large degree Native Americans as initiators. Government actions to protect the buffalo had to wait until the Plains Indian tribes were subjugated. The Yellowstone herd was poached regularly, even after a detachment of the army was sent to protect the park's resources in 1886. In 1908 the National Bison Range was established in the middle of the Flathead Indian reservation in Montana; other federal and state bison reserves followed.

Contemporary Issues

By 2007 there were more than 250,000 bison in the United States, and the conservation of the species was ensured. Since the 1960s, but especially since the farm crisis of the 1980s, buffalo have attracted much interest as an alternative to cattle ranching. Buffalo ranching has become a major part of the economies of Plains states, and many reservations have

started their own bison herds, for both cultural and economic revitalization. Many, but not all, bison ranching tribes are members of the InterTribal Bison Cooperative (ITBC), an umbrella organization with its seat in Rapid City, South Dakota. Buffalo are also attracting interest from environmental groups wanting to re-wild the Plains, and they have become one of the main symbols of the American West.

In Yellowstone National Park, one of the main controversies over bison focuses on brucellosis, a disease that can lead to abortions in cattle. Buffalo, like other large ungulates, can carry the disease. In order to protect its livestock industry, Montana established the policy of killing all bison that crossed from the park into the state in the 1990s. This policy, enforced by organized, large-scale killings of up to one thousand bison per year, outraged the environmental community, as well as some Native American groups. In response to the public outcry over this issue, Montana reinstated individual buffalo hunting in 2005. Joining in this measure are the Nez Perce of Idaho, who hold treaty hunting rights in the area.

In what seemed a major move toward increased tribal sovereignty, the Fish and Wildlife Service (FWS) agreed to share the management of the National Bison Range with the Confederated Salish and Kootenai Tribes of the Flathead

reservation in 2005. The agreement was canceled by the FWS in late 2006, however, due to allegations of harassment of workers by tribal employees and tribal inability to properly manage the reserve. In December 2007 the Department of the Interior ordered the FWS to come up with a new agreement to involve the tribes in the management of the range. In general, tribal bison herds have showcased that tribal governments can manage their own resources.

Buffalo Soldiers

The Buffalo Soldiers were former slaves, freedmen, and black Civil War soldiers who fought for the U.S. Army in the nineteenth and twentieth centuries. They played a prominent role in the nineteenth-century United States-Indian Wars (1848–1891), charged side-by-side with Teddy Roosevelt's Rough Riders up San Juan and Kettle hills during the Spanish-American War (1898), and rode into Mexico with General John J. Pershing in pursuit of Mexican bandit and revolutionary Pancho Villa.

Over 180,000 African Americans served in the military during the Civil War (1861–1865), and based on their loyal and effective service, the postwar army continued to enlist black men. An act of Congress in 1866 created six all-black army units: the 9th and 10th cavalries and the 38th, 39th, 40th, and 41st infantry regiments. In 1869 a reorganization of the army consolidated the four infantry regiments into

the 24th and 25th infantries. The approximately five thousand black soldiers who served in the four Buffalo Soldier units comprised over ten percent of the entire nineteenth-century army.

The origin of the nickname "Buffalo Solider" is unclear. A number of explanations have been put forth, but the only certain fact is that Native Americans first came up with the term. Various Plains Indian tribes, for example, referred to black soldiers as buffalo soldiers because the ferocity of their fighting and the bravery they demonstrated in battle reminded the Indians of a buffalo's fighting spirit. Another explanation suggests that Natives likened the hair of African American soldiers to a buffalo's mane.

Buffalo Soldiers guarded railroads and wagon trains, constructed and repaired buildings, installed telegraph lines, protected railroad property from striking workers, and tracked down cattle rustlers and outlaws. Their most notable duty, however, was fighting Native Americans. Despite the fact that African Americans were also treated as second-class citizens by white society, the Buffalo Soldiers took an active role in dispossessing Native Americans of their land for the benefit of white settlers. Buffalo Soldiers, for example, participated in the defeat of Victorio and Nana's Warm Springs Apaches, the Utes of Southern Colorado, the Chiricahua Apaches led by Geronimo and Mangus, and the Cheyenne and Comanche Indians of the Great Plains. In their final encounter with Native Americans, Buffalo Soldiers of the 9th Cavalry were sent to Pine Ridge in the aftermath of the Wounded Knee Massacre in December 1890 to reinforce the beleaguered 7th Cavalry.

Buffalo Soldiers proved to be among the most reliable and productive soldiers in the frontier army. Despite receiving lower pay and inferior equipment, and being assigned to remote and oftentimes dangerous posts, black regiments had the lowest desertion rates, fewest courts-martial, and the most reenlistments. More than a dozen Buffalo Soldiers were awarded the Congressional Medal of Honor during the United States-Indian Wars. Notable Buffalo Soldiers included Lieutenant Henry O. Flipper, the first African American to graduate from West Point, and fellow West Pointer Charles Young, who served during the Indian Wars and the Spanish-American War.

Although the service of Buffalo Soldiers was largely ignored before the 1970s, in recent years they have been immortalized in books, movies, and music. Reggae artist Bob Marley, for example, had a hit with his song "Buffalo Soldiers" in the early 1980s. The U.S. Postal Service honored

the Buffalo Soldiers with a commemorative stamp in 1994. Fittingly, a Buffalo Soldiers National Museum was founded in Houston, Texas, in 2000, and in 1992 General Colin Powell dedicated a memorial to the Buffalo Soldiers at Fort Leavenworth, the original home of the 10th Cavalry.

Bureau of Indian Affairs (BIA)

In the late eighteenth century, United States Indian policy was operated directly out of the War Department, but beginning in the early nineteenth century, the government began slowly formalizing and expanding a specialized bureaucracy to manage relations with the American Indian tribes. As it did so, the federal government began to assume more control over internal tribal affairs.

The U.S. government employed both treaty-making and military aggression to achieve its aims of acquiring tribal territory and establishing peace and order on its borders. In many treaties of the early 1800s, schools, blacksmith shops, agricultural implements, sawmills, health care, or other provisions were included as payment for land cessions. Often the fulfillment of these promised provisions required federal involvement within tribal areas. With this shift, the U.S. Congress began asserting its authority over tribal citizens, and by 1819 it had enacted a permanent fund to “civilize” tribal individuals. The civilization fund permitted the executive department to employ instructors to teach European agricultural methods to adult tribal citizens and the skills of math, reading, and writing in the English language to tribal children. These functions became the core responsibilities of the emerging Office of Indian Affairs (OIA), as the Bureau of Indian Affairs (BIA) was known until 1947.

Establishment

Secretary of War John C. Calhoun on March 11, 1824, established what he called a “bureau of Indian affairs” charged

with supervising federal Indian issues and activities. The first director of the new bureau, Thomas L. McKenney, had served as superintendent of Indian trade. He referred to the new organization as the Office of Indian Affairs, and the organization was variously referred as the Indian office, the Indian bureau, and the Indian department for the next century.

The new office did not have congressional approval at the time it was created by Calhoun. However, in 1832 Congress authorized the president to appoint a commissioner of Indian affairs with the mandate to oversee all federal Indian matters. Two years later, Congress sought reform of the Indian agent system because of concerns about irresponsibility, inefficiency, and waste of resources. Under the 1834 statute, official agents and other positions were established under the authority of the commissioner of Indian affairs. Another provision established Indian preferences for employment in the bureau.

Expansion and Functions

In 1849 Congress relocated the OIA from the War Department to the newly established Department of the Interior. The mandate for the Department of the Interior included oversight of land and resource management, territorial affairs, wildlife conservation, and federal Indian affairs. The highest official of the department—the secretary of the interior—was a presidential appointee.

Within the Department of the Interior, the OIA continued to serve as the primary vehicle for implementing federal Indian policy. The two major functions of the OIA throughout its history have been characterized as: “(1) to help Indians adjust to the society that gradually surrounded and engulfed them, or to help them live in the presence of that society on a self-sufficient basis, and (2) to exercise trust responsibility for Indian land and resources as long as that was required by law” (Theodore Taylor, *The Bureau of Indian Affairs*, 1984).

The second function derived from treaty obligations and federal laws that created a guardian-ward relationship between the United States and the Indians, with the federal government holding the power over tribal assets and resources. Throughout the history of the agency, the bureau has been severely criticized for mismanagement of those assets and resources and for failing to adequately meet the needs of tribal citizens.

With the passage of a federal law in 1837 directing that all tribal proceeds from land sales be placed in the U.S. Treasury, the OIA assumed the role of federal accounts

The Mashpee Wampanoag tribe gained federal recognition from the Bureau of Indian Affairs. Massachusetts governor Deval Patrick congratulates a member of the tribe on a visit to its headquarters in May 2007.

manager for tribal nations and individual tribal citizens. Furthermore, the services owed to Indian nations by treaty provisions were increasingly paid for from tribal funds held by the OIA. By 1858 U.S. Indian policy had moved toward restructuring Native communities into controlled concentrations on reservations under the strict authority of Indian agents. The reservation system resulted in certain tribal lands being deemed as “surplus,” which led to greater tribal land sales. Remaining reservation lands were intended to be allotted as individual tribal agricultural plots. All of these activities required the supervision of the OIA through a system of Indian agents overseeing reservation residents.

For a brief period after the Civil War (1861–1865), the Indian office allowed religious groups to nominate superintendents for Indian agencies and carry out educational services guaranteed in treaty provisions. By the 1880s, however, religious groups were no longer permitted to nominate superintendents due to the rivalries between different denominations. However, the churches still remained involved in the government schools. The U.S. Army was also heavily involved with the reservation system, and the government ensured that a strong military presence remained on or near tribal lands.

In 1871 Congress passed an appropriations bill with a rider by Congressman Henry Dawes that ended the official policy of treaty making with tribal nations, although the government continued to enter into similar negotiated

agreements with tribes. These new agreements required the approval of both houses of Congress or an executive order to enter into force. The 1871 law explicitly provided that the ongoing obligations incurred by the U.S. government under prior treaties were to be continued.

As federal law making moved towards general comprehensive enactments rather than separate negotiations with the tribes, the OIA’s role in internal tribal matters enlarged to implement the new federal statutes. The number of Indian service employees increased from 108 in 1852 to 1,725 in 1888 and were located in the Washington, D.C., headquarters and in field offices across the country. By 1872 field employees included personnel in all manner of occupations and industries, from plow makers to shoemakers to teachers to physicians. The number of Indian service employees continued to increase over time as U.S. Indian policy intruded further into tribal territories.

Allotment

A major federal legislative enactment that transformed the responsibilities of the OIA was the General Allotment Act of 1887, commonly known as the Dawes Act, which provided for the dividing up of tribal lands into plots then awarded to individual Indians. President Theodore Roosevelt was quoted during this time as stating that “[t]he General Allotment Act is a mighty pulverizing engine to break up the tribal mass. It acts directly upon the family and the individual” (Charles F. Wilkinson, *American Indians, Time, and the Law: Native Societies in a Modern Constitutional Democracy*, 1987). Under the terms of the Dawes Act, the individual parcels of land were placed into a restricted category known as a “trust status” under the administration of the U.S. government. The OIA held management authority over all lands held in trust status on behalf of individual tribal citizens or tribal nations. Adding to its role as account manager, the Dawes Act required OIA employees to serve as land managers, leasing agents, and lease payment disbursement clerks. These increased responsibilities required the office to once again expand its administrative structure.

With the implementation of allotment, the OIA added personnel such as irrigation engineers, land surveyors, probate attorneys, and inheritance examiners. After tribal land areas were allotted, remaining lands were declared surplus by U.S. officials, who decided on a price to pay the tribal owner for their purchase. The U.S.-purchased lands were then held as public federal lands or sold to American settlers or commercial interests. Proceeds from these sales were deposited

with the U.S. Treasury and administered by the OIA throughout this era.

The allotment era was also marked by a determined effort by the OIA to prepare Native children for assimilation. As early as 1870, the federal government had contracted with Christian organizations to manage educational institutions for tribal children. Federal monies were appropriated for these church-run schools until 1901 when they were replaced by tribal funds. In addition, in 1879 the OIA began to operate off-reservation boarding schools that attempted to distance Native children from their tribal culture and affiliation. School attendance was enforced through cruel methods such as withholding food rations for entire families if children failed to enroll. Harsh punishments, including beatings, for acts such as speaking tribal languages were inflicted on Native children at OIA boarding schools.

The assimilation policy was fueled by Congress's assertion of the plenary (complete) power doctrine over the tribes. From around 1880 until approximately 1930, the OIA's intrusive supervision reached its peak. Native Americans were renamed by federal service officials, tribal citizens were punished by Indian agents for engaging in cultural practices such as dances and spiritual ceremonies, and every attempt was made to impose Euro-American standards of dress, speech, and action upon tribal peoples.

The OIA Indian agents were the embodiment of the federal plenary powers on tribal lands and held absolute authority over disbursement of funds, allotment of lands to individuals, and the doling out of rations to families. The Indian agents had the support of the U.S. military to carry out these broad powers, and often military forts were located in close proximity to tribal reservations. The OIA established courts of Indian offenses (commonly called Code of Federal Regulations courts or CFR courts) beginning in 1883. Native citizens were prosecuted in CFR courts for practicing tribal dances and customs. By 1911 the OIA had in its employ approximately six thousand persons carrying out the many functions of overseeing practically every aspect of tribal life. Almost half of those employees were working in the federally run educational institutions for tribal children.

In 1920 Congress approved of the office's implementation of assimilation policies by enacting the Snyder Act, which provided the OIA with authority to manage federal appropriations "for the benefit, care and assistance of the Indians throughout the United States." In Laurence Schmeckebier's 1927 book, *Office of Indian Affairs: Its History,*

Activities, and Organization, the author set forth descriptions of the functions and structure of the OIA at the time. Schmeckebier identified the bureau's functions to include: distribution of property; the promotion of agriculture and stock raising; supervising land; allotting land; the sale and leasing of land; issuing patents in fee and certificates of competency; granting rights-of-way and easements; construction of drainage systems, waterways, and irrigation systems; administration of forest lands; controlling Indian traders; custody of tribal government and individual tribal member monies; education; promoting of home economics; supervision of attorney contracts; suppressing traffic in liquor on tribal lands; furnishing medical care; and other aspects of tribal community needs.

In the late 1920s, several investigations were launched to determine the effectiveness of the OIA, the most influential of which was the *Meriam Report* (1928). The *Meriam Report* condemned the allotment program and the efforts to use the program to assimilate Native Americans. The report also described in detail the poverty-stricken existence of many tribal citizens and the deplorable conditions imposed upon tribal children in poorly funded and inadequately managed federal boarding schools. The *Meriam Report* provided graphic evidence of just how badly the federal government's Indian "wards" were being treated. Poverty was rampant on the reservations, with per capita income at less than \$200 a year at a time when national annual earnings averaged \$1,350. The report found that health services on reservations were inadequate. Infant mortality on Indian reservations, for example, was found to be nearly three times that of European-descended Americans. Large numbers of Indians were dying from tuberculosis, trachoma, measles, and other diseases that had been largely erased in mainstream society. The average life span among Indians, the report stated, was forty-four years.

The New Deal

Due to the *Meriam Report's* detailed descriptions, outraged advocates for tribal peoples called for reforms to federal Indian policy and the OIA. Shortly after the issuance of the report, a new U.S. president, Franklin D. Roosevelt, was elected. He appointed John Collier, a proponent of tribal issues, as commissioner of Indian affairs to address the problem of Native mistreatment. Following Collier's appointment, the Democratic Congress passed the Indian Reorganization Act (IRA) of 1934. The IRA improved the economic situation of tribal citizens by immediately halting

the policy of allotment and indefinitely extending the trust status of allotments held by the federal government.

One of the most significant impacts of the IRA was its emphasis on tribal self-government through the adoption of tribal charters and constitutions. OIA officials drafted model constitutions to be adopted by tribes that would reorganize them into structures resembling municipal governments. Although the tribal constitutions continued to impose many of the restrictions the Indian bureau had placed on tribal leadership, the resultant federally recognized tribal governments provided a means to improve the economic conditions and quality of life for tribal citizens generally.

Some resistance to IRA constitutions emerged from OIA officials who were hostile to the empowerment of tribal governments. Despite their concerns, the Indian office's role in tribal affairs continued to be a considerable one even after the adoption of tribal constitutional forms of limited government. In later years, some Native activists would argue that tribes were coerced into signing IRA constitutions and that the forms of government were simply another, more subtle, form of federal paternalism.

Contemporary Organization

The name of the office was officially changed to the Bureau of Indian Affairs in a 1947 reorganization. By that time the office had developed into a complex bureaucracy with twelve regional offices, almost one hundred agencies and field offices, and thousands of employees. The bureau currently has an agency office headed by a superintendent located on each Indian reservation. The BIA has divided Indian Country into twelve service regions: Alaska (excluding part of the Northwest Region); Eastern (including Alabama, Connecticut, Florida, Louisiana, Maine, Mississippi, New York, North Carolina, and South Carolina); Midwest (including Iowa, Michigan, Minnesota, and Wisconsin); Great Plains (including Nebraska, North Dakota, and South Dakota); Southern Plains (including Kansas, Texas, and Western Oklahoma); Eastern Oklahoma; Rocky Mountain (part of Montana and Wyoming); Southwest (including Colorado and part of New Mexico); Western (including Nevada, Utah, and part of Arizona); Navajo (part of Arizona and part of New Mexico); Northwest (including part of Alaska and part of Montana, Idaho, Oregon, and Washington); and Pacific (California). The regional offices each have a director who oversees the individual agency offices.

The headquarters for the BIA has remained in the Department of the Interior in Washington, D.C. In 1977 the

position of assistant secretary of Indian affairs was created to replace the lower-ranking former commissioner of Indian affairs position. The secretary of the interior appoints the assistant secretary of Indian affairs, who is responsible for the daily administration of duties for the BIA and the oversight of the regional directors.

Tribal Membership Requirement and Indian Preferences

The BIA plays an active role in determining who is considered an "Indian" and thus receives bureau services. To receive services, tribal peoples must meet certain guidelines for federal recognition of tribal membership. During the allotment era, federal rolls were created to determine who should receive parcels of land. U.S. officials established these rolls, often incorrectly noting individual names, omitting names of tribal citizens, failing to correctly identify family members, and renaming tribal citizens. These federal rolls, referred to as the Dawes rolls, have become the standard basis for proving tribal membership in a federally recognized tribe. After the passage of the IRA in 1934, the standard constitutions adopted by many tribal governments contained provisions for tribal enrollment based upon proving lineage to the Dawes rolls.

Furthermore, the U.S. incorporated into both treaty agreements and federal laws blood quantum standards for proof of tribal membership to receive treaty payments and all subsequent federal services owed. Historically, the BIA has required individuals to provide documentation of lineage to establish whether the individual met the threshold blood quantum in a federally recognized tribe. Often the minimum requirement of possessing one-fourth "Indian blood" has been necessary to receive services such as higher education loans and grants. Proactive tribal governments have modified their enrollment standards to lower blood quantum requirements or accept a lesser proof of lineal descendancy. In some instances, the BIA will deliver services to tribal members enrolled in these tribes. For example, receipt of BIA financial and social services requires enrollment in any federally recognized tribe, except for Alaska Natives where the standard is one-fourth or more degree of Indian blood accompanied with U.S. citizenship.

Indian preferences for employment in the Bureau of Indian Affairs were set by federal law in the provisions of the 1934 IRA. An applicant seeking to qualify for Indian preference for a BIA position must provide proof of Indian descent through one of the following: (1) being a member

of a federally recognized tribe currently under federal jurisdiction; (2) being a descendant of tribal members who were residing within the present boundaries of an Indian reservation on June 1, 1934; (3) having one-half or more Indian blood from a tribe indigenous to the U.S.; or (4) being an Eskimo or other aboriginal person of Alaska.

In the 1970s a group of non-Indian BIA employees brought a class action suit challenging the Indian preference provision as violating the 1972 Equal Employment Opportunity Act and as constituting racial discrimination. The U.S. Supreme Court ruled unanimously in *Morton v. Mancari* (1974) that the Indian preference law did not constitute a racial qualification; rather, the Court said, it was a legitimate rational method of furthering the goal of Indian self-government and was based on the historical political relationship between the U.S. and tribal nations.

Tribal Self-Determination

In the late 1960s and early 1970s, a Native American protest and resistance movement developed that attempted to raise national awareness about how poorly the U.S. government had treated Indians over the previous two centuries. Native protestors, for example, occupied Alcatraz Island for months in 1969–1971, and in 1972 groups of Native activists traveled from all over the country to Washington, D.C., to conduct a protest. After negotiations about lodgings fell apart, the protestors seized and ransacked the bureau offices. The bureau had become—and remains, for many Indians—a symbol of all the pain inflicted upon Natives by the United States government.

As a result of Native activism in the 1970s, the dependency of tribal governments on BIA programs and services lessened to a considerable degree with the passage of the 1978 Indian Self-Determination and Education Assistance Act (ISDEAA). With the act, the United States committed itself to a policy of supporting self-determination for tribal governments. Rather than serving as the federal director of all aspects of tribal life, the BIA's role became more focused on the ongoing management of lands held in trust, the operation of a limited number of government-run schools and colleges, the administration of inherently federal functions, and service as a conduit for federal funds and a supervising agency for federally transferred programs.

The ISDEAA permitted tribal governments to assume operational oversight of community programs formally operated by the federal government by entering into contracts and receiving grants. The BIA retains ultimate finan-

cial and managerial authority, but tribal governments have control over local implementation of programs. This is commonly referred to as the “638 contract” process, named after the public law number. While entering into 638 contracts has led to more intense federal regulation and reporting requirements for those tribal governments operating under this system, it has also provided greater operational autonomy and efficiency in meeting the needs of Native citizens.

Under Title III of the ISDEAA, a pilot project for self-governance was introduced which allowed tribal governments to fully assume control of BIA programs and services without ultimate federal oversight. Tribal nations seeking significant autonomy from the BIA have utilized these self-governance provisions to contract administrative and management costs of programs and have simply received funding amounts from the BIA to fully operate programs. In 1994 the ISDEAA was amended to include Title IV, which permanently established the Tribal Self-Governance Program. According to the 2001–2004 Department of Interior report entitled *Strengthening the Circle: Interior Indian Affairs Highlights*, by entering into a self-governance compact, tribes “can efficiently plan, conduct, consolidate, and administer programs, services, functions and activities for tribal citizens according to priorities established by their tribal governments, and as a consequence, can reprioritize funding and redesign programs.”

The Early Twenty-first Century

In 2004 the BIA reported that it had provided funding and services to “more than 1.5 million American Indians and Alaska Natives in 31 states in three ways—directly, through self-determination contracts and grants, and through self-governance compact agreements with tribes.” “Over 450 federally recognized tribes,” the bureau noted, “have self-determination contracts or self-governance compacts with BIA and receive annually over \$650 million in funding to provide services to other citizens” (U.S. Department of Interior, *Strengthening the Circle: Interior Indian Affairs Highlights*, 2001–2004). These figures demonstrate that tribal nations have seized the opportunity to administer community services and programs that reestablish local control of tribal affairs.

In spite of the large number of tribally contracted programs, the BIA continues to have an active role in Native programs and services. In the area of education, the 2001–2004 Interior Department report notes that the BIA oversees “an educational system across 23 states on 63 Indian

reservations that is composed of 184 elementary, middle, and high schools; 2 BIA-operated postsecondary institutions; and 26 tribal colleges and universities.” Of the federal dollars committed to Indian education, approximately 98 percent reaches the schools and the tribal leadership that manages the contracts and grants to operate the schools. With regards to the oversight of postsecondary education, the BIA has implemented specific training initiatives in response to tribal community needs. Some examples of this are the BIA’s Forestry Cooperative Education program, which places interested students in employment positions with tribes and BIA-related forestry programs; the Water Resources Technical Training program offered at New Mexico State University in Las Cruces; and the Records Management Program established at the Haskell Indian Nations University.

In terms of law enforcement, the BIA’s Office of Law Enforcement and Security (OLES) has responsibility for providing patrols, investigations, and detention services on tribal lands. The BIA operates the Indian Police Academy in Artesia, New Mexico, which certifies officers from across the country to work on tribal lands. Among the initiatives carried out by the 206 law enforcement programs (divided into six districts) are the Drug Abuse Resistance Education program (DARE), the Gang Resistance Education and Training program (GREAT), traffic safety initiatives, drug and alcohol trafficking prevention, and programs for the prevention of arson.

Economic development and a return to former prosperity has been a priority for tribal nations, and the BIA has established programs aimed at assisting them in rebuilding their economies. One such effort is the provision of guaranteed and insured loans for eligible tribes and businesses owned by individual Indians. Another BIA initiative is the exploration and development of oil, gas, and coal deposits located on tribal lands. BIA consultants provide technical assistance in areas such as wind energy, power production, and renewable energy projects. One of the oldest components of the BIA’s supervision of tribal industry is its forestry program. According to the Department of the Interior, from 2001–2004 the Indian forestry program harvested enough lumber to build over thirty thousand residential homes each year.

Of paramount importance to tribal nations is the trust responsibility that the U.S. assumed through creation of the “plenary power doctrine” and by creating the trust status for tribal lands held on behalf of tribes and individuals by the U.S. government during allotment. In 1994 Congress estab-

lished the Office of Special Trustee for American Indians and tasked it to seek ways to improve the secretary of the interior’s abilities to discharge the government’s trust responsibilities. Those trust functions assigned to the Office of Special Trustee (OST) are carried out by officers reporting directly to the special trustee. The approximate acreage subject to trust management by the BIA is fifty-six million acres to date. The bureau manages an estimated 100,000 leases on trust lands for both tribal individuals owning more than ten million acres and tribes owning close to forty-five million acres. According to a governmental report, in 2003 “the trust collected revenues from leasing, use permits, sales, and interest of approximately \$195 million for 240,000 individual Indian money (IIM) accounts, and approximately \$375 million for 1,400 tribal accounts.” The report also stated that “The trust also manages approximately \$2.9 billion in tribal funds and \$400 million in individual Indian funds” (Department of the Interior, *Strengthening the Circle*, 2001–2004).

Within the BIA’s fiduciary trust programs are services intended to provide technologically accessible accounting of BIA records. In 2004 the American Indian Records Repository was opened in Lenexa, Kansas, to provide proper record consolidation and archiving. In addition, the BIA is actively working on the electronic indexing of all BIA and OST records in an electronic database. Other services include a plan for historical accounting of IIM accounts following the *Cobell v. Babbitt (Cobell I)* case in 1998, during which an accounting of 300,000 tribal individual accounts was requested after the BIA failed to adequately account for an estimated \$137.5 billion held under its authority since 1887.

To remedy some of the ills of the allotment era, the BIA has sought to improve the management of trust assets which are susceptible to the problem of fractionation. The issue of heirship was not properly taken into consideration with the passage of the Dawes Act, nor were allottees prepared for the legal consequences for their land parcels upon their deaths. As a result, allotted parcels were often inherited by multiple heirs, which led to numerous problems. According to the Interior Department’s 2001–2004 report, *Strengthening the Circle*: “Today, there are approximately 3.2 million owner interests in the 10 million acres of individually owned trust lands—a situation whose magnitude makes management of trust assets extremely difficult and costly. These millions of interests will continue to expand, unless an aggressive approach to alleviating fractionation is taken.”

On September 8, 2000, then-assistant secretary of Indian affairs Kevin Gover, a member of the Pawnee tribe of Oklahoma, spoke on the 175th anniversary of the establishment of the Bureau of Indian Affairs. In his remarks, he issued an apology on behalf of the BIA for the misdeeds and wrongs perpetrated by the agency since its founding days as the Office of Indian Affairs. He said: "So many of the maladies suffered today in Indian Country result from the failures of this agency. Poverty, ignorance and disease have been the product of this agency's work" ("Remarks at the Ceremony Acknowledging the 175th Anniversary of the Establishment of the Bureau of Indian Affairs," *American Indian Law Review*, vol. 25, 2000–2001).

In contemporary times, the BIA is still very much involved in tribal life through trust management of tribal assets, education services from preschool to postsecondary levels, oversight of tribal and BIA law enforcement in Indian Country, and administration of economic initiatives and loan programs. It also continues to provide services promised under the treaties entered into between the United States and tribal nations.

Burke, Charles H.

Charles H. Burke (1861–1944) served as a Republican member of the House of Representatives from South Dakota from 1899 to 1907, and 1909 to 1915, and was the commissioner of the Office of Indian Affairs (OIA) from 1921 to 1929. Burke was born in Batavia, New York, but moved to the Dakota Territory in 1882.

As a congressman, Burke supported the Dawes Act or the General Allotment Act of 1887, under which an Indian could be granted U.S. citizenship upon accepting an allotment of land and a twenty-five-year period of the federal government holding the land in trust. In 1906 he sponsored the Burke Act, which provided that the Indian who received an allotment did not become a citizen until the end of the trust period, gave the secretary of the interior the discretion to end the trust period early for any Indian deemed competent to manage their own affairs, and brought allotted Indian lands under the jurisdiction of federal, rather than state, law.

In 1921 President Warren G. Harding appointed Burke to head the Office of Indian Affairs (OIA), where his tenure was controversial. Burke was unable to persuade Congress to

provide the necessary funds to expand health and education programs for Indians. He commissioned the American Red Cross to complete a study on the problems involved in Indian health care, but suppressed its publication in 1924 because it was critical of the OIA.

Burke came under fire from reformers because of his position on the Pueblo Indian lands controversy. The legal status of the Pueblo peoples' title to their lands was complicated by several issues, some going back to the time of the United States–Mexico War (1846–1848). While New Mexico was a territory, non-Indian individuals had purchased or claimed to have otherwise obtained title to Pueblo lands. When New Mexico became a state, there was concern to settle the issue of the legal status of these titles. Burke supported the Bursum Bill, an act introduced in 1922 by New Mexico senator Holm O. Bursum, which aimed to settle the issue. Critics charged, however, that the Bursum Bill favored non-Indian claimants and put the burden of proving title on the Indians. Because of the pressure brought by reformers, the Pueblo Indian Lands Act, a compromise measure favorable to most of the interest groups on both sides of the issue, passed in June 1924.

Burke sought to stamp out Indian dances and other practices connected with their traditional lifestyles and religions. Older, pro-assimilationist reform groups, such as the Indian Rights Association, generally supported this policy, but newer, less ethnocentric groups, like those led by John Collier, scorned it. Burke focused on the fact that the dances and ceremonies occupied time when the Indians should be working to advance their economic well-being. He also criticized practices such as potlatches and “give aways” which seemed to undermine the efforts to teach the Indians the virtues of hard work and self-sufficiency.

It was during Burke's tenure as head of the OIA that Congress passed the Snyder Act (1924), granting U.S. citizenship to all Indians. While Burke supported this bill, he played no major role in getting it approved.

Reformers such as Collier continually criticized Burke over the issue of religious freedom, the use of off-reservation boarding schools, and the conditions among the nonreservation Indians in Oklahoma. Shortly after taking office in 1929, President Herbert Hoover asked Burke to resign.

Burke Act of 1906

The Act of May 8, 1906, also known as the Burke Act, modified two provisions of the General Allotment Act (Dawes Act) of 1887, which provided for the division of communal Indian lands into individual parcels. First, it postponed citizenship for a recipient of a land parcel until he received fee patent, or complete title, to an allotment rather than conferring it when an allotment was first approved. Second, it authorized the U.S. secretary of the interior to issue a fee patent to “any Indian allottee [who] is competent and capable of managing his or her affairs” before the normal twenty-five year trust period on an allotment expired.

In promoting this legislation, South Dakota representative Charles Burke sought to address the fact that the Dawes Act allowed Indians to become citizens while their lands were still held in trust. In *Matter of Heff* (1905), a case involving sale of alcohol to an allotted Indian, the U.S. Supreme Court determined that an allotted Indian was a citizen rather than a ward of the government and thus not subject to federal laws regulating alcohol sales to Indians. The Burke Act addressed this situation by keeping both Indians and allotments under federal jurisdiction until an allottee received a fee patent.

The Burke Act did not specify what constituted competency. For the first two years following the act's passage, superintendents recommended who was certified competent. In 1909 Commissioner of Indian Affairs Robert G. Valentine created the first commission to assess competency. Secretary Franklin K. Lane and Commissioner Cato Sells expanded the use of such commissions during the 1910s, conveying fee patents to large numbers of Indians. Most of the Indians who received fee patents under the Burke Act sold their lands, for a variety of reasons. Many were swindled out of their allotments by dishonest speculators.

Bursum Bill (1922)

During the early 1900s, Pueblo Indians attempted to recover their land holdings from white squatters and Hispanic farmers who had encroached on their territory. With the support of President Warren G. Harding and Secretary of the Interior Albert B. Fall, U.S. senator Holm O. Bursum of New Mexico proposed legislation in July 1922 that was designed to counter the Pueblos' effort by granting non-Indian claimants titles to the disputed land holdings and water rights within the region. Known as the Bursum Bill, the legislation would have also established permanent boundaries between Indian and non-Indian lands in New Mexico and placed the Pueblo Indians' internal affairs under the jurisdiction of the United States District Court.

John Collier, who served as the director of the American Indian Defense Association, informed the Pueblos of the pending Bursum Bill. Collier assisted the Pueblos in opposing the legislation by providing the Indians copies of the bill, participating in meetings, and rallying non-Indian organizations. The Pueblos also called a council meeting in which representatives from all nineteen Pueblo tribes participated. On November 22, 1922, the Indian community reestablished the All-Pueblo Council to fight the legislation. This marked the first time in 242 years that the council met.

With national organizations supporting the Pueblos, the legislation was defeated by March 1923. In the aftermath of the Bursum Bill controversy, many of the Pueblos' defenders became prominent leaders within the Indian reform movement of the Collier era.

Bush, George H. W.

George Herbert Walker Bush (1924–), the forty-first U.S. president, was born June 12, 1924, in Milton, Massachusetts. As president, he continued an Indian policy of self-government and self-determination begun by the United States in the 1960s.

Bush also signed several bills that affected Native American interests. Perhaps the most significant legislation effected during his administration was the Native American Grave Protection and Repatriation Act (1990), which required all institutions receiving federal funds to inventory their collections of American Indian remains and artifacts, make the lists available to the Indian tribes, and then return any of the items requested by a tribe.

That same year Bush signed the Indian Arts and Crafts Act, which was intended to promote Native arts and crafts and protect them from counterfeiting and deceptive marketing methods by non-Indians; the Native American Language Act, which encourages the preservation and promotion of traditional languages in schools with large Native student populations; and the bill that provided for the construction of the National Museum of the American Indian on the Mall in Washington, D.C. Bush also signed a joint congressional resolution establishing November 1990 as the first National American Indian Heritage Month.

Pursuant to the Indian Gaming Regulatory Act of 1988, in 1990 Bush appointed Anthony J. Hope as the chair of the first National Indian Gaming Commission (NIGC), a regulatory agency established in the Department of the Interior to oversee Indian gaming.

Bush also preserved the rights of the Catawba Nation by granting an extension of an expiring land claim, which enabled the Catawbas to reach a settlement of their land claim litigation and revive its federal recognition in 1993.

Bush, George W.

George W. Bush (1946–) served two terms as president of the United States (2001–). During his years in office he concentrated his presidency on the threat of terrorism and wars in Iraq and Afghanistan. Although Bush directed little attention to Native American issues, Indian affairs did draw notoriety to his administration. For instance, one of Bush's supporters, Jack Abramoff, pled guilty to felony charges for defrauding tribes and corrupting public officials. Abramoff was accused of using his influence with members of Congress to secure favorable decisions on casino gaming for several Native American tribes.

During the Bush administration, the Bureau of Indian Affairs was involved in several lengthy lawsuits, including the massive class-action *Cobell* litigation, which alleged that the federal government incorrectly accounted for and mismanaged Native American assets held in trust for a number of tribes. Controversies also developed over reports that oil companies during the early 2000s underpaid oil royalties on Native American land and over Bush administration plans to store nuclear waste on reservations.

Bush opposed efforts by the National Collegiate Athletic Association to prohibit colleges and universities from using mascots and images deemed offensive to Native Americans. He threatened to veto a bill in Congress aimed at improving health care for American Indians. He also refused to support the breaching of dams in the Columbia and Snake River drainage areas that might have helped salmon recovery

efforts in the Pacific Northwest, an issue of great interest to tribes in the region.

Buy Indian Act (1910)

In 1910 Congress passed the Buy Indian Act, which ordered the secretary of the interior to give preference to Native American labor, products, and producers when procuring goods and services for the needs of the Office of Indian Affairs. The purpose of the act was to help integrate Native people into the national economy and to bring the bureau's purchases and hiring within Congress's general procurement regulations.

The Buy Indian Act has been amended several times, and a number of programs have been developed from it. For example, the Indian Incentive Program originated from the Buy Indian Act and provides opportunities for contractors to receive a 5 percent bonus payment from the federal government for work subcontracted to an Indian organization for Indian-owned economic enterprise.

C

Article 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace and its honor is hereby pledged to keep it. The Indians desire peace and they now pledge their honor to maintain it.

Calhoun, John C.

A South Carolina statesman, famed defender of states' rights, and architect of the constitutional doctrine of nullification, John C. Calhoun (1782–1850) served in the House of Representatives (1811–1817) and the Senate (1832–1844; 1845–1850), and as secretary of war (1817–1825), vice president (1825–1832), and secretary of state (1844–45). As secretary of war under James Monroe, he was responsible for the Indian affairs of the United States and was a transitional figure in the nation's movement toward the policy of removal.

During his tenure as secretary of war, Calhoun pursued an Indian policy that reflected his paternalistic attitude toward Native peoples, whom he regarded as culturally inferior to white Americans but still capable of assimilation. He attempted, within limits, to protect Indians against extermination by American settlers, although not against encroachments onto their land. He established several forts in the West in an effort to intimidate the tribes around them to subject themselves to the United States and negotiated over forty treaties with various tribes. Calhoun also argued that the eastern tribes needed to be removed to the West for their own protection, and he believed that American national security demanded that Indian nations not exist on American borders.

Calhoun pressed for Indian assimilation into white culture and initiated an annual program for funding Indian schools. After the abolishment of the factory system in 1822, he established firm rules for the Indian trade, requiring licenses and bonds for traders and specifying that trade be conducted at certain locations. Calhoun also had to defuse an international crisis with Spain that developed when

General Andrew Jackson led an army into Florida to attack the Seminoles.

In 1824 Calhoun created an administrative office within the War Department called the Office of Indian Affairs and appointed Thomas L. McKenney as its first commissioner.

After he became president, Andrew Jackson converted Calhoun's policy of encouraging Indians to move away from white settlements into an aggressive policy of removal. In the mid-1840s, Calhoun opposed the war with Mexico, claiming it would, through the conquest of vast new territories, bring Americans into conflict with more Indians.

California v. Cabazon Band of Mission Indians (1987)

California v. Cabazon Band of Mission Indians, decided by the United States Supreme Court on February 25, 1987, was the impetus for the Indian Gaming Regulatory Act of 1988. The

specific questions presented in *Cabazon* were whether California and Riverside County in that state could apply their laws limiting bingo gaming to charities, setting maximum bingo prizes, and otherwise regulating bingo and draw poker, to facilities on the Cabazon and Morongo reservations. The state argued that it had an interest in preventing tribal gaming from infiltration by organized crime. The Court's 6–3 majority rejected this argument and concluded that state laws regulating forms of gambling, as distinguished from prohibiting those forms altogether, are preempted under the U.S. Constitution's Supremacy Clause. State laws attempting to regulate gaming on Indian reservations, in other words, were unenforceable unless they were authorized by the United States Congress. The Court also concluded that neither Public Law 280, which gave some states limited criminal jurisdiction over some reservations, nor the federal Organized Crime Control Act, which was passed to stamp out criminal gambling syndicates, provided such authorization.

The Court found compelling federal and tribal interests in Indian self-sufficiency and economic development, reasons that justified the rule requiring federal preemption over any competing state laws. The *Cabazon* majority pointed out that gambling proceeds were important for tribal revenues, that the Interior Department had approved tribal ordinances establishing reservation gambling, and that the tribes were regulating the activity. The judges also stated that the department maintained formal review procedures for reservation bingo management contracts, and three federal agencies gave financial assistance to the development of reservation gambling.

The decision, in the view of Congress, created a regulatory void, which it filled the following year by enacting comprehensive federal regulation of reservation gambling. The new law, the Indian Gaming Regulatory Act of 1988, thus ended the legal debate over whether Congress actually intended to regulate gaming.

California Indians

For more than 150 years, California Indians have faced the indecisiveness and uncertainties of the federal government's

Indian policy. Beginning with the Treaty of Guadalupe Hidalgo, which ended the U.S.–Mexican War (1846–1848), the government virtually abandoned California Indians and left them to the devices of state policies. During the 1870s the federal government exerted more control over California Indian affairs, especially in its efforts to enact President Ulysses S. Grant's Peace Policy. Between 1880 and 1932, federal officials began a sustained effort to assimilate, individualize, and detribalize California Indians, forcibly enrolling them in boarding schools and enacting the General Allotment Act (Dawes Act) of 1887, which broke up tribal lands and allotted portions of them to individual Indians. The 1930s were a period in which the government offered opportunities for government and economic development.

The last fifty years have witnessed more changes in federal Indian policy. After World War II (1939–1945), officials promoted a policy of forced assimilation and an end to the trust relationship between the federal government and California Indians, particularly the *rancherias* (Indian settlements established by the government). However, the Civil Rights movement, particularly grassroots efforts on the part of the California Indians, challenged this program of termination and helped usher in the era of self-determination.

California Indian Populations and Spanish and Mexican Policies

The various shifts in federal Indian policy are best seen against the backdrop of California Indian population history. Most scholars estimate that at the time of first contact with Europeans, 310,000 Native people lived within the current boundaries of the state of California. In 1769 the arrival of Spanish missionaries, soldiers, and settlers initiated a drastic population decline. By 1821, when Mexico gained its independence from Spain, only about 220,000 California Indians survived. The decrease was largely isolated to the California coast, where most of the Spanish settlements were located. Scholars attribute this population decline to disease and to the Spanish policy of forced conversion. At their missions, Franciscans instituted policies of assimilation and concentrated Indian populations into small areas in an effort to control the use of Native labor. Each contributed to the high mortality rates and low fertility rates of Natives at the missions.

During the era of Mexican occupation of California (1821–1848), the California Indian population continued to decline as Mexicans and Americans ventured into the interior of the territory. Mexican officials sanctioned policies that forced California Indians to work on Mexican ranchos

Indians at the Carmel mission welcome the Comte de La Perouse and his expedition. The Spanish occupation of California involved forced conversion programs at the missions.

(ranches). In the 1830s, for instance, General Mariano Guadalupe Vallejo and Miwok Indian allies attacked neighboring Wappos, killing some and hauling others away for forced labor. Additionally, epidemic diseases ravaged California Indian populations. In 1833 a wave of malaria, spread by American fur traders, killed more than twenty thousand Indians in California's Central Valley. Four years later, smallpox spread from Fort Ross and killed approximately two thousand California Indians along the north coast. By the end of Mexican rule in California, only about 150,000 California Indians survived.

Although the more than 50 percent population decline between 1768 and 1848 was devastating, worse was still to come. Between 1848 and 1860, the California Indian population declined by approximately 80 percent, from 150,000 to only 30,000. Across the state, low fertility patterns, disease, and a genocidal program sharply cut Indian populations. The creation of the reservation system in California did little to protect Natives, and by 1900 the California Indian population hit its lowest point—a figure possibly as low as 15,000.

During the twentieth century, the population of Native people in California rebounded. In the 2000 Census, over 600,000 California residents identified themselves as

American Indian. Although the number of Natives born in the state has increased, many of these people removed to California, largely after World War II.

The Treaty and the State

In 1848 the United States and Mexico signed the Treaty of Guadalupe Hidalgo that ended the war between them. In theory, the treaty included provisions to protect California Indians. Under the Plan of Iguala (1821), the new nation-state of Mexico had granted citizenship to Indians within its domain, which included California (although Spain, from whom Mexico had gained its independence, had only settled the coastal strip from present-day San Diego to San Francisco). Under Guadalupe Hidalgo, all Mexican citizens (including California Indians who lived in the missions) could have United States citizenship if they chose to remain in the Southwest. The United States, in subsequent dealings with California Indians, ignored this provision.

Partially, this was the result of the California Gold Rush. Between 1848 and 1849, more than 100,000 people streamed into California in search of gold. The rapid influx of Americans hastened California's admission into statehood. Since California lacked a territorial period, federal Indian affairs in the new state were nonexistent. For nearly three

years after the United States signed Guadalupe Hidalgo, the federal government left dealings with California Indians in the hands of the state.

The first law passed by the new California state government was the 1850 Act for the Government and Protection of the Indians. The law granted control over local Indian affairs to the justice of the peace, who heard all complaints made against Indians. The law outlined specific Indian crimes, such as burning the prairie, buying alcohol, and stealing livestock (punishable by up to twenty-five lashes). Furthermore, Indians needed a pass to be in a town or the justice of the peace could arrest them on charges of vagrancy and loitering. Finally, this law included a process where parents or relatives could hand over Indian children to white ranchers for a period of indenture, during which the Indians would work for the ranchers. Ranchers held Indian males until the age of eighteen and Indian women until the age of fifteen. The rancher had to clothe, feed, and humanely treat the Indian workers. The state legislature amended this provision ten years later to allow Indian men to be held until the age of twenty-five or thirty (depending on the age at which they were first indentured) and women until the age of twenty-one or twenty-five. The Act for the Government and Protection accomplished two things. First, it codified the Spanish and Mexican tradition of using Indians for labor. Both Spanish missions and Mexican ranchos depended on degrees of forced labor. White Californians simply made this tradition part of the new state laws. Second, the law gave tacit approval for ethnic cleansing, if not genocide. Mountain men publicly announced that they had killed Indian adults and then sold their children into indentured servitude.

Other state government decisions also sanctioned the murder of California Indians. State governors authorized locals to organize militias to attack Indians under the pretense of protecting white settlers and their property. In 1850 William Rogers, a sheriff from El Dorado County, formed a militia to punish Indians for killing livestock. For nearly three weeks, the Rogers party operated along the Cosumnes River and killed eighteen Miwoks. At the end of their expedition, they provided the state government with a bill for more than \$101,000. In northern California, these militias operated with no penalties for their actions. In the fall of 1859, a group called Jarboe's Rangers, named after their commanding officer Walter Jarboe, operated in the vicinity of the Round Valley reservation with the purpose of defending property and livestock from Indian attacks. By the time the governor disbanded the unit in January 1860, the

Rangers had reportedly killed three hundred Indians and imprisoned five hundred, but numbers may have been higher. On August 12, 1860, the California state legislature authorized the payment of \$9,347.39 to the Rangers. Militias cost the state government more than \$1 million, a sum that the federal government helped pay. These hunting parties pushed California Indians further into mountain fortresses, limiting their options for food, which thus increased Indian efforts to kill livestock.

Reservations

While state officials sanctioned forced labor and genocide, federal officials made efforts to shield California Indians through the Office of Indian Affairs (OIA). Shortly after California became a state, the U.S. Senate authorized George Barbour, Redick McKee, and Oliver Wozencraft to travel to the area for the purposes of meeting with Indians. In 1850 and 1851, the trio signed eighteen treaties with California Indian tribes, which set aside seven and a half million acres for Indian reservations within the state's boundaries. When the Senate received these treaties, considerable debate ensued. White Californians protested, arguing that the treaties provided too much potentially valuable mining and agricultural land for Indians. Missouri Senator Thomas H. Benton, father-in-law to surveyor and explorer John C. Frémont, argued that California Indians lacked land rights because they did not present such claims to the California land claims board. Other senators argued that Barbour, McKee, and Wozencraft lacked the authority to make treaties with California Indians. Other complaints revolved around the excessive and corrupt agreements the three men made with California merchants to supply provisions to the reservations. McKee, who negotiated treaties with northern California Indians, contracted with his son to provide beef cattle for Pomos in the Ukiah Valley. In the end, the United States Senate discussed the eighteen treaties in secret session and did not bring them to the Senate floor, essentially rejecting them.

Although the Senate never ratified the treaties, it stopped short of removing Indians from the state, an option that many senators and Californians supported. Rather, in 1852 the Senate appointed former Los Angeles mayor Edward F. Beale as superintendent of Indian Affairs in California. Drawing on ideas already in circulation in the state, Beale suggested a series of temporary reservations and farms. Beale planned to remove Indians to these institutions, where they would provide enough labor to make the reservations and

farms self-sufficient. If white Californians demanded Indian land, federal officials could easily remove Indians to other parts of the state. During his tenure as superintendent from 1852–1854, Beale established several reservations and farms in California, including the Tejon reservation and the Fresno Indian farm. His successor, Thomas J. Henley (1854–1859), expanded Beale's work, creating five new farms and reservations: Nome Lackee, Mendocino, Klamath, Nome Cult farm (later renamed the Round Valley reservation), and the Tule River farm.

This early reservation system failed to protect California Indians. Superintendents Beale and Henley were corrupt and used the offices for self-advancement. After being removed from their positions, both men retired to ranches located on the borders of Indian farms that they had established during their administrations. Moreover, Henley used Indian labor and OIA resources to establish his ranch. The federal government also grossly underfunded California reservations. In 1854 Congress authorized nearly \$500,000 for California Indians, but by 1874 that amount had declined to approximately \$100,000. Finally, reservations did not protect California Indians from the state militias and other vigilante activities. These organizations operated in the vicinity of reservations, killing Indians. By the end of the Civil War (1861–1865), government officials considered the reservation system too much of an economic burden to continue and reduced their number. By 1869 only three remained: Hoopa Valley, Round Valley, and Tule River. Afterwards, most Indians abandoned the reservations and formed communities, often near white farms and ranches.

The Peace Policy

After the transcontinental railroad and the telegraph began to link the nation, it became easier for OIA officials to communicate with California reservation agents and impose federal edicts on the state's Indian population. Between 1868 and 1876, Indian agents on California's three remaining reservations instituted the primary policy initiatives of the mid-nineteenth century Peace Policy.

Initiated during the presidency of Ulysses S. Grant, the Peace Policy attempted to offer more humane and honest treatment to Indians. The OIA contracted with churches to choose reservation agents. The Methodist Church placed agents on California's reservations who informed the Indians of the government's mission and promise of assimilation. These agents attempted to transform Indian life by teaching a Protestant work ethic to the Indians and persuading them

to dress in American clothes, cut their hair, put their children into schools, and convert to Christianity. Despite the Peace Policy's stated goals, life did not always improve for the Indians due to its effects. On the Hoopa Valley reservation, agent J. L. Broaddus used physical force to make assimilation mandatory, including arresting and imprisoning Hupas who defied his orders.

Until the 1860s the federal government had followed a "policy of neglect" for Indians in that region of the state. This changed under Grant's administration, and in January 1870 the president established the Pala and San Pasqual reservations through executive order. Government officials hoped that these reservations would protect Cahuillas, Luiseños, and Cupeños and introduce them to the government's assimilation program. However, many southern California Indians and non-Indians opposed the new reservations. Southern California whites, as they had during the 1850s treaty debate, argued that the land set aside was too good for Indians.

Some Luiseños and Cupeños refused to leave their homelands or support a government-appointed leader named Manuelito Chota. Due to this opposition, Grant terminated the reservations in 1871. Four years later, after meeting with Manuel Olegario, elected leader of the Luiseños and Cupeños, Grant authorized nine new southern California reservations through executive order.

Like those in northern California, southern California reservations became home to the government's efforts to "civilize" and transform Indian life. Government officials established schools and promoted the English language and American clothing. Still, some "friends of the Indian" criticized reservation conditions in southern California. In the early 1880s, writer Helen Hunt Jackson led a crusade for American Indians, specifically those in southern California, in her 1881 nonfiction work, *A Century of Dishonor: A Sketch of the United States Government's Dealings with the Indian Tribes*, and her 1884 novel, *Ramona*. In 1883 Jackson conducted a survey of southern California Indian conditions, discovering that whites had, among other injustices, exploited and stolen Indian lands. Her work reflected a general dissatisfaction with federal Indian policy in the early 1880s.

Assimilation Programs

In response to the discontent with the reservation system and the government's role in Indian affairs, officials and reform groups embarked on a new campaign to individualize and detribalize American Indians. This process occurred

in two phases. Between 1880 and 1900, federal officials expressed an optimistic view of American Indians. They argued that the “Indian problem” resulted from a poor environment—namely, the reservation—so they proposed to either change reservations or remove Indians from them. Over time, however, the well-intentioned motives of this assimilation policy surrendered to more destructive ones. Subscribing to pseudo-scientific notions of race, as well as the demand of the western states for Indian land and resources, reformers began to profess a negative assessment of Indian abilities. They argued that Indians could not change, were doomed to a nomadic and inferior existence, and would ultimately disappear as a race. The 1900 census revealed that only 250,000 Indians lived in the United States, the lowest number recorded up to that time. Rather than making efforts to protect Indians, many people reasoned that the government should liquidate resources spent on Indians and assimilate Native people into the lowest levels of American society.

In the late nineteenth century, the federal government began to fund educational programs on reservations. In the 1870s agents established day schools on the Round Valley and Hoopa Valley reservations in northern California. In the following decade, federal officials expanded the education program to include on-reservation boarding schools. By the end of the century, federal officials had established two off-reservation boarding schools in southern California: the Perris Indian School and the Sherman Indian Institute. At these institutions, students participated in very basic classroom studies and a more extensive vocational training program. At each level of education, students worked on farms or in domestic labor both on and off school grounds. At Sherman, for instance, the “outing program” placed Indian students in white homes in southern California, where they usually performed agricultural labor or housekeeping duties.

Many California Indians resented the federal education programs. Schools separated children from families, tried to turn children away from traditional tribal practices, and were unhealthy places to live. Students participated in several forms of resistance. Stories of students running away from boarding schools are common in the oral history from California Indian communities. In 1883 Round Valley Indian boarding school students burned their dormitory. A little more than thirty years later, another group of Round Valley students burned school buildings again, prompting the federal government to abandon the on-reservation boarding school in favor of a day school.

The policy of land allotment, enacted in the General Allotment (Dawes) Act of 1887, attempted to Americanize the California Indians by ending their communal ownership of property. Allotment called for the president of the United States to break up selected reservations into smaller land parcels (usually 160 acres), allow individual Indians to receive the land allotments, and then turn over any remaining land to the public domain for future sale to non-Indians. Agents from the Indian office hoped individual land ownership would convince Natives to adopt sedentary farming lifestyles. Across the country, the allotment policy had disastrous results, eventually reducing the American Indian land base in the country by 70 percent.

The results of allotment contrasted with the hopeful aspirations of California Indians. While the Dawes Act called for Indians to receive 160 acres of land, California allotment agents deemed there was not enough arable reservation land to grant each individual Indian this many acres. Most California Indians received allotments of less than ten acres. The average allotment on the Hoopa Valley reservation was 6.5 acres, while those on the Pala reservation were eight acres. These land plots were simply insufficient for California Indians to farm and lacked important resources. Despite this, many California Indians supported allotment. Indians on the Hoopa Valley and Round Valley reservations viewed allotment as an opportunity to control their land bases, since the policy promised to grant Native people their own land.

While reservations faced the onslaught of allotment, a humanitarian impulse in Indian affairs prompted the creation of *rancherias* for “homeless Indians.” In 1906 the federal government commissioned attorney C. E. Kelsey to conduct a census and survey of nonreservation Indians in California. Kelsey found more than thirteen thousand Indians living off-reservation in difficult circumstances, often relying on wage labor to see them through the year. In response, the federal government authorized money to purchase land in California for these Indians. Between 1906 and 1934, the federal government created fifty-four *rancherias* in California, and five more between 1934 and 1950.

Although the *rancherias* reversed the history of divesting California Indians of their land, they failed to provide better health care or economic development. *Rancherias* were residential land bases, consisting of anywhere from five to a few hundred acres, and usually lacking in water and good soil. Moreover, state and federal laws placed *rancheria* Indians in an uncertain position. In 1917 a California court ruled in *Anderson vs. Lake County* that *rancheria* Indians were citizens

of the United States because they were a part of the local economies. Thus, reservation Indians, many of whom had also entered the market economy as wage workers, were ineligible for the World War I military draft while *rancheria* Indians were eligible. Many *rancheria* Indians protested this unequal treatment and questioned the meaning of citizenship, largely because of the discrimination many of them faced at schools, hospitals, and other public places.

California Indians during the Indian New Deal

Federal Indian policy began to shift in the 1920s. In part, this new direction resulted from the organizing efforts of California Indians. In the 1920s and 1930s, California Indians formed political organizations, which protested the activities of the Office of Indian Affairs (OIA). In northern California, Pomos, Yukis, and members from other nations formed the Society of Northern California Indians. Assisted by Father Raymond Brown, a Catholic priest from Ukiah, the organization fought for welfare relief for northern California Indians. In southern California, the Mission Indian Federation, led by a Cahuilla named Adam Castillo, lobbied against allotment and the paternalistic policies of the OIA. Members also promoted a more active role for California Indian women in tribal politics.

On a national level, the appointment of John Collier as commissioner of Indian affairs ushered in a new direction in Indian policy. Best known for his work with the Pueblos in the 1920s, Collier formed the American Indian Defense Association in 1923, basing it in southern California, and participated in several efforts to improve the condition of California Indians. As commissioner, John Collier developed the Indian Reorganization Act (IRA). The act ended allotment, created a mechanism for American Indian nations to create tribal governments and corporations, and provided loans to Indian communities for economic development. Many reservations and *rancherias* took advantage of the IRA to create tribal governments and pursue economic development programs, such as cooperative cattle enterprises. In the early 1930s, Collier traveled throughout Indian Country soliciting support for the bill. In particular, he held meetings at the Chemawa Indian School in Oregon (which northern California Indians attended) and Riverside, California (which southern California Indians attended).

Still, aspects of the IRA were paternalistic. Much like the Peace Policy and assimilation efforts, Collier imposed his policy through the OIA, sometimes without listening to Native people. Moreover, the IRA ignored tribal govern-

ment traditions and treated American Indian groups as if they were culturally indistinct. Many California Indians, especially in the southern part of the state, disapproved of the act and the intrusiveness of the federal government. The way in which Collier manipulated election returns seemed to confirm their suspicions. On the Santa Ysabel reservation, only 9 out of 114 eligible voters cast ballots in favor of the IRA, while many demonstrated their objection to the act by abstaining from voting. However, Collier counted abstentions as a "yes," not a "no," vote and imposed an IRA tribal government on the Santa Ysabel reservation. On the Round Valley reservation, although 850 Indians were eligible to vote, only 200 did—138 voting in favor of the act and 62 opposing it. In these areas, a minority of the population chose a system of government that remains intact.

Compensation, Relocation, and Termination

At the end of World War II, federal Indian policy reversed direction yet again. The high rate of American Indian participation in World War II—both as fighting participants and on the home front—and a movement to reduce federal expenditures in government convinced some federal officials that the time was right for the final implementation of the assimilation program. These officials sponsored a three-part agenda. First, they intended to compensate Indians for past wrongs in order to wipe the slate clean. Second, they advocated terminating the federal trust responsibility over Indian lands and resources. Finally, they sought to relocate American Indians from their home communities (reservations or *rancherias* in California) to urban areas.

The process of compensation for California Indians began in the 1930s, but was not completed until the early 1970s. In 1927 the state attorney general helped California Indians sue the United States over the unratified 1850–1851 treaties. In 1944 the United States Court of Claims found in favor of the Indians and declared that the United States owed them more than \$17 million, less \$12 million for services rendered to them in the intervening years. In 1950 the United States Congress authorized payment to the thirty-six thousand eligible California Indians at an amount of approximately \$150 per Indian.

The litigation over California Indian land did not end there. In 1946 California Indians brought suit against the United States with the help of the Indian Claims Commission (ICC). Formed in the mid-1940s, the ICC enabled American Indians to sue the federal government over treaty violations and outstanding debts. The basis of the

1946 suit was the land that California Indians had ceded in the early 1850s for which they never received compensation. The Indians initially demanded compensation for more than 90 million acres of California, but settled for 64.5 million acres and a settlement of \$29.1 million (\$46 million after interest). In 1972 Congress authorized another per capita payment, and seventy thousand California Indians received payments of \$668.51.

Once the federal government had “compensated” California Indians for lost lands, it began the process of terminating the trust relationship. Termination attempted to end certain government services for American Indian communities and divide tribal assets (such as land and other economic resources) among individual tribal members. The federal government took several steps in this direction, many of which directly targeted California Indians. The 1953 Public Law 280 transferred criminal and civil jurisdiction in California from the federal government to the state. Also in 1953 the House of Representatives passed Concurrent Resolution No. 108, which provided the groundwork for termination. The California legislature supported termination until a state Senate report revealed that the policy threatened to shift large health care expenses to the state. Nevertheless, federal officials applied the termination policy to California, targeting the most vulnerable Native communities. The 1958 Rancheria Act authorized forty-one *rancherias* to vote for federal termination. Thirty-six *rancherias* did, thus severing their relationship with the federal government. By 1974 *rancherias* had lost a total of approximately five thousand acres of land, with ten losing all of their land.

The Bureau of Indian Affairs actively supported the relocation of California Indians to urban areas throughout the state. In one way, this policy had already been implemented in California, but it was more by Indian choice than by government edict. In 1951 eleven thousand California Indians lived in towns and cities, while a little more than seven thousand lived on reservations and *rancherias*. Thus, many Indians already lived off of federal trust land. Throughout the 1960s the movement of California Indians and other American Indians to cities increased exponentially. California’s urban areas, such as Los Angeles, San Francisco, and Oakland, developed multiracial and pan-Indian communities. Cahuillas in Los Angeles and Pomo in Oakland began to live next door to Lakotas and Navajos. In Oakland, the pan-Indian community created the Indian Friendship House, which sustained community activities and cultural events throughout the 1960s and 1970s.

Civil Rights, Self-Determination, and Indian Gaming, 1960 to the Present

In response to the policy actions of the 1960s, California Indians launched several efforts to take control of their own affairs. In 1964 Cahuilla Rupert Costo helped form the American Indian Historical Society (AIHS), which attempted to correct historical misperceptions of California Indian history. For the next twenty years, the AIHS produced a journal and published a series of books condemning Spanish, Mexican, and American treatment of California Indians. In 1967 a group of California Indians formed the California Indian Education Association, which sought to improve educational programs in the state. In that year, David Risling, a Hupa, helped coordinate an education conference in North Fork, California. The conference published a book entitled *California Indian Education*, which demanded more California Indian involvement in education, the restoration of Johnson-O’Malley funds, and increasing California Indian participation in BIA-sponsored schools.

Such events foreshadowed the Civil Rights movement in the United States. In particular, students demanded more American Indian involvement in the undergraduate curriculum. In the late 1960s, California Indian students at the University of California at Berkeley, the University of California at Los Angeles, the University of California at Davis, and California State University at Sacramento demanded more courses and better treatment for California Indian students. In the late 1960s and 1970s, schools in California’s state university and university systems formed American Indian or Ethnic Studies departments. Many of these students participated in the occupation of Alcatraz Island in the San Francisco Bay from 1969–1971. In the 1970s a group of California Indians formed Deganawidah-Quetzalcoatl (D-Q) University, an all-Indian college located near Sacramento.

Emboldened by the occupation of Alcatraz Island, other California Indians engaged in the nonviolent protest activities that were common in the era. Walt Lara, a Yurok, and other California Indians protested for the right to fish in the rivers and streams of northern California. Pit River Indians protested the ICC decision and the subsequent paltry distribution of money to California Indians. In June 1970 they occupied a campground that the Pacific Gas and Electric Company claimed. Police officials arrested 38 protesters, and California courts gave Indians a \$150 fine and one year of probation. That fall, the Pit River Indians occupied part of

Lassen National Forest and built a quonset hut to serve as the headquarters and cultural center for the activists. On October 27, 1970, police officers arrested thirty of the protesters, but none of them were convicted of any crime.

The consistent demands of American Indians in California and across the country for better treatment and for the right of Native political autonomy prompted action by the federal government. In 1973 President Richard Nixon signed the Indian Self-Determination and Educational Assistance Act. The era of self-determination was a time when, ideally, Indians and government officials would work together in the fields of education, health care, and government. Finally Indians were able, to some extent, to take the lead in determining their destiny.

One of the ways in which California Indians have taken advantage of self-determination is through Indian gaming. Indeed, some of the landmark Supreme Court decisions in Indian gaming have involved California Indian nations. Using successful bingo halls like those operated by the Seminole Nation in Florida, the Cabazon Band of Mission Indians opened a card room in southern California. However, local law officials from the city of Indio and Riverside County raided the Cabazon card room and attempted to exert local control over it. The Cabazon Band sued and in 1987 the case reached the Supreme Court. In *California v. Cabazon Band of Mission Indians*, the Court ruled that Indians could operate games of chance free from local regulation.

The decision forced the United States to clarify the parameters of Indian gaming in the United States. In 1988 the United States passed the Indian Gaming Regulatory Act (IGRA). The act recognized three classes of Indian gaming: Class I (traditional games of chance with small payouts), Class II (such as bingo), and Class III (slots, blackjack and other games associated with Las Vegas-style casinos). While tribal governments exercise supervision over Class I and II gaming, the IGRA stipulates that Native nations have to negotiate compacts with states in order to operate Class III gaming. Many California Indian reservations and *rancherias*, especially those in southern California and the Sacramento Valley, have utilized subsequent laws and provisions to benefit from the IGRA.

In 2000 California voters approved Proposition 1A, which allows California Indian nations to operate slot machines and Las Vegas-style casinos. Indian sovereignty over gaming has become contested in recent years. In a 2003 gubernatorial recall election, candidate Arnold Schwarzenegger demanded

that the state and California Indian nations rework their gaming compacts because, he said, the Indians were not paying their fair share for government services. Many non-Indians in California continue to protest the expansion of Indian gaming. Local referendums and state-wide attempts to curtail Indian gaming receive popular support, but Native Californians have successfully blunted the worst excesses of these efforts.

California Indians have made considerable efforts throughout the decades to dictate their own course in federal Indian policy. As California Indian nations enter the twenty-first century, they stand poised to lead efforts to preserve tribal sovereignty and cultural autonomy.

Camp Grant Massacre (1871)

After the Gadsden Purchase in 1854, Americans steadily moved into southern Arizona, threatening Apaches who had made their home in the region for generations. To protect settlers, in 1860 the U.S. Army established Fort Aravaipa northeast of Tucson. Renamed Camp Grant, after General Ulysses S. Grant, by 1865 the camp's "protection" of settlers entailed indiscriminately hunting down Apaches—killing men, capturing women and children, and destroying villages.

In February, 1871, Aravaipa and Pinal Apaches began surrendering to the U.S. Army at Camp Grant. By April nearly five hundred Apaches were peacefully settled five miles east of Camp Grant. Infuriated by the belief—although unfounded—that these Apaches were committing raids while under the protection of the army, a group of prominent Tucsonans organized and lead a violent attack against them.

On April 30, 1871, a group of Anglo-Americans, Mexican Americans, and Tohono O'odhams from Tucson attacked the encampment of Aravaipa and Pinal Apaches, killing more than one hundred, mostly women and children, and taking some thirty children as slaves.

After the massacre, Tucsonans were jubilant, but President Grant called the attack murder. Under intense pressure from eastern authorities, one hundred men were indicted for 108 counts of murder. The week-long trial in December, 1871, focused exclusively on Apache raiding. After nineteen minutes of deliberation, the jury pronounced the defendants not guilty. Although these events helped convince the federal leaders to adopt Grant's Peace Policy, in the aftermath of the massacre Aravaipa and Pinal Apaches were never again able to claim their ancestral homelands.

Campbell, Ben Nighthorse

A former senator (1993–2005) and representative (1987–1993) from Colorado, as well as an artist and Olympic athlete, Ben Nighthorse Campbell (April 13, 1933–) defied Capitol Hill conventions, often driving to work on a Harley Davidson motorcycle sporting his signature string tie, cowboy boots, and ponytail. As an Indian member of Congress, he fought to improve the living conditions on reservations and advance the status of Native Americans. Since his retirement from the Senate in 2005, Campbell has lobbied for Indian tribes and western interests.

Born in Auburn, California, to a Northern Cheyenne Indian and a Portuguese woman afflicted with tuberculosis, Campbell grew up in orphanages, in foster homes, and under the sporadic care of his sickly mother and alcoholic father. A high school dropout, he returned to school after serving in the Korean War (1950–1953) and worked his way through a degree at San Jose State University in 1957. After studying judo in Tokyo for four years, he won a gold medal at the 1963 Pan Am Games and captained the U.S. Olympic judo team in 1964.

In the 1970s, Campbell moved to Colorado to raise horses and design Indian jewelry. He also reclaimed his Cheyenne heritage, becoming a tribal chief in 1985 and adopting "Nighthorse" as a middle name. A moderate Democrat, he won election to the state legislature, serving from 1983 until 1986, when he launched a successful campaign for the U.S. House of Representatives.

Representing Colorado's sprawling Third District, Campbell served on the interior and agriculture committees, where he concentrated on the management of mining, water rights, forests, livestock, and national parks. Campbell's first major bill, the Colorado Ute Indian Water Rights

Settlement Act (1988), addressed the longstanding claims of two Ute tribes and authorized a future reservoir to irrigate southeastern Colorado and northern New Mexico. However, it would take additional legislation, which he sponsored as a senator in 2000, to allow the construction of the controversial Animas-La Plata Water Project.

Known to defend Native interests outside his district, Campbell worked to eliminate alcoholism and other health problems on Indian reservations. In his third term, he commemorated the Sioux and Cheyenne Indians, who defeated George Armstrong Custer's Seventh Cavalry in 1876, by having the former Custer Battlefield National Monument renamed the Little Bighorn National Monument (1992).

After entering the Senate in 1993, Campbell, a fiscal conservative and social liberal, grew apart from the Democratic Party. He switched to the majority Republican Party in 1995 and took seats on the powerful Appropriations Committee and the Indian Affairs Committee, which he later chaired. During his two terms in office, he sponsored legislation authorizing the Black Canyon of the Gunnison National Park (1999), the Sand Creek Massacre National Historic Site (2000), and the construction of the National Museum of the American Indian on the National Mall in 2004. On the museum's opening day, Campbell spoke from the Senate floor wearing the traditional tribal dress of a Cheyenne chief.

Campbell continues to design award-winning jewelry and defend the interests of Native Americans from his home near Durango, Colorado.

Canada, Indian Policy of

The roots of Canadian Indian policy predate the country's creation in 1867, and rest in the French and British colonial eras. Historian J. R. Miller classifies the history of relations between Natives and newcomers in Canada as cooperation (contact–1814), coercion (1814–1969), and confrontation (1969–present day). These divisions can also apply to understanding Canadian Indian policy in general. Early treaties were ones of peace and friendship or trading and military

alliances. Beginning in the mid-eighteenth century, Europeans broadened their claims to aboriginal territories through acts that extinguished title and purchased lands from Native groups. This process accelerated in the nineteenth century and was accompanied by new legal and political restrictions, such as the Indian Act (1876), which transformed Indians into wards of the state. Civilization and protection, then assimilation and control, were the watchwords of Canadian Indian policy and typified Canada's approach to Indians until dramatic changes in the mid-twentieth century, many of them spearheaded by Native peoples themselves.

Canada's Aboriginal Peoples

In 1982 Canada constitutionally acknowledged three aboriginal peoples: Indians, Inuit, and Métis. Previously, Canada's policy towards its Native people had been concentrated on Indians. Nonstatus Indians and Métis were regarded as ordinary Canadian citizens, and only status Indians (a designation with a distinct legal definition) rightly fell within the purview of Canadian Indian policy as governed by the Indian Act. Much of Canadian policy has its roots in the colonial era whereby both French and British practices influenced Canada's treatment of Native people after 1867. "Indian" has been a widely applied term, although Native, aboriginal, First Nation, Amerindian, and indigenous (or *amérindien* and *autochtone* in French) are preferred in Canada.

The Canadian government largely ignored the Inuit ("the people"), called Eskimo until the 1970s, until after World War II (1939–1945), when cultural and administrative structures (and, in the 1950s, relocations) unilaterally imposed Canada's will. The creation of the new territory of Nunavut (1999) in the eastern arctic was the result of decades-long negotiations for land, resources, and rights, and ultimately a form of Inuit self-government.

Canada's third recognized aboriginal group, the Métis, have been mainly disregarded by the Canadian government in terms of policymaking. The word "Métis" refers to persons of mixed Native and non-Native descent, particularly those who identify with a historical cultural identity that emerged over centuries of close ties during the fur trades across Canada.

Colonial Indian Policy

Peace and friendship pacts or commercial alliances were among the first kinds of treaties negotiated between Natives and newcomers in the colonial period, and were rarely formalized in written documents. The Two-Row Wampum

Aboriginal dancers and Canadian mounted police visiting Belgium honor the spirits of indigenous soldiers who died serving Canada during both world wars.

Treaty or *Guswenta* was recorded in a beaded belt representing two watercraft traveling parallel paths along a single river of life. This is how the Haudenosaunees (Iroquois) recognized the historic partnership between Native and European, initially with the Dutch, but later including the English, French, and Americans, one marked by peace, friendship, and mutual respect. The Covenant Chain is a similar early treaty tradition, symbolically a chain linking the European ship and Haudenosaunee canoe. Both the Two-Row Wampum belt and the Covenant Chain continue to be referenced by contemporary Canadian First Nations to emphasize what they see as the foundation of the relationship between peoples.

Until the mid-seventeenth century, the French were interested in exploiting their colonies in North America for their resources. During the fur trade era, aboriginal peoples remained essential partners because Native labor was the means by which furs were supplied. Some French men married Native women, and over time this resulted in the creation of the Métis people and culture. However, no land treaties were ever signed and it is unclear whether aboriginal land rights were affirmed or extinguished (erased) during the French regime. Indian reserves in New France initially emerged from mission villages on lands held by religious orders along the St. Lawrence River. Military alliances with First Nations remained important to the territorial maintenance of New France, and so the French welcomed

alliances with Native peoples through diplomatic and trading practices. One notable peace treaty was the Great Peace of Montreal in 1701 that marked the end of a nearly century-long conflict between the Haudenosaunees (Iroquois) and the French.

Like the French, the British in North America also cultivated military and commercial alliances. The Hudson's Bay Company (founded in 1670) made the fur trade a central point of contact for over two centuries in northern and western Canada. From 1725 to the 1760s, treaties between British and Native peoples on the eastern Atlantic seaboard attempted to establish lasting peace and protected some aboriginal rights to commercial livelihoods. Later treaties acknowledged the resource rights and autonomy of First Nations in the region, rights that were recently upheld by the Supreme Court of Canada (Marshall Decision, 1999) with respect to fishing rights and use of Crown lands.

The Royal Proclamation of 1763

One of the original influences on Canadian Indian policy was the precedent established with the Royal Proclamation of 1763, often referred to in Canada as an Indian *Magna Carta*. This executive proclamation for British North America established practices that defined British Indian policy for the next century and was subsequently adopted by Canada. Only the Crown could extinguish Native land titles

with the consent of Native leaders, in principle during a public meeting convened for such a purpose. The proclamation also created an Indian Territory in those areas west of British and French settlement that was designated for the uses of Native peoples and free from settler interference. This territory was reduced substantially when the borders of Quebec were expanded in 1774. In the short term, the proclamation addressed the fact that the British struggled against Native resistance and defense of their homelands west of the Appalachians, especially in the Ohio River valley, led by a multination alliance commonly associated with the Ottawa war chief Pontiac. The Indian Territory that the proclamation created seemed to affirm the sovereignty of those First Nations. In the long term, the Royal Proclamation of 1763 has been embraced as an Indian bill of rights because of the legal recognition it afforded aboriginal land holdings. Moreover, as Anishinabe (Ojibwe) legal scholar John Borrows contended, the principles of the proclamation were ratified by at least two thousand chiefs representing some twenty-four separate First Nations in the Treaty of Niagara (1764). This suggests the proclamation was not a unilaterally imposed policy.

Treaties and Nineteenth-Century Indian Policy

Historically, treaties in Canada have always been more favorable to the Canadian government than to aboriginal peoples. As military allies, Natives remained vital to the French until the loss of New France in 1763 and to the English until after the War of 1812. Hence political, diplomatic, and peace agreements remained significant. However, non-Native settlement and demand for Native lands and resources accelerated in British North America during the American Revolutionary War (1775–1783) and especially after the War of 1812. This led to arrangements that extinguished aboriginal title to the lands in certain areas, particularly Upper Canada (later southern Ontario). In Quebec and the Atlantic colonies there were no land treaties because First Nations were already confined within settlements or located in areas away from non-Native settlements. Elsewhere in Canada the principles of title extinguishment through Crown purchase were applied, with the exception of British Columbia.

In 1830 Indian affairs were transferred from military to civilian authority, marking the change of a policy characterized by diplomacy and respect of military allies to one of submission to British authority, “civilization,” and “protection.” Indian agents were government representatives sta-

tioned on reserves, which were commonly located within a First Nations’ home territory. Each reserve was divided into several agencies. Moreover, in the early nineteenth century, reserves located in the best regions for raising crops were frequently overrun by squatters, and complaints by Native residents went unaddressed by colonial authorities. By the 1850s the Robinson-Huron and Robinson-Superior treaties firmly established the pattern of subsequent treaty-making until the era of modern settlements in the 1970s. In return for surrendering title to the majority of their lands, Indians who signed treaties received payments, reserves, and usually additional promises such as the right to hunt, trap, or fish on Crown lands, access to Euro-Canadian style education, or other similar assistance aimed to help them adapt to the changing social and economic circumstances.

When Canada was created (July 1, 1867), its federal government was assigned the responsibility of Indian affairs, and the treaty process continued following these earlier English models. In the Canadian west between 1871 and 1877, the first seven of the so-called numbered treaties (Treaties 1–7) were made with various aboriginal groups. These agreements were initiated at the insistence of Native peoples themselves, who wished to have their lands and rights clearly outlined before the start of large-scale immigration. They ceded aboriginal lands to the Crown in exchange for payments, reserves, hunting and fishing rights, clothing and supplies, farm equipment, seed, agricultural training, education, and later promises of medical assistance. However, the crisis caused by the disappearance of the buffalo on the northern plains allowed the Canadian government to take advantage of the situation. By offering rations as part of some treaty packages they were able to compel even the most desperate holdouts to “take treaty,” much in the same way American authorities used rations to pacify the tribes of the Plains. As Treaty 7 elders have recently publicized, aboriginal understandings of treaty agreements differed greatly from how the Canadian government understood them. To aboriginals, a treaty was a flexible arrangement made to ensure peaceful coexistence and the sharing of resources, rather than a one-time real estate deal extinguishing aboriginal title and placing them under Canadian authority. Treaties 8, 9, and 10 (1899–1906) and Treaty 11 (1921) directly related to Canadian interests in resource exploitation and were negotiated to secure Canadian control over mining, forestry, and oil development.

Further west, in the 1850s on Vancouver Island, the British concluded fourteen treaties accounting for less than 3% of

the island's land mass, referred to as the Douglas or Fort Victoria Treaties. Later colonial administrations denied their existence and made no parallel settlements with First Nations living on the mainland colony. The policy established by the Royal Proclamation of 1763 was not applied to British Columbia either before or after it joined Canada in 1871. Indeed, with the exception of Treaty 8 (1899), which covered the remote northeastern corner of the province, no treaties or title extinguishments were made with First Nations in British Columbia until the Nisga'a Agreement in 2000. In 1997 Canada's Supreme Court called for a retrial of a 1991 claims case (*Delgamuukw*) and established an important new precedent for Native peoples across Canada when it insisted that aboriginal oral testimony be given the same value as documentary evidence in any future land and rights claims cases. Agreements, however, have been slow to emerge.

The Indian Act and the Rights of Status Indians

One of the key forces behind Canada's Indian policy is its Indian Act. The Indian Act is a far-reaching collection of statutes and legislation administered by the federal government that encompasses practically every aspect of Indian existence, including the definition of who is an Indian. Métis scholar Olive Dickason explained that whereas treaties aimed to accommodate through mutual agreement, the Indian Act imposed control, restricted, and constrained Indians. The legal category of "Indian" (known as status Indian) was similar to that of a legal minor and was first created in 1850. This statutory definition incorporated ancestry, residency, and culture rather than only blood quantum (the percentage of Native blood an individual possesses due to bloodlines) to define Indianness, and therefore who is subject to the Indian Act. Since the 1876 Indian Act, the first after the country's creation, the act has undergone numerous revisions and amendments, but many of its structures remain intact to this day.

Unlike the United States, which recognizes the collective identity of American Indians at the tribal level, Canadian Indian policy has operated based on definitions of Indians at the individual level. The "Indian band" became the unit for managing those individuals, regardless of what collective identity (house, clan, village, tribe, etc.) Natives had for themselves. Until 1951 Indian bands were also, by law, male political units. By the early twenty-first century, Canada had over six hundred Indian bands run by elected band councils. Band membership is established by Native band councils

themselves, but the federal government must first recognize the band.

The extension of the full rights of British subjects or Canadian citizenship to aboriginal people was a contested issue. In 1857 the United Province of the Canadas passed the Gradual Civilization Act that granted the rights of British subjects to adult Indian males who achieved certain moral and educational criteria. As the act's intent was "civilized" Indians, it extended political rights while it simultaneously revoked Indian status. In 1869 the Gradual Enfranchisement Act continued the provisions for Indian men, but stated that Indian women lost their status through marriage to a non-Indian (nonstatus Indian, Métis, or Euro-Canadian). This gender discrimination was incorporated into the Dominion of Canada's first Indian Act (1876), which consolidated existing British American and Canadian Indian policy. The Canadian version of the American Bureau of Indian Affairs, the Department of Indian Affairs or DIA (later called Indian and Northern Affairs Canada) was created in 1880 and dedicated a bureaucracy to this task. Native peoples openly resented attempts to "civilize" or assimilate them into mainstream Canadian society, and few voluntarily participated. Canadian citizenship separate from that of the British was not created until 1947 and Indians were initially excluded. Only in 1960 were federal voting rights and Canadian citizenship extended to all status Indians without having to relinquish their status.

For many years, Native women disproportionately lost their status because of the gender biases built into the Indian Act. In the 1970s high profile legal challenges by aboriginal women, increased activism in general, and the inclusion of aboriginal peoples in the Canadian Charter of Rights and Freedoms (1982) finally resulted in changes in the law. In 1985, Bill C-31 removed the gender discrimination clause from the Indian Act and permitted those who had lost their Indian status previously because of this policy to reapply for it. By 2001, over 100,000 individuals had regained their lost status through this provision, nearly three-quarters of them women. Yet the provision created by Bill C-31 remains flawed. Moreover, because reserve resources are often limited, many bands have been reluctant to accept those who have regained their status under Bill C-31 as band members.

Reserves and Native Governments

In Canada, Indian reserves were created by three methods: executive act, treaty, or purchase. There are no Inuit or Métis reserves, with the exception of several Métis settlements

established in Alberta in the late 1930s. Canada's most populous Indian reserve was established for the Haudenosaunees (Iroquois) in 1784 through executive order. The lands for this reserve, located along the Grand River in the southwestern portion of the colony of Upper Canada (now Ontario), was first purchased from an Anishinabe (Ojibwe) group, the Mississaugas, as per the policy laid out by the Royal Proclamation of 1763. In contrast, Indian reserves in British Columbia were created without any cession of Indian title. Many Indian reserves remain Crown lands held in trust by the Canadian government, even though they are administered by local band governments. The few exceptions where fee-simple title (complete ownership) has been granted to a band are a recent development, largely the byproduct of modern treaty settlements or, more rarely, through agreements made without treaties (for example, the Sechelt band of British Columbia secured reserve ownership and municipal-like self-government in 1986). Compared with the reservations of the United States, Canadian Indian reserves are confined to much smaller tracts of land. They vary in size, some only a few acres in scope while the largest is 525 square miles (or 336,717 acres). Only status Indians may live on Indian reserves.

By the late nineteenth century, reserve lands deemed surplus or idle were often alienated by federal, provincial, or municipal authorities without Native consent. In many provinces and territories, Indians were exempt from acquiring land and hence could not easily add to their reserves. Moreover, through enfranchisement, reserve lands could be allotted to individuals by the DIA (working in much the same way as the General Allotment Act, or Dawes Act, in the United States). Even when reserve lands were not reduced in size or taken away, the extraction of resources such as timber, minerals, or water from Indian land was brought about through the practice of leasing. There have been numerous instances of Indian bands not receiving fair compensation for such uses, and after *Guerin v. Regina* in 1984, Canada has admitted it has a responsibility to aboriginal peoples to act in their best interests in reserve-leasing. However, social services like health and education on Indian reserves remain underfunded, underserved, and inadequate. Most Indian reserves cannot be taxed, mortgaged, used as collateral, or seized for debt (conditions which hamper bands' ability to generate capital based on land).

Throughout the late nineteenth and the early twentieth-century, coercive assimilation of Indians was accomplished largely through legislation rather than violence. Starting in

the 1880s, and administered by the DIA, amendments to the Indian Act introduced elected band councils and banned a number of religious and cultural practices, such as the potlatch and the sun dance. The sale of alcohol to status Indians was forbidden, and in some areas a pass system required that Indians obtain permission from Indian agents for travel. As with U.S. Indian policy, which expressed a distrust of tribal collectivities and unsettled lifestyles, Canadian policy likewise pursued assimilation by means of "the Bible and the plough." Christian missionaries prompted the destabilization of Native societies and directly attacked traditional culture. However, their efforts were never total, and the use of Christianity in the service of cultural preservation by aboriginal Christians demonstrated that conversion could be a tool of Indian survival. Indian agriculture was encouraged by the Canadian government, although contrarily much was done to discourage commercial farming or ranching success among Indians.

The equivalent to American Indian boarding schools in Canada were known as "residential schools." These institutions were jointly operated by churches and the federal government and targeted primarily Indian children (although after 1951 there were also residential schools for Inuit students). By the 1920s and 1930s, compulsory attendance laws were included in the Indian Act, compelling Indian children to remain in residential schools until the age of eighteen. In another government-led movement to assimilate aboriginal peoples, some Indian children were removed from their homes and adopted or placed in foster care with white families. Popularly known as the "stolen children" or the "sixties scoop," after the decade in which it peaked, over fifteen thousand children were seized by the government in the 1950s–1970s. The practice of taking Indian children from their families finally declined in the 1980s. The legacy of the stolen children and Indian residential schools in Canada is one of dysfunction; cultural destruction; and physical, sexual, and mental abuse. In the 1990s all the major Protestant and Catholic churches that had run residential schools issued formal apologies, as did the Canadian government. In 1998 the latter pledged \$350 million to facilitate healing among Canada's Native peoples and especially for residential school survivors.

Changes in the Mid-Twentieth Century

Despite the assumption that the "Indian problem" could be solved only through integration into the mainstream culture, Canadian Indian policy guaranteed Indians remained wards

of the state, separated and excluded from Canadian society. Indians actively resisted this colonialism. In the early twentieth century, when Native peoples lobbied Canadian and British authorities, presented petitions, sought audiences with the king of England, and generally asserted their own claims to sovereignty, Canada responded to stifle their actions. In 1922 the little-enforced prohibition against the potlatch (banned 1884–1951) on the Pacific coast was applied in a dramatic raid and mass arrest of hosts and guests at a Kwakwaka'wakw (Kwakiutl) potlatch at Alert Bay, British Columbia. In 1924 the traditional hereditary leadership of the Haudenosaunees (Iroquois) in Grand River, Ontario, was forcibly removed and an elected council installed in its place. In a 1927 amendment to the Indian Act it became illegal to raise funds, use band funds, or hire a lawyer for the purposes of pursuing Native land claims in Canada. This remained in effect until 1951, and was one of the leading reasons behind the absence of any new treaties in Canada between 1923 and 1973. The Canadian government's reluctance take on the financial responsibilities of treaties was another.

A parliamentary inquiry from 1946–1948 into Canadian Indian policy was highly critical of past and current practices, and led to major revisions to the Indian Act in 1951. The ban on Indian land claims and alcohol use and prohibitions against Native cultural and ceremonial practices were finally dropped from the new version of the act, and for the first time women were allowed to vote in band elections. Yet, at its heart the contemporary Indian Act remains the principle tool for assimilation and is fundamentally similar to the 1951 version.

A profound shift in Canadian Indian policy occurred in the late 1960s and early 1970s. In 1969 Prime Minister Pierre E. Trudeau proposed sweeping changes presented in the form of a parliamentary paper (the White Paper). Much like the U.S. termination policy of the 1950s and 1960s, the White Paper proposed assimilation through the dissolution of the Indian Act and Indian status, the cancellation of treaties, and an end to any legal responsibilities for First Nations. This policy was supposed to have been developed in consultation with Native peoples, but there was widespread dissatisfaction, even a sense of betrayal, over the proposed changes. The National Indian Brotherhood of Canada complained that were they to adopt such a policy it would be akin to partnership in Indian cultural genocide. The Alberta Indian Brotherhood countered with its own proposal, *Citizens Plus* (also dubbed the Red Paper), advocating

mutually negotiated arrangements, like treaties, rather than unilaterally imposed wardship for Indian peoples in Canada. The original plan to phase out the Indian Act, DIA, and treaties was abandoned and the policies laid out in the White Paper were repealed.

Instead, the 1970s ushered Canada into a new era of modern aboriginal rights and land agreements, beginning in 1973 with the Calder case. This case was brought before the Supreme Court of Canada by the Nisga'a First Nation of northern British Columbia, a group which had never signed treaties with the British or Canadians, and claimed unextinguished title to their home territory along the Nass River. Although a split decision (three judges opposed, three judges in favor, one judge abstained), the insistence by at least three Supreme Court justices that colonial, federal, or provincial legislation could not remove aboriginal rights became the basis on which comprehensive claims in Canada came to the forefront.

Broadly speaking there have been two categories of Native land claims since the 1970s: specific and comprehensive. Specific claims refer to claims stemming from existing treaties or agreements (such as the failure to fulfill treaty promises or differences in interpretation for expected action). Comprehensive claims encompass those areas without any previous treaties or cession of Native rights. Although the Canadian government created a claims resolution office in 1974 to help streamline the process, most scholars agree that Aboriginal initiative and assertiveness brought about modern treaty making. The first comprehensive claim to be settled in Canada was the James Bay and Northern Quebec Agreement (Cree, Inuit) in 1975. Their agreement is considered to be the first aboriginal self-government legislation in Canada (a very late development when compared to American Indian self-government), although some might point to the Cree-Naskapi Act of Quebec, in 1984, as even more groundbreaking because it replaced the Indian Act in the regions it encompasses. Other notable modern agreements included the Northeastern Quebec Agreement (1978), Inuvialuit Final Agreement (1984), Gwich'in Agreement (1992), Nunavut Land Claims Agreement (1993), Sahtu Dene and Métis Agreement (1994), Agreement Covering 14 Yukon First Nations (2002), and the Nisga'a Agreement (2000). Despite the apparent resolution of many claims cases, it is significant to note that approximately half of the landmass of Canada has never been ceded by aboriginal peoples through treaties. This fact makes any court decisions as much political decisions as they are legal ones.

Constitutional Recognition and Recent Developments

The acknowledgment of aboriginal peoples in Canada's Constitutional Act (1982) was a major achievement in the struggle for aboriginal rights in Canada. Section 35(1) affirms and recognizes existing aboriginal and treaty rights, while section 35(2) enshrines Indians, Inuit, and Métis people as Canada's three aboriginal peoples. As political scientist Alan Cairns stated, the "constitutionalization" of aboriginal rights marked the end of wardship and assimilation as the central objectives of Canadian Indian policy. Despite the recommendations of a royal commission in the 1993 Penner Report that self-government be granted to those willing Indian communities, it remains unclear whether the acknowledgements in the Canadian Constitution include political self-determination. Indeed, the first test case of exactly what existing Aboriginal rights were constitutionally guaranteed came in a fishing rights case from British Columbia (*Sparrow v. Regina*, 1990). Canada's Supreme Court ruled that aboriginal rights exist even in the absence of treaties, that colonial or provincial legislation cannot nullify these rights, and that legislation negatively impacting Native peoples can only be applied when justified (such as for conservation of a resource). Also in 1990 with the *Sioui* case ruling by Quebec's Supreme Court, aboriginal rights were again recognized in the absence of treaty rights. In this case, guarantees for safe passage and rights to religious, cultural, and commercial practices authorized by the British in the final days before the fall of New France were deemed "treaty rights" and were entitled to the aboriginal peoples in the province (particularly the Huron) of present-day Quebec. Neither case, however, spoke to the issue of self-government.

Moreover, confrontations, blockades, and armed occupations in pursuit of land claims remained parallel developments in Canada despite these achievements in the courts and by legislation. The most high-profile of these, the 1990 "Oka Crisis," involved centuries-old unresolved land claims of Mohawks of Kanesatake and the Quebec town of Oka, east of Montreal. When plans for the expansion of a golf course threatened sacred land and a burial ground, tensions escalated as armed Mohawks erected barricades around their territory and a police officer was killed. The provincial police, Royal Canadian Mounted Police, and finally the Canadian army were called in. Other Indian bands in the region, particularly the Mohawks at Kahnawake, joined in an

act of solidarity and were met with racist hostility by many Montreal citizens after the Indians blocked a major bridge and highways into the city. After seventy-eight days the Oka standoff was ended peacefully by the Mohawks, although aside from changes to Indian policing policy, none of their claims were definitively settled.

Has Canada's Indian policy been a success or failure? In terms of its attempt for the last 150 years to eliminate the "Indian problem" by absorbing Indians into mainstream Canadian society through disempowerment and confinement, it has failed. Canada's record for redressing historical claims among its aboriginal citizenry has been poor, and the persistence of Indians in the pursuit of their rights to lands, resources, and freedom of cultural expression has been largely in spite of the official policy. The Royal Commission on Aboriginal Peoples in the early 1990s examined the unfairness of the historic and contemporary Canadian Indian experience. The five-volume, 3,537-page report completed in 1996 contained a critical and condemnatory review of the past and current exercise of Canadian Indian policy, citing practices that were nothing short of colonialism. Although many of its 440 recommendations have received little public or government attention so far, it marks a movement toward Canada's admission of the inappropriateness of its assimilationist, coercive, and restrictive policies for its Indian peoples.

Carleton, James Henry

James Henry Carleton (1814–1873) was an officer in the Union Army during the Civil War (1861–1865) and led American forces that interned Navajos and Apaches at the notorious Bosque Redondo reservation in the 1860s.

Carleton was born on December 27, 1814, in Lubec, Maine, and served in the Maine militia during the Aroostook War, the 1838 border dispute with Canada. He was commissioned in the U.S. Army in 1839 and stationed in Indian Territory in 1841, where he was involved in recapturing slaves taken in Indian raids and in attempts to end the Indian liquor trade. In 1842 he was responsible for the construction of Fort Croghan in Nebraska. After serving in the U.S.-Mexican War (1846–1848), he led the 1st U.S. Dragoons in New Mexico. Carleton's outfit was responsible for a railroad survey expedition and led troops against the Jicarilla Apaches. In 1858 he headed an investigation of the Mountain Meadows Massacre, in which a group of Mormons murdered over 120 Arkansan migrants.

Carleton began the Civil War as commander of the 1st California Volunteer Regiment. Along with pushing the Confederates in New Mexico and Texas to the east, he attacked and defeated Cochise's Chiricahua Apaches and Mangas Coloradas's Mimbreno Apaches at the Battle of Apache Pass in July of 1862. He established Fort Bowie to protect against Confederate incursions through the pass. In August his forces defeated the Mescalero Apaches; Carleton ordered the killing of all Mescalero men and the removal of the women and children to the new reservation at Bosque Redondo.

In the spring of 1863 he attacked the Navajo camps aligned with Manuelito, the resistance leader. This fighting ended at Canyon de Chelly, where men under the command of Carleton's field commander, Colonel Christopher "Kit" Carson, defeated the Navajo resistance. After the battle, Carleton ordered the Navajo, about eight thousand in all, on the "Long Walk" to Bosque Redondo. (In 1868 the Navajos were allowed to return to their homeland.) In 1864 troops under Carleton claimed to have defeated a large group of Kiowas and Comanches at the Battle of Adobe Walls in

Texas, although his army was driven from the field by a superior Indian force.

Carleton became infamous for his brutal tactics, for refusing to discuss surrender terms with the Indians, and for ordering the destruction of the men of the resisting tribe. Carleton wrote several books on his military experiences. He died on January 7, 1873.

Carlisle Indian School

The Carlisle Indian School was an educational institution established in the late nineteenth century as part of attempts to assimilate Indians into mainstream American society. Its roots began in 1878 when Union Army lieutenant Richard Henry Pratt brought seventeen Indian men from Florida to Hampton Normal School in Virginia. The Native Americans had been held under Pratt's supervision at Fort Marion in Florida, and once they had served their term, they agreed to attend the freedmen's school at Hampton along with African Americans. Pratt quickly decided that Indians should not mix with blacks, and petitioned the government for a separate institution. In 1879 Secretary of the Interior Carl Schurz authorized a boarding school specifically for Indians at an abandoned army barracks in Carlisle, Pennsylvania. A second off-reservation boarding school was approved that year and opened in 1880 at Pacific University in Forest Grove, Oregon. That school moved in 1884 to become Chemawa Indian School in Salem, Oregon.

Pratt and his contemporaries believed that compulsory Indian education in schools near white communities would solve the country's problems with its noncompliant Native peoples. His methods included removal of Indian children from tribal influences, physical transformation of Natives with "white" clothes and haircuts, military discipline, agricultural and industrial instruction for boys, domestic training for girls, and the elimination of any language but English.

Students in the “outing” program were sent to work for local white families. Pratt’s formula for Indian education was applied at government boarding schools throughout the nation. Over ten thousand students from reservations and villages all over the United States and Alaska were sent to Carlisle until it closed in 1918.

Carson, Christopher “Kit”

Well-known soldier and Indian agent Christopher “Kit” Carson (1809–1868) was born in Richmond, Kentucky. In 1824, he traveled to the New Mexico territory and established himself as a trapper and guide. Between 1842 and 1845, John C. Frémont employed him on three separate expeditions to map routes throughout the American Southwest to the Pacific coast. During this period, Carson befriended many Indian tribes throughout the area. Made famous by Frémont’s accounts of the expeditions, Carson was appointed by the United States as an Indian agent at Taos, New Mexico, in 1854.

When the Civil War (1861–1865) erupted, Carson resigned the position to command the First New Mexico Volunteers and helped organize volunteer units for the Union cause. The primary duty of the units, however, was to subdue unrest among the Indian tribes in New Mexico and Texas. In 1863, Carson launched a successful campaign against Navajos resisting white encroachment. Securing victory at Canyon de Chelly, Carson force-marched the defeated Navajos to the Bosque Redondo (Fort Sumner, New Mexico) in the spring of 1864. Sent to western Texas later that same year, Carson faced a combined force of Comanches, Kiowas, and Cheyennes at the Battle of the Adobe Walls. Carson’s victory, along with Colonel John Chivington’s 1864 defeat of Black Kettle and other

Cheyennes at Sand Creek, Colorado, forced the tribes to sign the Little Rock Treaty in 1865.

For his gallantry and distinguished conduct in the Indian campaigns, General James H. Carleton recommended Carson for the rank of brevet brigadier general in October 1865. After retiring to Fort Lyon, Colorado, Carson died from an aortic aneurysm on May 23, 1868.

Carter, Jimmy

Jimmy Carter (1924–), U.S. president from 1977 to 1981, signed several pieces of legislation that directly benefited American Indians and Native Alaskans. Carter, a native of Plains, Georgia, served as a representative in the state legislature and, from 1971 to 1975, as governor of Georgia. He was elected president of the United States in 1976.

Among the significant acts completed during his presidency were the American Indian Religious Freedom Act (1978), which acknowledged the right of Native people to practice their own spiritual beliefs; the Tribally Controlled Community College Act (1978), which authorized federal support to those institutions; the Alaska National Interest Land Conservation Act (1980), which dramatically expanded national park acreage in that state, some of which was occupied by Native Alaskan groups; and the Indian Child Welfare Act (1978), which gave tribes a voice in child custody hearings and aimed to keep parentless Native children with their tribes.

Carter’s administration also attempted to resolve outstanding land claims with tribes in the eastern United States. For instance, in 1980 Carter signed the Maine Indian Land Claims Settlement Act, which provided compensation for the historical property claims of several tribes in the state. It was also during Carter’s term that the federal government recognized the Tucson Pascua Yaquis.

Carter strongly supported the protection of Native water and fishing rights; in 1978 he asked Congress to study ways to allocate water resources fairly among the states and the Indian tribes. He also made a symbolic statement when he elevated the office of commissioner of Indian affairs to assistant secretary level and appointed Forest J. Gerard, an enrolled member of the Blackfeet tribe of Montana, as the first assistant secretary of the interior for Indian affairs.

While some scholars and Native leaders have praised Carter for these accomplishments, others have criticized him for failing to give greater attention to the Indian Self-Determination and Education Assistance Act (1975) and for attempting to reduce spending on other Native programs.

Cass, Lewis

Lewis Cass (1782–1866) served as the secretary of war under Andrew Jackson and played a prominent role in implementing the United States's removal policy.

Cass was a prominent Democratic leader from the Old Northwest and had a political career that spanned over fifty years. He began as a prosecuting attorney and went on to serve as a state legislator, federal marshal, and army officer. He was appointed civil governor of the Michigan Territory by James Madison in 1813 and served in that capacity until 1831.

Through his military experience and tenure as civil governor, Cass earned a reputation among his contemporaries as one of the best informed and experienced Indian policy experts in the country. As superintendent of Indian affairs, a concurrent role held by all territorial governors, he gained first-hand experience negotiating treaties and brokering relations with tribes in the Great Lakes region. He was a significant participant in a majority of the treaties that reduced

tribal land bases during his terms as governor and was singularly responsible for negotiating those treaties. In political circles, Cass was viewed as a fair but determined negotiator who regularly traveled throughout the territory.

Cass wrote a series of essays examining the relationship between the federal government and the tribes. His most important essay, published in January 1830, was the first advocating removal that was written by an expert in Indian affairs to appear in the popular press since the election of Jackson as president in 1829.

Jackson's election ushered in a new era in federal Indian policy, and in 1831 he appointed Cass as his secretary of war. Cass supervised the removal of the eastern tribes to the trans-Mississippi lands and was one of the ideological architects of the removal policy. The roots of the policy were founded on the assimilationist ideals embraced by Thomas Jefferson, Henry Knox, and others. Cass and his contemporaries believed the American Indian was at an early stage in human development, the hunter state, a period Europeans had successfully passed through millennia earlier. The policy he implemented in his role as territorial governor supported programs that would lead the Indian tribes out of their cultural "savagery." Cass and many others believed that this was the most humanitarian approach to the Indian problem and the only way the Indians would survive. Cass proposed that the federal government was obligated to assist willing tribes on their path toward "civilization." Those tribes that refused this assistance were seen as a threat and would be dealt with militarily. Political necessity quickly outweighed all other concerns, however. The increasing demand for lands east, and the acquisition of territories west, of the Mississippi River demanded a change in the Jeffersonian approach. Cass, like other pro-assimilationists, did not abandon his goals, but rationalized that federal programs would fail as long as the Indians lived too close to the corrupting forces of white populations. Removing tribes west of the Mississippi would, according to the humanitarian supporters of removal, provide an environment that would allow missionaries to do their work. Peaceful co-existence, they believed, was not possible.

As secretary of war, Cass inherited the responsibility of implementing the Indian Removal Act of 1830 and used his power to favor those Indians who went along with the assimilation and removal policies of the federal government. One example of this was in his allocation of smallpox vaccinations to those tribes who were involved in favorable treaties with the United States. Cass refused vaccinations to

tribes along the Upper Missouri River because they were no longer economically important to U.S. trade, and because they were considered beyond “civilizing.”

A loyal supporter of Jackson, Cass served as his secretary of war until designated the U.S. minister to France. Cass and his family were living in Paris during the summer of 1837, when a smallpox epidemic killed untold thousands of unvaccinated American Indians located along the Upper Missouri River. Cass returned to the United States in 1842, where he lost a bid for the presidency in 1848.

Cayuse War (1848–1855)

The Cayuse War (1848–1855) grew out of the Whitman Massacre, which occurred in Oregon Territory on November 29, 1847. Reverend Marcus Whitman had established the first mission among the Cayuses more than a decade earlier, but some Cayuses became suspicious of him and the increasing number of settlers who had traveled to Oregon since his arrival, bringing with them measles and advancing on Indian land. Some Cayuses believed Whitman was partially responsible and had helped settlers overcome disease while secretly poisoning Indians. These beliefs led a small band of discontented Cayuses to attack Whitman’s mission, killing more than a dozen settlers, including Reverend Whitman and his wife, and taking more than forty captives.

Response to the attack was swift. Within a month the captives were successfully ransomed. The territory’s provi-

sional legislature raised a force of 550 militiamen and created a three-person peace commission. Because not all the Cayuses had favored the Whitman raid, the hope was that the Cayuses responsible would be willingly turned over by their people.

Ultimately, the peace commission failed because the militia interfered with its efforts. Small fights broke out in January 1848. Cayuse renegades were splintered and found reinforcements from the Nez Perce, Walla Walla, Umatilla, and Palouse tribes. This group, comprised of more than four hundred warriors, made its stand on February 24, 1848, in the Battle of Sand Hollow. The battle was a failure for the Cayuses, who lost several men and, more importantly, were unable to recruit more warriors to their cause because of this loss. The militia continued to pursue the Cayuses and by month’s end had killed more than twenty warriors. Although more small fights took place over the next few weeks, the militia’s efforts to capture those responsible for the Whitman Massacre were unsuccessful, and by June 1848 the militia had disbanded and the Cayuses scattered—both physically and politically.

The hunt for those responsible for the massacre, however, did not end. In the eighteen months following the disbanding of the militia, Oregon became a territory and its new government, along with U.S. representatives, pressured the Indians in the area (including the Cayuses) to find those responsible.

By December 1849 Red Wolf (Nez Perce) had captured five Cayuse warriors believed to be the only survivors of the original band that attacked the mission two years earlier. In May 1850 the men stood trial for their crimes and were sentenced to death. They were hanged on June 3, 1850, and, with their deaths, the last chapter of the Cayuse War ended.

Census

The U.S. Constitution provides that the federal government take a census every ten years for the purpose of apportioning delegates in the House of Representatives. The Constitution also states that “Indians not taxed,” a category that lawyers and government officials found difficult to define, should not be counted for the apportionment process. For this reason, for many decades the Census Bureau did not make a serious effort to include Native peoples in their enumerations. It is thus difficult for demographers to describe the history of the Native American population in the United States. After the government started counting Indians in 1850, difficulties in identifying the Native popu-

lation were complicated by the isolation of some of them, the undercounting of the communities that census takers visited, and the fact that many Native people tried to pass as white to avoid discrimination. Counting Native Americans continues to be difficult because individuals can now self-identify their ethnicity.

Most colonial censuses did not count Native Americans. In nineteen estimates of the Plymouth colony’s population before 1690, for instance, only one included Native residents of the area. Some counts were taken for military purposes; colonial governments were often concerned with how many warriors tribes could offer in a war. Demographers today have used these counts to estimate the Native population during the colonial period.

Table 1. American Indian and Alaska Native Population by Selected Tribal Grouping, 2000

Tribal Grouping	American Indian and Alaska Native alone		American Indian and Alaska Native alone or in combination	
	Number	Percent of U.S. Population	Number	Percent of U.S. Population
Total	2,447,989	0.87	4,315,865	1.53
American Indian, one tribal grouping¹	1,770,046	0.63	2,883,803	1.02
Apache	57,199	0.02	104,556	0.04
Cherokee	302,569	0.11	875,276	0.31
Chippewa	110,857	0.04	159,744	0.06
Choctaw	88,692	0.03	193,314	0.06
Creek	40,487	0.01	76,159	0.03
Iroquois	47,746	0.02	89,371	0.03
Lumbee	52,614	0.02	59,488	0.02
Navajo	276,775	0.10	309,575	0.11
Pueblo	59,621	0.02	73,687	0.03
Sioux	113,713	0.04	167,869	0.06
Alaska Native, one tribal grouping²	96,998	0.03	120,766	0.04
Alaska Athabaskan	14,700	0.01	18,874	0.01
Aleut	12,069	—	17,551	0.01
Eskimo	47,239	0.02	56,824	0.02
Tlingit-Haida	15,212	0.01	22,786	0.01
One or more other specified tribal groupings³	755,799	0.27	1,279,089	0.45
Tribal grouping not specified⁴	452,697	0.16	1,017,222	0.36

Notes: Data based on sample. For information on confidentiality protection, sampling error, nonsampling error, and definitions, see www.census.gov/prod/cen2000/doc/sf4.pdf. For the 14 specific tribal groupings listed (Apache through Sioux and Alaska Athabaskan through Tlingit-Haida), the alone population includes people who reported that one tribal grouping only. The corresponding alone-or-in-combination population also includes people who reported one or more tribal groupings and one or more races.

— Rounds to zero.

¹ The alone population includes people who reported only one American Indian tribal grouping. The corresponding alone-or-in-combination population includes people who reported one American Indian tribal grouping and one or more races.

² The alone population includes people who reported only one Alaska Native tribal grouping. The corresponding alone-or-in-combination population includes people who reported one Alaska Native tribal grouping and one or more races.

³ The alone population includes people who reported one or more American Indian or Alaska Native tribal groupings not listed above or elsewhere classified and no other race, and people who reported 2 or more of the 14 specific tribal groupings listed above (Apache through Sioux and Alaska Athabaskan through Tlingit-Haida) and no other race. The corresponding alone-or-in-combination population includes people who reported one or more other specified tribal groupings regardless of whether they also reported another race.

⁴ The alone population includes people who checked the box “American Indian or Alaska Native” regardless of whether they also reported another race.

Source: U.S. Census Bureau, Census 2000 special tabulation.

In the early nineteenth century, some censuses were undertaken by Indian agencies at the direction of the federal government. In 1809, for instance, Return J. Meigs, an American agent, completed a census of the Cherokee Nation. In 1826 the Cherokee government reported that it had concluded its own census. This count, more thorough than the federal census, demonstrated that many Cherokees were embracing Anglo-American methods and mechanical arts and integrating into the market economy. In 1835 the federal government took a census of the Cherokees in preparation for their removal to the Indian Territory.

The decennial (occurring every ten years) census only began to count Native Americans and report them separately in 1850, when the census bureau undertook a special count of them. This first enumeration, which the Census Bureau declared to be incomplete for its failure to take counts in several states, territories, and tribes, estimated a Native population of slightly more than 400,000 Indians. The 1860 census counted "civilized" Indians but failed to enumerate the number of Native people in Indian Territory and on reservations. Only in 1890 did the Census Bureau begin to enumerate, rather than estimate, the Indian population. The census of 1890 also marked the low point of Native population in the United States.

In the 1890s, the federal government began implementing the Dawes Act, which provided that communally owned Native territories be surveyed and allotted to Native individuals, to instruct them on the value of individual property ownership and prepare them for assimilation. Native Americans therefore needed to be counted in order to divide the land; on reservations Indian agents were told to calculate the Native Americans under their supervision. The enumeration in the Indian Territory led to the Dawes Rolls, which listed those eligible between about 1899 and 1906 for land allotments in the Oklahoma Territory, which was created out of the merged Oklahoma and Indian Territories. Many rumors circulated about the purpose of the rolls, and many Native Americans refused to have their names collected. Moreover, coordination between the federal Census Bureau and the Indian agents was poor; some individuals were skipped while others were counted twice.

In the 1930s, Native tribes were given some degree of power, particularly in terms of controlling their membership. Some tribes, including the Cherokee Nation, now use the rolls as the basis for determining membership. Other tribal nations require applicants to have a certain percentage of Indian blood for membership, which usually means that all

or most of the applicant's ancestors have to be listed on the tribal rolls. Some Native Americans stayed away from the classifications during the Dawes Rolls. Their descendants have difficulty obtaining tribal recognition today.

After reaching its lowest point in 1890, the Native population in the United States began to slowly recover in the twentieth century. By 1950 the census determined that the Native population (including Eskimos and Aleuts) had only grown to 343,000, but from that point it increased dramatically, from 550,000 in 1960 to 827,000 in 1970. By 1990 the number of Native Americans identified in the census had increased to almost 2 million; in 2000 2.4 million identified themselves as only Native American or Alaska Native (a newer, more inclusive term for Eskimo or Aleut). Another 1.7 million identified themselves as both Native American or Alaska Native and another ethnicity.

On the whole, the Native Americans reaction to the census (and towards ethnic classification in general) has been affected by the majority American society. Until relatively recently, many Native Americans identified themselves as white, or would be listed as white, in official counts and on documents, such as birth certificates, to avoid racial prejudice. In the 1960s, the Red Power movement promoted pride in "Indianness," and by the late twentieth century most in the majority society no longer viewed Native Americans as inferior. Also after 1960, the government started allowing individuals to state their own ethnicity. Scholars suggest that these trends, along with decreased infant mortality and increased life expectancy rates, led to the dramatic expansion of the Native population over the last few decades.

Chemawa Indian School

Chemawa Indian School, the first off-reservation boarding school on the West Coast, was authorized by Secretary of the Interior Carl Schurz in 1879. It was originally known as the Forest Grove Indian Industrial and Training School. The school opened in February 1880 at Pacific University, with eighteen young adult students from the Puyallup reservation in Washington State attending. Lieutenant Melville C. Wilkinson, a Congregationalist Union Army officer, was appointed superintendent. He had previously served as aide-de-camp to General Oliver Otis Howard, who led the Freedmen's Bureau after the Civil War (1861–1865) and founded dozens of schools for ex-slaves.

At Forest Grove, the student population grew as more and younger children were sent from Northwest reservations and Alaskan villages. By 1884 additional acreage was needed. The Indian staff and student body donated money for a new school north of Salem. The post office there was named Chemawa after a local band of Kalapuya Indians, and within a few decades the school was known as "Chemawa" as well. The campus expanded to 450 acres but was reduced to 300 in the middle of the twentieth century as roads and freeways were built near the premises.

The curriculum in all off-reservation schools was deliberately designed to acculturate Native people and prepare them for assimilation into white society. The school attempted to separate its students from their tribal ties, traditions, languages, and religions. In the late 1920s and 1930s, the failure of this approach was realized and federal Indian education programs began to attribute some value to Native cultures. By the early twenty-first century, Chemawa was still in existence as an accredited high school serving hundreds of Native students from many Northwest tribes.

Cherokee Advocate

The Cherokee Nation published the first tribal newspaper in America, the *Cherokee Phoenix*, in Georgia between 1828 and 1834. When the tribe removed to the West, they established a second newspaper, the *Cherokee Advocate*, in 1844 with the same aims as its predecessor: presenting useful information to its readers and a positive image of the tribe. Printed in both English and the Sequoyan syllabary, it was designed to appeal to both Native and white readers.

An important duty of the *Advocate* was to publish legal information, including new laws, addresses by the principal chief, reports of the Indian agent and the commissioner of Indian affairs, and proceedings of the National Council. In addition, it published legal notices, including bankruptcy judgments; notices to creditors; and declarations by district judges, sheriffs, and other tribal officials. Its news and editorial columns contained information concerning criminal trials in the Cherokee Nation's district courts, as well as in the federal court at Fort Smith, Arkansas, which had jurisdiction over the Indian Territory in certain matters.

The *Advocate* was often highly political, running not only editorials but correspondence from commentators at home, tribal delegates in Washington, and observations from other newspapers in and around Indian Territory. As the Cherokee Nation became threatened by territorial bills in Congress, threats to national sovereignty, erosion of its land base, allotment of tribal lands in severalty, and other important issues, the newspaper kept its readers, who were often scattered in remote areas, current on legal and political affairs. The paper, which was in circulation until 1906, helped Cherokee citizens formulate policies to defend themselves against hostile actions by the federal government and other interest groups.

Cherokee Nation v. Georgia (1831)

Cherokee Nation v. Georgia was an 1831 United States Supreme Court case that established several important principles of federal Indian law. It is the second of three Supreme Court Indian law cases known as the Marshall Trilogy, (along with *Johnson v. McIntosh* (1823) and *Worcester v. Georgia* (1832)). Georgia's desire to remove Cherokees from the state was part of the larger effort by the United States to remove all Indians west of the Mississippi River. *Cherokee Nation v. Georgia* was an attempt by the Cherokees to resist that policy.

In the mid-1820s, Georgia began enacting laws abolishing the Cherokee courts and legislature, dividing Cherokee land among Georgia counties, extending Georgia laws over Indians and other persons in Cherokee country, and invalidating Cherokee laws and political institutions. The Cherokee Nation protested these attempts to drive them from their lands and asked the federal government to fulfill its treaty promises to protect the Cherokee government and homeland. The United States refused, which was no surprise as President Thomas Jefferson's administration had signed an agreement with Georgia in 1802 to remove the Cherokees as soon as possible, despite federal treaty promises. The Cherokee Nation, led by John Ross, its principal chief, turned to the U.S. Supreme Court and sued Georgia to prevent its trespasses and interference in Cherokee governance.

The Court's opinion, however, primarily addressed only the technical issue of jurisdiction. The third article of the Constitution allowed the Court to hear the case against Georgia only if it determined that the Cherokee Nation was a "foreign state." The Cherokee Nation argued that it was a foreign state because its citizens were not citizens of the United States and did not owe allegiance to it. Georgia did not appear to contest the decision.

The majority did agree that Indian tribes were states; that is, they were distinct political and governmental entities capable of managing their own affairs, and that by repeatedly entering into treaties with tribes, the United States had demonstrated its belief that they were states to be dealt with on a political basis. The majority held, however, that tribes were not states "foreign" to the United States. Consequently, Justice John Marshall wrote, the Court did not have jurisdiction to hear the case.

While Marshall's comments were considered the majority opinion, the six members of the Court represented three distinct views on the jurisdiction question. Two justices, Smith Thompson and Joseph Story, concluded that the

Cherokees comprised a foreign nation and could therefore bring suit in federal court. Justices William Johnson and Henry Baldwin argued that the Cherokee Nation was not sovereign and that individual Cherokees were simply subjects of the state in which they lived. Marshall and Justice John McLean forged a compromise between these two positions. They maintained that the Indian tribes were what Marshall described as "domestic, dependent nations." Consequently, a majority of four (Marshall, McLean, Johnson, and Baldwin) believed that the Cherokees did not comprise a foreign government and therefore did not have standing to appear before the Court. It is significant to note that four of the justices (Thompson, Story, Marshall, and McLean) believed that the state of Georgia had violated the rights of the Cherokee Nation.

Marshall elaborated on what he meant by "domestic, dependent nations." By "domestic," he simply meant that the tribes were located within the borders of the United States. He added that as the Indian nations relied on the protection and treaty promises of the federal government, they were "dependent" upon the United States. Marshall noted that foreign nations could not enter treaties or interact with American Indian nations because they were within the United States and under its protection.

Marshall also declared that Indian people were "in a state of pupilage," and, therefore, "wards" of the United States. This was the origin of the principle that the United States owed a trust responsibility to the Indian nations. Notably, the Court relied on several falsehoods in *Cherokee Nation v. Georgia* and falsely stated that the Cherokees relied on the United States for daily sustenance. In fact the Cherokees were primarily a settled, agricultural people who lived in long-established villages under well-established governments and provided for themselves. The nation had its own written language, national newspaper, and laws and constitution. Many Cherokees owned cotton plantations and slaves.

Perhaps most important, Marshall suggested that the Indian tribes were sovereign nations and the United States had repeatedly acknowledged that fact in a series of treaties. Marshall enunciated this position more clearly and boldly in *Worcester v. Georgia* the following year; and the principle of tribal sovereignty set forth in the Marshall Trilogy remains relevant and controlling in contemporary American Indian law.

Cherokee Phoenix

The *Cherokee Phoenix* (renamed the *Cherokee Phoenix and Indian Advocate* in 1829) was a weekly newspaper published by the Cherokee Indian Nation from February 21, 1828, to May 31, 1834. Elias Boudinot, a Cherokee formally educated in Connecticut, edited the *Phoenix* and supervised the printing of over 250 editions of the newspaper in the Cherokee capital of New Echota in northwest Georgia. Roughly three-fourths of the articles in the *Phoenix* were published in English; the remainder were written in the Cherokee syllabary developed by Sequoyah in 1821. Though primarily read in the United States, the paper had an international circulation.

Funding for the *Phoenix* came largely from donations from missionary societies, prominent Cherokees, and the Cherokee Nation. The original name of the newspaper signified the rebirth of the Cherokee Nation as it discarded ancient native practices (such as revenge-taking) and adopted Western institutions and lifeways such as legislative government, sedentary agriculture, and writing in an effort to gain acceptance by white Americans. The Cherokees renamed the paper as it evolved into a publication concerned with not only Cherokee affairs but with Native American affairs in general.

Like other newspapers of the day, the *Phoenix* published material on many topics but from a uniquely Native American perspective. The *Phoenix* communicated news, laws, and government notices, as well as religious, social, and political activities, to the far-flung members of the Cherokee Nation. The *Phoenix* also reported on talks held by the Cherokees and other Native American nations with federal and state governments and provided extensive coverage of

the Indian Removal Act of 1830 and the U.S. Supreme Court cases *Cherokee Nation v. Georgia* (1831) and *Worcester v. Georgia* (1832), both of which were highly significant in the history of Cherokee national rights.

Boudinot's early editorials championed Cherokee nationalism and spoke against such issues as the advancement of white settlers onto Cherokee land, the Indian Removal Act, and the inadmissibility of Cherokee testimony in state courts. However, over time, Boudinot came to believe that removal, not assimilation, served Cherokee interests best and his editorials (and many of his news articles) reflected this. Boudinot's change of heart prompted his dismissal as editor by Cherokee leaders opposed to removal. The *Phoenix* continued publication for several more months before going bankrupt.

Efforts to revive the newspaper failed, but fear of a renewal prompted white Georgians to destroy much of its printing equipment and the print shop in 1835. While this silenced what had been a very vibrant voice of Native American culture in the nineteenth-century southeast, the *Phoenix* was reborn in 1844 as the *Cherokee Advocate*. Published in Tahlequah in the Cherokee Nation, the *Phoenix's* successor ran until the dissolution of the tribal nation in 1906. As of 2008, the newspaper serving the Cherokee Nation was known as the *Cherokee Phoenix*.

Cherokee War of 1776

The indecisive aftermath of the Anglo-Cherokee War (1759–1761) led to escalating tension between colonial and British authorities and Indian tribes. Recurrent conflict along the borders between Cherokee villages and white settlements, together with Cherokee lobbying, hastened the establishment of the Proclamation Line of 1763, which was designed to stop the flow of unauthorized settlement on tribal lands. However, the British proved unable to enforce

the line and to stop either illegal settlement by individuals or large-scale land speculation. Tribal concerns mounted, and Cherokee leaders began to be pulled into resistance movements such as Pontiac's Rebellion (1763–1766), which challenged both European political and cultural authority. Cherokee diplomats mounted a peace offensive, utilizing the tools of land gifts, land cessions, and intermarriage with the colonists. However, a minority of rising young Cherokee leaders were persuaded that armed resistance was the only path to survival.

The swift deterioration of relations between Britain and the southern colonies was solidified both by an abortive British naval landing in Charlestown and by Cherokee raids led by Dragging Canoe against the settlements in the Tennessee River headwaters and western North Carolina. News of these attacks, coupled with fears over a long-rumored British plan to ignite a tribal and slave rebellion, created panic among the colonial settlers in the region. In late summer and fall 1776, just after the Declaration of Independence was signed, large militia bands from North and South Carolina, Georgia, and Virginia overwhelmed Cherokee towns located along the great river valleys of the southern Appalachians. Six thousand men, including Catawba Indians and other traditional opponents of the Cherokees, marched in a show of overwhelming force against the Cherokees.

The rhetorical offensive by Continental Congress leaders was premeditated and genocidal in tone. In one letter Thomas Jefferson stated he wished the colonists would drive the Cherokees across the Mississippi River. William Henry Drayton, a South Carolina planter and politician, advised South Carolina troops to destroy every Indian cornfield and town and utterly destroy the Cherokee Nation. As was customary, the Cherokees fell back in a defensive strategy that sacrificed villages but saved lives in battle; however, many died from starvation and the stress of dislocation. The burning of Kituhwa, the Cherokee mother town, was a severe psychological blow. Similarly damaging was the loss of so many elder leaders needed to fill the traditional spiritual and political roles for recovery. The overwhelming show of force against the Cherokee proved a successful lesson and deterrent to other powerful southern tribes tempted to join the British side in the American Revolutionary War (1775–1783).

The coordinated campaigns, remembered simply as the “Indian War” or “Great Cherokee War,” were interpreted later by American veterans of the conflict as a necessary psy-

chological prelude to revolution in the south. For Cherokees, the war resulted in an altered world in which they were surrounded by new adversaries. Before the revolutionary era, colonial leaders had seen the Cherokees as powerful gatekeepers to the trans-Appalachian west. The Cherokee War of 1776 overturned the old balance of power that the Cherokees had used to hold colonial ambitions in check.

Chitto Harjo

Chitto Harjo (1846–1911) was the *heneha* (speaker) of the Muscogee (Creek) traditionalists who protested against the destruction of traditional Muscogee culture, prompted by the land seizures of the General Allotment (Dawes) Act of 1887. He also led opposition to Oklahoma statehood in 1907.

Chitto, a clan designation, means “snake,” and “Harjo,” not a surname, means “recklessly brave.” Chitto Harjo's resistance against allotment resulted in his arrest by the federal government in 1898, although he immediately resumed his anti-Dawes activities upon his release. He traveled with three fellow counselors and a translator to Washington, D.C., to research U.S.–Muscogee law and discovered that the Dawes Act was in violation of the 1832 Creek removal treaty.

Chitto Harjo and his followers turned settlers off surplus land and intimidated Muscogees cooperating with allotment. When reports of this prompted an attack by settlers, federal marshals arrived to arrest Dawes Act resisters, not the settlers. This became known as the Crazy Snake War. Chitto, released under the requirement that he accept the allotment act, continued his efforts against it and was arrested in 1902 and imprisoned for nine months.

A 1905 effort by the Five Tribes of Oklahoma (Muscogees, Cherokees, Seminoles, Chickasaws, and Choctaws) to establish an “Indian” state called Sequoyah met with approval from both Natives and settlers. Chitto Harjo traveled to Washington, D.C., again to speak out against

Oklahoma statehood, and he testified before Senate Select Committee hearings on the matter, protesting the seizure of Indian Territory as a new settler state. Despite his efforts, Congress established Oklahoma as a state in 1907.

Between 1907 and 1909, Chitto Harjo continued to resist Oklahoma statehood. In 1909 he went to Washington for the third time. Alerted by his visit to the level of continuing Muscogee anger, federal officials awaited an excuse to move decisively to silence it. Taking advantage of a case of stolen meat, federal police rushed into Muscogee land called Hickory Grounds and a settler-led riot ensued.

Although not present at the riot, Chitto Harjo was declared an armed and dangerous outlaw. His family home was surrounded by territorial marshals and he was shot during the attack. His son snuck him out of the house during a lull in the firefight. Oklahoma posses formed to hunt him down and Governor Charles N. Haskell sent in troops, which encouraged looting, assaults, and general mayhem by armed mobs of settlers. The press referred to the situation as the new Crazy Snake War, although it became more commonly called the Smoked Meat Rebellion. Chitto Harjo remained free, but in hiding, until his death on April 11, 1911.

Citizenship: United States and State

Like most issues related to Native Americans and their lands, the citizenship status of Native individuals can be complex and has been the subject of much controversy throughout history. The fundamental citizenship status of most American Indians is that they are considered members of Native nations. Citizenship, or membership, in an Indian tribe is conferred as a matter of tribal law, federal law, or both. Because of intermarriage between tribes, as well as between Indians and non-Indians, not all persons who are culturally Indian or who are descendants of tribal members are eligible for tribal citizenship. When a Native person is a tribal citizen, however, federal and state citizenship are in addition to the tribal affiliation.

U.S. Citizenship

In the early twenty-first century, all Indians born in the United States are U.S. citizens. Native Americans have viewed—and some still view—efforts to make them citizens of the United States with some suspicion. Historically, citizenship for Indian people was viewed as a way to separate Native people from their lands, to make them subject to state laws, or to destroy tribal sovereignty.

The history of Native American citizenship in the United States began with the founding of the country. The U.S. Constitution distinguished citizens who had Native heritage from "Indians not taxed," who were citizens only of their Native nations. Prior to the Civil War (1861–1865), citizenship was sometimes conferred on particular tribes by treaty or special statute, as was the case with the Wyandots in 1855. Without such naturalization, however, most Indians were considered to be members of their tribes and not citizens of the United States or the individual states.

The Fourteenth Amendment

The Fourteenth Amendment, ratified in 1868, provides that: "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside." The amendment also reiterated the provision of the original Constitution that "Indians not taxed" were excluded from the population count used to apportion membership in the House of Representatives.

In the 1880s a man named John Elk was denied the right to register to vote in Omaha, Nebraska. He sued in federal

court, claiming that he was a citizen entitled to vote because he had been born in the United States, had severed his tribal relations, and was under the jurisdiction of the United States. The U.S. Supreme Court disagreed. In an 1884 decision, *Elk v. Wilkins*, the Court held that because Mr. Elk was born a tribal citizen, he was not “born . . . subject to the jurisdiction” of the United States under the Fourteenth Amendment. He could therefore only be considered a citizen, the Court ruled, if he had been naturalized by Congress, and he had not. His voluntary abandonment of his tribal relations did not make him a citizen of the United States.

The General Allotment Act

Congress’s first attempt at widespread naturalization of Indians came with the passage of the 1887 General Allotment Act, also known as the Dawes Act. The act broke up many reservations into pieces of land called allotments, which were assigned to individual Indians. Each allotment was to be held in trust by the United States for its Native allottee for twenty-five years. After that, the individual would be issued a deed (patent in fee) to the land, which then became subject to state taxation and could be sold. The allotment of tribal land was part of a general federal policy created to assimilate Indians into mainstream American society. Federal policy makers believed that individual land ownership, citizenship, and conversion to Christianity were the tools by which Indians would become assimilated, and Indian tribes would eventually cease to exist.

Originally, the General Allotment Act said that every Indian receiving an allotment, as well as any Indian who voluntarily resided apart from the tribe and “adopted the habits of civilized life,” was declared a citizen of the United States. Once allottees received the patent in fee to their land, they were also made subject to the laws of the state in which they resided. In the 1905 case of *In re Heff*, the Supreme Court ruled that a Kickapoo allottee was not subject to a federal law prohibiting the sale of liquor in Indian Country because he was a U.S. citizen and subject to state law; therefore, the federal laws governing Indians did not apply to him.

In response to the decision, Congress amended the General Allotment Act in 1906. The amendment, called the Burke Act, provided that allottees would become U.S. citizens only when they received the fee patent to their land, rather than when the land was first allotted. The Burke Act also, however, stated that fee patents could be issued to allottees before the expiration of the twenty-five-year trust peri-

od if the federal government determined that the allottee was “competent and capable of managing his or her affairs.” Based on the Burke Act, the Supreme Court overruled *In re Heff* in 1916. In the case of *United States v. Nice*, that same year, the Court held that Congress retained authority over allottees, at least during the trust period. The Court stated: “Citizenship is not incompatible with tribal existence or continued guardianship, and so may be conferred without completely emancipating the Indians, or placing them beyond the reach of congressional regulations adopted for their protection.” The Court held, in other words, that allottees retained their tribal citizenship.

The General Allotment Act thus created two paths to U.S. citizenship and imposed them on Native individuals without their participation or consent. Indians who voluntarily abandoned tribal citizenship could become U.S. citizens. And allottees would become citizens when they received the deed to their allotments, whether at the end of the trust period or upon an earlier determination by the federal government that they were “competent.” In reality, however, Indians who were naturalized through the General Allotment Act were generally still under federal guardianship and continued to live under tribal law.

Subsequent Naturalization Statutes

Following the General Allotment Act, Congress continued to enact occasional naturalization statutes for specified classes of Indians. For example, in 1888 Congress provided that an Indian woman who married a citizen of the United States would, by the marriage, become a citizen herself. In 1919 Congress passed a law making Indians who fought in World War I (1914–1918) eligible to apply for U.S. citizenship, although few did so. Both statutes expressly preserved the rights of naturalized Indian women or service members to any tribal property or interests in tribal property.

Congress also focused on the tribes in the Indian Territory. Although those tribes were exempted from the General Allotment Act, in the 1890s Congress turned its attention to allotting the tribal lands and suppressing the tribal governments of the territory. The Indian Territory Naturalization Act of 1890 allowed a member of any Native nation living in the Indian Territory (present-day eastern Oklahoma) to choose U.S. citizenship by applying to a federal court. The statute did not affect a person’s tribal citizenship, but allowed the individual to acquire dual citizenship. Then, in 1901 Congress simply declared all Indians living in Indian Territory to be citizens of the United States.

As a result of the General Allotment Act and the many specialized statutes that followed, by the early twentieth century there was no categorical or definitive way of knowing whether a Native American was a U.S. citizen. This was problematic to the mainstream American public, which generally considered the status of U.S. citizen to be highly desirable. It was also problematic to those Indians, such as John Elk, who wished to participate in the state or federal political process by voting or running for elected office.

Indian Citizenship Act of 1924

In 1924 Congress naturalized all Indians by enacting the Indian Citizenship Act. This law declared:

That all non-citizen Indians born within the territorial limits of the United States be, and they are hereby, declared to be citizens of the United States: *Provided*, That the granting of such Citizenship shall not in any manner impair or otherwise affect the right of any Indian to tribal or other property.

This law conferred United States citizenship on all Indians, while also retaining Native people's land-based tribal relationships. The statute thus provided, in effect, dual citizenship.

During the nineteenth and early twentieth centuries, Indian citizenship was generally closely tied to cultural and political assimilation. Federal policy makers viewed citizenship as an important tool in the drive to break up the tribal land base, sever tribal relations, and end the separate status of Indian tribes. Tribal resistance to these efforts was often fierce. Unlike the General Allotment Act, however, the Indian Citizenship Act of 1924 did not couple citizenship to loss of land, loss of tribal relations, or extension of state jurisdiction. Instead, it implicitly retained the governmental status of tribes and the full participation of Indian citizens in their Native nations.

Nonetheless, some Native Americans did not want U.S. citizenship. For instance, after the passage of the act, the Grand Council of the Iroquois Confederacy sent letters to the president and Congress "respectfully declining United States citizenship, rejecting dual citizenship, and stating that the act was written and passed without their consent" (Chief Oren Lyons and John Mohawk, eds., *Exiled in the Land of the Free: Democracy, Indian Nations, and the U.S. Constitution*, 1992). Subsequently, at the start of World War II (1939–1945), the Iroquois (Haudenosaunee) brought a case in U.S. federal court, arguing that Iroquois citizens were not subject to the military draft. The Iroquois said that they had

never accepted the Indian Citizenship Act, were not U.S. citizens, and were in fact citizens of their own sovereign nation. Federal courts rejected this argument, however, and some Iroquois were arrested and charged with draft evasion.

In the years since 1924, many Native Americans have viewed themselves as dual citizens or simply as U.S. citizens, but some continue to consider themselves members only of their own sovereign nations. Some actively denounce U.S. citizenship, while others simply see no reason to participate in the affairs of a foreign country. For example, Indians' voting rates were extremely low until the last two decades, and some Native nations issue their own passports for international travel.

Federal Termination Policy

The federal termination policy of the 1950s and 1960s brought a theory from the assimilation era of the late 1800s back to the forefront. This was the idea that treaty rights and tribal membership made Indians "super citizens." Accordingly, proponents of termination argued that these "special rights" needed to be removed so that Native individuals were equal to other U.S. citizens.

The beginning of the termination era was signaled by House Concurrent Resolution 108, adopted in 1953. The resolution provided that "it is the policy of Congress, as rapidly as possible, to make the Indians within the territorial limits of the United States subject to the same laws and entitled to the same privileges and responsibilities as are applicable to other citizens of the United States." Under this legislation, citizenship meant removal of Native rights and the repeal of laws that set Indians apart from the mainstream United States, such as nation status, treaty rights, reservations, and laws forbidding Native people from owning firearms and drinking alcohol. The existence of the Bureau of Indian Affairs was also brought into question.

Once a tribe was terminated, its citizens were fully subject to state jurisdiction. As a companion to termination, Congress also enacted Public Law 280 in 1953, which granted some states—and authorized all others to assume—civil and criminal jurisdiction over all Indians. In addition, the federal government pursued a relocation policy that encouraged Indians to move off reservations and to urban areas. Once off the reservations, Native individuals usually left tribal government and reservation-based services and became subject to state laws.

Even though the termination era officially ended in 1970, and many of the terminated tribes have since been

“restored” to federally recognized status, there are still tensions around issues related to Native American citizenship. Those who oppose Native nation sovereignty still point out that tribal sovereignty and citizenship mean that Indians receive the benefits associated with state citizenship but do not have to pay some state taxes or follow the same rules as non-Indian citizens. Native people respond that they are acting within their treaty rights and national sovereignty, which predates the time when anyone was a citizen of the United States.

State Citizenship

Historically, Indians who were not U.S. citizens were also not citizens of any state. Thus, in *Elk v. Wilkins*, John Elk was denied the right to register to vote in a city council election because he was not a citizen under the Fourteenth Amendment. Indian participation in state elections became important as more Indians moved off the reservations, and because citizenship and suffrage have generally been deemed closely related. A number of states blocked Indians from voting at various times, including Arizona, Utah, New Mexico, Idaho, Colorado, North Carolina, and Washington.

When Indians were naturalized as U.S. citizens by the Indian Citizenship Act of 1924, they also became citizens of the state in which they resided. The Fourteenth Amendment to the U.S. Constitution provides that all persons who are naturalized “are citizens of the United States and of the State wherein they reside.” As a result, Indians in the early twenty-first century are both federal and state citizens.

Nothing in state citizenship, however, subjects Indian individuals to state laws. Instead, Native Americans living on reservations are generally subject only to federal and tribal law. State law applies, in general, only if Congress has specifically authorized it.

Civil War (1861–1865)

The American Civil War began in 1861 and ended a bloody four years later in 1865. The extent to which each Indian nation was affected by the conflict varied greatly on the basis of geographic location. Some found themselves at the front lines of the war, others engaged in struggles peripheral to the war, and still others were mostly untouched by the combat. Initially, both the U.S. government and the Confederate States government intended the war to be between white men and saw no role for Native Americans. However, as the conflict progressed, both sides sought the assistance of Indians as allies and soldiers.

United States

The West

The federal government entered the war with an established relationship with American Indians. On the plains and in the far west, American expansion had already begun to clash with Native American lives. The plan to separate Indians from their extensive homelands and contain them on reservations took shape with the Treaty of Ft. Laramie in 1851. The major western Indian wars would come after the Civil War, but the pattern of conflict was already established. When the U.S. Army entered the Civil War in 1861, military planners removed U.S. troops from western forts to bolster forces in the east. Tribes across the west watched Union soldiers march out of frontier forts with all their gear. Without a clear understanding of the national conflict, most Indians regarded the withdrawal as a victory rather than a lull in the struggle.

While some tribes gained a respite from the army presence, others faced ruthless efforts to strip them of their lands, which were aided by the government's nearly total lack of attention to Indian policy in the war years. In Colorado, untrained, undisciplined miners under the command of John Chivington massacred over 150 Southern Cheyennes and

This Indian delegation of Sioux leaders was one of many sent to protest or negotiate in Washington, D.C., during the Civil War. Both the Union and Confederacy saw the necessity of having Indian allies.

Arapahoes, mostly women, children and elders, in the 1864 Sand Creek massacre. Chivington and territorial governor John Evans pursued their own agenda, with little oversight from either the Office of Indian Affairs or U.S. Army leadership. Farther south in New Mexico, another ambitious military commander, General James H. Carleton, sought to solve his regional problems by confining the Indians to one area. To that end, he waged a campaign of total warfare against the Apaches and Navajos, driving 8,500 men, women, and children to a barren reservation known as Bosque Redondo. The Apaches and Navajos suffered there throughout the war until the government finally turned its attention to their plight and returned them to portions of their homelands.

Similarly, land-hungry settlers in Minnesota territory used the war as an effective cloak for their move against the Dakotas (Eastern Sioux) people. The neglect of the Indian office and the abuse of the traders under the reservation system sparked a desperate response from the Dakotas in 1862—a response that was crushed by the U.S. Army. Survivors were banished to the deplorable Crow Creek agency and many Dakota men were sentenced to die. When thirty-eight Dakotas died by hanging on December 29, 1862, in Mankato, Minnesota, it was at that time the largest mass execution in U.S. history. Other tribes suffered terribly as well during the Civil War, for reasons barely connected to the conflict. And after the war the reunited nation continued to push westward, consolidating and then expanding territorial gains at the expense of Native nations.

Kansas and the Indian Territory

In Kansas and the Indian Territory, Indians initially seemed as irrelevant to the war effort as they did in the west. The

Office of Indian Affairs did little to assure the Cherokees, Creeks, and others residing on the border of Confederate States that the U.S. would honor treaty obligations to protect them. Most of the agents to the southern Indian tribes were southern men themselves. As sectionalism heated up and the secession crisis loomed, agents quickly made their choice to side with the new Confederacy. Thus, the United States had no presence in the region at a time of great turmoil. The United States then made policy choices that negatively impacted their relations with the tribes in the area. Supposedly worried about the security of transportation, the Office of Indian Affairs suspended annuity payments to tribes in Indian Territory. The Indian governments relied on these payments, which were guaranteed by treaties, to fund their governments and schools, and the decision to cease them left Indian leaders feeling betrayed and suspicious. In addition, as the U.S. Army withdrew from federal installations throughout the South, it also pulled troops out of Indian Territory. Indian leaders watched helplessly as Union soldiers marched out of Forts Arbuckle, Cobb, and Washita in 1861. Not surprisingly, the southeastern Indian nations were left wondering if the U.S. government had any commitment to them at all. They continued to send letters to Washington asking for an explanation of the situation, but received no replies as newly appointed agents dared not venture out of Union-controlled Kansas to meet with their charges. The Confederacy quickly capitalized on this lack of U.S. presence in Indian Territory.

The United States slowly rebuilt its relations with the tribes in Indian Territory and realized the importance of having Indian allies in that region. Indian Territory, it realized, could be an important buffer between Kansas and

Confederate Texas and Arkansas. Also, both the Office of Indian Affairs and the U.S. Army soon had to deal with the flow of refugees pouring into Kansas in response to Confederate aggression in 1861–1862. The transportation of food and basic necessities became huge issues for those trying to aid refugees. The Creek, Cherokee, and Seminole people seeking Union protection outside of their national boundaries desperately wanted to return home and were willing to fight to do so. Eventually, in 1862 the commissioner of Indian affairs, William P. Dole, urged the army to enlist American Indians, which resulted in the formation of the Indian Home Guards. Their first assignment was the long-awaited Union invasion of the territory. Beginning in 1862, the Union increased its presence and tenuous control over the region, which allowed many civilians to return to homes they discovered had been ravaged by war. Many tribal members began to rethink their official alliance with the Confederacy now that the United States was reasserting control. About half of the Creek, Cherokee, and Seminole people renewed their old allegiance to the federal government. Cherokee chief John Ross traveled to Washington to meet with President Lincoln and reestablish a relationship with the Office of Indian Affairs and get help for his people.

The residents of Indian Territory remained a divided people throughout the war. Adherents of each side were forced to flee their homes, as “enemies” from their own tribe gained control of the area. The end of the war found thousands of displaced people living as refugees, many with no place left to call home. The United States government wasted little time in taking land from a weakened people. All five Indian nations, including those loyal to the U.S., were forced to cede land, and mass emigration from the east soon followed. The peace treaties also required the Indians to grant citizenship to their freed slaves.

The East

The number of American Indians residing in the eastern states was far less than in the rest of the country, approximately only thirty thousand, and those mostly in Michigan, New York, and Wisconsin. Their major concern was saving land and autonomy in the face of constant white expansion. Major indigenous powers, such as the Iroquois and Cherokee, had suffered extensive territorial loss during the early nineteenth century. The relatively small numbers of Eastern Indians meant that the United States could safely ignore them during the war. Because the war was initially

regarded as a concern of whites, Indians, like African Americans, could not join the U.S. Army. Secretary of State William H. Seward, at times regarded as a friend to Indians, spoke bluntly about the “white man’s fight” and told Indians not to get involved. However, the arguments of men such as Commissioner Dole and the realities of a long war broke down the barriers so that Indians were accepted into service in 1862. They fought alongside white soldiers in many cases, but were often relegated to the companies of the U.S. Colored Infantry. Some units became known for their concentration of Native American members, such as Company D of the 132nd Regiment New York Volunteer Infantry, which was known as the “Tuscarora Company.” Ottawa and Ojibwe Indians enlisted in the 1st Michigan Sharpshooters in the summer of 1863. They marched with the Army of the Potomac in the intense battles of 1864—Wilderness, Spotsylvania Courthouse, Petersburg—and paid a high price in casualties. Despite obvious displays of bravery and skill, the Union always treated Indian soldiers as subordinates by placing them under the command of white officers and few ever rose to positions of leadership.

One Indian soldier did gain status in the U.S. Army. Ely S. Parker, a Seneca Indian from New York state, was the great-great-grandson of Seneca prophet Handsome Lake and became one of the fifty sachems of the Iroquois League. He trained as an engineer, eventually working in Illinois where he met Ulysses S. Grant. At the outbreak of the war, Parker tried to enlist but was rebuffed several times, including once by Secretary of State Seward. Finally, in 1863 General Grant chose Parker as one of his adjutants. Grant came to like and trust Parker and promoted him to military secretary in 1864. In this position, Parker accompanied Grant everywhere, carrying his important papers and writing all of the lieutenant general’s correspondence. Parker was one of the officers present at the final meeting of Grant and General Robert E. Lee at Appomattox Courthouse in April 1865. Because Lee’s assistant could not complete the task, Ely Parker wrote out the official surrender terms signed by Grant. Parker went on to become the first Indian to serve as commissioner of Indian affairs.

Confederate States of America

Because the Civil War began only a decade and a half after removal, the Confederacy had few Native residents within its territory. Southern states, led by Georgia, had forced the Cherokee, Creek, Choctaw, Chickasaw, and Seminole nations out of their homelands east of the Mississippi River.

Small remnants of these people remained, but held little interest for a new nation in the crisis of war. Four hundred Cherokees did enlist in the Confederate army in William Holland Thomas's legion, performing mostly guard and reconnaissance duties in the mountains of North Carolina.

The bulk of the relocated southern nations resided just on the border of the Confederacy, and the Confederate government quickly realized the importance of securing their loyalty. Jefferson Davis ordered the creation of an Office of Indian Affairs in the spring of 1861, and the Confederacy chose to move away from established Indian policy by offering Native nations more autonomy and representation in the national government. President Davis sent several emissaries to Indian Territory to meet with the leaders of the nations. Men from Arkansas and Texas who had ties to the Indian nations through commerce and marriage also urged the Indians to ally with the Confederacy. Although the majority of Indians did not own slaves, many of the wealthy leaders did and participated in a cash crop economy. This gave them a clear tie to the newly established Confederacy, which had pledged to protect the "peculiar institution." The obvious interest of the Confederacy and the indifference of the Union served to overcome the legacy of removal so that all the five tribes, as well as others, signed treaties of alliance with the Confederate States of America. By the fall of 1861 the Confederate States of America had successfully completed its first major diplomatic mission.

Enlistment of Indian troops began immediately, and here the Confederate States of America differed greatly from the Union. Confederate Indian soldiers served in distinct units under Indian officers, rather than integrated units led by white officers. Men from all five nations quickly volunteered for Confederate service and filled several regiments. Many Cherokee, Creek, and Seminole soldiers stayed loyal to the Confederacy even after their brethren switched to the Union side, and few Choctaws and Chickasaws wavered in their loyalty to the South, despite the efforts of Union officers to entice them. These Indian units fought mainly in their own nations, so Indian Territory became one large battleground with roving armies destroying everything in their path. The situation devolved into a series of brutal civil wars with old animosities and rivalries being played out by armed men. The civilians bore the brunt of the conflict as homes, schools, livestock, and fences fell to the ravages of war. Indian Territory lost much of its wealth during the conflict.

The largest battle in the territory was fought in 1863 at Honey Springs. Most of the rest of the engagements were

skirmishes and raids, often to get provisions, which were always in short supply. Indian soldiers typically suffered from meager, poor-quality military supplies. When Confederate forces captured the federal steamboat *J. R. Williams*, the military advantage was lost when soldiers rushed to take the booty to their impoverished families.

Despite its ultimate outcome, the steamboat raid did serve to showcase the skill of Cherokee general Stand Watie. Watie was the most famous Confederate Indian soldier and a respected military leader. He began as a political leader of the pro-removal faction of the Cherokee Nation and served as the chief of the southern Cherokees. Originally mustered under General Benjamin McCulloch, Watie outlasted several Confederate commanders and gained the rank of brigadier general in 1864. His surrender of Confederate Cherokee forces in June 1865 ended the southern Indians' involvement in the Civil War.

The nations of Indian Territory paid a high price for their alliance with the Confederacy. They were required to surrender territory and abolish slavery in order to reestablish relations with the United States. The end of the war also brought the beginning of the loss of autonomy for the Five Nations. Speculators, politicians, railroad executives, and veterans coveted the lands of the Five Nations and worked hard to open the region to non-Indian commerce and settlement.

Except perhaps in rare individual cases, Indians did not benefit from the Civil War. In general they lost lives, property, and autonomy because of the war and then had to face a united expansive nation in the postwar period.

Civilization Program

During the first four decades of the American national republic (1789–1830), the U.S. government pursued a consistent, if not always well-funded, policy toward Native Americans. Federal officials, Indian agents, congressmen, and presidents encouraged the Indians residing within the United States to become literate, Christian yeoman farmers—to become “civilized,” in the parlance of the era. Their eventual goal was to peacefully incorporate Native American peoples into the citizenry of the United States.

The Means of Acculturation: Agents and Gifts

Policy makers employed three methods of promoting Indian civilization. First, agents and treaty commissioners publicly encouraged Indian audiences to adopt plow agriculture, stock-raising, and domestic manufactures (particularly spinning and weaving). They argued that these changes would better allow Indians to feed themselves, thus reversing two centuries of population decline, and would also help Indians support themselves financially as profits from the North American fur trade declined.

Some agents accompanied their urgings with agricultural demonstrations and incentives. For example, Benjamin Hawkins, who served as principal agent to the southern Indians from 1796 to 1816, established a European-style farm at his agency to provide Creek horticulturalists with a model of “civilized” farming. He also advised the federally administered Indian trading-house at Fort Wilkinson to pay Creek women a premium for homespun cloth and for agricultural produce such as eggs and butter.

Second, the U.S. government provided Indians who signed treaties with “civilizing” gifts that would give them a material head start in their adoption of European-American lifeways. These gifts commonly included plows, spinning wheels, looms, and livestock. A committee of the

Continental Congress proposed such gifts in 1787, and in a July 1789 report to President George Washington, Secretary of War Henry Knox re-introduced their proposal. In the 1790s and early 1800s, federal treaties with the Creeks, Cherokees, Iroquois, and Great Lakes Indian nations promised annual deliveries of agricultural hardware and livestock to the signatories. The 1796 Indian Trade and Intercourse Act appropriated \$15,000 per year for civilizing gifts; subsequent Congresses renewed the gift appropriation until 1834.

The Means of Acculturation: Indian Schools

The third method the government used to promote Indian civilization was the recruitment of Christian missionaries to open schools for Indian children to teach them reading, writing, animal husbandry, blacksmithing, and other domestic arts. Early administrations provided encouragement but little direct support to such missions. In the 1790s the War Department placed about twenty Creek and Iroquois children with Quaker families who promised to educate them. In 1803 the Jefferson administration gave several hundred dollars to Presbyterian missionary Gideon Blackburn to help him build a school for the Cherokees and promised the Kaskaskias funds for a church and for the salary of a priest who would also work as a schoolteacher. Thomas Jefferson's successor as president, James Madison, approved small grants to Moravian and Congregational missionaries planning schools for the Cherokees and Choctaws.

It was not until 1819 that this third element of civilization policy achieved routine and regular funding. The Civilization Act, brainchild of Superintendent of Indian Trade Thomas McKenney, provided a \$10,000 annual appropriation for schools for Native American children. During the following decade, civilization-policy funds were parceled out to over a dozen Protestant mission societies. The most notable of these societies was the Boston-based American Board of Commissioners for Foreign Missions, an association of Congregationalists and Presbyterians that maintained nearly twenty schools and missions in Native American communities. (The largest single recipient of funds, however, was Senator Richard M. Johnson, who used them to establish a private academy near Bear Spring, Kentucky. Johnson's Choctaw Academy boarded and educated Choctaw, Chickasaw, Creek, Miami, and Potawatomi students.) By 1826, thanks in large part to federal subsidies, the number of Indian schools in the United States had grown from six to thirty-six, and by 1830 nearly two thousand Indian pupils were enrolled therein.

Benevolence and Manipulation

The motives of the men who created and maintained the civilization policy were a complex mixture of publicly expressed benevolence and more private pragmatism. Federal officials such as Benjamin Hawkins and Henry Knox earnestly believed that adopting commercial agriculture and other European lifeways was the only way the Woodland Indians could preserve themselves from extinction. They believed that allowing this extinction to occur would stain the United States' honor and blacken its international reputation, linking it with the "Black Legend" of 16th-century Spanish cruelty in the minds of contemporary observers. Many educated patricians such as Timothy Pickering (a treaty commissioner and secretary of war) and Thomas Jefferson believed that "civilizing" Indians would affirm their own Enlightenment faith in the natural equality and perfectibility of human beings. The missionaries with whom these policy makers formed an alliance believed that teaching Native Americans to read and plow would prepare them for conversion to Christianity.

Federal officials also observed that their government could gain practical advantages from the Indian civilization program. Henry Knox argued that giving gifts of livestock and agricultural hardware to Indian chiefs would cause the Indians to feel more bound to the United States and its interests. Placing the children of influential Indian leaders with Quaker families or in boarding schools could have a similar effect, as those children would be hostages to their parents' good behavior. During the American Revolutionary War (1775–1783), the Continental Congress had paid to educate the sons of influential Caughnawaga and Delaware leaders in order to cement their loyalty to the United States, and the first Indian children whom the Washington administration promised to educate were the nephews of the biracial Creek Indian leader Alexander McGillivray, whom Henry Knox wanted to turn into an American client.

Jefferson's "Coincidence of Interests"

In the early nineteenth century, Thomas Jefferson asserted that the civilization policy would promote his administration's policy of territorial expansion, because Indians who gave up hunting for farming and home manufacturing could subsist on less land and sell their surplus lands to the U.S. government. Additionally, as Native Americans adopted intensive horticulture and began raising stock, their need for capital would induce them to sell those lands. "A coinci-

dence of interests will be produced," Jefferson wrote to Benjamin Hawkins in February 1803, "between those who have lands to spare, and want other necessities, and those who have such necessities to spare and want lands" (Paul Ford, ed., *Works of Thomas Jefferson*, vol. 9, 1905). Policy makers ultimately hoped that acculturated Indians would break up their collectively held tribal lands into small individual allotments and agree to live under American laws, potentially then intermarrying with whites and disappearing into the general population. The civilization policy was thus not merely an expression of American benevolence. Its creators sought to use it to turn Indians into allies, then into clients, and finally into citizens, so that the government could assimilate them and sell their lands.

Native American Responses to the Civilization Policy

Despite the ethnocentric goals of its creators, many Woodland Indians welcomed the civilization policy, and by 1800 a growing number of Native Americans were adopting European lifeways. Hundreds of Cherokee, Choctaw, Creek, Delaware, and Wyandot families were raising cattle and horses, making their own cloth, and selling their crops for cash. A small but growing number of Indian parents sent their children to mission schools, believing that the skills taught there would make it easier for their progeny to negotiate with white Americans. Federal gifts of livestock, plows, spinning wheels, and educational assistance thus contributed to a process of acculturation that Indians had already begun on their own.

This process was, however, selective, and those who adopted new lifeways sought to blend them with traditional beliefs and social structures. Choctaw and Cherokee agriculturalists, for instance, preserved their traditional gender roles—according to which women tilled the soil and men hunted—by raising livestock, which allowed male farmers to maintain their traditional masculine identification with animals, and by purchasing African American slaves to work in their fields. The Senecas imprinted the civilization program with their own cultural stamp by incorporating it into a new religion called the Gaiwaio, which was preached by the prophet Handsome Lake. Handsome Lake urged his followers to adopt the white man's artifacts (such as plows and frame houses) but also to revive old ceremonies, such as the white dog sacrifice, and to abandon alcohol and witchcraft.

Some Woodland Indians rejected the civilization program altogether. These "nativists," as some scholars call them, fol-

lowed the teachings of prophets, such as Tenskwatawa, who implored Native Americans to renounce European clothing and tools, or joined the Creek Indians' Red Stick movement, whose adherents destroyed the fences and livestock of acculturated Creeks. The nativists also rejected the land cessions their chiefs had made to the U.S. government and fought against the United States during the War of 1812.

The Waning of Support

The dedication of white American leaders to Indian assimilation eroded sharply after 1815. Some former advocates of the civilization program, such as John Adams, dropped their support after ten thousand Indian warriors fought with Britain against the United States in the War of 1812. Also, a growing number of American congressmen and officials were from Western states, and from a settler population that had always considered Native Americans uncontrollable "savages" who threatened their lives and livelihoods. Five new trans-Appalachian states (Alabama, Illinois, Indiana, Mississippi, and Missouri) entered the Union between 1816 and 1821, and their representatives demanded that the U.S. government terminate the civilization program and drive the Woodland Indians across the Mississippi River.

Meanwhile, federal officials, such as Thomas McKenney, who became the first superintendent of Indian affairs in 1824, and Lewis Cass began arguing that the civilization policy was failing because the advance of white settlements was culturally poisoning the Woodland Indians. Indians living in the vicinity of frontiersmen and fur traders, these critics charged, tended to absorb all of their vices and acquire none of their virtues. Only by removing Indians to an isolated reserve could the U.S. government hope to complete the task of "civilizing them." By the early 1830s, supporters of the Indian civilization program were joining with its opponents in advocating the transfer of eastern Indians to trans-Mississippi reservations. The Indian civilization program thereby became one of the foundations of the policy that was to succeed and supplant it: Indian removal.

The removal program, however, did not permanently erase the desire of American policy makers to assimilate the United States' Indian population. Assimilation returned to the forefront of U.S.-Indian relations after the Civil War (1861–1865), when President Ulysses S. Grant proposed a new "peace policy" toward the trans-Mississippi Indian nations. The program replaced Indian agents (for a time) with Christian missionaries, established new industrial schools for Native American children, and provided (under

the Dawes Act) for the allotment-in-severalty of Indian reservation lands. The new policy represented, in many ways, the final fulfillment of the old civilization policy, but it did not bring white Americans any closer to accepting Native Americans as fellow citizens, and it ultimately introduced new hardships to Indian families already ravaged by war and removal.

Clark, George Rogers

The elder brother of noted explorer William Clark, George Rogers Clark (1752–1818) won several victories against British possessions in the Illinois Country early in the American Revolutionary War (1775–1783) and was instrumental in establishing peace with several tribes in the region after that conflict.

After serving as a junior officer in the Virginia militia during Lord Dunmore's War against the Shawnee in 1774, Clark established a claim in Kentucky, which at the time fell within the far western bounds of Virginia. In 1777 he proposed to

Virginia governor Patrick Henry an attack on British-held towns in the Illinois Country with the ultimate objective of an attack on Fort Detroit. Throughout the next two years his militia forces defeated the British at Cahokia, Kaskaskia, and twice at Vincennes. Due to a lack of men and resources on the part of Virginia's government, however, Clark was never able to mount his planned assault on Detroit. He spent the rest of the war attacking Shawnee villages in the Ohio Country.

After the war Clark served as the Indian commissioner for the Old Northwest Territory. His many successful negotiations culminated with the Treaty of Fort McIntosh with the Delawares, Wyandots, Chippewas, and Ottawas in 1785 and the Treaty of Fort Finney with the Shawnees in 1786. From that point, his life descended into drunkenness and poverty. His reputation suffered greatly when he attempted to lead an expedition against the Spanish in Louisiana in 1793 without the consent of the U.S. government. He died in Louisville, Kentucky, in 1818.

Clark, William

William Clark (1770–1838) was a well-known American explorer and soldier. He served as a militiaman against the Indians in the Ohio Valley starting in 1789, and took part in the Battle of Fallen Timbers in 1794. He retired from the army in 1796, but quickly accepted the invitation from Meriwether Lewis to explore the Louisiana Territory in 1803. Lewis selected Clark for his knowledge of Indians and his understanding of their diplomatic protocols.

On the two-year-long expedition, known as the Corps of Discovery, Clark drew detailed maps of the area and made several contacts with the numerous Indian tribes who lived in the territory. Clark knew that the expedition depended on the goodwill of the Indians, and even as he declared to them that they now lived in the territory of the United States, he worked to stay in their good graces. After Clark returned from the expedition, Jefferson appointed him as the

principal Indian agent for the Louisiana Territory and brigadier general of the militia.

In 1813 Clark was appointed governor of the newly established Missouri Territory. After losing an election for governor of Missouri in 1820, he served as superintendent of Indian affairs for the upper Missouri and Mississippi region. While in office, Clark concerned himself with strengthening the area's settlements against hostile Indians, establishing friendly relations with the tribes in the region, and organizing the removal of several tribes from the east of the Mississippi to west of the river.

Clinton, Bill

President William Jefferson Clinton (1946–) generally signed laws and executive orders that favored tribal nations and Native Americans, though some question whether his work was more symbolic than substantive. Clinton became the first sitting president since Franklin D. Roosevelt (1933–1945) to visit a tribal reservation when he traveled to the Oglala Sioux Pine Ridge reservation in South Dakota in 1999 as part of a cross-country campaign to economically depressed regions.

Clinton (1993–2001) was the first president to invite leaders of all tribal nations across the country to meet with him in Washington, D.C., to discuss relations between tribal governments and the federal government. From that 1994 meeting came an executive order entitled Consultation and Cooperation with Tribal Governments, which Clinton signed on November 6, 2000. The order directed federal agencies to develop standards for consulting with tribes. Furthering his stated goal of increasing federal recognition of tribal sovereignty, Clinton also signed the reauthorization of the Indian Self-Determination and Education Assistance Act in 2000, which enhanced self-governance for tribal governments.

Additionally, Clinton signed orders that expanded protection for Native American religious freedom. His executive order on sacred sites directed federal agencies not to physically disturb those sites and to ensure access to them for tribal members. This order, however, had limited practical impact since it included other statements that detracted from its enforcement. He also issued the administration's Policy Concerning Distribution of Eagle Feathers for Native American Religious Purposes, which directed federal agencies to change their policies and procedures to ensure Indian people would have access to eagle feathers for their ceremonies and rituals.

President Clinton nominated long time Menominee activist Ada Deer for the post of assistant secretary of the interior for Indian affairs. She was the first Native American woman to hold that position. During her time at Interior, the Alaska Native villages were included on the list of federally recognized tribes published by the Bureau of Indian Affairs.

Clinton's second assistant secretary was Kevin Gover (Pawnee), an attorney and former professor at Arizona State University, Sandra Day O'Connor School of Law. During his time in the office, Gover issued a formal apology to Indian people on behalf of the Bureau of Indian Affairs for its history of inhumane treatment of Native Americans.

Among President Clinton's other accomplishments was the groundbreaking of the National Museum of the American Indian in Washington, D.C., in 1999. The museum was completed in 2004. Also, in 1993, Congress passed, and the president signed, an apology to Native Hawaiians for the overthrow of their government.

A class action lawsuit was filed in 1996 against the federal government during Clinton's administration to demand an accounting of the money held in Individual Indian Money accounts, which were grossly mismanaged for decades. The suit, filed by lead plaintiff Elouise Cobell, was ongoing as of mid-2008. In 1999 members of President Clinton's cabinet were held in contempt by the judge for failing to comply with court orders associated with the case.

Cloud, Henry Roe

Henry Roe Cloud (1884-1950), a Winnebago (Ho-Chunk) Indian of the Bird clan, was a prominent teacher and official in the U.S. government. Born in 1884 on a reservation in Nebraska, Cloud is believed to be the first Native American to attend Yale University, graduating in 1910 and gaining his master's degree in anthropology in 1912. He became well-known around the university because of his public speaking skills and was a member of Elihu, the Yale secret society. He was also one of the early members of the Society of American Indians.

While at Yale, Cloud attended a lecture by missionary Mary Wickham Roe and learned about the evangelical work being undertaken among Indians. He took "Roe" as his middle name and began to focus on Native American education. He became president of the American Indian Institute in 1915 and served as superintendent of Haskell Institute, later the Haskell Indian Nations University, in Lawrence, Kansas, and later of the Umatilla reservation at Pendleton, Oregon. Cloud became editor of the *Indian Outlook* and assisted in the 1926-1929 survey of the Indian Office that resulted in the *Meriam Report*, which detailed federal mismanagement of Indian lands and programs.

In 1936 Cloud was appointed supervisor-at-large of the Office of Indian Affairs. In his last years he transcribed the genealogies of the Oregon coastal Indians after a court award of \$16 million as compensation for illegal land seizures. He died February 9, 1950, in Siletz, Oregon.

Clum, John P.

John P. Clum (1851–1932) was one of the youngest and most accomplished Indian agents in the nineteenth-century American West. In 1874, after briefly serving as a weather observer in Santa Fe, New Mexico, Clum was appointed Indian agent at the San Carlos White Mountain Apache reservation in the Arizona Territory. At the age of twenty-three, he found himself in charge of one of the most isolated and volatile Indian agencies.

Prior to Clum's arrival, the military firmly ruled the Apache reservations, allowing government agents little voice in agency affairs. Clum realized the harmful effects of martial rule, and with the backing of the Office of Indian Affairs, asserted civilian control over the agency. To eliminate the need for military protection and bring some degree of self-rule to San Carlos, Clum created an Indian police force and court system. Apache police arrested intruders, monitored potential troublemakers, enforced the ban on alcohol, and arrested those who were deemed "renegades," including Geronimo. Shortly thereafter, the Office of Indian Affairs used Clum's police force as a model, introducing similar institutions at all Indian agencies.

Due to Clum's skillful administration and his general acceptance by Apache leaders, the government moved toward consolidating all the Apaches onto one reservation administered by the young agent. In March 1875 over 1,400 Apaches from Camp Verde Agency were moved to San Carlos. Eventually over five thousand Apaches were put under Clum's rule.

Clum resigned his post in 1877 after continued conflict with the military and what he deemed a lack of support from the Office of Indian Affairs. Thereafter he ventured to Tombstone, Arizona Territory, where he edited the *Tombstone Epitaph* and served as town mayor in 1881. After spending time in Alaska, Clum bought a citrus ranch in Southern California. He died in Los Angeles in 1932.

Cobell Litigation

In *Cobell v. Kempthorne et al.* (D.D.C. 1996), a complex class action suit, thousands of American Indian leaseholders took the government to task for mismanaging their earnings held in federal law-mandated trust accounts.

On June 10, 1996, five American Indian landowners filed a lawsuit in the U.S. District Court for the District of Columbia against the federal government for mismanagement of trust funds associated with Individual Indian Money (IIM) accounts. These accounts hold the earnings of individual Indians associated with oil and gas and other mineral leases on individual Indian allotment lands. Under federal law, the federal government manages these trust accounts instead of allowing individual Indians to deposit these funds into private accounts.

The plaintiffs in *Cobell* alleged that the federal government breached its duties as trustee by not providing statements on the accounts, by failing to keep adequate records of how much money was due under each account, and by failing to provide funds to the IIM account holders. Citizens of the United States are generally free to choose their own bank, but for American Indian allottees the federal government serves as the bank for income derived from Indian lands.

Plaintiffs in the *Cobell* lawsuit now number between 300,000 and 500,000 IIM account holders from hundreds of tribes. These account holders are suing to ensure that the federal government is held to the same standards as any other bank that oversees individual deposit accounts.

The case has been divided into two parts. Phase I includes fixing or reforming the management and accounting of the IIM trust accounts. Phase II addresses the historical accounting, or lack thereof, associated with IIM accounts.

The trial for Phase I lasted six weeks. In its December 21, 1999, opinion, the district court found that the federal government had breached its fiduciary duty under the Indian Trust Fund Management Reform Act of 1994 to account accurately for all money in the IIM accounts. The court also found the government had failed to retrieve and retain all information needed to render an accurate accounting of the IIM trust, to establish written policies and procedures with the necessary technical support, and to staff business systems architecture for trust management functions. As a result, the federal government was required to submit quarterly status reports to the court summarizing its progress in meeting its fiduciary duties to the IIM trust beneficiaries. In short, the

court determined that the federal government's accounting system for the IIM accounts was broken, and the government was ordered to correct the problem.

The numerous appeals by the federal government that followed the 1999 district court opinion ultimately resulted in reassignment of the case to a different judge at the district court level. Meanwhile, federal officials were held in contempt for their failure to produce documents and follow court orders.

Because the accounting system is flawed, it is impossible for the federal government to determine exactly how much money is owed each IIM account holder. The plaintiffs estimate that the total compensation is \$27.5 billion. The federal government's estimation is much lower.

In 2005, in an attempt to resolve the case, Sen. John McCain, R-Ariz., introduced a bill that would provide \$8 billion to end the case, settle other pending claims, and support Indian trust asset management reform. The Senate Committee on Indian Affairs held several hearings on the bill, but as of 2008 the bill had not moved forward and no settlement had been reached.

On April 20, 2007, the district court restated that after nineteen decisions of the court, orders were still in effect that required the government to produce a statement for each account and make quarterly progress reports toward that goal. A ten-day trial on the Phase II historical accounting ended on October 25, 2007. In August 2008, a federal court judge ruled that the Native American account holders were owed \$455 million, far short of the \$47 billion sought. The plaintiffs are considering further appeal.

As of 2008, over 210 days of evidentiary hearings had been devoted to this case. Both parties agree that at least \$13 billion passed through the IIM accounts in the 1900s. However, they continue to disagree about whether the proper amounts have been paid out to IIM account holders.

Cochise

Cochise (c.1810–1874), the leading Apache war chief of the second half of the 1800s, was officially only the leader of the

Chokonon band of Chiricahua Apaches. Known for his fighting skills, intelligence, honesty, and uniquely strong influence in a culture not given to absolute authority, he was widely respected and had influence over all Apaches. Among the Apaches, Cochise was his generation's central figure in the battle to maintain their land base against Mexican and U.S. intruders.

Cochise was allied with Victorio, Juh, and Nana, all other influential Apaches. Geronimo, the famed Apache war leader of the next generation, fought alongside Cochise.

Cochise battled against Mexican and U.S. settlers for forty years with varying degrees of intensity. However, he began an all-out war against the United States in 1861, after he was attacked during a meeting with military personnel and his brother and other relatives were hanged. For the next five years, Cochise and his warriors controlled southeast Arizona. The most well-known battle between Cochise's forces and the United States took place at Apache Pass in 1862. The Apaches' war effort was aided by their ability to cross the Mexican–U.S. border to safety and by the fact that the U.S. military was focused on the Civil War (1861–1865) during this period.

The fighting continued until 1872, by which time Cochise had decided that peace with the United States was the only option. He negotiated a treaty with General O. O. Howard, holding out until he won two concessions: his friend Thomas Jeffords as agent, and a reservation in southeastern Arizona instead of on the Rio Grande. Cochise died two years later.

Coeur d'Alene War (1858)

The Coeur d'Alene War of 1858 was largely an outgrowth of the Yakama War of 1855, which had erupted in response to the imposition of the reservation system in the Pacific Northwest. Although contemporaries perceived them as separate conflicts, they involved many of the same groups and are often lumped together as the Plateau Indian Wars. After suffering military defeats in 1855 and 1856, Kamiakin,

Qualchan, and other “hostile” Yakama Indians traveled throughout the Interior Northwest urging Indians to unite and continue fighting the United States. Many Natives joined the alliance because they feared the United States would continue to move onto their lands, while others tried to remain neutral or even served as scouts for the Americans.

The Coeur d’Alene phase of the war began in May 1858, when the United States sent 160 soldiers from Fort Walla Walla to Colville, Washington, to punish “renegade” Palouses for killing American settlers. The troops were met near present-day Steptoe Butte by more than one thousand warriors—including members from the Spokane, Coeur d’Alene, Palouse, Yakama and Columbia tribes—who forced the soldiers to retreat after taking minor casualties. In response, the U.S. government dispatched a force of some seven hundred troops, led by Colonel George Wright, to locate and defeat those responsible.

At the Battle of Four Lakes and the Battle of Spokane Plains in September, the confederated Indian forces suffered serious setbacks that undermined their ability to recruit additional allies and continue fighting. Over the next few weeks, Wright’s army participated in several small battles and destroyed much of the Indian property they came across, starting with the slaughter of eight hundred Indian horses seized after the Battle of Spokane Plains. By the end of the month, Wright had forced most of the remaining Indians to surrender. The majority moved onto reservations after Congress ratified the treaties signed in the Pacific Northwest in 1855. Some Indians were not captured, however, and the implementation of the reservation policy sparked further violence in the Northwest during the 1860s and 1870s.

Cohen, Felix S.

Felix Solomon Cohen (1907–1953) was the man who wrote the book on American Indian law. The author of *Cohen’s Handbook of American Indian Law*, he received his bachelor’s degree from the City College of New York (1926), his doctorate in philosophy from Harvard University (1929), and his law degree from Columbia University (1931). Cohen was an attorney with the Solicitor’s Office of the Interior Department during President Franklin Roosevelt’s New Deal (1933–1947). It was during this long service that he drafted the Indian Reorganization Act of 1934 (IRA), which helped change the government’s Indian policy from one aimed toward assimilation to one in which the government recognized the tribes as sovereign political and economic entities.

When passed, the IRA was considered a bold move, for it attempted to provide Indian tribes more control over their own affairs. Criticisms of the act developed, with critics arguing that the tribes were forced to follow a democratic, capitalistic model of government that did not always fit with tribal customs and traditions. John Collier, the commissioner of Indian affairs at the time, encouraged the tribes to establish constitutions under the IRA; Cohen advised tribal leaders on how to construct constitutions that satisfied the law’s restrictions. He drafted model constitutions for tribes to follow if they wished, but never believed that all tribes had to follow the same model. Some in the Office of Indian Affairs, however, did try to impose constitutions on the tribes.

Cohen developed a reputation as an expert in Indian law. In 1939 he was appointed chief of the Indian Law Survey, a joint project with the interior and justice departments. The Justice Department wanted a litigation manual to use when bringing cases against the Indians, but Cohen had a vision of a book that would incorporate all of Indian law. Cohen was the creator, writer, and editor of the *Handbook of Federal Indian Law*, published by the Interior Department in 1941. The *Handbook* was a complete treatise on Indian law, analyzing cases and statutes and setting forth historical and philosophical arguments on Indian rights, including rights that Indians had in relation to the state and federal governments. It was a reflective and scholarly work, visionary in its direction and approach. The *Handbook* was the first book to comprehensively examine the existing laws, statutes, and cases dealing with Indian issues, and to set them forth in a readable and understandable format, with commentary. The

scope of the book extended far beyond what rights the government had when dealing with the Indians. It also looked at the government's responsibilities to the tribes and the Indians' rights in dealing with the federal government, including rights of self governance and tribal sovereignty.

Cohen was part of the American legal realism movement. His philosophy of law—functional jurisprudence—focused on how a court's decision would impact the litigant and society as a whole. Functional jurisprudence incorporates science, sociology, and history. As a lawyer, Cohen saw it as his duty to take the ideals of democracy and make them work. He argued that judges should not only look at precedent but also should be realistic and consider the social and moral effects a case would have on society. The *Handbook* was his most complete expression of his theory of functional jurisprudence as it applied to Indian rights. Rather than merely list and describe cases, Cohen reviewed their historical context and the impact of the decisions on the Indians. If he believed a case had not been properly decided, he would explain the social outcome of the decision and why that outcome was not desirable. The *Handbook* has been revised several times, including most recently in 2005.

Cohen was also responsible for the forty-six-volume *Statutory Compilation of the Indian Law Survey: A Compendium of Federal Laws and Treaties Relating to Indians* in 1940. When he left the Interior Department in 1946, he was awarded the Distinguished Service Award, the department's highest honor. He entered private practice and represented Indian tribes, helping secure voting rights and social security benefits for Indians in Arizona and New Mexico.

From 1946 until his death in 1953, Cohen taught jurisprudence at City College and legal philosophy and legislative drafting at Yale Law School. He was a prolific writer and authored many articles on legal philosophy, Indian rights, legal ethics, civil rights, and minority issues. He coauthored the textbook *Readings in Jurisprudence and Legal Philosophy* with his father, philosopher Morris Raphael Cohen.

Colbert Family

When Americans put increasing demands on the southeastern Indians for land cessions, the Chickasaws relied on men of mixed descent with greater fluency in English to conduct their negotiations with Americans. From the 1790s through the mid-1830s, George (1764–1839) and Levi Colbert (1759–1834) directed Chickasaw negotiations with the U.S. government. Sons of a Chickasaw woman named Noe and James Logan Colbert, a Georgia trader who married into the Chickasaw Nation in 1758, they were about a generation older than their bicultural counterparts among neighboring tribes and lacked a formal Christian education. Only James Logan Colbert's youngest son, James, was literate, and he played a minor role in the politics leading to removal.

Like the mixed ancestry elites of other tribes, George (Tootemastubbe) and Levi (Itawamba) Colbert owned livestock, slaves, hundreds of horses, and a wide array of farming implements, which they attained through inheritance, trade, military service, and gifts from U.S. agents. In the early 1800s, George orchestrated the laying out of the Natchez Trace, secured the exclusive right for Indians to operate businesses on it, and enriched himself through a ferry operation that he located on it. As they enjoyed commercial success through the Chickasaws' ancient social structure, the Colberts defended it and thereby maintained their people's loyalty.

The Colberts came to power through traditional channels, as war chiefs and then as counselors to tribal leaders. U.S. interpreter Malcolm McGee noted that Chickasaw leader Chinubee asked George Colbert to serve as principal chief in dealings with the United States because he was fluent in English. In 1812, at the age of forty-eight, George Colbert resigned from this service to look after his business affairs and Levi took his place. A nephew described Levi as the "second controlling chief" to Chinubee's successor Ish-to-pa-ha, and in 1828 U.S. commissioner Thomas McKenney called Levi the "Speaker of the Nation."

As U.S. pressure to abandon their lands mounted, the Chickasaws and the Colberts became increasingly defensive

of their old ways and resisted unwanted changes in their culture. U.S. officials stated that George Colbert fought against education, missionaries, and alcohol in his later years. In an effort to prevent the removal of their tribes to the West, the Chickasaw national council passed a formal resolution in 1826 against any individual's receiving a private reservation, or other type of monetary payment, in exchange for tribal lands. Plainly embarrassed by this act, the Colberts admitted that they had accepted personal payments from treaty officials in earlier negotiations; however, they insisted that Colbert wealth was gained by exploiting whites, not other Chickasaws.

In 1827 McKenney met privately with Levi and his main supporters to discuss removal. McKenney was a family friend charged with Levi's eldest son's education. Colbert made no commitment to removal at this meeting but agreed to send a party to view the lands in the West. In an aborted attempt to turn the Chickasaws against Colbert, U.S. agent Benjamin Smith spread rumors that Colbert had sold the Chickasaw homeland. Colbert had to call a special assembly to allay the fears of the Chickasaws. Agent Smith, irate at Colbert's uncooperative stance on removal, demanded that U.S. officials cease their correspondence with him. However, the Chickasaws counted on Colbert to relay their grievances (mostly reports of white theft of their horses and other property) to the Office of Indian Affairs.

Although the Chickasaws were wary of Levi's negotiations with U.S. treaty agents, his authority among his people remained strong. In 1828 and again in 1830 they chose Levi to lead an exploration to view a potential new site for settlement west of Arkansas. The party found no satisfactory lands.

As U.S. pressure intensified, the aging Levi Colbert grew ill and was unable to attend further treaty negotiations. Colbert protested the removal Treaty of Pontotoc, negotiated during his absence in 1832, on the grounds that it would profit the minority of Indians who had assimilated into U.S. society to the disadvantage of the less educated majority. Chickasaw protests over the corrupt reservation system that resulted from the treaty led the United States to resume negotiations with the Natives. The Chickasaws were the last of the southeastern tribes to sign a final removal agreement, the Treaty of Doaksville (1837), which settled them in the Choctaw's new country in the Indian Territory. Levi Colbert, who passed away in 1834, did not live to see his people's forced removal to Indian Territory. George led his own removal party to Choctaw lands in present-day Oklahoma.

Collier, John

Commissioner of Indian affairs from 1933 to 1945, John Collier (1884–1968) was the architect of the Indian New Deal, a series of programs that sought to slow the pace of Indian assimilation in the United States and end policies that endangered Indian people, their communities, and their culture.

Born on August 4, 1884, the fourth of seven children, Collier grew up believing that societal wrongs could be righted through communal action. He attended but never graduated from Columbia University. His first job in the public arena was secretary of the People's Institute in New York City, beginning in 1907, and his work on behalf of new immigrants further reinforced his belief in collective action. He also felt that distancing newly arrived immigrants from their ethnic heritage was not necessary to ensure their assimilation into American society. During his tenure at the institute, Collier learned the basic formulas that guided his Indian policy.

Collier left the People's Institute in 1919 when federal funding for the program ended. He moved west and took a position as the director of adult education in California. One year later Collier received an invitation from his close friend Mabel Dodge to come to New Mexico. The trip offered him his first contact with Indian people.

Collier joined Dodge in Taos, New Mexico, and became a close observer of the problems confronting the Pueblo Indians. Living with the Pueblos, Collier realized that

Indians were the personification of his beliefs—they maintained a sense of communal spirit despite centuries of assault on their culture. He felt as though he had discovered a “lost” civilization, one he termed a “Red Atlantis.”

Collier took a position as a researcher for the Indian Welfare Committee of the General Federation of Women’s Clubs in 1922. He was convinced that he could put his skills to work for the Pueblos. As a researcher he emerged onto the national political scene by helping to block the Bursum Bill, which sought to negate Pueblo land grants issued by the king of Spain in the sixteenth and seventeenth centuries and open Pueblo territory to white settlement. Collier established the American Indian Defense Association (AIDA) to put his personal philosophy into action. Among its numerous priorities, the AIDA called for an investigation of federal Indian policy; demanded the preservation of Indian cultures; asked for guarantees of political and economic rights for tribes; and called for an end of the General Allotment Act (Dawes Act), which sought the individual allotment of Indian lands. Collier worked nonstop for the next ten years, hoping to stem the assimilationist policies he believed damaged Indian people already suffering from the effects of colonial policies.

The 1932 election of Franklin Delano Roosevelt as president signaled a major shift in American political thinking and had a significant effect on Indian affairs. In liberal political circles, the failure of the allotment policy was evident, and the assimilationist thinking supporting it was no longer popular. For like-minded easterners, Collier was the only choice to run the Office of Indian Affairs (OIA), and in April 1933 he was asked to become commissioner of the organization, a post he held for the next twelve years. Collier’s background in federal Indian policy gave him a unique perspective; his superiors stated that he was the most qualified person to ever hold the office.

Collier promised to extend the policies of Roosevelt’s New Deal to Indian America. He cancelled Indian debts to the federal government for irrigation projects; diverted millions from New Deal programs to Indian-specific programs such as the Indian Civil Conservation Corps; and passed the Pueblo Relief Bill (finishing what he had started with his fight against the Bursum Bill), which repaid the Pueblos for lands appropriated by illegal settlers. Collier also moved to hire more Indians within the bureau. Later, he furthered interagency cooperation between his department and the Department of Agriculture.

The cornerstones of Collier’s promise to Indian people were the Johnson-O’Malley Act and the Indian Reorgani-

John Collier, center, served as commissioner of Indian Affairs and was also the founder of the American Indian Defense Association.

zation Act (IRA). The Johnson-O’Malley Act, passed in 1934, was a basic federal aid program designed to provide funds to local off-reservation communities where Indians were mixed in with the general population. The act allowed the federal government to make contracts with states for Indian education, medical care, and welfare services.

The IRA was designed to be the comprehensive plan to extend the New Deal into Indian Country. It ended land allotments, restored surplus lands to tribes, and established financial aid rules for Indian students in higher education. The act allowed for the formation of tribal corporations and permitted the drafting of tribal constitutions and the organization of governments in an effort to revitalize tribal political, legal, and economic autonomy. It was criticized, however, for forcing a western capitalist structure—the corporation—on communally based societies. Collier’s defenders argued that the commissioner was attempting to provide an institutional structure that would restore political control to the tribes and enhance their opportunities for economic development. The bill also confirmed the secretary of the interior’s responsibility for conservation of Indian lands and

committed the Interior Department to providing funds for economic development.

Collier also led efforts to promote appreciation of Native culture. He reduced the influence of Christian missionaries in boarding schools and affirmed the right of Native Americans to practice their own spiritual and religious beliefs. He also ensured that Indians received preferential hiring with the Office of Indian Affairs and created the Indian Arts and Crafts Board to protect Indian-made products with a government trademark. During the 1930s, Indian lands frequently benefited from the construction of new homes, schools, hospitals, roads, and various other programs sponsored by the New Deal.

Collier instituted soil and forest conservation policies in an effort to preserve Native economic resources for the long term, sometimes with controversial results. In an effort to stop land erosion in the American Southwest, the government killed a number of Navajo sheep, which led to starvation on the reservation and a deep distrust of Collier. The Navajo, the nation's largest tribe, thus became outspoken critics of Collier's stock reduction policy.

Like the rest of the New Deal policies, by 1939 Collier found his programs under attack from conservatives in Congress who charged that they were a barrier to assimilation. Others claimed that Collier was a communist and referred to his programs as socialist experimentation that was contrary to national interest. The real failures of the IRA, however, were that the concept of constitutional government was not well received by many Indian tribes, and BIA promotion failed. In fact, Collier's tribal government plan suffered a serious blow when the Navajo rejected almost every aspect of the Indian New Deal.

By 1941 national attention shifted from domestic reform to World War II (1939–1945), and Collier supported mobilizing Indians for the war effort. The final issue Collier dealt with as commissioner was the confinement of displaced Japanese-Americans on Indian lands. Indian nations resented the further appropriation of their territory to build camps for the Japanese-Americans and protested to demonstrate their displeasure. Collier, believing he had lost his place in a wartime administration no longer committed to Indian reform, resigned on January 19, 1945. President Roosevelt praised Collier for his work in a difficult position and reluctantly accepted the resignation. After leaving his post, Collier taught at City College of New York and Knox College in Illinois, and later spoke out in favor of indigenous rights. He died in Talpa, New Mexico, on May 8, 1968.

Controversial even in their time, Collier's policies continue to be a source of debate. In recent years, Indian activists and scholars have argued that the IRA constitutions were paternalistic and represented a continuation of the policies of assimilation. The historical legacy of the IRA and the entire Indian New Deal remains contested territory, but there can be no doubt that Collier respected the value and integrity of Native culture.

Colyer, Vincent

Vincent Colyer (1825–1888) was an artist, Christian humanist, and advocate for the interests of freedmen and American Indians. A Quaker activist, Colyer served in the United States Christian Commission, which helped Union soldiers throughout the Civil War (1861–1865). During Reconstruction he founded the first freedmen's school in North Carolina. From 1869 to 1872, Colyer was the secretary of the Board of Indian Commissioners, an advisory body that studied Indian conditions and made recommendations for policy reforms to the secretary of the interior. President Ulysses S. Grant established the board under his Peace Policy. The main goal of the policy, formulated due to the government's failed Indian system, was to humanely relocate Indians on government reservations. Colyer sup-

ported the policy and believed that the government could “civilize” all of the tribes.

In 1869 Colyer visited the Alaska Territory in support of education for that area’s Natives. In the summer of 1871, he served as a peace commissioner to help assuage violence in the Southwest. His overt favoritism for the Natives did not make him popular among white settlers or the army. In the aftermath of the April 1871 Camp Grant Massacre in Arizona, he met with Akimel O’odham (Pima) and Xalychidom Piipaash (Maricopa) leaders during a stop at the Gila River Indian reservation. Colyer told the assembled dignitaries that to settle the fallout they had to make peace with the Apaches and stop raiding. Neither recommendation was followed, but Colyer did gain the support of Secretary of Interior Columbus Delano to establish reservations in the Southwest. After resigning from the board in 1872 in protest over its lack of influence over the Office of Indian Affairs, Colyer retired to Connecticut where he went on to become an artist of some renown for his portrayals of life in the West.

Comanche Wars (1835–1875)

The Comanche Wars (1835–1875) were a series of conflicts between American troops and Comanche Indians intent on protecting their Native lands from settlers. These wars cannot be dated with absolute precision, but combat on the Texas frontier was heaviest during the years 1835–1843, 1857–1860, 1863–1867, and 1872–1875.

Texas was a complicated area of conflict. There was no federally owned land in Texas because the entire Republic of Texas had been admitted as a state, a fact that also meant neither the army nor federal civilian authorities had the authority they possessed in other areas. As the number of Americans moving into Texas grew, the stage was set for bitter conflicts over land. The Comanches had advanced earlier into what became Texas and New Mexico, pushing aside many other

Indians and stopping the advance of Spanish and later Mexican settlements. As a warrior people, they were unwilling to make way for farmers and other settlers. The Comanches often asked white authorities to reduce hostilities by establishing a line beyond which settlers could not take Comanche land, but such requests were always ultimately rejected. Texans were also reluctant to establish reservations because most of them believed that those Native Americans who were not killed should be expelled from the state.

Although the image of the Comanche war tactics in United States popular culture has often been one of warriors suddenly attacking peaceful settlers, the reality was often far different. Whites were frequently the aggressors, and in some cases, bandits killed settlers and created the illusion that the killers were Comanches, further inflaming anti-Indian sentiment. Numerous attacks on Comanches, many of whom were not engaged in raiding, motivated warriors to seek vengeance for their losses. Some Texans were also simply fearful of, and antagonistic towards, the Comanches and occasionally lashed out at the Indians. For instance, in 1840 a number of prominent Comanche leaders were killed during a council with Texan negotiators at San Antonio.

An aggravating factor in the conflict was the employment of “rangers” by Texas before and after 1845. During the frontier years the Texas Rangers were often men who were more intent upon fighting Indians, especially to collect booty, than maintaining the peace. Unfortunately, the U.S. Army was eventually influenced by the attitude of the Rangers and began conducting the same kind of indiscriminate attacks.

Initially, the army had difficulty waging war on the plains, but gradually it adapted to the new conditions. By 1860 the level of fighting had been greatly reduced. During the Civil War (1861–1865), however, when federal troops were no longer on the frontier, Texas experienced renewed conflict that did not change immediately after the war’s end. The large numbers of federal troops stationed in Texas were deployed primarily to counter French forces in Mexico and to implement Reconstruction. Differences between civilian authorities responsible for Native American affairs and the army continued to hamper the application of a consistent policy.

Through negotiations leading to the Medicine Lodge Treaty in 1867, many, although by no means all, Comanches went to a reservation in Indian Territory (in what is now Oklahoma). The control exercised over them by Indian agents and the scanty rations on the reservation quickly

exhausted the patience of many Comanches, who resumed attacks on Texas.

The Red River War of 1874–1875 brought about the end of Comanche military resistance. Relatively uncoordinated but complementary troop movements were employed to exhaust Comanches and Kiowas and to force them into reservation life. Efforts to build a large coalition of Indians partly on the basis of a belief that they could now be immune to white firepower were shattered at the Second Battle of Adobe Walls in 1874 when a small party of buffalo hunters defeated a large group of Comanches, Kiowas, and Cheyennes and inflicted significant casualties. From July 20, 1874, moreover, the army was allowed to enter reservations in pursuit of “hostile” Indians. The culmination of fighting came in the Battle of Palo Duro Canyon on September 28, 1874, when Colonel Ranald S. Mackenzie’s men found a large number of Comanches in a situation where they could not flee the troops. Having separated the warriors from their horses, Mackenzie ordered some horses seized and many others shot, thereby depriving the Comanches of their mounts. Other army attacks occurred, and, finally, during 1875, the last independent Comanches gradually surrendered and were removed to a reservation.

Commissioner of Indian Affairs

On March 11, 1824, Secretary of War John C. Calhoun created what he called a bureau of Indian affairs to operate within the War Department. He also established the office of commissioner of Indian affairs as the organization’s head. (Thomas L. McKenney, the first commissioner, titled his let-

terhead the “Indian Office” and usually described the bureau as the Office of Indian Affairs.) Over time the Office of Indian Affairs (OIA) evolved from a small grouping in the War Department that oversaw correspondence with the Indian tribes and trade and relocation issues to a massive bureaucracy that administered Indian lands, trust funds, and a number of social and educational programs. The responsibilities of commissioner of Indian affairs also evolved in response to the demands of the policy makers in Congress.

Precursors to the Office

In 1775 the Continental Congress, composed of delegates from the thirteen British North American colonies, met and created three departments—northern, central, and southern—to deal with Indian affairs and appointed commissioners to head each department. In particular, their efforts were focused on trying to persuade the Indian tribes on the borders of the states to remain neutral in the colonies’ war for independence.

After the united colonies won the American Revolutionary War (1775–1783) and created a new government under the Articles of the Confederation and the U.S. Constitution, they attempted to develop a centralized system for dealing with the Indian tribes. When the founders wrote the Constitution, they included Article 1, section 8, clause 3 that stated Congress had the power to regulate commerce with the Indian tribes. Congress has used this clause as the constitutional foundation of its authority over Indian relations. Territorial governors originally served as district superintendents, and a superintendent of Indian trade was responsible for overseeing the factory trading system. Federal administrators usually had a central office and administered the local agencies that dealt directly with the Indians. This federal government oversight created a conflict of interest, as the main focus of the government was not seeing to the interests of the Indians, but promoting settlement, security, and expansion for the new nation.

In 1789 Congress created a War Department and placed Indian affairs under the responsibility of its secretary. The federal government also occasionally appointed agents under the jurisdiction of the War Department who were empowered to negotiate treaties with the tribes. A chief clerk and assistant clerk were later appointed to aid the secretary of war. In 1806 Congress created the position of superintendent of Indian trade to supervise government trading posts. The superintendent frequently worked closely with the secretary of war. Thomas McKenney served as superintendent

of Indian trade from 1816 until 1824, when he assumed leadership of Calhoun's newly established OIA.

Creation of the Position

Upon his creation of the Indian affairs bureau, John C. Calhoun appointed McKenney its unofficial commissioner. McKenney believed that American Indians could and should be acculturated in preparation for assimilation into white society, and he supported the Indian Civilization Act of 1819, which provided funds for Indian education. McKenney's duties included administering the appropriations for annuities and current expenses, approving all expenditure vouchers, directing the funds for the "civilizing" of Indians, ruling on Intercourse Act claims between Indians and whites, and handling the Indian correspondence of the War Department.

McKenney faced the reality that he and his clerks were, in all practicality, overseeing all of Indian relations but lacked jurisdictional authority over their work. He argued that Congress needed to create an independent office of Indian affairs led by a department head holding the power to act on issues dealing with U.S.-Indian relations. In 1826 McKenney drew up a proposed bill that would create such an office and provide for the appointment of a general superintendent of Indian affairs. This superintendent would assume the responsibilities for Indian relations officially possessed by the secretary of war. Congress refused to adopt McKenney's suggestions; however, in 1832 it passed a bill that gave the president authority to appoint a commissioner of Indian affairs to serve under the secretary of war. The commissioner's appointment came with an annual salary of \$3,000. In 1834 Congress officially established the Office of Indian Affairs, which continued to operate within the War Department.

During its last fifteen years of operation within the War Department, the OIA oversaw and assisted in the removal of the eastern tribes to new lands across the Mississippi River.

Transfer to Interior

From the earliest days of the Indian office there were those who contended that Indian affairs did not belong in the War Department. Critics of the existing structure argued that Indian affairs was a civil rather than a military responsibility and that supervision of that responsibility detracted from the War Department's ability to run its military programs efficiently. In 1849 Congress transferred the OIA to the newly created Department of the Interior. This transfer created a change in policy and responsibilities for the commissioner. It

also spawned an immediate conflict over jurisdiction, as the new department also contained the General Land Office and patent and pension offices and was charged with the primary responsibility of overseeing the public domain. The transfer also touched off a long and bitter feud over the question of whether military or civilian officials should administer Indian affairs.

The government policy of aiding and abetting the removal of the Indian tribes to reservations in the West continued after this transfer. During the 1850s the responsibilities that developed from maintaining tribes within specific borders required the government to provide these Indians with food, clothing, shelter, and other supplies. The OIA had the responsibility of administering this aid, which put new burdens on the bureau. Its main goals were to educate Indian children, persuade Indian adults to farm, and compel Indians to remain on their reservations. The office faced chronic manpower and funding shortages, and agents and their staffs had to adapt to living and interacting with Indians daily. Partly due to these pressures, inefficiency and dishonesty grew within the bureau, and untrustworthy or inept Indian agents created chaos and hostility on some reservations. The commissioners of Indian affairs varied in their ability and success in managing these problems.

Reform

In 1867 Congress appointed a peace commission to study the problems of the OIA's administration of reservations. The commission recommended sweeping changes, including appointing honest and effective agents and establishing an independent agency for Indian affairs. Some improvements were made, but the recommendation to remove the OIA from the Interior Department was never followed. Pressure to return the commissioner's office to the War Department also failed.

When Ulysses S. Grant won the presidential election in 1868, he appointed Lieutenant Ely S. Parker as commissioner. Parker was the first Native American to serve as commissioner and the first appointed to a cabinet level position. As his first task as commissioner, Parker vowed to clear the office of the corrupt agents that had soured the relations between the United States and Native Americans. Parker told Jacob Cox, the secretary of the interior, that the only way to improve the status of Indians was to provide them with a proper liaison to help them redress grievances. Parker resolved to be that liaison, and he met with delegations representing Indian nations throughout the United States. He sought help

in supervising new agents from the Quakers and filled vacant posts with tried-and-true army officers from the Civil War (1861–1865). Through these methods, Parker improved the government's relations with many of the Indian nations.

In 1871 Congress passed the Indian Appropriations Act, which ended the federal government's policy of dealing with the Indian tribes by treaty. It stated all future Indian policies would be determined by congressional statute or executive order. This act endangered tribal autonomy and gave the government—including the commissioner of Indian affairs—even greater authority over Indians.

In the 1880s the commissioners of Indian affairs intensified the government's policies of assimilation and allotment toward Native Americans and increased the bureau's presence on reservations. In 1871 Congress passed an appropriation of \$100,000 for Indian education. By 1877 the OIA had begun to focus more on education and had established a system of Indian boarding schools. These schools attempted to force Native American children to acculturate to white society in the United States. The General Allotment Act (Dawes Act) of 1887, a congressional act authorizing the president to allot portions of certain reservation lands to individual Indians, also authorized the secretary of interior to negotiate with the tribes to purchase lands for non-Indian settlement. Allotment was designed to destroy Indian communal holdings, as its advocates believed that sharing property encouraged tribalism. The government's allotment program was also intended to open Indian lands to non-Indian purchase and settlement.

The commissioners of Indian affairs during this era oversaw the agents who were running the Indian schools, dispensing justice and distributing supplies on reservations, and assigning allotments and leasing contracts. The OIA also centralized its operations by requiring agents to report directly to the commissioner in Washington, D.C., and by 1900 the Indian agents working under the authority of the commissioner had effectively taken the place of many, if not most, tribal governments.

The commissioners carried the government's basic goals of assimilation and land allotment into the twentieth century, although some progressive and reform-minded holders of the office attempted to modify some of its harsher policies. Francis E. Leupp, who served from 1905–1909, and Robert G. Valentine, whose tenure lasted from 1909–1912, introduced reforms such as more substantial health services and more orderly systematic administration. Commissioner Cato Sells, who served from 1913–1921, viewed World War I

(1914–1918) as an opportunity to assimilate Indians by recruiting them to fight for the United States, and after the war a substantial number of Native American veterans were made citizens of the country. At the same time, the war required the government to sharply reduce services that the OIA had been providing, especially in the area of health and education.

John Collier

In the 1920s progressive reformer John Collier challenged the basic assimilation and land allotment policies of the OIA. Under pressure from Collier, the government undertook a thorough examination of U.S. policy towards the tribes. The *Meriam Report*, published in 1928, detailed very serious shortcomings in the government's provision of services to the reservations. Impressed with Collier's ideas, the Franklin D. Roosevelt administration appointed Collier as commissioner in 1933. Collier dramatically reformed the office during his tenure, which continued until 1945.

At Collier's recommendation, Congress responded to the *Meriam Report* by passing the Indian Reorganization Act (IRA) in 1934, which was intended to improve tribal economies and strengthen tribal governments by instituting autonomous corporate/public organizational structures for the tribes. The IRA also required the OIA, which had employed few Indians during its history, to provide Natives with preferential consideration when hiring. In the 1970s the U.S. Supreme Court heard a challenge to this requirement. A non-Indian who had not received a position with the Bureau of Indian Affairs (as the Office of Indian Affairs was then named) charged that the preference was unconstitutional because it allowed the bureau to discriminate on the basis of race. The Court ruled that the bureau's "Indian first" policy was proper because the government had a special political relationship to the tribes. As of early 2008, over 95 percent of the twelve thousand employees managed by the Indian office are Natives. The commissioner's office during Collier's tenure also moved to protect the culture of Native peoples, a rather dramatic transformation from the long line of previous commissioners who had attempted to stamp out Native culture and force individual Indians to assimilate.

From Commissioner of Indian Affairs to Assistant Secretary of the Interior

During World War II (1939–1945), the commissioner's office experienced many of the same problems it had suffered during World War I, including personnel shortages, disrupted

social services, and low morale. After the war, the scope of the OIA and the duties of its commissioner expanded to include forestry, range management, and land acquisition. In 1947 the office received an official name change, becoming the Bureau of Indian Affairs (BIA). Around this time conservative politicians began to repeatedly demand that the federal government "terminate" the Indian tribes, phase out the BIA, and assign its programs to other federal and state agencies. Dillon S. Myer, who served as commissioner from 1950–1953, established a Division of Programs to gradually withdraw some services from reservations. The Republican Congress of this period enacted legislation that created a process for terminating the existence of tribal governments. The commissioners were also directed to institute programs to relocate individual Indians to urban areas and place them in industrial jobs. The commissioner's office was expected, in other words, to prepare the tribes for their eventual extinction and the final assimilation of individual Indians into greater American society.

The termination program was a short-lived disaster, and in the 1960s, at the instigation of the Red Power movement, the federal government shifted the emphasis of the BIA toward the principle of self-determination. Self-determination not only reversed the termination decisions for several tribes, it also spawned a renewed respect for Native culture and tribal political autonomy. Programs inspired by the idea that the tribes ought to determine their own destinies allowed tribal leaders to apply to federal agencies for grants and administer programs themselves. Congress also passed a series of laws that aimed to improve the quality of reservation life without destroying tribal governments. These developments, and the creation of new programs during the Lyndon B. Johnson and Richard Nixon administrations, ended the bureau's monopoly on funding for tribal programs and enabled Indian tribes to develop ties with a number of federal agencies.

In 1975 Congress authorized the American Indian Policy Review Commission, headed and staffed by Indians and composed of eleven task forces, to investigate the BIA. The commission's final report recommended even greater recognition of tribal sovereignty. Morris Thompson, a Tanana Alaska native and the youngest and last commissioner of Indian affairs to serve under that title, symbolized the changes in the BIA and Indian economic independence. Born, raised, and later buried in the village of Tanana, Alaska, Morris held leadership positions in the Alaska Federation of Natives and Commonwealth North and served in a cabinet

position in the administration of Governor Walter Hickel before taking on the position of commissioner. In 1977 Congress fulfilled another of the American Policy Review Commission's recommendations when it elevated the commissioner's office to assistant secretary of interior and awarded the BIA a stronger voice in policy decisions.

By the late twentieth century, tribes were self-governing bodies and the BIA had pledged to protect and enhance tribal resources, rights, and self government. As a consequence of the government's movement toward tribal self-determination, the responsibilities of the commissioner (now assistant secretary) have evolved from a managerial or administrative nature to one of a more advisory capacity. The BIA is also trying to atone for past errors. In 2000 Kevin Gover, a Pawnee attorney and assistant secretary of the interior for Indian affairs, issued a formal apology for the errors of mismanagement and neglect over the bureau's long history.

Commission on the Rights, Liberties, and Responsibilities of the American Indian

The Fund for the Republic, a nonprofit corporation focused on civil liberties, established the Commission on the Rights, Liberties, and Responsibilities of the American Indian as an independent research organization in 1957. The commission was charged with investigating the legal status of American Indians and assessing their assimilation into the American mainstream. The commission membership was small and composed of top leaders in government, media, and university circles. W. W. Keeler, principal chief of the Cherokee Nation, was the only Indian who served on the commission.

The commission was critical of Congress's termination program, which was designed to end federal support to the tribes in preparation for their assimilation. In their 1961 report, *A Program For Indian Citizens*, the commission members expressed their belief that termination was inevitable for Indians but that it should happen only once they were socially and economically assimilated into American society. To this end, the commission called upon the federal government to provide more job-skills training to reservation residents and greater assistance in finding urban employment. The commission also recommended that government programs obtain more tribal consent, that tribal governments extend full civil rights to their members, that the Bureau of Indian Affairs undergo organizational reform, and that Indians receive increased funding for health and education. In 1966 the commission published its final report, which was titled *The Indian: America's Unfinished Business*. Some Native leaders criticized the report for assuming that Indians would want to integrate and abandon their culture and traditions.

Compact of 1802

The Compact of 1802, also known as the Georgia Compact, was an agreement between the federal government of the United States and the state of Georgia in which Georgia ceded its western land claims in exchange for a federal guarantee of the state's sovereignty within its borders. The compact attempted to begin to resolve the controversial Yazoo land sales and provided the legal framework that would support the dispossession and removal of the Cherokee, Creek, Choctaw, and Chickasaw Indian nations in the decades to come.

The western lands claimed by the state of Georgia had been a subject of controversy since the close of the American Revolutionary War (1775–1783). Under its colonial-era, sea-to-sea charter, Georgia had claimed all the land included in the present-day state, as well the lands extending westward to the Mississippi River between the southern boundary of Tennessee to the north and the northern boundaries of East and West Florida to the south. These western lands were known as the “Yazoo lands” after a river that flowed through them. In December 1789 the Georgia legislature enacted legislation that awarded title to three private land speculation companies. It did so again in 1795, this time awarding title to four companies through an agreement called the Yazoo Act. The act was especially controversial since it was revealed after passage that nearly every Georgia legislator had an interest in one of the speculation companies. The law was repealed, but not until after many subsidiary titles had been sold. These complicated state land sales, in addition to the fact that these lands had also been under Spanish and British sovereignty at various points in the previous fifty years, made the question of who owned what lands within Georgia's vast claims enormously complex. Laws passed by Congress in 1798 and 1800 called for the appointment of commissioners to adjudicate and settle the situation. President Thomas Jefferson finally appointed James Madison, Albert Gallatin, and Levi Lincoln as federal commissioners in 1802 to negotiate a solution.

Working alongside commissioners appointed by the state of Georgia, Madison, Gallatin, and Lincoln brokered a compromise that secured Georgia's title to, and sovereignty within, its present-day borders. The remainder of its land claims (the present-day territory of Alabama and Mississippi, minus their panhandles) was ceded to the federal government. The first article of the Compact of 1802 outlined the terms of this cession. The United States would recognize the title to any lands in the ceded territory granted by the governments

of Spain or Great Britain prior to the Treaty of San Lorenzo (1795) and title granted by Georgia prior to 1785. The United States would pay Georgia \$250,000 for these lands. Settlers on these lands would be entitled to form a new state under the principles and parameters set down in the Northwest Ordinance (except that slavery would be allowed in this southern territory).

Most importantly in terms of Indian relations, the first article stated that the federal government would, via treaty, extinguish all of the Indian titles within the new boundaries of the state of Georgia as soon as they could be “peaceably obtained, and on reasonable terms.” The Cherokees and Creeks retained title to lands within Georgia’s modified boundaries. In ratifying the compact, the U.S. government was formally committed to the dispossession of these Indian nations. Pro-removal advocates in Georgia used the compact in the 1820s to pressure the federal government to relocate the Creeks and the Cherokees.

Comparative Indigenous Policies

Over the course of history, indigenous peoples have been subjected to policies of varying empires, states, and national powers that have transformed their lives. The nations that attempted to extend this dominion used a variety of means, including legislation, legal argument, and military force to seize lands of indigenous peoples, take their political autonomy, and try to eradicate or transform their culture. Only in the last few decades have these nations begun to reassess their past policies and recognize that indigenous peoples have rights to their lands and to their destinies.

When European imperial and colonial expansion began in the fifteenth century, the colonial governments and local

settlements established their own unique policies toward the Natives of the area. However, these were frequently limited in scope, and it was often not until former European colonies began to declare their own independence and create their own governments that universal and geographically encompassing policies toward indigenous peoples were devised.

Four modern nations are instructive for comparing policies toward their indigenous residents: the United States, Canada, Australia, and Brazil. Each one of these countries at some point followed several broad trends in policy making toward indigenous peoples, including isolating them as political entities, removing them from their lands, acculturating them and preparing them for assimilation into mainstream society, and, more recently, recognizing their sovereignty as communities and their right to self-determination. The chronological lengths, extent of enforcement, and official recognition of each of these policy trends varied from country to country.

United States

One noted historian of U.S. Indian policies, Francis Paul Prucha, has argued that those policies have consistently been motivated by paternalism and that the Native peoples in the nation have been harmed more by the failed implementation of well-intended ideas than by purposeful malice.

Article 1, section 8 of the U.S. Constitution empowered Congress to “regulate commerce . . . with the Indian tribes.” Known as the Indian Commerce Clause, this article made policy relations with indigenous tribes the exclusive province of federal law and jurisdiction. This power was augmented by exercise of presidential treaty-making authority under Article 2, section 2 of the Constitution. For much of the first century of U.S. history, these two articles formed the core of federal policy toward indigenous peoples, with treaties drawn and executed by the executive branch and legislation passed by Congress. Significantly, by signing treaties with indigenous groups and regulating trade and commerce with them, the U.S. effectively designated indigenous peoples as sovereign political entities.

After the ratification of the Constitution, the United States developed a “civilization” program designed to prepare Indians for assimilation into the majority society. The government provided tribes with tools and other implements in an effort to teach them how to live and farm like white Americans. The architects of this policy, President George Washington and Henry Knox, his secretary of war,

believed that acculturated Indians would need less land for hunting and thus be inclined to cede excess territory to the United States. Gradually, they theorized, white Americans would surround and assimilate Native communities. However, while perhaps honorable in intent, the plan failed. The sovereign status of the tribes was rarely respected by American citizens during the United States' early history, and funds sufficient to provide military forces necessary to protect the tribes from the trespasses of settlers were never appropriated by Congress. The policy also failed to take into account the fact that most Natives had little interest in assimilating and that white Americans were generally reluctant to accept Indians into their communities.

Consequently, a shift in federal policy occurred, and in 1830 Congress passed the Indian Removal Act. The act provided the president with the authority to negotiate treaties with Indian tribes in which they would surrender their territories in the east for new lands west of the Mississippi River. During this period, and even after their removal, the United States continued to treat indigenous peoples as sovereign political entities. In *Cherokee v. Georgia* (1831), the U.S. Supreme Court ruled that indigenous communities were "domestic dependent nations" that retained a large measure of control over internal matters and were separated territorially and politically from the United States. The Court offered even stronger language in support of tribal autonomy in *Worcester v. Georgia* (1832).

In the 1840s, as the American population expanded further into the West, the United States began isolating Indian tribes onto reservations. At the same time, it continued to provide limited funds to prepare Native people for assimilation into the majority society. Tribes reluctant to move to reservations often found themselves facing the U.S. military. Between the removal era and the Wounded Knee massacre in 1890, the United States fought and won dozens of wars against Native nations in the West and isolated them onto reservations.

In 1871 the government ended its policy of recognizing the sovereignty of the tribes and dealing with them through treaties. The General Allotment Act of February 8, 1887, marked yet another comparative shift in general federal policy. Also called the Dawes Severalty Act, this act authorized the breaking up of reservation lands into smaller parcels that were then allotted to individual Indians. The expectation was that private property ownership would dissolve tribal ties and prepare Indians for assimilation into American society. The consequence of this act was that many Indians sold their

allotments, and once isolated reservation lands were opened up to non-Native settlers, the Indian nations in the West suffered a devastating loss of land.

At the same time that it was imposing allotment on the tribes, the United States was increasing support for educational programs. Boarding schools away from reservations, designed on a military model, were adopted by the government as a way to isolate Indian children from their tribal culture, instill in them patriotic respect for the United States, and prepare the boys for a trade and the girls for the same domestic responsibilities practiced by white American women.

The process of encouraging indigenous peoples to assimilate into the larger U.S. society lasted for nearly fifty years, until the Indian Reorganization Act (IRA) of June 18, 1934. Intended to reverse the General Allotment Act's policy of weakening, if not wholly destroying, the status of indigenous tribes as sovereign self-governing entities, the IRA ended the allotment of reservation lands. In addition, the secretary of the interior was authorized to restore to tribal ownership any remaining surplus reservation lands except those located within a federal reclamation project and to reacquire "through purchase, relinquishment, gift, exchange or assignment" interests in real property within or without reservations for the purpose of providing land for indigenous tribes. Indigenous tribes were also given the power to adopt constitutions and bylaws that would become effective upon ratification by membership vote and approval by the secretary. The law was intended to enable tribes to exercise the powers of municipal governments, including buying, selling, and leasing property and establishing tribal businesses.

Issues quickly arose, however, with regard to the constitutions to be drawn up by Natives. The Office of Indian Affairs (OIA) pressured tribes to accept standard models that it generated, which did not take into account traditional Native methods of governance. A total of 258 elections were conducted, with 181 tribes opting for, and 77 opting against, the adoption of constitutional governments.

The OIA, led by Commissioner of Indian Affairs John Collier, moved to recognize the value of Native culture and protect it from dishonest non-Indians. The organization also encouraged Native schools to integrate tribal knowledge and history into their curricula. However, despite the government's stated goal of helping to restore indigenous tribal self-determination, it did not sustain this so-called Indian New Deal.

In 1946 Congress began to pass legislation that called for a reversal of the self-government policy and an end to the

trust relationship between federal and tribal governments. Over fifty tribes were terminated during this period. In 1953 Public Law 280 was enacted, which gave several states jurisdiction over indigenous tribal territory. The federal government also initiated an urban relocation program, in which reservation residents were transferred to cities and provided with job training and employment. The termination program was very unpopular among most Indians. Groups such as the National Congress of American Indians emerged to challenge the policy, and by the late 1950s the country began moving slowly toward abandoning it.

In the 1960s Native activism against termination, for better living conditions, and for the restoration of sovereignty forced the United States to finally move toward a policy of recognizing the tribal right to self-determination and to a restoration of tribal sovereignty. Generally speaking, this policy continues in the early twenty-first century. Indigenous tribes in the United States are enabled to maintain their own governments, courts, and jurisdictions and negotiate their own contracts for health, education, and welfare. Two important federal acts supporting Indian self-determination are the Indian Self-Determination and Education Assistance Act of 1975 and the Indian Child Welfare Act of 1978. Other laws, such as the American Indian Religious Freedom Act (AIRFA) of 1978 and the Native American Graves Protection and Repatriation Act (NAGPRA) of 1990, have given indigenous peoples broader rights to religious freedom and cultural patrimony. The Indian Gaming Regulatory Act (1988) provided some tribes with the means—legal gambling and casino operations—to revitalize their economies. Compared to earlier programs that were aimed at either isolating and removing indigenous tribes or acculturating and assimilating them, the current trend reflects a more enlightened, just federal policy.

Canada

Canada followed many of these same general trends as the United States when dealing with its indigenous First Nations peoples. Canada, however, did not rely heavily on the removal of indigenous peoples from their traditional lands. Nor has it fully recognized the First Nations peoples' self-determining rights and sovereign status.

From the late 1600s to the mid-1800s, the general policy of the French and British colonial governments toward the indigenous peoples of present-day Canada was one based largely on commercial alliances. For example, in 1670 a royal charter granted by the British monarchy gave the Hudson's

Bay Company the power to enact any laws and regulations deemed necessary to govern relations with the indigenous peoples. This policy served to economically and socially limit the indigenous peoples' role in the growing colonial society, as the Hudson's Bay Company was given sole jurisdiction to trade and conduct commerce with them. During this time no treaties were signed and it is unclear whether indigenous land rights were affirmed or extinguished.

In 1763 the British colonial government passed the Royal Proclamation. The proclamation continued the previous policy trend, declaring that only the Crown could extinguish indigenous land title, with the consent of indigenous leaders. It further created an indigenous territory in those areas west of British and French colonial settlements. This trend continued for the next one hundred years, as reflected in the 1829 Act to Better Protect the Mississauga Tribes, Living on the Indian Reserve of the River Credit. This act attempted to protect the tribes' lands from trespass and sale and to continue to keep them economically and socially isolated from the developing Canadian society.

Between 1871 and 1877, the newly formed Canadian government entered into a series of seven treaties that were denominated by a number rather than the place of signing, as was the norm in the United States. These treaties were initiated largely at the insistence of the indigenous peoples themselves in an effort to gain protection from the growing intrusion of nonindigenous populations. At the same time Canada was establishing treaties with these groups, it also was moving to dissolve any official recognition given to them through legislation such as the Indian Act of 1876, which worked to take away the rights of indigenous peoples and to encourage their acculturation into the Canadian society. The act defined who was considered an Indian and prohibited First Nations peoples from governing themselves, owning land, or managing their own trade. Under the law, individuals were not allowed to use alcohol or leave their reserve without permission from the government. The act also provided an agent appointed by the Department of Indian Affairs to oversee and veto any act by a reserve council.

The law encouraged acculturation and assimilation by providing that an individual could acquire Canadian citizenship (and abandon their First Nations identity) when they satisfied certain government standards. Canada largely maintained its acculturation and assimilation policies until the late twentieth century. Not until the passage of the Constitution Act of 1982 did the nation officially recognize and affirm "the existing aboriginal and treaty rights of the aboriginal

peoples of Canada.” This was the first policy step by Canada to embrace the current trend of recognizing indigenous peoples’ rights of self-determination.

The act was followed by the *Aboriginal Self-Government Federal Policy Guide* of 1995, which recognized that indigenous peoples possessed an inherent right to self-government. However, unlike in the United States, where indigenous people are recognized as sovereign nations (although with a dependent status), in Canada indigenous peoples do not have a right to sovereignty in the international or political sense and are not considered independent indigenous nations. Rather, they are considered to be similar to Canadian provinces, with the ability to form local governments that remain under the jurisdiction of the federal government.

Canada’s first indigenous self-government agreement was signed on April 27, 1999, in the state of British Columbia with the Nisga’a First Nation. The agreement allows for self-determining powers and some level of sovereignty, but the Canadian government still controls commercial relations and natural resource management decisions.

Australia

In Australia, policies directed toward indigenous peoples date back to arrival of the British in 1788. The indigenous peoples were never recognized to be independent with rights of self-determination and to their lands, a failure that has only recently begun to be reversed.

When the British colonized Australia, they considered it a *terra nullius* (“empty land,” in Latin). This doctrine gave legal force to the claiming and settling of lands occupied by indigenous people, where it was argued that no system of laws or individual ownership of property existed. As such, treaties with the indigenous peoples were never entered into and land rights were never recognized or reserved. To some extent, the doctrine became a self-fulfilling prophecy, as colonization of the island resulted in a severe decline in the indigenous population due to epidemic diseases, the loss of fertile lands, consequent malnutrition and starvation, and, in some cases, intentional efforts to hunt down and kill Indigenous Australians.

In 1835 Richard Bourke, governor of the colony of New South Wales, proclaimed that indigenous peoples could not sell or assign land, nor could an individual person acquire it, other than through the Crown. The proclamation did not acknowledge indigenous peoples’ rights to their land and isolated them from the growing Australian economy and society. Because they were considered—wrongly—to have

no system of law, they were considered to be under the jurisdiction of the Crown. The policy was affirmed in the 1889 case of *Cooper v. Stuart*, in which the judicial committee held that since the land did not have an “established system of law” prior to British colonialism, it was *terra nullius*. Therefore, the British colonial government was not required to purchase the land from the Indigenous Australians; it simply could obtain lawful title by possessing and occupying the land. This practice continued into the twentieth century. The government did establish several reserves for Indigenous Australians, including Queensland in 1897, Western Australia in 1905, New South Wales in 1909, and South Australia in 1911.

Beginning in the early twentieth century, Australia shifted its policy toward acculturation and assimilation. Officially adopted by the Australian government and the Territory Aboriginal Affairs authorities in 1937, this trend toward acculturation and assimilation was initially modeled on programs in the United States and Canada. Two years later, in 1939, John McEwen, minister of the interior, announced his own “New Deal” to assimilate the indigenous peoples of Australia. Australian politicians and indigenous people exhibited strong opposition to this new policy, however, and parliament failed to adopt the New Deal referendum. Nevertheless, piecemeal acculturation and assimilation attempts continued for the next thirty years.

In 1971 the Supreme Court of the Northern Territory of Australia ruled in the landmark case of *Milirrpum v. Nabalco Pty Ltd.* (also known as the Groves Land Rights Case) that any land rights that Indigenous Australians might have held were extinguished in 1788 with the arrival of the first English colonists. However, the court held that these rights were not extinguished because of *terra nullius*, as previously argued, but simply because such rights had never been sanctioned by the British and were thus not part of Australian law.

The Indigenous Australians involved, the Yolngu, lost their attempt to reoccupy their traditional land, leased from the Australian government by Nabalco Pty Ltd. for mining purposes. The Groves Land Rights case was a landmark decision for indigenous rights because for the first time an Australian higher court acknowledged the existence of an indigenous system of law, though it stated that land title was not a part of that law. The case also recognized the validity of the use of oral evidence to establish indigenous property rights, a vital precondition for a successful land rights case. The case led to the establishment of the Woodward

Commission and the eventual recognition of indigenous land rights in the Northern Territory. On December 9, 1976, the Aboriginal Land Rights (Northern Territory) Act was passed, officially recognizing Australia's shift in policy. Under the act, four land councils were established in which indigenous people in the Northern Territory of Australia could, for the first time, claim rights to land based on traditional occupation.

Building on this policy trend, the Council for Aboriginal Reconciliation was established in 1991 to improve relations with the Indigenous Australians. Given a ten-year lifespan, which ended on December 31, 2000, the council focused on several key goals, one of which was the issue of "documents of reconciliation," which were designed to acknowledge the rights of the Indigenous Australians in the Australian constitution and to bring about a formal national reconciliation with them.

On June 3, 1992, the High Court of Australia decided *Mabo v. Queensland (No. 2)*, which rejected the declaration of *terra nullius* and recognized a form of indigenous title. The Native Title Act of 1993 followed in the legislature, providing for determinations of indigenous title in Australia. It also provided the foundation for the creation of the Native Title Tribunal and the Indigenous Land Fund, created to settle land claims and enable the indigenous peoples of Australia to develop self-determining mechanisms.

In January 2001 the Council for Aboriginal Reconciliation was replaced with a new private body, called Reconciliation Australia. The establishment of this institution resulted in a reversal of the trend toward granting indigenous people complete sovereign status to a policy more like Canada's, in which indigenous peoples have some self-determining abilities but are still under the control of the federal government in terms of economic and commercial development.

On February 13, 2008, Prime Minister Kevin Rudd offered a national apology to the Indigenous Australians for its "Stolen Generation" policy, in which the government from 1869 to 1969 seized children from their parents, supposedly for their protection, and placed them with church missions and state institutions and camps.

Brazil

Although it has implemented some policies similar to those of the other nations discussed, Brazil remains a long way from granting self-determining rights to indigenous peoples or recognizing their sovereignty.

The first general policies toward indigenous peoples in Brazil date back to the initial colonial period and reflect a broad trend toward isolating them from the larger social and political development of the country. King Sebastian I (1557–1578) of Portugal declared in 1570 that the indigenous peoples of colonial Brazil should not be used for slavery and ordered the release of those held in captivity. Furthermore, he favored and rewarded indigenous people who helped fight against the French, such as Araribóia, chief of the Teriminós, who was given lands near the Bay of Guanabara. It was not until 1755 that the slavery of indigenous peoples in Brazil was finally abolished. The Portuguese monarchy, however, did not recognize indigenous peoples' rights and worked to keep them separate from the growing colonial population, although a fair amount of intermarriage occurred between the colonists and the Natives along the coast.

In the seventeenth and eighteenth centuries, the *Bandeirantes*—Brazilian colonial scouts who took part in exploration expeditions (*Bandeiras*)—expanded Brazil from the small limits of its initial colonial area to roughly the same territory found in present-day Brazil. While these *Bandeirantes* were pushing further inland looking for indigenous peoples to enslave, a strong mission system was also established in Brazil. Carmelites, Franciscans, Mercedarians, Jesuits, and other missionaries worked to acculturate various groups of indigenous peoples, mostly in the region's interior. Some missions did not seek to make the indigenous peoples adopt a European way of life, only the Christian religion, while others worked toward a more comprehensive acculturation policy. Under the mission system, leadership of the indigenous peoples achieved a high degree of autonomy within the colonial empire, and with the use of indigenous labor many missions became economically successful.

It was not until the beginning of the twentieth century that Brazil as a country officially established a specific policy toward indigenous peoples. Largely due to the efforts of Cândido Rondon, a military officer of both Portuguese and indigenous Bororo ancestry, the *Serviço de Proteção aos Índios* (Indian Protection Service—SPI), was created in 1910. The SPI was the first federal agency charged with protecting indigenous peoples and preserving their culture.

By the mid-twentieth century, as the Brazilian population continued to grow and expand beyond the coastal areas, a new policy direction was needed in order to deal with the growing number of conflicts arising between indigenous and nonindigenous peoples. Following the same pattern as the United States, Canada, and Australia, the Brazilian govern-

ment moved to begin establishing policies aimed at acculturating and assimilating indigenous peoples into the larger Brazilian society. For example, President Getúlio Vargas's authoritarian *Estado Novo* ("New State"), inaugurated in 1937 and lasting until the end of World War II (1939–1945), attempted to promote the industrialization of Brazil and the national integration of outlying regions far from the coastal concentration of the country's population. This New State regime encouraged acculturation and assimilation of indigenous peoples by opening up formerly isolated areas within the interior to nonindigenous settlers. However, conflicting interests of missionaries and homesteaders, along with fierce resistance from the Xavante indigenous peoples, thwarted these plans. In the process, those favoring the assimilation of the indigenous population clashed with those defending the isolation and protection of indigenous groups. Despite the latter's efforts, fixed settlements, increased nonindigenous encroachment, and paternal governmental assistance were forces that sometimes led to the acculturation of indigenous peoples.

In 1952 the first Brazilian indigenous reserve, Xingu National Park, was established in the state of Mato Grosso, marking a shift away from the New State acculturation policy toward one of recognizing the sovereignty of indigenous peoples. In 1967 the government of Brazil disbanded the SPI after it was discovered that agency officials failed to protect indigenous peoples' lands and, in collaboration with land speculators, systematically slaughtered Natives by intentionally circulating disease-laced clothes amongst them.

The Brazilian government established Fundação Nacional do Índio (FUNAI) in 1967 to replace the SPI. The new organization continued the Brazilian policy trend of moving away from isolating or acculturating indigenous peoples toward establishing their self-determination rights. FUNAI is headquartered in Brasília and is organized under the Ministry of Justice. It is responsible for handling all issues regarding the country's indigenous peoples.

Despite these positive changes, it was not until 1988, with the establishment of the Brazilian constitution, that the recognition of indigenous peoples' sovereign status became official. Article 231 of the constitution recognizes the "original" right of indigenous peoples to their traditional territories and defines this right as taking precedence over all other rights, including those of the state itself. It specifically guarantees the rights of indigenous peoples to the use of the territories they have traditionally occupied, and further states that, "All acts having as their purpose the occupation, own-

ership or possession of [indigenous land] are nullified and extinct, without legal force."

In 1991 Decree 22 was established, which proclaimed the primacy of indigenous peoples' rights over competing interests. Signed by President Fernando Collor de Mello, the decree insured that title to indigenous land would be based on aboriginal habitation alone, and parties with secondary title would be compensated for their losses. In addition, the Brazilian government adopted a timetable that these territories be demarcated by October 5, 1993. However, as of 2007, Brazil had granted only 210 indigenous land titles out of 554 acknowledged claims.

On January 8, 1996, President Fernando Henrique Cardoso signed Presidential Decree 1775, granting squatters, miners, ranchers, and state and local governments new and unprecedented power to challenge the boundaries of indigenous reserves. This decree marked a radical shift in Brazil's policies toward indigenous peoples, replacing the previous Decree 22, under which more than half of the indigenous reserves thus far legally recognized in Brazil were officially demarcated. Because of its effectiveness as a formula for the creation of indigenous reserves, Decree 22 had become the object of an intense repeal campaign by business and development interests, especially in Brazil's northern states, where most of the large reserves are located.

Presidential Decree 1775 potentially affects some 344 out of the 554 designated indigenous reserves. The decree gives all parties (private and public) who wish to contest the boundaries of any indigenous reserve created under Decree 22, and that has not yet been registered in a title registry office a period of ninety days, to submit complaints to the Minister of Justice. The minister will then have an additional thirty days to study the merits of the complaint and announce his decision. Finally, the president will have a further thirty days to confirm or reject the minister's recommendation. As of 2007 no new indigenous area had been identified or demarcated since the implementation of Decree 1775.

Current Brazilian policies toward indigenous peoples continue to fluctuate. Unlike in the United States, Canada, and Australia, the indigenous peoples of Brazil continue to struggle to gain basic self-determination rights. Although some reserves have been established that protect indigenous peoples, these reserves lack sovereign status and are continually under the threat of encroachment by loggers, farmers, and settlers. Additionally, the Brazilian government continues to be under pressure to develop and exploit resources on lands inhabited by indigenous peoples.

Conclusion

Policies toward indigenous peoples are still unfolding in many countries. Mechanisms for self-determination and sovereignty are contentious and difficult to establish. Some countries have been able to enact laws that enable indigenous peoples to realize many of their self-determination rights, while others are still in the beginning stages of recognizing indigenous peoples at all. The United States, Canada, Australia, and Brazil serve as informative comparative examples, as each has moved from policy trends favoring removal or isolation of indigenous people to policies encouraging acculturation and assimilation. Most recently, each of these countries has taken steps toward granting indigenous people self-determining rights and recognizing them as sovereign people—steps that are likely to continue in the upcoming years.

Confederate States of America

Various Native tribes lived within or in close proximity to the Confederate States of America (C.S.A.) during its existence from 1861 to 1865. The most numerous and powerful of these nations resided in the Indian Territory, present-day Oklahoma, a critical location to the west of Confederate Arkansas and to the north of Confederate Texas. The largest group was referred to at that time as the Five Civilized Tribes and included the Cherokees, Creeks, Choctaws, Chickasaws, and Seminoles, all of whom had recently been forcibly removed from the Southeast to accommodate white southerners' demands for land.

The Confederacy did not want hostile Indian groups on its border and in March 1861 created its own Bureau of Indian Affairs under the War Department. President Jefferson

Davis appointed David Hubbard as commissioner of Indian affairs. Within a few months, Hubbard, prominent Arkansas lawyer Albert Pike, and Brigadier General Benjamin McCulloch received official missions to Indian Territory. Pike achieved a formal alliance with the Cherokee, Creek, Choctaw, Chickasaw, and Seminole nations in November 1861, as well as an agreement with the more nomadic tribes to the west.

This alliance broke new ground in U.S. Indian policy by offering Native nations non-voting representation in the Confederate Congress. The U.S. government had included offers to let the Cherokees send a deputy to Congress in the treaties of Hopewell (1785) and New Echota (1835), but it had never admitted an Indian representative into that body. This accommodation was, therefore, an important step forward for Native people. Two Native delegates did take their seats in Richmond, the first and last time Native nations had specific representation in a national congress.

Part of the C.S.A.'s diplomatic policy with Natives focused on preventing them from taking up arms against the Confederacy by making them allies. The other aspect was convincing the Indians to actually fight *with* the southerners in their quest for independence. While both sides in the conflict generally insisted that this was a "white man's war," the Confederacy enlisted the military assistance of Indians before the United States, which represented another political first. In recruiting, Confederates hoped their mutual interests as slaveholders would overcome Indian leaders' displeasure over the recent trauma of Removal, for which they blamed southerners. The Confederacy accepted units filled entirely by men from the Cherokee, Creek, Choctaw, Chickasaw, and Seminole nations. Surprisingly, the C.S.A. allowed the Indian men to pick their own officers. This created the opportunity for a prominent Cherokee man named Stand Watie to become a brigadier general in the Confederate army, the highest ranking Native American in the war. Native troops, however, tended to be poorly trained, inadequately supplied, and were often not respected by higher-ranking officers. Also, early in the war the C.S.A. broke a treaty agreement not to take Native troops out of their nations without their consent when it required them to march to the Battle of Pea Ridge (1862) in Arkansas. Indian troops resisted such poor treatment and tried to keep their tribal interests at the forefront. As the C.S.A.'s war effort began to fail and focus shifted to the east, the C.S.A. lost interest in its Native allies and left them to deal with the victorious Union on their own.

Congress, Native Americans in the U.S.

While Congress has considered legislation affecting Native Americans since its inception in 1789, at least nine senators or representatives have claimed to be full or part American Indian. Among these politicians, three served in the U.S. Senate. One Indian senator, Charles Curtis (R-Kans.), was the vice president under Herbert Hoover. Other prominent Native American congressional members have included Senator Robert Owen (D-Okla.), Representative Benjamin Reifel (R-S.D.), and Ben Nighthorse Campbell (R-Colo.). Despite their small number, Native American members of Congress have had a unique ability to influence the bills considered before the congressional Indian affairs committees.

Born to a part Kaw mother and an Anglo father in North Topeka, Kansas, Charles Curtis (1860–1936) was the first known Indian in Congress. As a child, he lived for three years with his maternal grandmother on the Kaw Indian reservation in central Kansas. After returning to Topeka, he became Shawnee County's prosecuting attorney. In 1892 Curtis won election to the House of Representatives as a Kansas Republican. Rather than hide his ethnic background, he decorated his Capitol Hill office with Native American artifacts. He promoted the allotment of reservation land as a means to improve the living conditions of Indians and, in 1898, sponsored the Curtis Act, which abolished tribal legal systems and led to the dissolution of the Five Tribes within the Indian Territory. Curtis chaired the House Indian Affairs Committee from 1903–1907, prior to his election to the Senate in 1907. As a senator, he chaired the Senate Indian

Affairs Committee from 1919–1921 and became the Senate's first official majority leader in 1925. Three years later, he accepted his party's nomination for vice president, serving one term in office.

Robert Latham Owen (1856–1947), part Cherokee, worked as a federal Indian agent, a banker, and a lawyer, defending Choctaws and Cherokees. In 1901 he drafted the act that gave citizenship to every Indian in Indian Territory, and after Oklahoma became a state in 1907, he was elected to the Senate as a Democrat. Prior to his retirement in 1925, he chaired two select Indian committees and founded the Committee on Banking and Currency, serving as its chair from 1913–1918. In that position, he cowrote the Federal Reserve Act of 1913 and sponsored major legislation regulating farm loans and child labor.

From 1917–1952 at least three Indian representatives served from Oklahoma: Republican Thomas Chandler (1871–1953) and Democrats John Nichols (1896–1945) and William Stigler (1891–1952). Chandler, a Cherokee, was a businessman, a tribal tax collector, and a town commissioner before serving two terms in the House (1917–1919; 1921–1923), where he was a member of the Indian Affairs Committee. Nichols, an Indian of unspecified lineage, served from 1935–1943. A specialist in Indian affairs and aviation, he resigned from Congress to become a vice president of Transcontinental and Western Air (TWA). Stigler, of Choctaw descent, practiced law and served in the state senate prior to replacing Nichols in the House. He defended Indian treaty obligations and promoted the sale of coal and asphalt lands on reservations.

Representative Benjamin Reifel (1906–1990) was born on the Rosebud Indian reservation in Parmelee, South Dakota, to a Lakota Sioux mother and a German American father. Prior to entering the House in 1961, he spent nearly thirty years in the Office of Indian Affairs, and its successor, the Bureau of Indian Affairs (BIA), working as a field agent, a tribal government organizer, and eventually supervisor of the Fort Berthold reservation in North Dakota. As a conservative Republican, he promoted farming interests, Indian education, and funding for the arts until his retirement from Congress in 1971.

Known for his signature ponytail and Harley Davidson motorcycle, Ben Nighthorse Campbell (1933–), of North Cheyenne descent, represented Colorado in the House of Representatives (1987–1993) and the Senate (1993–2005). Prior to entering Congress, he captained the U.S. judo team

Charles Curtis served as a Republican senator from Kansas before being appointed vice president under Herbert Hoover. Part Kaw, Curtis was the first known Indian in Congress.

at the 1964 Olympics, worked as a rancher and an award-winning Indian jewelry designer, and served in the Colorado state legislature. In the House, he focused on the management of natural resources, national parks, and the settlement of Indian claims. Elected to the Senate as a Democrat, Campbell switched to the Republican Party in 1995. The move awarded him seats on the Appropriations Committee and the Indian Affairs Committee, the latter of which he chaired from 1997–2004. He sponsored legislation commemorating the history and achievement of Native Americans, including the authorization of the National Museum of the American Indian (NMAI). Located on the National Mall in Washington, D.C., the NMAI exhibited Campbell's jewelry designs shortly after his retirement from the Senate in 2005.

The son of a BIA agent, Brad Carson (1967–) lived on several Indian reservations as a child. He was a Rhodes Scholar and a special assistant to the secretary of defense before entering the House in 2001 and serving two terms. An enrolled member of the Cherokee Nation, Carson

sought to improve living conditions for Native Americans, working families, and seniors residing in Oklahoma's Second Congressional District. In 2004 the moderate Democrat announced his resignation and launched an unsuccessful Senate campaign.

The most recent Indian to enter Congress is Representative Tom Cole (1949–), also from Oklahoma. A Republican Chickasaw, Cole taught history and politics at Oklahoma Baptist University, served in the state senate from 1988–1991, and was Oklahoma's secretary of state from 1995–1999. While secretary, he secured federal funds to rebuild Oklahoma City after the 1995 bombing of the Alfred P. Murrah Federal Building. Since entering the House in 2003, he has focused on issues concerning national defense, small businesses, education, and Native Americans. Like the Indians who preceded him, Cole has an insider's ability to influence legislation affecting Native Americans.

Congress, U.S.

As the lone branch of the federal government authorized to deal with Indian affairs, Congress is the primary policy maker in the field. Congress's authority to deal with Indian issues is plenary (complete) and exclusive as to the states. Congress has legislated in almost every possible area of Indian affairs, often delegating extensive authority to the executive branch, and the Supreme Court has affirmed congressional authority in all but a few circumstances.

Sources of Congressional Authority over Indian Affairs

Article 1, section 3, clause 8 of the Constitution includes the Indian Commerce Clause, in which Congress is authorized

to "regulate commerce . . . with the Indian tribes." This replaced a similar clause in Article 9 of the Articles of Confederation that read, "The United States in Congress assembled shall also have the sole and exclusive right and power of . . . regulating the trade and managing all affairs with the Indians, not members of any of the States, provided that the legislative right of any State within its own limits be not infringed or violated." This provision in the Articles created one of the major problems for the federal government that contributed to the necessity for a new Constitution—federal authority for dealing with Indian tribes was nonexclusive, with the states negotiating separate treaties and land sales without the consent of Congress.

The Constitution, on the other hand, made clear that any authority over Indian affairs would be exercised by Congress to the exclusion of all others. The First Congress enacted the Trade and Intercourse Act in 1790, prohibiting anyone from engaging in commerce or any other relationship with Indians and Indian tribes without Congressional consent. In 1793 Congress amended the act to include criminal penalties for violators. Congress's interpretation of the word "commerce" was much broader than mere commercial activities and included any interaction with Indians and tribes, even venturing into Indian Country without a mandate from Congress to do so. But the Indian Commerce Clause is not the sole source of authority for the federal government in Indian affairs. The War Power, the Treaty Power, the Property and Territory Clauses, and the overall structure of the Constitution have been cited at different times as authorizing all but absolute power for Congress and the executive branch to legislate and administer Indian affairs. In *United States v. Lara* (2004), the Supreme Court asserted that congressional plenary power derives from a "preconstitutional" source of power that is a "necessary concomitant of nationality." In other words, theoretically, the authority of the U.S. government to regulate all Indian affairs was a power necessary for the existence of the nation even before the creation and ratification of the Constitution.

Extent of Congressional Authority over Indian Affairs

The Supreme Court has long agreed that Congress's authority in Indian affairs is plenary and exclusive, allowing Congress to legislate in areas that appear to be all but absolute. Over time, the Court has concurred in congressional power to abolish Indian treaty rights without tribal consent (*Lone Wolf v. Hitchcock* [1903]), legislate over criminal

Until 1871 the U.S. Senate had the exclusive power to ratify federal treaties with Indian tribes. After the House Appropriations Act of that year, the House of Representatives began to play a more active role in Indian affairs.

law in Indian Country (*United States v. Kagama* [1886]), determine and mandate tribal membership criteria (*United States v. Rogers* [1846]), and even to take Indian property without compensation (*Federal Power Commission v. Tuscarora Indian Nation* [1960]). The Court declared that cases involving Indians and Indian tribes were political questions which the Court was barred from deciding in order to preserve the separation of powers between the judicial branch and the rest of the federal government. In *United States v. Holliday* (1865), for example, the Court decided that it would not second-guess a decision by Congress or the executive branch over whether a group of Indians (in this case, the Saginaw Chippewa tribe of Michigan) retained sovereign tribal status or had ceased to hold its sovereignty.

Over time Congress delegated significant authority to the president and the departments of war and the interior to handle the day-to-day dealings in Indian affairs. An 1834 act created what would later become the Bureau of Indian Affairs and provided for the broad authority of the president to administer Indian relations. Congress also has delegated significant authority to the states and to the tribes themselves to handle Indian affairs in particular circumstances.

Indian Treaty Ratification

Congress's participation in the ratification of Indian treaties was very significant. Under Article 2, section 2, clause 2 of the Constitution, the president is authorized to negotiate and execute treaties with foreign nations (and Indian tribes) "by and with the advice and consent of the Senate." As such, all

Indian treaties had to be ratified by the Senate before they became law. In numerous instances, the Senate voted to unilaterally amend Indian treaties. Sometimes the federal treaty negotiators would inform the tribal treaty negotiators of the change and seek their consent for the amendment; in other instances, the amendment would go unreported to the tribes.

For example, the treaties of the Indian tribes in what would become the State of California negotiated around the 1850s were delivered to the Senate for ratification, but then were locked away for decades. The California tribes, unaware their treaties had never been ratified, followed the treaty provisions for several years while the United States ignored them. In other instances, the Senate amended Indian treaties at the request of political favorites. Such was the case with the 1855 Treaty of Detroit, which had been made with several bands of Michigan Anishinaabek (Ottawas and Chippewas). The Senate reduced the size of the Indians' reservation by removing the tip of the Leelanau Peninsula in order to preserve the land rights of influential non-Indians living in Northport, Michigan.

Congress also acquired additional authority over Indian affairs as a consequence of the cessions of authority made by the Indian tribes. For example, in Article 3 of the 1785 Treaty of Hopewell, the Cherokee Nation agreed to place itself under the "protection of the United States of America, and of no other sovereign whatsoever." In *Cherokee Nation v. Georgia* (1831), a sharply divided Supreme Court held that the word "protection" implied that the Cherokee Nation had become dependent on the United States. The next year,

in *Worcester v. Georgia*, Chief Justice John Marshall held that the word “protection” meant that the Cherokee Nation had agreed to be under the military protection of the United States and therefore was not dependent in any other respect. But the word “protection” appeared in other treaties as well and the Court often interpreted it to mean that the Indian tribes had granted all but absolute power to the federal government to decide Indian affairs. And even if the word “protection” did not appear in an Indian treaty, in cases such as *Lone Wolf v. Hitchcock* the Court ascribed the dependence associated with the term to all Indian tribes regardless. The *Lone Wolf* Court interpreted the 1867 Treaty of Medicine Lodge Creek with the Kiowa and Comanche tribes—which did not include the term “protection” or any other similar language—to mean that those tribes were utterly dependent on the federal government. In spite of a treaty provision that prohibited the further cession of Indian lands without tribal consent, the Court used its dependency theory to uphold the allotment of these tribes’ reservation through an act of Congress and without valid tribal consent.

Later, the Supreme Court held that Congress had acquired the authority to extend federal criminal law and jurisdiction into Indian Country through the Major Crimes Act in *United States v. Kagama* (1886). This ruling was ironic considering that the Court explicitly stated that the authority to deal in Indian affairs must rest with the federal government, even if the authority could not be found in the Constitution. The Court again injected the concept of tribal dependency as a source of congressional authority into its analysis.

The End of Treaty Negotiation

In 1871 the House of Representatives inserted a rider in the Department of Interior’s appropriations bill (often referred to as the Indian Appropriations Act) that attempted to relieve the president of his authority to negotiate treaties with Indian tribes. This statute was of dubious constitutionality because the power of Congress to limit the constitutional authority of the president to make treaties is nonexistent, but as a statement of federal policy, the 1871 act did serve as the end point of the era of Indian treaty making. The act did, however, preserve all rights and responsibilities created in previously ratified Indian treaties.

After the supposed end of treaty making, the federal government continued to negotiate important agreements with Indian tribes. These agreements between sovereigns became law just as a treaty would have, but the House and Senate both had to debate and approve the agreements. In the mod-

ern era, Congress has authorized the Department of Interior to negotiate compacts and other agreements with Indian tribes that are, for all practical purposes, treaties. Congress also has authorized tribes and states to negotiate gaming compacts and agreements relating to Indian child welfare. In recent years, states and local governments have negotiated several different kinds of intergovernmental agreements providing for, among other issues, cooperation in tax collection, law enforcement, economic development, and the provision of a wide variety of governmental services.

The Trust Relationship

The relationship between the federal government and Indian tribes is characterized as a trust relationship, with Congress the ultimate “trustee” for the tribes. The origins of this relationship date back to the Cherokee cases—*Cherokee Nation v. Georgia* (1831) and *Worcester v. Georgia* (1832)—in which Chief Justice John Marshall wrote that Indians and Indian tribes were dependent upon Congress and that Congress must deal with the tribes in good faith. In *Worcester*, for example, the Court interpreted vague language in the Cherokee treaties to the benefit of the Indians in holding that the Cherokee Nation retained most of the elements of sovereignty. Because the Cherokee treaty negotiators might not have understood the nuances of the treaty language as the American negotiators would have, the Court held that the treaty provisions must be interpreted as the Cherokees would have understood them. Various Indian treaty provisions in which Indian tribes placed themselves under the “protection” of the American government or otherwise required the government to keep the tribes and non-Indians separate cemented the trust relationship. In most treaties, the federal government promised to undertake some duty or duties that served to preserve tribal sovereignty or Indian land holdings—for example, removing squatters by force.

Cases where Indians and Indian tribes attempted to enforce the trust responsibility have fallen into two categories. First, there were claims brought against the federal government relying upon express wording in statutes, regulations, or treaties that created a trust duty on the part of the federal government. These kinds of cases were based on what could be called a “hard trust.” Second, there were claims brought against the federal government based on the general notion that the federal government owed a more general trust duty to Indians and Indian tribes. This type of case arose in large part after the 1960s and 1970s, when the Supreme

Court opened the door to common law trust actions, or “soft trust” cases.

The first type of trust responsibility case—the “hard trust” case—is exemplified by *United States v. Mitchell* (“*Mitchell II*”) (1983) and *United States v. White Mountain Apache Tribe* (2003). In *Mitchell II*, the Court held that the federal government’s regulations, in which the government controlled most aspects of a tribal timber program on the Quinault Indian reservation, created a trust duty for the benefit of the tribe, allowing the tribe to sue the government for damages when the government wasted the timber. In *White Mountain Apache Tribe*, Congress’s creation of Fort Apache, its mismanagement of the fort, and later transfer of ownership to the tribe created a legal duty to the tribe, allowing it to sue the government for damage to the property caused by the neglect of the government.

Until 1977 the Supreme Court refused to exercise its power of judicial review over congressional legislation and executive branch decisions in Indian affairs in all but a few cases. In *Lone Wolf v. Hitchcock*, for example, the Court refused to question Congress’s judgment in allotting the Kiowa and Comanche tribes’ reservation. The Court stated that Congress must deal with Indian tribes with “perfect good faith,” but it also held that the question of whether Congress did deal in perfect good faith was a political question for Congress and not subject to judicial review. On occasion, the Court recognized that the federal government had failed in its duty to an Indian tribe, as it did in *Seminole Nation v. United States* (1942), where the Court held that the federal government must handle Indian trust accounts under the “most exacting fiduciary standards.” In 1977 the Court in *Delaware Tribal Business Committee* agreed to review and even strike down Indian affairs legislation if it was not rationally tied to a legitimate congressional purpose.

The other type of trust case—or “soft trust”—is exemplified by *United States v. Mitchell* (“*Mitchell I*”) (1980), in which the Quinault Nation argued that the General Allotment Act of 1887, which stated that allotted Indian lands would be held in trust pending the issuance of a final patent to the Indian owner, did not create a trust duty to manage the lands. The main characteristic of a soft trust case often was a claim made by the tribal interest that the federal government should have taken affirmative action to prevent the loss of Indian property, for example, on the basis that the federal government owed a general responsibility to Indians and Indian tribes. Claims in this vein almost always failed.

However, the general trust responsibility of the federal government served to buttress the legal foundation for Indian affairs legislation that might otherwise have been vulnerable to attacks on the basis that the legislation created race-based classifications that would be subject to strict scrutiny under the Fifth Amendment Due Process Clause. However, the Supreme Court, in cases such as *Morton v. Mancari* (1974), has held that acts of Congress extending benefits, preferences, or even disadvantages to Indians and Indian tribes are consistent with the common law trust responsibility of the federal government to tribal interests and are not subject to strict scrutiny.

Critical Indian Affairs Legislation

Acts of Congress in the area of Indian affairs are classified in Title 25 of the United States Code. Sections 2 and 9 delegate very broad administrative authority to the president and the secretary of interior to administer Indian affairs and implement statutory and treaty provisions. These delegations authorized the secretary of interior to create law and order codes, tribal courts, and tribal police in the nineteenth century; the Federal Acknowledgment Process for unrecognized Indian tribes in 1978; and regulations for the Indian Gaming Regulatory Act, among other things, more recently.

The first major piece of legislation Congress passed under its authority was the Trade and Intercourse Act in 1790. The act prohibited anyone from entering Indian Country or engaging in any land sales or other commercial or political activity with Indians and tribes without the consent of Congress. In 1830 Congress passed the Indian Removal Act, which authorized the president to negotiate treaties with eastern Indian tribes that would result in the exchange of land west of the Mississippi River for the cession of Indian lands in the east. The executive branch’s enforcement of the act led to incredible suffering during the removal period.

In 1887 Congress passed the General Allotment Act, also known as the Dawes Act. The act expressed the will of Congress to break up and allot Indian lands amongst the Indians living on a particular reservation and to allow the secretary of interior to sell the “surplus” lands of the reservation to non-Indians. Theodore Roosevelt called the act and its implementing statutes “a mighty pulverizing engine to break up the tribal mass” (David H. Getches, “Conquering the Cultural Frontier,” 1996). Allotment of Indian lands led to the dispossession of millions of acres of once-communal tribal property. In 1934 Congress put an end to the allotment era by enacting the Indian Reorganization Act. This act

allowed Indian tribes to reorganize into municipal forms of government and remains the governing document of much of modern Indian law and policy.

However, in 1953 Congress enacted House Resolution 108, noting that it was the belief of Congress that the relationship between the federal government and Indians tribes should be “terminated.” This led to the political termination of over one hundred Indian tribes and the resurgence of Indian land dispossession. Also in 1953 Congress enacted Public Law 280, which extended state criminal and civil jurisdiction into Indian Country in several states, including California and Minnesota. In 1968 Congress attempted to extend American-style civil rights protections to Indian people in the Indian Civil Rights Act. Congress moved away from termination and toward self-determination in the 1970s, culminating in the enactment of the Indian Self-Determination and Educational Assistant Act in 1975. Congress has enacted numerous “self-determination” and “self-governance” acts in the years since. In 1988 Congress passed the Indian Gaming Regulatory Act, after a Supreme Court decision in *California v. Cabazon Band of Mission Indians* (1987), which involved tribal high-stakes bingo operations.

Congressional Committees on Indian Affairs

The congressional Indian affairs committees have their roots in the Continental Congress, which established a committee in 1775 to negotiate with eastern tribes. The U.S. Senate and the House of Representatives created standing Indian affairs committees in 1820 and 1821, respectively. However, these committees did little more than support presidential policies until 1871, when treaties with Indian tribes were no longer authorized by the government. In the late nineteenth and early twentieth centuries, the Indian affairs committees produced legislation designed to foster the assimilation of Native Americans into mainstream American society. During the postwar tribal termination period, the 1946 Congressional Reorganization Act dissolved the House and Senate Indian affairs committees. In response to the new era of Indian self-determination that began in the 1960s and 1970s, the Senate created the Select Indian Affairs Committee in 1977, while the House currently considers most Indian-related legislation within the Committee on Natural Resources.

The Indian Treaty and Removal Era

Prior to 1871, U.S. presidents and tribal leaders signed more than 370 treaties that were each approved by the Senate, as required by the U.S. Constitution. In the 1820s the Senate and House established standing Indian affairs committees to

oversee the execution of the treaty provisions. Congress also took responsibility for regulating trade with Indian tribes and considered legislation relating to the care, education, and management of Indians and their lands. It also handled the logistics and funding of the transfer of the eastern Native tribes to lands west of the Mississippi River.

Following a dispute with the Cherokee Nation in the late 1820s, Georgia initiated the Indian removal era when it declared the end to tribal government within its borders. The state's congressional delegation then called for the relocation of southeastern Indian tribes, enlisting the support of President Andrew Jackson and other southern senators and representatives. In 1830 the chair of the Senate Committee on Indian Affairs, Hugh Lawson White, a Jacksonian from Tennessee, urged Congress to authorize negotiations to remove Indians from the existing states. In response, the House and Senate passed the Indian Removal Act in 1830. The Senate then approved the 1835 treaty that forced the Cherokee Indians to the Indian Territory (present-day Oklahoma), as well as many other Indian removal treaties.

By mid-century the West no longer served as a safe refuge for Indians, as migrating settlers came into conflict with relocated tribes. Indian commissioners lobbied Congress for protected areas to be set aside for the exclusive use of Native Americans. In 1851 Congress passed the Indian Appropriations Act, which created the first reservations. While the Senate ratified treaties purporting to ensure the survival of reservation Indians, many Native Americans suffered from starvation or disease as they waited for delayed government annuities. Tribal leaders petitioned Congress for additional services as white settlers filed claims citing Indian violence or theft of property. In 1865 the Senate committee chair, James Doolittle, investigated the escalating conflicts between Indians and whites on the frontier. Finding that treaties and warfare did not settle disputes, he authorized a new commission in 1867 to establish peace with the western tribes.

Meanwhile, the House, which had no constitutional role in treaty making, considered itself cut off from Indian negotiations. In 1871 the House committee attached an amendment to an appropriations bill, declaring that the federal government would no longer recognize tribes as sovereign entities capable of making treaties. The tribes, however, could partake in agreements approved by both houses of Congress. The 1871 law ended the Indian treaty-making era in American history, allowing the House and Senate to take an increased role in Indian affairs. Congress approved fifty-six

cooperation agreements until 1914, when federal statutes replaced negotiations with individual tribes.

The Assimilation and Allotment Era

After the treaty-making era, power to negotiate with Indian tribes transferred from tribal leaders and the president to the members of the House and Senate Indian affairs committees. In the late nineteenth and early twentieth centuries, the committees produced legislation designed to foster the assimilation and independence of Native Americans. Chaired by Republican Henry Dawes of Massachusetts, the Senate committee reported a bill dividing reservation lands into individual homesteads in 1887. The General Allotment Act, or Dawes Severalty Act, divided communal tribal holdings and distributed them in small acreage plots to individual Indians. In 1898 House committee member Republican Charles Curtis, a Kaw Indian and future vice president, sponsored the Curtis Act, which extended allotment to the Indian Territory and subjected individual Native Americans to federal, rather than tribal, law. Additional turn-of-the-century legislation attempted to dissolve individual tribes while promoting the integration of Indians into the larger society.

In the years following passage of the Dawes Act, the Senate created select and standing committees to ensure compliance with the law and to investigate Indian claims of theft, instances of trespassing on Indian lands, and Indian expenditures. These committees were consolidated under the Committee on Indian Affairs in 1921. The committee had one subcommittee to investigate charges of waste and mismanagement in the Indian Office, now called the Bureau of Indian Affairs.

The Indian New Deal and Tribal Termination

In 1934 Congress passed the Indian Reorganization Act, which ended allotment and attempted to return the management of their lands and natural resources to Native Americans. The act also provided the means for tribes to adopt constitutions and establish new corporate governments. This shift in federal policy was reversed after World War II (1939–1945) with the beginning of the termination era, during which Congress adopted legislation aimed at destroying tribal units, ending federal support for tribes, and transferring the management of Indian affairs to the states. The 1946 Legislative Reorganization Act coincided with the withdrawal of federal support to Indian tribes. The act, which reformed the committee structure in Congress, abolished the Indian Affairs committees.

Between 1947 and 1977, Indian affairs, including the health, welfare, and education of Indians, were spread between several standing committees. Most land-related legislation, however, was handled first by the public lands committees and then by the interior and insular affairs committees. In 1953 Congress adopted a House resolution declaring that the federal government would cease the supervision of Indians, diminishing the need for Indian legislation.

The Self-Determination Era

By the mid-1960s, many policy makers considered termination to be a failure and the federal government began reforming Indian affairs once again. Two Senate committees held a series of hearings on the status of Native Americans, resulting in the Indian Civil Rights Act of 1968 and the Indian Education Act of 1972. The Menominee Restoration Act of 1973 formally ended the termination period, restoring the status of tribes and federal services to Indians. Hundreds of tribes, including Alaska Native villages, were either reestablished or officially recognized for the first time, making it difficult for members of Congress to manage the sudden influx of tribal claims. In 1973 Senator James Abourezk sponsored legislation creating the American Indian Policy Review Commission. After a two-year investigation between 1975 and 1977, the commission found that the current committee system was inadequate to handle complex Indian policy.

In response to the commission's report, in 1977 the Senate created the temporary Select Committee on Indian Affairs, which handled issues pertaining to American Indians, Native Hawaiians, and Alaska Natives. The committee became permanent in 1984. (As opposed to standing committees that primarily develop legislation, select committees often provide an oversight function and are considered less powerful and prestigious than standing committees.) In 1993 Chair Daniel Inouye, a Democrat from Hawaii, sponsored a resolution dropping the word "select" from the committee's title. Although the technical amendment changed the committee's name to the Senate Committee on Indian Affairs, the redesignation was largely symbolic and it remains a select, not a standing, committee. Nevertheless, the committee's members have sponsored major legislation, including the Indian Gaming Regulatory Act (1988) and the bill authorizing the National Museum of the American Indian (1989). In 1997 Republican Ben Nighthorse Campbell of Colorado, a Northern Cheyenne, became the first senator of Native American descent to chair

the committee. Campbell served two terms as chair, from 1997 to 2001 and from 2003 to 2005. Other prominent former chairs include Senator Abourezk (1977–1979), the committee's founding chair; William S. Cohen (1981–1983); Senator Inouye (1987–1995 and 2001–2003); and Sen. John McCain (1995–1997 and 2005–2007).

In contrast to the Senate, the 1977 commission report prompted the House to create an Indian affairs subcommittee that existed for two years within the Committee on Interior and Insular Affairs. Various full committees handled Indian affairs until 1993, at which time the new House Committee on Natural Resources formed a subcommittee that currently considers Indian related legislation.

In recent years, Indian activists and members of Congress have demanded the development of standing Indian affairs committees in both the House and Senate, citing the importance of Indian legislation to the country at large. However, as of the 110th Congress (2007–2009), there were no indications that a change in committee status was forthcoming.

Conquest, Doctrine of

The doctrine of conquest refers to two different ideas in the history of the law of Euro-American and Indian relations.

First, it suggests a military victory by a non-Indian nation over an Indian tribe, which results in the victor acquiring sovereignty over the defeated tribe. This definition is reflected in Spanish, English, and American ideas that “just wars,”—that is, wars generally deemed legally or philosophically moral by the community of nations—could under certain circumstances justify the physical invasion of Indian lands.

Second, the word conquest has a special meaning when it is used as an element of the doctrine of discovery, which holds that the first “Christian” nation to “discover” previously unknown lands received first claim of title against all other nations. Under European law, the individual property rights of a conquered people were not disturbed, although the victorious nation was deemed to have acquired sovereignty over the conquered territory.

The United States Supreme Court embraced the doctrines of discovery and conquest in *Johnson v. M’Intosh* in 1823 and used them to rationalize the United States’s extension of sovereignty over the Indian tribes within its borders. The Court considered the first European discoveries of Native lands to be military conquests, as the newly arrived Europeans claimed political and commercial rights over the Natives, and declared that the United States had succeeded to those rights. The Court further held that the national interests of the United States prevented it from leaving the Indian nations in complete ownership of their territories. Therefore, the Court said, it would follow the European precedent and hold that conquest left the Native peoples with only the right to occupy their lands.

Constitution, Iroquois Influences on the U.S.

The five nations of the Mohawks, Oneidas, Onondagas, Cayugas, and Senecas (the Tuscaroras became the sixth nation to join in the early eighteenth century) created the

Iroquois Confederacy (the Haudenosaunees, or “People Building a Long House”) sometime between 1190 and 1525. They put the prophet Deganawidah’s vision of intertribal peace and unity into practice. As noted by Onondaga chief Oren Lyons when he addressed United Nations delegates in 1992, “we were instructed to create societies based on the principles of peace, equity, justice, and the power of good minds.” The Great Binding Law, he said, became the constitution for the Iroquois Confederacy.

Scholars agree that this indigenous and ingenious structure achieved substantial levels of internal peace and external influence. It empowered the Iroquois to dominate other tribes and rival the French, Dutch, and English colonies. Through shrewd intratribal, intertribal and cross-cultural diplomacy, the Iroquois Confederacy held the balance of power in northeastern North America from approximately 1641 until 1779. During this era there were increasing contacts between European Americans (traders, agents, missionaries, soldiers, treaty negotiators, surveyors, interpreters) and Native Americans. Unfortunately, greater familiarity bred as much contempt and divergence as admiration and convergence. Most European Americans neither respected nor understood Indian cultures or customs. But due to frequent encounters between the two societies, some of the Indian side of the story was recorded and should be considered an essential part of colonial American history.

As a consequence of the political activism of the 1960s, a more inclusive outlook developed in which scholars attempted to reveal how American Indians influenced the history of the United States. Some scholars have asserted that prominent founders such as George Washington and Benjamin Franklin expressed high regard for the concepts, principles, and governmental practices of the Six Nations Iroquois Confederacy. As a result, some have argued that many of the democratic principles in the Articles of Confederation (1777) and U.S. Constitution (1787) were explicitly modeled on the Iroquois Confederacy. This historical interpretation is known as the “Iroquois influence thesis.”

The documentary evidence most cited by supporters of the Iroquois influence thesis indicates that at the signing of the Treaty of Lancaster in 1744, the Onondaga sachem Canassatego recommended that the thirteen British colonies should follow the Iroquois example of strength through unity in a powerful confederation. For the Iroquois, confederation created a loose governing structure in which a grand council dealt with common external matters (such as war-

fare and diplomacy), while each tribe maintained its own internal autonomy. Under the Articles of Confederation, the United States of America was formed as a “firm league of friendship,” with each state retaining every power not delegated expressly to the national Congress. Moreover, both the Great Law of Peace and the U.S. Constitution adhered to balanced and limited political principles based upon the consent of the people. Both governing structures also utilized complex arrangements based upon separation of powers, checks and balances, a veto power, ratification, and impeachment (or, for Iroquois chiefs, “dehorning”).

Opponents of the Iroquois influence thesis point out that Anglo-American political leaders sought very specific and limited goals from negotiations with Iroquois sachems. They wanted profitable trade relations and alliances depending on shifting balance-of-power circumstances in North America. Benjamin Franklin’s 1751 reference to “six Nations of ignorant Savages” (Benjamin Franklin, *The Writings of Benjamin Franklin*, Vol. 2, 1970), and Thomas Jefferson’s 1776 grievance about “merciless Indian savages” in the Declaration of Independence, they maintain, illustrate that these founders did not desire to emulate Native Americans. Most European Americans during the colonial era did not respect or understand Indian worldviews or governance.

Opponents of the theory also argue that parallel concepts in close geographic proximity, like mixed government and natural rights, can be arrived at independently and that societies that espouse them do not necessarily influence each other. Contending assessments of Iroquois influence on the United States government will continue because *influence* remains difficult for scholars to prove or disprove. When considering cause and effect, a number of similarities and correlations do not necessarily indicate decisive influences. Opponents of the Iroquois influence thesis also suggest that a different approach to observing influences is to ask the opposite question: are there any significant disparities? Any reading of the Great Law, they say, reveals more differences with the U.S. Constitution than similarities.

But more importantly, the Great Law of Peace and the Iroquois Confederacy represent the most documented indigenous confederation in North America. The confederacy predated the creation of the United States by at least two hundred fifty years, and even if it had little or no influence on the U.S. Constitution, it is worth acknowledging as an indigenous sociopolitical system that embraced many of the same themes as American republicanism.

Constitution, U.S.

Indian tribes, along with foreign nations and the American states, are listed in the United States Constitution as governments that Congress is granted authority to deal with on commercial issues. The founders who drafted the Constitution viewed Indian tribes as full-fledged political entities that controlled their citizens and their territories. Indeed, prior to the creation of the United States, Euro-American colonists had dealt with Indian tribes on an official governmental and treaty-making basis. It was natural, then, that the representatives of the thirteen original states included in the Constitution a provision controlling how the newly formed federal government would deal with the Indian nations. In Article 1, section 8, the Constitution pro-

vides that “Congress shall have Power . . . to regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes.”

The United States Supreme Court has interpreted this constitutional language to mean that Congress was granted the exclusive power to regulate U.S. trade and affairs with Indian tribes. The very first Congress under the Constitution assumed this power. In the first five weeks of its existence, it enacted four laws concerning Indian affairs, including one in July 1790 that forbade states and individuals from buying Indian lands.

Tribes are also referred to, but are not expressly named, in Article 6 of the Constitution, which states that all treaties entered into by the United States “shall be the supreme Law of the Land.” Article 2, section 2, gives the president the authority “to make Treaties” with the advice and consent of the Senate. By 1789 the United States had entered into approximately twenty-two treaties with European countries and nine with Indian tribes.

Individual Indians are also mentioned in the Article I, section 2, and in the Fourteenth Amendment (1868). According to the amendment, when state populations were counted to determine how many representatives a state would have in the House of Representatives, Indians were not to be counted unless they paid taxes.

American Indian tribes played a major role in the development and history of the United States and engaged in official diplomatic and governmental relations with other sovereign governments from the moment Europeans arrived on the continent. Indian tribes have been a part of the day-to-day political life of the United States and continue to have a government-to-government relationship with the United States.

Constitutions, American Indian

In general, modern American Indian constitutions are a mixture of tribal, federal, and municipal laws. Most tribal constitutions contain elements of federal interference, with limited specified powers and provisions authorizing federal supervision of tribal lawmaking, the result of decades of federal coercion and control. Those tribes that have written constitutions have begun the process of removing these unwanted features.

The Cherokee Nation adopted one of the first written tribal constitutions in 1827 as a means of proving to the outside world that Indians lived by a rule of law (see page 222). The Cherokee constitution borrowed many of the political elements of the United States Constitution. Other Indian nations, including the major tribes in the Southeast, followed the Cherokee example in the nineteenth century.

Many more tribes adopted constitutions after Congress enacted the Indian Reorganization Act (IRA) in 1934. Under the act, each tribe’s membership could vote to adopt the reorganization plan proposed by the statute, which included the opportunity to develop and adopt a tribal constitution. Many traditional and insular tribal communities refused the opportunity, and some of these tribes, the Navajo Nation being one example, have no written constitution.

The promise of constitutional reform under the IRA gave way to the notorious “model IRA constitutions,” where the Office of Indian Affairs imposed a standard constitution on most tribal communities. These model constitutions, usually adopted between 1935 and 1940, had no provision for separation of powers between branches of tribal government, no provisions for tribal courts, and a limited number of powers listed for tribal councils and tribal chairs. They limited tribal governments to exercising powers of municipal governments, with most power concentrated in the hands of the tribal chair. The most paternalistic provision inserted by the federal government into these model tribal constitutions was the requirement that the secretary of interior had to approve any amendments and even all ordinances passed by the tribal council before they were effective. Because the IRA granted the secretary authority to approve or disapprove any original tribal constitution, the tribes often had no choice but to accept the model constitutions offered by the U.S. government. Of course, these constitutions had little relationship to traditional tribal governments and often destroyed tribal customary law.

EXCERPT FROM THE CONSTITUTION OF THE CHEROKEE NATION, 1827

The Cherokee Nation adopted one of the first American Indian constitutions. Their constitution, consisting of twenty-four articles, borrowed some elements from the U.S. Constitution. Other tribal nations also adopted constitutions, particularly after passage of the Indian Reorganization Act in 1934.

We the Representatives of the people of the Cherokee Nation, in Convention assembled in order to establish justice[,] ensure tranquility, promote our common welfare, and secure to ourselves and our posterity the blessings of liberty, acknowledging with humility and gratitude the goodness of the sovereign ruler of the Universe affording us an opportunity so favorable to the design and imploring his aid and direction in its accomplishments do ordain and establish this Constitution for the Government of the Cherokee Nation.

Article 1st.

The boundaries of this nation embracing the lands solemnly guaranteed and reserved forever to the Cherokee Nation the treaties concluded with the United States is as follows, and which shall forever hereafter remain unalterably the same; To wit: Beginning on the north bank of the Tennessee River at the upper part of the Chickasaw Old Fields thence along the main Channel of said River including all the islands herein to the mouth of the Highwassee River thence up the main channel of said river including Islands to the first Hill which closes in on said river about two miles above Highwassee Old Town

Section 2. The sovereignty & jurisdiction of this Government shall extend over the Country within the boundaries above described, and the lands therein is & shall remain the Common property of the nation;

Article 2. The power of this Government shall be divided with three distinct departments, the legislative, Executive, and Judicial. 2nd. No person or persons belonging to one of these departments shall exercise any of the powers properly belonging to either of the others; except in cases herein after expressly directed or permitted.

Article 3. The Legislative power shall be vested in two distinct branches, a Committee and a council[,] each to have a negative on the other, and both to be stiled [sic] the General Council of the Cherokee Nation, and the style of their acts and laws shall be "Resolved by the Committee and Council in General Council Convened."

Section 2. The Cherokee Nation as laid off into eight Districts, shall remain so.

Section 3. The committee shall consist of two members from each district and the council shall consist of three members from each district, to be chosen by the qualified electors of their respective districts for two years, and the elections to be held in every district on the first monday [sic] in august [sic] for the year 1828 and every succeeding two years thereafter. And the Genl Council shall be held once a year to be convened on the second Monday of October in each year at New echota [sic]; no person shall be eligible to a seat in the general Council but a free Cherokee male citizen who shall have attained to the age of twenty five years the descendants of Cherokee men by all free women (except the african [sic] race) whose parents may be or may have been living together as man and wife according to the customs & laws of this nation & shall be entitled to all the rights and privileges of this Nation, as well as the posterity of Cherokee women by all free men, no person who is of a negro or mulato [sic] parentage either by the father or mother side, shall be eligible to hold any office of profit or honor or trust under this Government. The electors and members to the General Council shall in all cases except in those of treason, felony, or breach of the peace be privileged from arrest during their attendance at elections and the General Council, and in going to or returning from the same. In all elections by the people the electors shall vote Vi-Va-Voce. ...

Section 4. All free male citizens (excepting negroes and descendants of white & Indian men by Negro women who may have been set free) who shall have attained to the age of 18 years shall be equally entitled to vote at all public elections. –

Source: The Cherokee Constitution of 1827. *Tennessee's Landmark Documents*. Tennessee State Library and Archives. <http://tsla-teva.state.tn.us/landmarkdocs/files/135.php>.

The example of the Constitution of the Saginaw Chippewa Indian Tribe of Michigan in 1937 is instructive. Upon learning of the passage of the IRA, a group of tribal leaders began to develop a tribal constitution on their own. They adopted provisions consistent with their understanding of tribal government authority and tribal membership. The Office of Indian Affairs rejected their constitution as written and insisted upon restrictive tribal membership criteria and expansive federal control over tribal government activities. In the early twenty-first century, the tribe was still attempting to correct the bureau's failures.

The secretarial approval requirement hindered tribal governments for decades. In some instances, the federal government used that authority to coerce the tribe into accepting unfavorable gas and mining leases, with minimal royalty payments made to the tribes. The federal government often restricted tribal membership requirements in order to reduce federal entitlements to tribal members.

In 1968 Congress passed the Indian Civil Rights Act in an attempt to require tribal governments to follow most of the provisions of the Bill of Rights. Since then, many tribes have adopted their own versions of the Bill of Rights or incorporated the federal statute into their constitutions. However, some tribes have asserted that no such statute is necessary because the community already offers these protections to individuals, and, in some cases, the tribal protections are even stronger.

Many tribes are now in the difficult process of reworking their constitutions to better reflect the realities of tribal government and to erase the federal presence in them. In most instances, the Bureau of Indian Affairs (as the Office of Indian Affairs was renamed in 1947) now interferes less in these tribal decisions, but the political effects of past federal meddling are difficult to correct.

Tribes without written constitutions still follow a general and primary tribal law, with each branch of government (tribal councils and tribal courts being the primary branches) sharing the interpretation of tribal law through the enactment of legislation and the pronouncement of tribal common law.

Cooper, Peter

Peter Cooper (1791–1883) was a New York inventor, industrialist, and philanthropist who included advocacy for Native Americans among his many charitable and civic efforts. Cooper was raised close to peaceful Native communities and became shocked by their transition to warring tribes as whites began to advance upon their lands. Although a champion for white Western migration, he supported policies to allow whites and Native Americans to coexist in peace.

Cooper's formal Native endorsement began in 1868 after he read Lydia Maria Child's *An Appeal for the Indians*. He was inspired to found, along with prominent educators and religious men, the New York Indian Peace Commission, also known as the United States Indian Commission. Cooper believed that peace would come only if Native Americans adopted "our laws and became citizens with the right to represent their wants and their grievances in the government of our country" (Edward C. Mack, *Peter Cooper: Citizen of New York*, 1949). Rather than full assimilation, however, Cooper promoted Native education programs on reservations.

Through the commission, Cooper helped craft legislation that proposed a system of reservations free from white intrusions that could allow for the "civilization" of Native Americans. In 1869 the legislation led to the creation of the Board of Indian Affairs, which, under President Ulysses S. Grant's Peace Policy, had limited success in ending military campaigns against Native Americans and fostering a reservation system.

Cooper also sought to educate the public about Native cultures by bringing Indian delegations and leaders to speak at the Cooper Union for the Advancement of Science and Art. Cooper founded the union in 1859 in New York City.

Cornplanter

Born the son of John Abeel (O'Bail), a Dutch trader, and a Seneca named Gahhononeh, the war chief Cornplanter (c.1740–1836) was known by many names, including John O'Bael and Gyantwakia. His half-brother was the religious leader Handsome Lake. He gained valuable military experience during the French and Indian War (1754–1763) as a participant in the 1755 defeat of British general Edward Braddock.

An advocate for Iroquois neutrality when the American Revolutionary War (1775–1783) erupted, he led the Seneca warriors that allied themselves with the British in 1777. Cornplanter participated in the August 1777 siege of Fort Stanwix and the June 1778 Battle of the Wyoming Valley. In 1780 he helped lead attacks in the Mohawk and Schoharie valleys of New York.

Following the revolution, Cornplanter adopted an accommodationist stance towards the United States. He helped negotiate the Fort Stanwix Treaty of 1784 and participated in treaty negotiations at Buffalo Creek in 1788, Fort Harmar in 1789, Canandaigua in 1794, and Big Tree in 1797. Each treaty hurt his standing among the Senecas since each included land cessions. For Cornplanter's efforts to preserve the peace, Pennsylvania awarded him land on the Allegheny River.

In 1792 the United States dispatched Cornplanter to the Ohio Valley in hopes that he could convince the local Natives to agree to a peace agreement. The Indians from the region, led by the Miamis and the Shawnees, contemptuously rebuffed his overtures.

In 1807 a rift formed between Cornplanter and Handsome Lake, who believed that Cornplanter was enriching himself at the expense of other Senecas. During the War of 1812, Senecas aligned with Cornplanter fought on behalf of the United States while Handsome Lake's followers were nonparticipants in the conflict.

In his latter years, Cornplanter had a religious vision that led him to burn the memorabilia he had accumulated from his years of military and diplomatic service to the United States. His subsequent preaching career ended soon after Pennsylvania authorities granted him and his heirs tax-exempt status on his land grant.

Council of Energy Resource Tribes (CERT)

Twenty-three western tribes formed the Council of Energy Resource Tribes (CERT) in 1975. The nonprofit organization sought to become a clearinghouse for the information, technical support, and contracting expertise that tribes needed to manage natural resources such as oil, gas, coal, and uranium. CERT lobbied for federal funding and policy reforms that would make energy resource development better serve tribal needs and earn fair market value for Indians. Although often at odds with the Bureau of Indian Affairs, CERT fit into the federal government's policy of Indian self-determination.

In its early years, CERT obtained considerable funding from the Department of Energy (DOE), leading some critics to charge that CERT and the DOE were conspiring to exploit tribal resources. CERT also faced criticism that it pushed development too aggressively. Following a budget crisis in 1983, CERT curtailed its lobbying efforts and focused on providing technical assistance to tribes. Its efforts have contributed to changes in federal policy and expansion of tribal involvement in resource development. As of 2008 CERT had over fifty member tribes in the United States and four affiliates in Canada, and it continued to receive federal funding to support its activities. CERT's agenda promotes prudent energy development through tribal control and partnerships with industry.

Council Springs (1847), Treaty of

Shortly after Texas's annexation in December 1845, the administration of President James K. Polk dispatched commissioners Pierce M. Butler and M. G. Lewis to establish contact with Indian tribes in the state and to arrange for a conference to explain the new relationship between Texas Indians and the U.S. government. On May 13, 1846, Butler and Lewis convened a peace council at Council Springs with delegates representing the Comanches, Ionis, Anadarkos, Caddos, Lipans, Longwas, Keechis, Tawakonis, Wichitas, and Wacos. After two days of speeches and discussion, the assembled leaders signed a treaty that provided the following stipulations:

- 1) the Indians placed themselves under the protection of the U.S. government and acknowledged its right to regulate their trade;
- 2) the signatories agreed to deliver up captives (white, black, or Indian) and restore stolen horses;
- 3) Indians agreed to alert American authorities of any hostile designs directed against the United States on the part of themselves or their neighbors;
- 4) Indians guilty of murder or robbery were to be given up to federal authorities to stand trial, while U.S. citizens guilty of similar crimes committed against Indians were to be punished in accordance with state law;
- 5) the president received authorization to establish trading houses, agencies, and posts near popular Indian hunting grounds and encampments, both to protect the tribes and to ensure implementation of the treaty stipulations;
- 6) no person was allowed to sell or trade alcohol to Texas tribes;
- 7) the federal government agreed to send blacksmiths, teachers, and missionaries to serve in the Indian territories;
- 8) each side pledged to maintain the peace in perpetuity, and the federal government agreed to disburse \$10,000 worth of goods to the tribes.

On February 15, 1847, the Senate ratified the treaty and President Polk signed the document on March 8. The peace proved short-lived, however, and following the United States–Mexico War (1846–1848), hostilities between federal

troops and Texas Indians plagued the state for the next thirty years.

Courts of Indian Offenses

The United States government created courts of Indian offenses in response to a case from the 1880s in which one Lakota tribal member, Crow Dog, killed a fellow tribal member, Spotted Tail. While the Lakotas had a traditional dispute resolution system that adequately provided restitution to the victim's family, the federal government was not satisfied with that outcome.

In 1883 the secretary of the interior initiated the creation of courts of Indian offenses under the Office of Indian Affairs (later renamed the Bureau of Indian Affairs), and the commissioner of Indian affairs imposed them on a number of tribes. The courts administered a code set forth by the secretary that was incorporated into the Code of Federal Regulations (CFR). From the beginning, these “CFR Courts” were based on a shaky legal foundation, as there was no statutory authorization for the establishment of such tribunals.

Although the current version of the authorizing regulation states that courts of Indian offenses exist to “provide adequate machinery for the administration of justice for Indian tribes in those areas of Indian country where tribes retain jurisdiction over Indians that is exclusive of state jurisdiction but where tribal courts have not been established to exercise that jurisdiction” (25 CFR § 11.1[b], 2007), the original wording of the regulation was more ominous. Even as recently as 1992, the same regulation identified the targeted tribes as those “in which traditional agencies for the enforcement of tribal law and custom have broken down [and] for which no adequate substitute has been provided under Federal or State law” (25 CFR § 11.1[b], 1992; emphasis added). Additionally, the courts of Indian offenses were imposed as “educational and disciplinary instrumentalities,” in which the federal government attempted to “improve and elevate the condition” of the Indians so that they could acquire “the habits, ideas, and aspirations which distinguish the civilized from the uncivilized man” (*United States v. Clapox*, 1888). Finally, these courts were also intended to

reduce the remaining power of traditional chiefs by creating a competing center of authority.

Courts of Indian offenses, unlike tribal courts, are subject to much broader federal review. Because decisions of the courts' appellate division are final and not subject to administrative appeals within the Department of the Interior, they are subsequently subject to federal judicial review, unlike tribal court decisions. Despite the questionable legal foundation of the courts and their lack of direct statutory authority, the constitutionality of their decisions has been upheld. In *Tillett v. Hodel* (1990), for example, the federal district court noted that Congress has repeatedly recognized the courts of Indian offenses and cited statutes delegating power to the president broad enough to establish them. Additionally, Congress has been appropriating funds for courts of Indian offenses since 1888.

Courts of Indian offenses do not have to be permanent, however, as a tribe can transition to a tribal court by passing a "law and order code which includes the establishment of a court system [that] has been adopted by the tribe in accordance with its constitution and by-laws or other governing documents" (25 C.F.R. § 11.1[b], 2007). The tribe would also need to notify the assistant secretary for Indian affairs.

By 2007 tribal courts vastly outnumbered courts of Indian offenses. According to the National Tribal Justice Resource Center, more than 275 tribes had established tribal courts, while only twenty-three courts of Indian offenses remained.

Covenant Chain

For a period of one hundred years beginning in 1677, the Covenant Chain was central to diplomatic relations between the Haudenosaunees (Iroquois) and several affiliated tribes

and the British colonies. Over time, the chain came to represent a system of alliances and trading partnerships. The two sides viewed the chain differently, however. While the British sought legalistic agreements with the Iroquois Confederacy to ensure English sovereignty in the face of French interests, the Haudenosaunees saw the Covenant Chain as a way to negotiate and renew alliances, kinship, and social relations.

The chain was one of numerous metaphors employed in Haudenosaunee council oratory that allowed speakers to communicate complex ideas across the cultural divide. Other key metaphors included the path, the fire, the tree, and the house. Different Iroquoian words for "chain" mean something similar to "arms linked together," and the Covenant Chain was represented on wampum belts by highly stylized human figures with joined hands. According to Haudenosaunee oral tradition, the chain was first a rope and then an iron chain, but since these could easily break, it was later made of silver, and parties to councils worked to keep it shiny and free of dust. The Covenant Chain relationships with the British colonies were dissolved when the imperial authorities in London took control of diplomacy in the mid-1750s, but the chain remains a unique and symbolic form of diplomatic protocol for the Iroquoian tribes.

For Haudenosaunees in the early twenty-first century, the Covenant Chain consists of three links symbolizing friendship, good minds, and peace, and is represented on the Guswentha or Two Row Wampum belt by three rows of white beads that separate two double rows of purple beads. Every four years the Haudenosaunees extend an invitation to the U.S. president to polish the Covenant Chain.

Crawford, T. Hartley

Thomas Hartley Crawford (1786–1863) served as commissioner of Indian affairs from 1838 until 1845. A Jacksonian Democrat, Crawford was elected to the 21st Congress in 1829 and reelected in 1831. He also served in the Pennsylvania House of Representatives from 1833 to 1834. In 1836 President Andrew Jackson appointed Crawford to investigate alleged fraud in the sales of Creek land allotments. Crawford's report in 1838 condemned the speculators who had been buying Indian land.

Crawford was appointed commissioner of Indian affairs by President Martin Van Buren. Hartley was the first commissioner who had previous experience with Indian affairs, and he had a reputation as a capable administrator. During his time in office he secured the removal of the Sac and Fox and Winnebago tribes from the Iowa Territory and also oversaw the removal of the Cherokees to the Indian Territory. He tried to speed up the removal and acculturation process for other tribes as well. For much of his tenure the United States was engaged in a bitter war with the Seminoles that culminated in their relocation.

Perhaps because of these experiences, Crawford attempted to find ways to develop better relations between Native Americans and whites in the West. He tried to improve educational opportunities for Indians by pushing for the establishment of manual labor schools. He also urged tribes to accept provisions instead of cash for their annuity payments and worked to reduce the sale and distribution of alcohol into Indian communities.

Crazy Horse

Much about the life of Crazy Horse (c. 1840–1877), an Oglala Sioux, is unknown or based on information gathered long after his death. Called "our strange man" by the Lakotas, he was an eccentric loner probably born near Bear Butte in present-day South Dakota. His father, an Oglala medicine man, was also named Crazy Horse; his mother was probably the sister of the Brule leader, Spotted Tail.

As a youth Crazy Horse became known for his natural talent with horses and for his tendency to shun many traditional rites. When he was about fourteen, he had a vision of a man and a horse floating above the ground. In the vision he was told to wear a single feather and to tie a small stone behind his ear. He was told never to keep any belongings, but to always give away his possessions in order to help others. After this vision Crazy Horse dressed plainly and dedicated himself to protecting his people and providing for them.

When he was about fifteen, Crazy Horse came upon the massacre of dozens of Brule Sioux on Bluewater Creek in Nebraska. Some believe that the shock of what he saw there made him a great warrior. Crazy Horse participated in several battles during what is known as Red Cloud's War, or the Bozeman Trail War (1865–1868). His courage during such engagements as the Fetterman Fight (1866) and the Wagon Box Fight (1867) helped establish his reputation as a leader in the resistance to American expansion and the reservation system.

His best documented and most heroic action was at the Battle of the Rosebud. During the summer of 1876, thousands of Lakotas and Cheyennes were gathered along the Little Bighorn River while a large contingent of soldiers moved west to fight them. On June 17 Crazy Horse, Sitting Bull, and close to one thousand warriors attacked General George Crook and his one thousand soldiers on Rosebud Creek. In hand-to-hand combat, the Indians fragmented Crook's defensive line and prevented him from launching a counterattack.

Eight days later Crazy Horse was present at the Battle of Little Bighorn, but his exact actions there are unknown. Most scholars believe he led the force of Indians that flanked George Armstrong Custer and surrounded his soldiers.

That winter Crazy Horse was responsible for the well-being of over one thousand people. Low on food and ammunition, in May of 1877 he agreed to surrender in exchange for his own reservation. Once he arrived at Fort Robinson in Nebraska, however, Crazy Horse became the

The Native American artist Amos Bad Heart Buffalo depicts the death of Crazy Horse, an Oglala Sioux chief. Crazy Horse was caught in a trap after arriving at a fort and was killed by a soldier with a bayonette.

subject of rumor and bitter jealousy among the Indians who had already surrendered. On September 6, 1877, he came into the fort with the understanding that the commander wished to speak with him. Instead, the plan was to arrest him and take him to a prison in Florida. Realizing he was being led towards the jail, Crazy Horse turned to run. A Lakota policeman grabbed him from behind, and a soldier bayoneted the warrior. He died a few hours later.

Crazy Horse is now often viewed as a symbol of Native American resistance.

Crazy Snake Uprising (1901)

The Crazy Snake Uprising was one of a number of rebellions of Indians against United States efforts to force their

assimilation into mainstream society by allotting their lands and abolishing their traditional governments. Chitto Harjo ("Crazy Snake") was a Creek leader at the time of the termination of the Creek Nation by the Curtis Act of 1898. The act, intended to incorporate tribes into the United States and release their valuable lands for non-Indian settlement, ended the governmental and legal powers of the Five Tribes (the Creeks, Cherokees, Choctaws, Chickasaws, and Seminoles), who had been removed from the South and settled in present-day eastern Oklahoma earlier in the nineteenth century. The act further allotted Creek lands to individual Creeks and released the remaining lands for sale to whites.

The various removal treaties negotiated between the U.S. government and the Creeks, including the Treaty with the Creeks negotiated in Washington on February 14, 1833, had guaranteed them their lands in what is present-day Oklahoma forever and in fee simple. The preservation of Creek culture was, in the Indians' view, dependent on the recognition of these treaty rights. Traditional Creeks refused to recognize the abolition of the treaties and their sovereignty as an Indian nation. A large number of chiefs met and reaffirmed their traditional laws and government. Accordingly, they implemented their own government in place of the former one that had agreed to the Curtis Act.

They appointed judges and elected a chief, a second chief, a twelve-member cabinet, members of a House of Warriors and a House of Kings, and two houses of a legislature. The dissident chiefs also sent out light horsemen to post and enforce a new law prohibiting the employment of, and the leasing of land to, those in the Creek Nation who complied with the U.S. government. The law provided a fine of \$100 for its violation and up to fifty lashes. The light horsemen whipped an unknown number of Creeks for its violation. The rebellion directly asserted traditional Creek sovereignty and challenged the imposition of American law on the Creek nation.

In March 1901 a federal grand jury in Muskogee indicted 253 Creeks, including Crazy Snake, alleging that they had “willfully and feloniously formed a certain government . . . purporting to be the legal and lawful government of the Muskogee (Creek) tribe” (Sidney L. Harring, *Crow Dog’s Case: American Indian Sovereignty, Tribal Law, and United States Law in the Nineteenth Century*, 1994). This indictment affected about 10 percent of all adult Creek males at the time and indicated the widespread nature of the revolt. Facing the overpowering strength of the U.S. government and not willing to resort to armed resistance, those indicted submitted to U.S. authority and were soon pardoned.

In 1907, when Oklahoma was admitted to the Union as a state, Crazy Snake and other Creeks reassembled on Hickory Ground, traditional Creek council grounds, to reassert their claim to sovereignty. They remained there for two years until another rebellion, the Smoked Meat Rebellion, resulted in an attack by state authorities. An attempt to arrest Crazy Snake led to a gun battle and the death of two deputies. Crazy Snake, wanted for murder, fled deep into the hills of the Creek Nation where he lived the last three years of his life a hunted man protected by traditional Creek society.

Indians resisted the imposition of American law in many different ways, weighing the options available to them to defend their sovereignty and their way of life. The Crazy Snake Uprising was unique in that it carefully sought to replicate the political and legal institutions lost under the Curtis Act. The rebellion honored Creek law and attempted to use it to preserve the Creek Nation.

Creek Civil War (1813–1814)

The Creek Civil War (1813–1814) touches on important themes in American Indian history, including internal factionalization, accommodation versus resistance, nativist religious revival, and federal Indian policy in the Southeast.

The war started out as an internal conflict, largely between Upper Creek and Lower Creek settlements. But after a group of nativist Red Stick Creeks from the lower towns attacked Fort Mims (in present-day Alabama) in August 1813, killing some five hundred Americans, the United States entered the dispute. U.S. troops under the leadership of Gen. Andrew Jackson, with the help of Creek, Choctaw, and Cherokee allies, soundly defeated the Red Sticks. The resulting Treaty of Fort Jackson (1814) stripped the Creeks of their lands in the largest cession ever engineered in the southeast.

The Creeks, also known as the Muskogees, originally lived in present-day Alabama, Georgia, and northern Florida. At the beginning of the nineteenth century, the Creek Nation comprised some twenty thousand people living in fifty towns, mainly in what is now Alabama and Georgia. The towns were roughly divided into thirty-nine Upper Creek towns and eleven Lower Creek towns. The Upper Creeks congregated around the Coosa and Tallapoosa Rivers in Alabama. The Lower Creeks lived near the Flint and Chattahoochee Rivers in western Georgia. The upper towns were to the west of the lower (that is, up the river). The English traders who traveled to the Creek territory from Charleston during the colonial era were probably responsible for the “upper-lower” designations.

Causes of the Civil War

When war broke out among the Creeks in 1813, the warriors known as Red Sticks fought against other Creeks,

Americans, and a contingent of Cherokees and Choctaws who were allied with the United States. Historians have debated why the Red Sticks went to war. They agree that most of the Red Sticks resided in the Upper Creek villages, while many of those who sided with the Americans and even fought against the Red Sticks were from the Lower Creek towns. Historians differ, however, over why the Upper and Lower Creek towns diverged. Some point to the growing cultural and economic differences between the Upper and Lower Creeks. Although there were exceptions, many of the Lower Creek towns favored acculturation, including sedentary farming, market exchange, and the acquisition of wealth. Some of the Lower Creeks even owned slaves. Many Upper Creeks rejected acculturation and continued to rely on hunting, gathering, and farming. According to the historian Claudio Saunt, material inequities emerged between poor and wealthy Indians, with the Lower Creeks accumulating more wealth than their Upper counterparts. When coupled with cultural and religious accommodation to Euro-American ways, these inequities created tension between different factions of Creeks.

Indian agent Benjamin Hawkins exacerbated these growing divisions. Hawkins arrived among the Creeks in 1796 and immediately implemented a civilization program. Federal Indian policy at this time was directed at “civilizing” Indians—that is, convincing them to give up their “savage” or “barbarous” culture and religion. Once Indians adopted “civilized” ways—including speaking English, adopting Anglo-American gender roles, and becoming settled farmers—they could become part of American society. Hawkins embraced this policy, and immediately set up a model farm at his agency for Creek men. He encouraged Creek women to spin and weave. Hawkins made considerable inroads with his program among the Lower Creeks, whereas many Upper Creeks rejected his ideas. According to the historian Benjamin W. Griffith Jr., the principal division in Creek society was between those who followed Hawkins and those who bitterly resisted his acculturation program.

Other historians, however, including Frank L. Owsley, point to nativist conflict as the chief cause of the Creek Civil War. In 1811 Tecumseh, a Shawnee, arrived among the Creeks, spreading his message of cultural, religious, and military resistance to whites. Many Upper Creeks listened to his message and vowed to cast out American influence, return to their cultural and religious values, and fight for their sovereignty. After Tecumseh left, Creek prophets continued to spread his message, including Josiah Francis (Hildis Hadjo),

Captain Isaacs, and Peter McQueen. These Creek prophets, especially Francis, became the most ardent supporters of war. The Lower Creek towns, however, tended to advocate peace and accommodation and largely ignored the prophets.

Although cultural, economic, and religious factors separated the Upper and Lower Creek towns, these divisions were not absolute. Indeed, in the months leading up to the civil war, many Red Stick warriors focused their ire on Big Warrior, a wealthy chief at Tuckabatchee, an Upper Creek village, who frequently sided with Hawkins. Just before the outbreak of the civil war, several Creeks killed American homesteaders, and Hawkins demanded that the Creeks capture those responsible. A contingent of Creeks associated with Big Warrior carried out Hawkins’s order, executed the insurgents, and took refuge at Tuckabatchee. These executions angered many Creeks, especially young warriors, who then laid siege to Tuckabatchee. After this incident, the Creek Civil War began. Red Sticks burned Creek plantations, killed livestock, and attacked illegal squatters living on Creek lands.

The United States Enters the War

Until the summer of 1813, the war remained between the Creeks. In July, however, the United States entered the fray. On July 27, 1813, a group of Red Sticks traveled to Pensacola to obtain weapons and ammunition from the Spanish. On the way home, the Red Sticks were attacked by a frontier militia at Burnt Corn Creek. In that battle, two Americans and some twenty Creeks were killed, and about twenty Americans and many Creeks were wounded. The surviving Americans fled to several hastily constructed stockades, including Fort Mims.

On August 30, 1813, about one thousand Red Sticks attacked Fort Mims in retaliation for Burnt Corn Creek. When the fighting subsided, the Red Sticks emerged victorious. Although the Red Sticks lost about a hundred warriors, they killed all of the Mississippi soldiers and about fifty Euro-American and Creek men stationed at the fort. Several historians argue that because Creeks were killed in the fort, the war was an internal conflict that should not have involved outsiders. However, around the country Americans demanded vengeance with cries of “Remember Fort Mims.” Newspapers across the region published sensationalized accounts of the “largest Indian massacre” in U.S. history, and the number of whites killed at Fort Mims grew with each retelling.

The federal government, finding it could not ignore the “Fort Mims massacre,” then entered the Creek Civil War. In

the fall of 1813, Georgia, Tennessee, and Mississippi Territory militias commanded by Gen. Andrew Jackson, joined by Choctaw and Cherokee allies, entered Creek territory to attack the Red Sticks. During the six months of war that followed, Jackson and his troops laid waste to much of the Upper Creek region. By the time the war ended, historians estimate that some three thousand Creeks had lost their lives—about 15 percent of the total population. Moreover, crops and towns across the Upper Creek region were destroyed.

Although this conflict saw many small engagements, three battles stand out as important to the overall outcome of the war. One of the first battles occurred on November 3, 1813, at Tallushatchee, a Creek village sympathetic to the Red Sticks. Troops led by Gen. John Coffee attacked the village and killed many of the Red Sticks who had taken refuge there. A few days later, on November 9, 1813, the Red Sticks lost again at the Battle of Talladega. After these initial battles, there was a break in the fighting. During the months that followed, many of Jackson's troops deserted, but he managed to gather reinforcements, which allowed him to inflict a final defeat on the Creek warriors at the third notable battle, which broke out at Horseshoe Bend on March 27, 1814. With the help of Lower Creek and Choctaw and Cherokee allies, Jackson's troops killed 800 Creeks and captured 350 Creek women and children. After the Battle of Horseshoe Bend, the remaining Red Stick survivors fled to the Seminoles or to the Gulf Coast. All the Creek prophets were killed or fled from Creek territory.

On August 9, 1814, Jackson forced thirty-five Creeks to sign the Treaty of Fort Jackson. Under this treaty, the Creeks ceded over twenty-three million acres, or over two-thirds of Creek lands, to the Americans. Ironically, almost all of the land in this single largest land cession in the southeast belonged to the Lower Creeks, who had embraced "civilization," sided with the Americans, and helped Jackson win at the Battle of Horseshoe Bend. In the years that followed, the United States made over \$11 million from the sale of Creek land ceded in the Treaty of Fort Jackson.

The Creek Civil War touched on themes played out in other locales throughout the southeast, and indeed, across the United States at various times. Like the Creeks, tribes around the nation had to deal with cultural, religious, and economic factionalization. Indians were divided over whether to resist white encroachment on their lands or acquiesce and hope to garner positive treaty terms. Nativist religious leaders inspired resistance among the Creeks; other

such religious movements motivated tribes to resist throughout the rest of the nineteenth century. Creek neighbors in the southwest, including the Cherokees, Choctaws, Chickasaws, and Seminoles, faced their own conflicts with white settlers, states who wanted their land and resources, and unfair treaties. Jackson's treatment of the Creeks (both friend and foe) served as a worrisome preview of the Indian policy he would follow when he became president.

Crime, Regulating in Indian Country

One of the primary tasks of a government is to control crime by making laws regulating behavior and enforcing those laws through the criminal justice system. The general rule is that each government has the authority to regulate crime within its territory and only within its territory. Thus, California officials can regulate crime within the state, but the California legislature cannot pass a law making something illegal in Virginia, or a California prosecutor cannot file charges against someone who committed a crime in Texas.

This general rule does not apply to regulating crime in Indian Country. “Indian Country” is the legal term used to describe the territorial boundaries of an Indian tribe. The term is defined by federal statute and includes all reservations, dependent Indian communities, and Indian-owned allotments. Tribal governments do not possess authority to regulate the behavior of all persons in their territory and cannot prosecute everyone who commits a crime there. Instead, a series of statutes and court decisions have created a complex set of rules governing who can regulate crime in Indian Country.

The issue can perhaps be approached most easily by exploring how the system created by those laws operates in practice and how authority to regulate crime in Indian Country is allocated. The determination of which government—federal, state, and/or tribal—possesses authority to regulate crime in Indian Country depends on three primary factors: the identity of the defendant, the identity of the victim, and the nature of the crime charged. Accordingly, the obvious threshold question is what it means to be an Indian for the purposes of criminal jurisdiction. Although no federal statute defines Indian for these purposes, several court decisions have articulated a well-accepted test that consists of two requirements. To be an Indian for purposes of regulating crime in Indian Country, a person must first possess some Indian heritage—that is, some degree of Indian blood. Second, the person must be recognized as an “Indian,” which is usually interpreted to mean that the person must be a member of a federally recognized tribe.

Tribal Governments

A tribal government has the authority to prosecute an Indian who commits a crime against another Indian in Indian Country but does not, with a few minor exceptions, have the authority to prosecute a non-Indian for a crime committed in Indian Country.

Tribal governments existed before Europeans arrived on the North American continent, and, as governments, they wielded the authority to deal with individuals whose behavior was deemed unacceptable. The U.S. Supreme Court recognized and affirmed this power in its 1883 decision in *Ex Parte Crow Dog*, in which the Court ruled that tribal governments possess the inherent sovereignty to regulate crime committed by Indians in Indian Country. The case stemmed from an incident in which one member of the Brule Sioux tribe, Crow Dog, killed another Indian named Spotted Tail. The tribe handled the matter according to its tradition,

which included requiring Crow Dog to pay reparations to Spotted Tail’s family, but did not include executing Crow Dog. The United States prosecuted Crow Dog, but the U.S. Supreme Court ruled that the federal government lacked the ability to prosecute an Indian for a crime committed against another Indian in Indian Country.

Although current law continues *Crow Dog*’s holding, the rule has not always held true. From *Crow Dog* until its 1978 decision in *U.S. v. Wheeler*, the Supreme Court divided the populace into two categories: Indians and non-Indians. Although tribal governments could regulate crime committed by Indians in Indian Country, the Supreme Court did not expressly rule until 1978 on the authority of tribal governments to prosecute non-Indians. Beginning with *Wheeler*, the Court divided the populace into three categories: non-Indians, member Indians (those who were members of the tribe bringing the criminal charges), and non-member Indians (those who were members of other tribes). *Wheeler* declared that tribes possess inherent authority to prosecute member Indians. In its 1990 decision in *Duro v. Reina*, the Supreme Court held that tribes lacked authority to prosecute non-member Indians for crimes committed in Indian Country. In response, Congress quickly passed a statute known as the *Duro fix* amendment, which declared that tribes do possess inherent criminal jurisdiction over all Indians who commit crimes in Indian Country. The Supreme Court upheld the statute in its 2004 decision in the case of *U.S. v. Lara*. Consequently, tribal governments may once again prosecute any Indian who commits a crime in Indian Country.

As a result of the U.S. Supreme Court’s 1978 decision in *Oliphant v. Suquamish Indian Tribe*, tribal governments lack the authority to prosecute non-Indians. *Oliphant* involved two separate cases, both of which involved defendants who were non-Indians but lived on the Suquamish reservation. One defendant was accused of assaulting a tribal police officer, and the other defendant led police on a high-speed car chase that ended when he crashed into a tribal police car. The U.S. Supreme Court reviewed the history of the federal government’s relationship with tribal governments and reached the conclusion that tribal governments had at some point lost the ability to use criminal law to regulate the behavior of non-Indians in Indian Country. The Court’s decision was highly controversial, but neither Congress nor the Court had taken affirmative steps to change that decision as of the early twenty-first century.

FIGURE 1: Violent Victimization*

* National Crime Victimization Survey annual average rates and percentages for 1992–2001 (does not include murder).

Source: Bureau of Justice Statistics. *A BJS Statistical Profile, 1992–2002: American Indians and Crime*. U.S. Department of Justice. <http://www.ojp.usdoj.gov/bjs/pub/pdf/aic02.pdf>

U.S. government reports show that American Indians experience violent crime at a rate twice that of the U.S. population.

This same division, focusing on whether the defendant is Indian or non-Indian, governs a tribe's ability to regulate so-called victimless crimes. Victimless crimes include matters such as gambling, possession of drugs, prostitution, and reckless driving. Many governments have criminalized such behavior based on societal norms that declare it unacceptable, even if no victim is readily identifiable in the same way as the victim of an assault or a robbery. Tribal governments may prosecute Indians for victimless crimes but may not prosecute non-Indians.

In investigating and prosecuting crimes, tribal governments must follow the provisions of the Indian Civil Rights Act of 1968, and one of those provisions declares that in sentencing a defendant, tribes may not impose a sentence of more than one year's imprisonment and/or more than a \$5,000 fine. These limitations are per offense, so a defendant convicted of multiple offenses may be sentenced to the maximum punishment for each conviction.

The Indian Civil Rights Act also permits a defendant to challenge a sentence by petitioning a federal court to issue a writ of *habeas corpus*. The purpose of such a petition is to request that a federal court correct any errors in the tribal proceeding that violated the individual rights guaranteed to the defendant by the Indian Civil Rights Act. A federal court may issue a writ of *habeas corpus* only if it finds an error that violated the act and which had a substantial effect on the outcome of the case. Federal courts may not review tribal proceedings for errors of tribal law. A petition for a writ of *habeas corpus* may be filed only by a person who is in the custody of the tribal government and who has first exhausted his or her tribal remedies.

Federal Government

The federal government may regulate crime in Indian Country only when authorized to do so by a specific statute. These statutes fall into two categories: statutes of general applicability and statutes specifically relating to behavior in Indian Country.

Statutes of general applicability are ones that Congress clearly intended to apply everywhere in the United States, such as mail fraud or assault on a federal officer. The federal government may always prosecute a defendant accused of violating one of these laws within its borders; it does not matter whether the violation occurred inside or outside Indian Country.

Congress has also enacted a number of statutes targeted at Indian Country. Some criminalize specific behavior, such as embezzling from a tribal organization or domestic violence. Two other statutes, the Indian Country (or General) Crimes Act of 1817 and the Major Crimes Act of 1885, grant the federal government more far-reaching authority to regulate crime in Indian Country, but do not authorize a comprehensive ability to regulate all such crime.

The Indian Country Crimes Act gives the federal government the ability to regulate crime in Indian Country, but proceeds to give three exceptions to this power. In the first exception, the act explicitly provides that the statute does not apply to crimes committed by one Indian against the person or property of another Indian. In a series of cases, the U.S. Supreme Court extended this exception to apply to crimes committed by one non-Indian against the person or property of another non-Indian. Thus, the act applies only to interracial crimes.

FIGURE 2: American Indians and Crime, 1992–2001

Source: Bureau of Justice Statistics. *A BJS Statistical Profile, 1992–2002: American Indians and Crime*. U.S. Department of Justice. <http://www.ojp.usdoj.gov/bjs/pub/pdf/aic02.pdf>

Various sources have begun collecting data on crime in Indian Country. These statistics indicate that Native Americans experience violence at a rate of more than twice that of people in the United States as a whole.

The act also contains language declaring that the statute does not grant the federal government authority to prosecute an Indian for a crime if the Indian was already punished by the local law of the tribe. However, if the crime is one listed in the Major Crimes Act (discussed below), or violates a federal statute of general applicability, the federal government may still prosecute.

Finally, the Indian Country Crimes Act also explicitly provides that it does not apply, and does serve as a basis of federal authority to regulate crime in Indian Country, when a treaty stipulates that the tribe retain exclusive authority to regulate crime. It is unclear whether any such treaties still exist.

The Major Crimes Act was enacted by Congress in 1885 in reaction to the Supreme Court's decision in *Ex Parte Crow Dog*. At the time of the *Crow Dog* decision, the only potentially relevant statute providing the federal government with the ability to prosecute *Crow Dog* was the Indian Country Crimes Act. Because that statute specifically declares that it does not provide the federal government the authority to prosecute Indian-on-Indian crime in Indian Country, no law existed to authorize the federal prosecution. The goal of the Major Crimes Act was to overturn the *Crow Dog* decision and ensure that the federal government had the necessary authority to prosecute Indians who commit serious crimes in Indian Country. The statute confers on the federal gov-

ernment the ability to prosecute an Indian who commits one of the offenses listed in the statute, which include, among others, murder, manslaughter, sexual abuse, arson, and burglary. The U.S. Supreme Court upheld the Major Crimes Act in 1886, in the case of *U.S. v. Kagama*, declaring that Congress possesses plenary (complete) power over Indian affairs and thus had the authority to enact the Major Crimes Act.

The federal government may also possess the ability to prosecute victimless crimes that occur in Indian Country, but again, some statute must exist authorizing the federal government to do so. If a defendant's actions violate a federal statute of general applicability, that certainly authorizes federal prosecution. The Major Crimes Act does not support such prosecutions, as the language of the statute authorizes prosecutions of Indians who commit crimes against the person or property of an Indian or other person. This provision has been interpreted to require a victim. The Indian Country Crimes Act, however, has been interpreted as authorizing the prosecution of both Indians and non-Indians for federal crimes, including victimless crimes. The statute, however, requires that the victim and defendant be of different races. As a consequence, courts have held that in the case of victimless crimes, non-Indian defendants may be prosecuted only if the crime does not implicate an Indian or Indian interest, and Indian defendants may be prosecuted only if the crime does not implicate a non-Indian or the

Federal prosecutors may choose which cases to pursue. A Syracuse University database reveals that federal prosecutors have refused to file charges in 62 percent of the cases arising in Indian Country. The federal government has not released specific data.

interests of a non-Indian. Provided the interracial scheme of the statute is not disrupted, courts have interpreted it to authorize the federal government to prosecute victimless crime occurring in Indian Country.

State Governments

One of the fundamental tenets of Indian law and federal Indian policy is that Congress possesses plenary power to regulate Indian affairs, and that, generally speaking, states lack the ability to regulate Indians in Indian Country. This general prohibition also applies in the context of crime control, and means that states may not prosecute Indians who commit crimes in Indian Country. This applies regardless of whether the crime was committed against an Indian or a non-Indian.

Before exploring this rule further, it should be noted that the general rule assumes that no special statute exists conferring additional jurisdiction on a state. Two examples of these special statutes exist: Public Law 280 and settlement acts. Public Law 280 is a federal statute granting several states (including Alaska, California, Minnesota, Nebraska, Oregon, and Wisconsin) the authority to, among other things, regulate crime in Indian Country just as it does elsewhere in the state. Public Law 280 does not deprive tribal governments of the ability to regulate crime; rather, it gives concurrent authority to the state government.

Settlement acts are federal laws that resolved land disputes and similar claims, such as with tribes in Kansas, Maine, and

New York. Some settlement acts conferred additional jurisdiction on a state. Thus, when exploring who has the authority to regulate crime in a specific Indian Country, one must first determine whether a special statute exists regarding that territory.

If no special statute exists, the general rule applies, which provides that states possess the authority to regulate crime committed by a non-Indian against a non-Indian in Indian Country, and only such a crime. The issue of victimless crimes is more controversial, since permitting such prosecutions means allowing the state to set normative behavioral rules for the territory of a separate sovereign. Most courts, however, permit states to prosecute victimless crimes committed in Indian Country by non-Indians.

States have jurisdiction to prosecute crimes between non-Indians that occur in Indian Country. In a series of cases between 1882 and 1946, the U.S. Supreme Court held that when an Indian is neither the defendant nor the victim, Indian interests are not implicated and state jurisdiction is therefore proper.

Double Jeopardy

Clearly, issues arise in which more than one government possesses the ability to prosecute the same defendant for the same activity. This overlap is not unique to Indian law. Often a state and the federal government will both possess the ability to prosecute the same person for the same action, such as drug trafficking or kidnapping that crosses state lines. The

Fifth Amendment to the U.S. Constitution provides that no person may be twice put in jeopardy for the same actions. This Double Jeopardy Clause has been interpreted to mean that neither the state nor federal government may prosecute the same person twice for the same crime.

Under a principle known as the Dual Sovereignty Doctrine, however, the U.S. Supreme Court has ruled that the Double Jeopardy Clause does not prevent two governments from each prosecuting the same defendant for the same action. The theory behind the doctrine is that the defendant's activity was a separate offense against each sovereign, and is thus two separate “crimes.” Accordingly, two prosecutions do not count as multiple prosecutions for the same offense. For the doctrine to apply, each of the two prosecuting governments must derive its sovereignty from a separate and independent source. The federal government and the state governments are separate sovereigns. Within a state, however, various other governments may exist, such as city governments and county governments. These subdivisions derive their sovereignty from the state, and thus do not satisfy the prerequisites of the doctrine. Thus, a kidnapper who snatches his victim in Oklahoma City, Oklahoma, and transports him to Little Rock, Arkansas, where he kills him, may be prosecuted by the state of Oklahoma and the state of Arkansas, but cannot be prosecuted by the Oklahoma City district attorney and the Little Rock district attorney.

In the context of crime in Indian Country, the Fifth Amendment's Double Jeopardy Clause restricts the federal and state governments from multiple prosecutions of the same defendant (subject to the Dual Sovereignty Doctrine), and the Indian Civil Rights Act contains a similar provision restricting a tribal government from twice prosecuting the same defendant for the same crime.

The case of *Wheeler* raised the question of whether the Dual Sovereignty Doctrine extended to tribal governments. Wheeler, a member of the Navajo Nation, had been convicted in Navajo tribal court of contributing to the delinquency of a minor. The federal government filed statutory rape charges arising out of the same incident, and Wheeler argued that double jeopardy barred the federal prosecution. The U.S. Supreme Court rejected Wheeler's argument and ruled that tribal governments derive their sovereignty from a separate source independent of federal and state governments. Consequently, the Court ruled that the Dual Sovereignty Doctrine applied and that federal law does not limit multiple prosecutions of the same offender by tribal, federal, and state governments.

Crockett, David “Davy”

David Crockett (1786–1836) was born in Green County, Tennessee, and raised on the Tennessee frontier. Due to his hunting, scouting, and Indian fighting skills, Crockett gained a reputation as the “King of the Wild Frontier.” During the Creek Civil War (1813–1814), he enlisted in the Tennessee militia following the massacre of settlers at Fort Mims, Alabama, by Creek Indians. Serving in the Second Regiment of Volunteer Mounted Riflemen, he participated in the attack on the Indian town of Tallushatchee, Alabama, on November 3, 1813. The battle's retributive nature and extreme violence against the trapped Creeks helped to shape Crockett's pro-Indian sociopolitical ideology throughout the rest of his life.

Capitalizing on his “common man” frontier persona, Crockett won election to the United States House of Representatives in 1826, 1828, and 1832. As a congressional representative, he openly opposed President Andrew Jackson's policies toward Indians. He strongly criticized the removal of eastern tribes from their lands under the 1830 Indian Removal Act, a position that caused his reelection defeat in 1830.

After regaining a congressional seat in 1832, Crockett was defeated again in 1834. He then left Washington to join the Texas Revolution (1835–1836). At the Battle of the Alamo, tradition holds that the attacking army of Mexican president Antonio López de Santa Anna killed Crockett and his fellow defenders in the early morning assault of May 6, 1836.

However, recent research suggests that Crockett and a handful of defenders survived, only to be summarily executed after the battle by Santa Anna.

Crook, George

George Crook (1828–1890) was a career army officer who served in the Civil War (1861–1865) but is best known for his role in the United States–Indian Wars (1848–1891). General William T. Sherman once called him the greatest Indian fighter of all. After graduating from the United States Military Academy at West Point, Crook served in Oregon and northern California, where he fought in the Yakama War (1855–1858) and Rogue River War (1855–1856). He returned east when the Civil War broke out and accepted a commission in the Union Army. He fought at the battles of Antietam, Chickamauga, and in the Shenandoah campaign. He eventually achieved the rank of major general of volunteers.

After the war Crook received a commission to major general in the regular army but reverted to the permanent rank of lieutenant colonel. He was assigned to frontier duty in the Pacific Northwest. His campaign against the Northern Paiutes so impressed President Ulysses S. Grant that he put Crook in command of the Arizona Territory in 1871 and assigned him the task of pacifying the Chiricahua Apaches. Crook's use of Apache scouts, his relentless pursuit of the Indians, and his willingness to negotiate proved successful against the Apaches and became his trademarks. In 1872 the Apaches were on reservations, Arizona Territory was at peace, and Crook was promoted to brigadier general.

In 1875 Crook took command of the Department of the Platte, a large military district that covered what is present-day Iowa, Nebraska, Utah, and sections of the Dakotas and Montana. On March 17, 1876, his troops attacked a Northern Cheyenne and Lakota camp on the Powder River

in Montana Territory. Although clumsily executed, it was the opening battle of the ill-fated Sioux War of 1876, in which Crook was to play a critical role. By June his command was back in Montana Territory. Cheyenne and Lakota warriors led by Crazy Horse attacked them on the Rosebud River on the 17th. Many people call the outcome a draw, but the six-hour battle forced Crook to withdraw rather than carry on to his rendezvous with Lieutenant Colonel George A. Custer, a decision that contributed to the U.S. Army's debacle at the Battle of Little Bighorn.

Crook occasionally intervened in positive ways for Indians. In 1879, for example, he found legal representation for, and spoke on behalf of, Standing Bear, a Ponca Indian. Standing Bear had been arrested by Crook's troops for entering his old Nebraska homeland to bury his son. A Nebraska court ruled in favor of Standing Bear in *Standing Bear v. Crook* and held that Indians were "persons" under the law and could claim the right of *habeas corpus*. Late in his life, Crook also criticized the U.S. government's failure to abide by its treaties with the Indian tribes.

In 1882 the Apaches took up arms again and Crook returned to Arizona. He spent the next several years trying to pacify them. He forced many to surrender but Chiricahua leader Geronimo evaded him. Nelson A. Miles, who replaced Crook, managed to restore order and exile Geronimo and his followers to a prison in Florida. Crook worked to have Geronimo and his followers relocated to Fort Sill in the Indian Territory.

In 1888 President Grover Cleveland put Crook, then a major general, in command of the Division of the Missouri. In 1889 Crook headed a group of commissioners that persuaded the Sioux to accept allotment of their lands, which opened their reservations to white settlement. Crook believed that allotment would lead to the break up of the reservations and thereby speed the Indians' assimilation into mainstream society.

Cultural Property

The protection of cultural property is a key element in the preservation of any culture, including that of American Indians and Indian tribes. Cultural property can be defined as items so important to a given culture that they assist the culture in identifying itself; they reflect the culture's vision of itself and serve as the embodiment of its important emotional and historical events. Laws exist at the international, national, state, and tribal levels to identify, control, and preserve cultural property. This is important not only to ensure its passage to the next generation, but also to guarantee that it is used and depicted in a manner acceptable to the creating culture. For indigenous people, cultural property includes both tangible and intangible items, including carvings, pottery and rug designs, paintings, religious artifacts, sacred sites, dances, songs, stories, plant knowledge, and language.

One of the key elements distinguishing cultural property from other property is that cultural property is usually deemed to be owned by the culture as a group, and not by any one individual. For example, the Statue of Liberty belongs to the people of the United States. The idea that it could be owned by a single individual who could dispose of it at will is inconceivable. In American Indian traditions, a person, family, or clan may serve as the custodian of an item of cultural property, but they are not its owners in the sense of possessing the unilateral ability to sell or destroy the item. The dispute over the artifacts from Chilkat Village's Whale House illustrates this tension. Once the art world became aware of the existence of the exquisitely carved totem poles and rain screen, an art dealer began negotiations to purchase the artifacts from the Whale House Keeper, who, according to tribal culture, was the custodian of the artifacts but not the owner. After a lengthy period of time, which included a series of lawsuits, legislative actions, and several attempts to remove the artifacts from the village (one of which was ultimately successful), a court ruled that the artifacts were the cultural property of the Klukwan people and could not be sold or removed from the village without the consent of the village council.

Within the United States, disputes regarding American Indian cultural property arise due to a variety of circumstances. Three of the more common are: 1) many Indian sacred sites are located on land now owned by the United

States, 2) Indian artifacts are often viewed only as historical items to be collected by museums or private individuals, and 3) American law tends to protect individual, as opposed to collective, ownership.

Protection of Tribal Cultural Property on Public Lands

Many cultural property matters litigated in the United States have centered around the right of Indians to have access to sacred sites in order to practice their religion, and decisions by federal agencies to manage public lands in ways that either accommodate or fail to accommodate that access. Federal policy, embodied in the American Indian Religious Freedom Act of 1978 and the 1996 Executive Order 13007, require federal agencies to respect the religious practices of American Indians and to take those practices into account when making decisions and setting regulations.

In addition, the National Historic Preservation Act of 1966, which was significantly amended in 1980 and 1992, contains a mechanism for including physical locations classified as traditional cultural property on the National Register of Historic Places, established a review process for ensuring that any decision impacting an historic site be fully informed, and created a system of state and tribal historic preservation officers with significant roles in implementing the national program. However, the act has been criticized because it defines items on the National Register as the cultural property of the United States, and federal (rather than tribal) entities generally have final say in making management and other decisions impacting the property. In addition, the initial step of listing the property on the National Register requires disclosing details about its location, history, and religious significance. Many tribal religions forbid such disclosures to outsiders. National Register Bulletin No. 38, originally issued by the National Park Service in the early 1990s, provides guidelines for evaluating and documenting traditional cultural property.

Other federal statutes do not expressly protect cultural property, but do require informed decisionmaking before federal agencies take action that may impact cultural property. Perhaps the most important such statute is the National Environmental Policy Act of 1969, which requires analysis of major federal actions that might significantly affect human health and the environment, including "historic, cultural and national aspects of our heritage." The act provided the basis for a challenge to the decision of the U.S. Forest Service to authorize upgrades to a ski resort in the Coconino National

Forest, an area of religious significance to a number of tribes in the southwestern United States (*Navajo Nation v. United States Forest Service* [2007]), and another federal decision to authorize the construction of an observatory on Mount Graham in Arizona (*Mt. Graham Red Squirrel v. Yeutter* [1991]), as well as subsequent cases.

Historic Treatment of Tribal Cultural Property

For over one hundred years, museums and private individuals have collected the arrowheads, pots, carvings, and other artifacts made by Indian cultures. Collectors prize these items for their historic, artistic, and monetary value. The demand for such items has created a thriving trade, including a black market, in Indian artifacts. U.S. map agencies have stopped indicating the location of archaeological sites on maps, as they were literally serving as treasure maps for pothunters, people who loot archaeological sites for profit.

Archaeologists gain information by analyzing artifacts in context, which requires that excavations be conducted by trained individuals who properly document their work. In an effort to eliminate excavation by untrained or unauthorized individuals, Congress first enacted the Antiquities Act of 1906 and later the Archaeological Resources Protection Act of 1979 (ARPA). Both statutes establish procedures and requirements for excavating sites. From the perspective of American Indians, both statutes are troubling, as they assert that Indian skeletal remains are archaeological resources and are federal property. ARPA does provide that archaeological resources found on tribal land are tribal property, but that does not alter the fundamental problem of treating human remains as archaeological resources, as something to be dug up and tested and studied. Such actions violate the religious beliefs and burial customs of most tribes.

Museums and private entities have also long collected and displayed the skeletons and bones of Indians. In 1868 the U.S. surgeon general issued a request that army medical officers collect Indian skulls for study, leading to the desecration of Indian burial grounds and the bodies of Indians who died in battle. Indian burial sites were also turned into roadside attractions, including the Indian Burial Pits near Salina, Kansas, and Dickson Mounds in Illinois.

By the time Congress began hearings on the issue in the late 1980s, over forty-three thousand Indian skeletal remains were in the hands of museums—over eighteen thousand of them in the Smithsonian alone. Congress would ultimately enact the National Museum of the American Indian Act in 1989 and the Native American Graves Protection and

Repatriation Act in 1990. These statutes require museums to inventory their holdings of American Indian remains and artifacts and create procedures for repatriating them.

The problems caused by collectors extend beyond the damage to archaeological and burial sites. Regardless of whether the collectors acquired the objects legally or illegally, the phenomenon of collecting Indian artifacts fosters a view of Indians as historical curiosities, rather than as members of living, vibrant cultures. It also naturally leads to conflicts between collectors and tribes over who controls the disposition and treatment of cultural objects. One example of this conflict was the issue of the Zuni War Gods, statues located at various spots around the Zuni Pueblo reservation. The statues were specifically designed to be slowly destroyed by exposure to wind, rain, and other elements. Through the erosion process, the War Gods released their power and protected the Pueblo. In the 1970s the Pueblo became aware that many of the War Gods had been stolen and sold to museums and other collectors. In 1978 the Zuni began a campaign to locate and repatriate the missing statues. Between 1978 and 1990, thirty-eight War Gods were returned without a single lawsuit being filed.

Fulfilling the demands of tourists and collectors can also worsen conflict between tribes. For the Hopis, Kachinas are the physical embodiment of their gods, and strict cultural norms exist restricting the carving and possession of Kachina masks and the carving of Kachina dolls. Indians who are not Hopis have begun manufacturing and selling Kachinas in violation of these cultural norms.

Laws Protecting Cultural Property

The United States has many statutes protecting intellectual property, and a variety of efforts have been made by Indians and Indian tribes to use these laws to protect their cultural property. The Copyright Act, which protects an author's exclusive rights to original work fixed in a tangible medium, potentially provides protection for Indian songs, stories, dances, weaving patterns, pottery, and other art. The law's requirement of identifying the original author and the time frames in which protection is provided, however, render the statute useless to many tribes. The nature of tribal custom and tradition means that often no one individual author or artist can be identified, or, even if one existed, the identity has been lost over time. Ultimately, tribes want to protect their traditional stories and songs as cultural property under the control of the tribe for eternity, not establish rights reserved for one individual for a set period of time.

Patent law, which protects discoveries and inventions, has the potential to protect traditional seed crops and plant knowledge, as well as genetic resources. While some tribes have successfully obtained patents, two significant areas of controversy exist. American Indians, like indigenous people around the globe, possess significant amounts of plant knowledge, including which crops thrive in particular environments and which plants can be used to treat certain diseases. Pharmaceutical and agricultural companies have sought to use this knowledge in their research and development processes. After acquiring the information, the companies often seek patents on their discoveries. The indigenous groups originally in possession of the information usually do not share in the proceeds of the patent. Efforts by tribes themselves to seek patents often fail because a specific inventor cannot be identified, the discovery occurred too far in the past, and/or because the tribe cannot describe the discovery in a manner acceptable to Western scientists.

Patents may also be issued for human cells and genetic discoveries. Because some tribal groups are genetically isolated and unique, they have become the focus of scientists seeking to identify ways in which the groups' DNA creates either susceptibility or resistance to certain diseases. Efforts to patent these discoveries have outraged indigenous groups and activists, particularly in cases where scientists did not first obtain the informed consent of those involved.

Trademark law exists to protect symbols and names used by businesses and other entities to distinguish their products and services from those of other entities. Tribal names, images, and symbols are used to market products (Indian motorcycles, Jeep Cherokee, Mazda Navajo, and Crazy Horse Malt Liquor, for example), as mascots for sports teams (Washington Redskins, Cleveland Indians, North Dakota Fighting Sioux, Florida State Seminoles), and as state logos (the symbol on the New Mexico state flag was appropriated without permission from the Zia Pueblo). The Lanham Act, the primary federal trademark statute, prohibits registration of any marks "which may disparage or falsely suggest a connection with persons, living or dead, institutions, beliefs, or national symbols." Several efforts have been made to use this provision to cancel trademarks deemed offensive and to provide more control to tribes over their names and symbols.

In addition to general intellectual property laws, Congress also passed the Indian Arts and Crafts Act in 1990 (IACA). The IACA's primary purpose is not specifically to protect cultural property but to require that products represented and sold as being Indian made are indeed Indian made. The

IACA revived and expanded the Department of Interior's Indian Arts and Crafts Board, created a mechanism for assisting with the registration of trademarks and marketing of Indian products, and imposed criminal and civil liability on those who sell products falsely labeled as Indian made. The primary criticism of the IACA centers on its definition of Indian, which requires that a person either be a member of an Indian tribe or be certified as an Indian artisan by an Indian tribe. This definition has been criticized as being both over- and underinclusive.

Tribes often take a broader view of cultural property and seek to protect things, like language, that assist in the transmission and preservation of culture, even if they do not satisfy any existing definition of cultural property. The United States has an uneven history with respect to Indian languages. Beginning with the recommendation by the 1867 Indian Peace Commission, and continuing well into the twentieth century, schools were established to educate Indians using English only; Indian students were punished, often severely, for speaking their native language. Despite the official federal policy to eliminate Indian languages, the U.S. military benefited tremendously from tribal members who used their languages to transmit messages in both world wars. The contributions of the Comanche and Navajo Codetalkers of World War II (1939–1945) have particularly been singled out for recognition. In 1990 Congress officially reversed its prior policies when it enacted the Native American Languages Act, which established a number of mechanisms for preserving Native languages.

Many international agreements exist recognizing and protecting cultural property, including the 1970 United Nations Educational, Scientific and Cultural Organization (UNESCO) Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property. The United States is a signatory to the convention, and Congress has enacted implementing legislation. The convention protects items of archaeological and ethnological interest that are at least 250 years old, which would include many items of significance to Indians. However, it allocates responsibility for designating and protecting cultural property to the United States and not to the tribes themselves.

Other international agreements protect various aspects of cultural property and resources, including the 1992 United Nations Declaration on the Rights of Persons Belonging to National or Ethnic, Religious and Linguistic Minorities and the 2007 Declaration on the Rights of Indigenous Peoples.

The World Intellectual Property Organization, a specialized arm of the United Nations, has undertaken to study methods of protecting the traditional knowledge and cultural expressions of indigenous peoples, as well as the intellectual property aspects relating to genetic resources. The Organization of American States has established a Working Group to Prepare the Draft American Declaration on the Rights of Indigenous Peoples.

Curtis, Charles

Charles Curtis (1860-1936) was a member of the Kaw Tribe, a Kansas Republican congressman, senator, and vice president of the United States. Curtis was born on the Kansas frontier to a mother of mixed Indian and French heritage and a father of English-American stock. Raised for a time on the Kaw Indian reservation, the future politician ultimately chose to pursue a formal education and life among his non-Indian relatives. Following a distinguished legal career, Curtis served Kansas in the United States Senate from 1907-1913 and from 1915-1929.

Strongly identifying as Native American, Curtis was among a group of influential Indian progressives who supported government assimilation programs, often over the strong objections of tribal leaders. As chair of the House Committee on Indian Affairs, he sponsored the Curtis Act of 1898, a law that forced allotment and tribal dissolution on the Five Tribes of the Indian Territory (Cherokees, Chickasaws, Choctaws, Creeks, and Seminoles) and paved the way for Oklahoma statehood. Curtis also promoted legislation that protected Indian mineral rights, funded Native schools, and removed squatters from reservation lands.

In national politics, the Kansas senator achieved great heights, becoming Senate majority leader and vice president of the United States during the Herbert Hoover administration (1929-1933). He was the first Native American to achieve these offices. Curtis died of a heart attack on February 8, 1936, having served as a major force in Republican politics and Indian affairs for over a quarter of a century.

Curtis Act of 1898

The Curtis Act of 1898 was a piece of allotment era legislation that attempted to destroy tribal governments in the Indian Territory, particularly the five major tribes that had been relocated from the Southeast (Cherokees, Chickasaws, Choctaws, Creeks, and Seminoles). The act overturned

numerous treaty rights by allotting tribal lands, invalidating tribal laws, abolishing tribal courts, and giving the secretary of interior control over tribal revenues and mineral leases on Indian lands.

Passage of the General Allotment Act (also known as the Dawes Act) of 1887 had previously initiated a policy designed to break apart tribal collective lands into smaller portions called allotments. It also empowered the Dawes Commission to redistribute those allotments to individual Indians, with the surplus being sold to non-Indians at bargain prices. In an address to Congress in 1901, President Theodore Roosevelt praised the Dawes Act, declaring that the time had come to recognize the Indian as an individual and not as a member of a tribe.

By the late 1890s, however, the act was encountering strong resistance from some tribes, particularly those in the Indian Territory. Many tribal leaders refused to negotiate new agreements with the Dawes Commission that they claimed broke solemn promises previously made to them by the government. Isparhecher, a Creek chief, noted the “alarming disregard for the terms of treaties already in existence. . . . What good is there to come of future treaties with the United States when she has no respect for those already existing between us” (Kent Carter, *The Dawes Commission and the Allotment of the Five Civilized Tribes*, 1999). Ultimately, however, the inevitability of allotment became apparent, and some of the tribes attempted to negotiate the best terms that they could with the Dawes Commission. When these agreements were presented to the tribal membership, they were often voted down. One such agreement with both the Choctaws and Chickasaws, the Atoka Agreement, was rejected by the Choctaws in December 1897.

Eventually, Congress grew increasingly impatient with the progress of allotment in the Indian Territory under the Dawes Commission. On February 24, 1898, Representative Charles Curtis, himself of Kaw ancestry, introduced “An Act for the Protection of the People of the Indian Territory, and for Other Purposes,” and President William McKinley signed the bill into law on June 28, 1898. Despite its benevolent-sounding title, the only people being protected by this legislation were non-Indians. In effect, what the Dawes Commission had been unable to achieve through negotiation, the Curtis Act now attempted through a legislative order.

The portions of the act that immediately affected the tribes dealt with enrollment. Tribal resistance had hindered the Dawes Commission’s attempts to collect satisfactory rolls

of citizens, and allotment could not proceed until these rolls were generated. Section 21 of the act specified that the commission would have access to all tribal rolls and records, and, if necessary, the federal court in Indian Territory could compel tribal officials to turn over the documents. Refusal or failure to do so would result in punishment for contempt.

Once a citizenship roll was completed and tribal lands were surveyed, Section 11 authorized the commission to proceed with allotment. Mineral rights on allotted land, however, were not distributed. Section 13 gave the secretary of the interior exclusive control over those rights.

In the event allotment itself was not sufficient to destroy the tribal collective, the Curtis Act also attempted to starve tribal governments financially. Section 19 forbade any federal payments to tribal governments or tribal officials. Instead, the secretary of the interior was placed in charge of tribal funds, which subsequently would be distributed only to individual tribal members.

In addition to the monetary restrictions, the Curtis Act attacked the legal infrastructure of the tribes. Section 26 prohibited the enforcement of any tribal laws by any U.S. court in the Indian Territory. Section 28 went even farther, abolishing all tribal courts and removing any powers of tribal court officers.

The devastating impact of the Curtis Act was readily apparent in a few short years. When the Senate Select Committee on Indian Affairs visited each of the Five Tribes in the 1930s, they found that most of the traditionalist communities were near starvation and that literacy rates had dropped sharply, as had tribal land holdings. By 1933 the Choctaw Nation had lost nearly seven million acres and was struggling to hold on to a mere twenty-five thousand. The Creeks had been dispossessed of all of their tribal lands except for one acre. Widespread poverty also meant that many individual allotments were sold under duress. In response to these conditions, Congress passed the Oklahoma Indian Welfare Act of 1936, which repealed many of the sections of the Curtis Act. Other sections of the Curtis Act were further modified by passage of the Five Tribes Act of 1970.

Custer, George Armstrong

George Armstrong Custer (1839–1876) served with distinction in the Civil War (1861–1865), earning the rank of brigadier general. At war's end, rather than return to civilian life, he accepted a reduction in rank and transferred to the American West to protect settlers. Custer became lieutenant colonel of the newly created Seventh Cavalry. He first engaged Indian warriors in 1867 while assisting in an expedition against the Sioux and Cheyennes, who were fighting the construction of U.S. army forts on Indian land not ceded by treaty.

Following the 1867 expedition, Custer deserted his military post for an unauthorized visit to his wife and was court-martialed. A year later, he returned to active duty and, on November 27, 1868, led the Seventh Cavalry in the massacre of a band of Cheyenne Indians camped at Washita River in present-day Oklahoma. The Cheyennes, led by chief Black Kettle, had been instructed by a U.S. army colonel to make camp and await the return of a general. Under Custer's command, army troops charged the Cheyennes village at dawn, killing more than one hundred men, women, and children, including Black Kettle and his wife.

In June 1876 President Ulysses S. Grant reluctantly allowed Custer to join Gen. Philip Sheridan, Col. John Gibbon, and Gen. Alfred H. Terry on a campaign to surround the Sioux and Cheyennes at Little Bighorn. Grant insisted that Custer not be placed in charge of the troops. Sheridan disobeyed these orders when he allowed Custer to

scout with his men in a separate foray, evidently to locate the Indian encampment. Custer was ordered not to attack the village but to wait for the three main columns of troops. On June 25, 1876, Custer ignored Sheridan's orders and led an attack that resulted in the total destruction of his troops. Custer and 251 officers and men were killed in the Battle of Little Bighorn. (Exact casualties for the battle are disputed.)

The defeat shocked the American public. The government began a new policy of unrelenting, year-round warfare. (Warfare was traditionally not carried out in the winter months due to the harsh weather and its effect on men and horses.) The Seventh Cavalry was reconstructed, rearmed, and participated in the capture of Chief Joseph's band of Nez Perce in 1877 and the massacre of some three hundred Lakota Sioux at Wounded Knee in December 1890.

General Custer and the Battle of Little Bighorn became part of the popular history of the American West. Hundreds of books have been written about Custer and more than a dozen movies based on the battle have been filmed. Few depict any of the actual events that led to the battle; most portray Custer as a hero ambushed by a band of "savage" Indians.

Article 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace and its honor is hereby pledged to keep it. The Indians desire peace and they now pledge their honor to maintain it.

Dams and Hydroelectric Power

Dams provide approximately 19 percent of the world's electricity and are an important energy source that is often considered relatively "green" (environmentally friendly) in comparison with other sources. In the United States, fourth among nations with the most hydroelectric capacity, dams have provided power, flood protection, irrigation waters, and improved river transportation. Their reservoirs have become sites of recreational activities. Dams have also harmed ecosystems, violated significant archeological and Native American sacred sites and millions of acres of reservation lands, and forced the relocation of thousands of Native and non-Native people. The restructuring of river environments with dams raises important issues regarding treaty rights, land rights, and the allocation of resources such as fisheries and water.

Although dam building on U.S. rivers did occasionally affect Native and non-Native communities in the nineteenth century, impact was relatively limited until the twentieth century, when federal agencies turned to river development for the purpose of hydroelectric generation. In 1902 Congress passed the Newlands Reclamation Act, which created what eventually became known as the Bureau of Reclamation to oversee irrigation projects in the American West. Between the 1930s and the 1970s, the Bureau of Reclamation and the U.S. Army Corps of Engineers built numerous dams on most of the nation's rivers, advancing earlier and smaller efforts that preceded the 1930s. Many Native American communities were affected by the creation of these dams, which included the Bonneville (1938), Grand Coulee (1941), and Dalles (1957) dams on the Columbia

River; Garrison Dam (1953) on the Missouri River; Glen Canyon Dam (1964) on the Colorado River; Kinzua Dam (1965) on the Allegheny River; Ice Harbor (1961), Lower Monumental (1969), Little Goose (1970), and Lower Granite (1972) dams on the Snake River; and Tellico Dam (1979) on the Little Tennessee River. Each is part of a larger system of dams meant to manage the nation's river systems for hydroelectric generation, flood control, and irrigation. As a result, the impact on Native communities and the resources upon which they rely was cumulative and felt throughout entire river basins.

Construction on the Grand Coulee Dam in Washington began in 1933 and was among the many federal relief projects started in response to the Great Depression. The Bureau of Reclamation project created a reservoir named in honor of Franklin Delano Roosevelt that covered fertile land on the Colville and Spokane reservations. Nearly half of the families on the Colville reservation relocated. The dam blocked more than one thousand miles of salmon habitat, eliminating salmon on the river north of the dam and affecting Indian fishing communities throughout the region. In all, eight federal dams were constructed on the main stem of the Columbia River. While most did not flood reservation lands, all negatively affected the river's prized salmon runs and most overwhelmed significant off-reservation Native fishing sites. Some of them also destroyed or displaced many villages and burial sites. The engulfing of the spectacular Celilo Falls and Long Narrows region of the mid-Columbia River by the Dalles Dam in Oregon necessitated a series of negotiations with members of the Yakama, Warm Springs, Umatilla, and Nez Perce reservations and culminated in a cash settlement. As with dam projects in other parts of the

George Gillette, chair of the Fort Berthold Indian Tribal Business Council, left, weeps as Secretary of the Interior J. A. Krug signs the contract in which the tribe sold 155,000 acres of its reservation for the Garrison Dam project. In the 1990s, the tribe was awarded \$142 million for losses associated with the dam.

country, those on the Columbia River were preceded by some measures to document archeologically significant sites such as Petroglyph Canyon.

Tribes living along the Missouri River faced similar losses during the same period. Five dams were constructed on the Missouri's main stem as part of the Pick-Sloan Plan, flooding more than 550 square miles of tribal lands and leading to the relocation of more than nine hundred Native families. Much of the acreage lost to the Garrison Dam's Lake Sakakawea was agriculturally rich bottom land on the Fort Berthold reservation.

The Kinzua Dam (1965) in Pennsylvania, built for flood control and to generate hydroelectricity on the Allegheny River, forced the relocation of approximately seven hundred Seneca Indians from Pennsylvania to New York. The dam's twenty-five-mile reservoir flooded nearly ten thousand acres of tribally owned land, forced the relocation of gravesites, and destroyed the Cold Spring Longhouse, an important sacred site.

By the 1970s dam building had slowed in the United States, with most rivers suited to hydroelectric generation already developed. One exception was the Tellico Dam on the Little Tennessee River, which was highly controversial for its potential environmental impacts. After years of conflict, construction concluded in 1979. The dam's reservoir

flooded former Cherokee settlements; burial sites; a platform mound; and their sacred mother town, Chota.

Throughout the transformation of the nation's rivers, Native leaders contested dam building. Tribal politicians recorded their dissent in carefully worded resolutions, spoke at public meetings and to journalists, and traveled to Washington, D.C., to testify before congressional committees. They elected tribal representatives to negotiate compensation with federal agencies. Sometimes they worked with Bureau of Indian Affairs agents to spread their concerns. Much of the dam building on the nation's largest rivers coincided with the rise in popularity of the termination policy, which sought to assimilate Indians into mainstream American society and thus hampered efforts to negotiate adequate settlements. Despite this, Native resistance to dam construction, as well as tribal efforts to protect treaty-guaranteed fishing rights after World War II (1939–1945), stimulated tribal advocacy for continued sovereignty in the 1960s and 1970s.

Compensation usually took the form of a one-time large sum payout rather than payments spread over generations and linked to the profits of hydroelectric generation. Several tribal communities renewed their efforts to gain appropriate compensation in the 1980s and 1990s. The Colville reservation reached a \$52 million settlement in the 1990s, and Congress awarded the Three Affiliated Tribes of the Fort Berthold reservation \$142 million for their losses associated with the Garrison Dam in North Dakota.

Dams do not always negatively affect tribal people, and there are some instances where tribes have approved of, and benefited from, the development of rivers. The Confederated Tribes of the Warm Springs reservation in Oregon approved Portland General Electric's Pelton Dam on the Deshutes River, which runs through the reservation, at the same time that the tribe was protesting dams slated for the Columbia River. In 2001 the tribes agreed to form a partnership with the private owner to manage the dam and associated hydroelectric project.

Dancing, Regulation of

In the United States, a directive listing dance as a federal “Indian Offense,” punishable by fines and imprisonment, was on the books for over fifty years, starting in the early 1880s until its repeal in 1934. However, aspects of the restrictions, including the ban on “torture” as part of the Sun Dance, continued until around 1952. Throughout this period, the rhetoric surrounding anti-dance policies shifted in subtle but significant ways. The earlier restrictions focused on the military threat that Indian dancing was perceived to pose. Some army officers and Indian agents feared that certain dancing was a prelude to an Indian uprising. Around the turn of the twentieth century, the restrictions began to focus more on the dances’ supposed barbarism. Shortly thereafter, the thrust of the regulations became to halt practices that officials saw as wasteful. Although these regulations did affect Indian dance practices, many Native peoples also refused or circumvented attempts to ban and restrict dancing, and many Indian dance practices continue today.

In the 1880s Secretary of the Interior Henry Teller and Indian Commissioner Hiram Price instigated the first official federal strictures on Native American dance practices. On December 2, 1882, Teller addressed a letter to Price directing him to devise rules to prohibit dances and other traditional rituals that inhibited the acculturation of Indians. He warned that dances such as the Sun Dance and the Scalp Dance encouraged aggressive behavior on the part of the young men in a tribe.

On April 10, 1883, Price directed Indian agents to establish courts of Indian offenses, staffed by “civilized” Indians who would rule on Indian cultural practices that the U.S. federal government deemed “offensive.” The first Indian offense named, which was repeated in the 1892 reissue of the rules, was dancing: “Any Indian who shall engage in the sun dance, scalp dance, or war dance, or any other similar feast, so called, shall be deemed guilty of an offense, and upon conviction thereof shall be punished” (Francis Paul Prucha, *Documents of United States Indian Policy*, 3rd ed., 2000).

Less than a decade later, however, the tenor and rhetoric of federal restrictions on Indian dances shifted. Explicit

restrictions on “scalp” and “war” dances and concerns about Indian dancing as prelude to warfare disappeared from the 1904 regulations. Instead, concerns focused on the Sun Dance—widely described as “barbarous”—and called into question the religious status of Indian dances and ceremonies. Punishment for dancing included the withholding of rations and incarceration.

During the 1920s the government still referred to dances as “barbarous” in its prohibitions, but new edicts increasingly focused on a different anxiety: the “waste” officials claimed Indian dancing produced. As non-Indians flocked to see Southwest Indian dances, the government issued anti-Indian dance circulars directed at the very dances these tourists and artists were traveling to see. On April 26, 1921, Commissioner of Indian Affairs Charles Burke issued Circular No. 1665 to the superintendents in which he insisted that dancing could be elevating, but that Indian dances were harmful, profane, and encouraged degrading behavior. He especially condemned dances that promoted “acts of self-torture, immoral relations between the sexes, the sacrificial destruction of clothing or other useful articles, the reckless giving away of property, the use of injurious drugs or intoxicants, and frequent or prolonged periods of celebration which bring the Indians together from remote points to the neglect of their crops, livestock, and home interest.” Burke suggested that each superintendent first use “patient advisory methods” to convince the Indians “to confine their dances and like ceremonials within such bounds as he may with reasonable concession approve.”

On February 14, 1923, Burke issued a supplement to Circular No. 1665—based on missionary recommendations calling for time and age restrictions in Indian dancing—accompanied by a letter of “appeal to the Indians of all our jurisdictions.” In this message Burke argued that dances “take the time of the Indians for many days” and lead to “the neglect of stock, crops, gardens, and home interests.” He wrote, “and then you go home to find everything going to waste.” American Indian leaders (along with some artists and Indian rights activists) argued that this rhetoric and legal debate about Indian dancing was tied to proposed legislation about Indian land. Some insisted the ceremonials be recognized as valid religious practices; that the tourists, not the dancers, were degraded; or that Christians “wasted” time and money on Christmas.

In the early 1930s, Commissioner of Indian Affairs John Collier repealed the dance restrictions that had been on the books since 1884. On January 4, 1934, Collier issued

Circular 2970, entitled "Indian Religious Freedom and Indian Culture." In it he wrote, "No interference with Indian religious life or ceremonial expression will hereafter be tolerated. The cultural liberty of Indians is in all respects to be considered equal to that of any non-Indian group."

Dann Sisters

Mary Dann (1923–2005) and Carrie Dann (1933–), members of the Western Shoshone Nation, were born in Eureka County, Nevada. Known for their civil rights and Native American land rights activism, they carried on a nearly forty-year struggle against the United States government to maintain their ancestral Western Shoshone lands, which include two-thirds of Nevada and parts of four adjoining states.

The Dann sisters were raised in traditional Shoshone culture, which celebrates the leadership of women. They grew up on a ranch that they later owned as adults and that came to be a source of conflict with the United States government. The sisters claimed that the United States had taken land and use rights belonging to them and the Western Shoshones. Shoshone lands have been used as a testing facility for conventional and nuclear weapons and for storage of nuclear waste, and the Dann ranch abuts a gold mine. The Dann sisters therefore became involved in protest movements against nuclear weapons and mining to help protect traditional Shoshone land.

The Western Shoshone Nation lost most of their land under the 1863 Treaty of Ruby Valley. The treaty limited the boundaries of the Shoshones, while giving the United States limited access to, and use of, the Shoshone land. The nation

sued the United States, claiming that the government used illegal means to gain control of their ancestral lands.

The conflict continued for years before the federal Indian Claims Commission decided that the Shoshones had lost their land due to the gradual settlement of non-Indians. The nation was awarded \$26 million in compensation in 1970. Though the Shoshones refused the award, the Supreme Court ruled in *United States v. Dann* (1985) that the nation had lost their title to the land because they had been awarded compensation. Congress has since attempted to provide a payment that would satisfy the Shoshones. It was under this scenario that the Danns began to wage their legal battle to recover the Shoshones' lands and to keep multinational corporate interests from exploiting the tribe's natural resources.

In 2003 the Inter-American Commission on Human Rights issued a decision against the U.S. government affirming the Western Shoshones' right to their ancestral lands. The decision was the first time the commission found against the federal government in favor of a tribe, and it cited violations in the human and treaty rights of the Dann sisters.

Mary died in 2005 after an accident on an all-terrain vehicle, but Carrie continues their activism work.

Dart, Anson

Anson Dart (1797–1879), born March 6, 1797 in Brattleboro, Vermont, was the first superintendent of Indian affairs appointed to negotiate treaties with tribes in the Oregon Territory. Dart arrived in Oregon in 1851 to resolve conflicts generated by treaties made with Native bands and

to ensure that the Indians remained on the large reservations where they lived.

The Donation Land Act of 1850 drew American immigrants into the Oregon Territory, increasing conflicts between settlers, miners, and the Native people. In response, the commissioner of Indian affairs in Washington, D.C., formulated new policies. Dart and his agents were assigned to remove Native people from western Oregon and to consolidate all tribes east of the Cascade Mountains. Dart discovered that neither the eastern nor the western tribes favored consolidation, however, and he believed that the valley and coastal Indians were a valuable labor force benefiting the settlers.

In 1851 Dart negotiated thirteen treaties at Tansey Point, Port Orford, and in Oregon City. Through these agreements, the western tribes relinquished title to most of their territory, but were allowed to keep small reservations on their homelands. Most of the Natives were free to fish, hunt, graze animals, and use timber for their homes, but some agreements were limited to ten years or the lifetime of the signers. When Dart submitted the six treaties signed by territorial governor John P. Gaines and his own thirteen treaties to Congress, all were tabled and placed in a confidential file. None met the criteria for removal established by the Indian commissioner. Dart resigned as superintendent and left Oregon in 1853.

In 1864 Dart patented a “venereal preventive,” which started a scandal in the Indian Office when a decade later the commissioner of Indian affairs purchased five thousand bottles of the oil to be used as protection by the Indians. Dart’s medicine was soon shown to be worthless, which likely figured in his later failed attempts to gain appointment again as a superintendent of Indian affairs, first for Arizona and then for Washington Territory. Dart died in Washington, D.C., on August 12, 1879.

Fifty-five years after the Dart treaties were rejected, the secretary of the interior compiled a roll of descendents of those Indians who had signed some of the treaties. In 1913 an appropriations bill compensated the signers’ descendents with money, but not with land.

In *Documents of American Indian Diplomacy: Treaties, Agreements, and Conventions, 1775–1979* (1999), Vine Deloria and Raymond DeMallie wrote, “With the creation of these rolls, the United States may be said to have reconstituted the tribes for the purpose of affirming and fulfilling the treaties.” In 2002, when the Chinook Tribe of Washington was accepted for recognition, the 1906 rolls provided a foundation for their argument. The decision was later reversed, but

the validity of the Dart treaty was not questioned and may still provide the Chinooks and other tribes with a basis for future successful efforts at recognition.

Davis, Jefferson

Jefferson Davis (1808–1889) was the only president of the Confederate States of America (C.S.A.). He also served as a U.S. representative and senator from Mississippi and secretary of war under President Franklin Pierce. In all of these powerful positions, he affected U.S. Indian policy.

Davis embraced the concept of Manifest Destiny, as did many other whites of his time, believing Indians would have to give way to the inevitable progress of Anglo-Americans. Educated at West Point, Davis served in an army primarily occupied with subduing “hostile” Indians. His posting to the frontier brought him into direct contact with American Indians struggling to retain their lands against a tide of white settlers. One of his major concerns as secretary of war was to ensure that the army protected the settlers flooding Indian country. He sent troops to move reluctant Seminoles to the Indian Territory. As a senator, Davis pushed to include Indian Territory in the enforcement of the Fugitive Slave Law.

As president of the Confederacy, Davis had direct contact with the five southeastern Indian nations (Cherokee, Creek, Choctaw, Chickasaw, and Seminole) who had been relocated to Indian Territory. He created an Office of Indian Affairs under the War Department in March 1861. One of the most important steps Davis took was to recognize the importance and strength of the Indian nations and to send agents to secure their alliance with the Confederacy. The C.S.A. achieved this in 1861, and all five southeastern nations remained at least nominally aligned with the Confederacy during the Civil War (1861–1865).

Dawes, Henry L.

Massachusetts congressman and senator Henry Laurens Dawes (1816–1903) was born on October 30, 1816, in western Massachusetts. Educated at Yale College, he served in various state offices before being elected to the U.S. House of Representatives in 1857, where he chaired several committees. In 1875 Dawes was elected to the U.S. Senate and served as chair of the Senate Committee on Indian Affairs.

Dawes became interested in Indian affairs toward the end of his first term in the Senate. His principal connection to the issue was his sponsorship of the General Allotment Act (Dawes Act) of 1887. Whereas previous policy toward Native Americans stressed the physical removal of tribes to isolated reservations, Indian reformers of the 1870s emphasized the need to prepare Native Americans for private property ownership. Under the Dawes plan, reservations would be broken up and the lands distributed to individual Indian families. When a Native American took an allotment, he became a U.S. citizen. A further provision allowed the federal government to purchase unallotted lands. The proceeds of these purchases would fund schools for Native Americans that would help “civilize” the various tribes. This plan, Dawes believed, would accelerate the incorporation of Native people into Anglo-American society. Historians have been critical of the Dawes Act because not only did it result in the widespread loss of tribal lands and political autonomy, but the schools founded under it undermined Native American culture.

After retirement from the Senate, Dawes stayed active in Indian affairs. In 1893 he headed the Commission to the Five Civilized Tribes (the Dawes Commission), which convinced the Cherokees, Choctaws, Seminoles, Creeks, and Chickasaws residing in the Indian Territory to accept allotment by 1902. Dawes died on February 5, 1903.

De Smet, Pierre Jean

Pierre De Smet (1801–1873) was a Roman Catholic priest of the Jesuit order. He emigrated to the United States from Belgium in 1821. After his ordination in 1827, he worked and traveled among the Indians, becoming increasingly involved in peacemaking, often at the behest of the government.

De Smet was first introduced to Native Americans and their ways of life while serving as prefect at St. Regis Seminary and Indian School in Florissant, Missouri (1824–1830). Poor health prompted him to return to Europe in 1830, but he returned to the United States in 1838 and founded a mission for the Potawatomi in Council Bluffs, Iowa. He left there in 1840 to satisfy the Flatheads’ (Salish) request for a priest. He lived and traveled with them until he became superior of the Oregon Mission (1841–1846). During that time, De Smet visited and established missions among many of the Native peoples of the Northwest, whose prior contact with Christian fur traders and their Christianized Indian employees had made them unusually receptive to missionaries. In 1849 he returned to St. Louis, where he served as assistant vice provincial and procurator of Missouri until his death.

In addition to establishing Catholic missions throughout the region, De Smet brokered peace among Indian groups

and between them and the government. He is particularly remembered for his calming role at the 1851 Fort Laramie treaty council, for persuading some of Sioux chief Sitting Bull's followers to sign the 1868 Fort Laramie Treaty, and for serving as a peace commissioner for the government during the Yakama and Coeur d'Alene wars.

Dearborn, Henry

Henry Dearborn (1751–1829), a New-Hampshire-born physician, army officer, land speculator, and congressman, served as the United States's fifth secretary of war from 1801 to 1809. As the head of the War Department, Dearborn implemented President Thomas Jefferson's dual policy of Indian civilization and territorial expansion. The Jefferson administration's need for Indian land was acute for multiple reasons: the Republicans favored the rapid expansion of white settlements, Jefferson wanted to create a security buffer along the Mississippi River, and the administration in 1802 promised Georgia to clear the Indian title to all lands in the state. Dearborn thus directed U.S. treaty commissioners to press the eastern Woodland Indians for land cessions, if necessary by bribing influential chiefs.

Like other Jeffersonian Republicans, the secretary was frugal with public funds and preferred to pay the lowest possible price for Native American land; in 1806 he wrote that 1–2 cents per acre was reasonable. Dearborn also argued that Indian land cessions would help advance the civilization program, as the loss of their hunting grounds would pressure

Native Americans into adopting commercial agriculture and home manufactures. He even suggested urging Indian treaty signatories to divide their remaining lands into community allotments and then individual allotments, following the principle of philosopher John Locke that individual property ownership was the foundation of civilization. By the end of Dearborn's tenure, the War Department had arranged twenty treaties whereby the U.S. government acquired over 200,000 square miles of Indian land.

Decolonization

According to indigenous scholars Waziyatawin Angela Wilson and Michael Yellow Bird, "Decolonization is the intelligent, calculated, and active resistance to the forces of colonialism that perpetuate the subjugation and/or exploitation of our minds, bodies, and lands, and it is engaged for the ultimate purpose of overturning the colonial structure and realizing Indigenous liberation" (*For Indigenous Eyes Only: A Decolonization Handbook*, 2005). In the same work, Wilson and Yellow Bird describe decolonization as a constellation of strategies that empower indigenous communities to "freely determine their political status and freely pursue their economic, social, and cultural development." Native American decolonization activism has been influenced by, but is clearly distinct from, the decolonization movements that developed in the 1960s and 1970s against European colonialism in Africa, the Middle East, and other parts of the world.

Tribal societies coexisted and prospered for thousands of years before their contact with Europeans. European explorers crossed the Atlantic in the late fifteenth century and happened upon a land more vast than they could have imagined and populated by millions of indigenous peoples, who were expeditiously misrepresented as biologically and intellectually inferior. Europeans later began to devise rationalizations for destroying the indigenous populations through wars, diseases, and forced relocations.

Efforts to challenge and resist colonization often invoked increased brutality, but the indigenous peoples persisted, pro-

ducing an enduring legacy of essential cultural elements, beliefs, values, and traditions. Decolonization is a goal and a process that emanate from historical resilience and survival. To outdistance the contemporary effects of colonization, it must therefore be organic.

The Goal and the Process

The *goal* of decolonization is to cultivate strong, vibrant indigenous communities in which solutions are derived from indigenous cultural frameworks. Decolonized indigenous peoples are self-governing, proactive nations that set their own agendas for transforming their lives.

Discussions among indigenous leaders, healers, and scholars reveal that decolonization is also a *process* complicated by paradox. When indigenous peoples exercise legal sovereignty, for example, they are wielding a weapon of colonization, for it was European legal philosophers who constructed the idea of sovereignty and used it to exert dominion over the indigenous peoples they encountered in their conquests. Sovereignty, as defined by federal Indian law, continues to subjugate indigenous peoples by allowing internal governance while denying independent nation status. Sovereignty can be used to further decolonization efforts, but it is not the overall goal of the decolonization movement.

Education is another mechanism of decolonization that is paradoxical. In the nineteenth century, federal Indian policy codified systemic colonization through miseducation in government boarding schools. In an effort to, in school founder Richard Henry Pratt's words, "kill the Indian and save the man," agents of the U.S. government forcibly removed indigenous children from their homes and placed them in institutional Office of Indian Affairs (OIA) boarding schools far from their families for extended periods of time.

Policymakers reasoned that white "civilization" could be imposed on children by forcing them to abandon their tribal cultures. They were assigned English names, their long hair and braids were shorn, and they were humiliated and punished for speaking their indigenous languages. They were also taught that their spiritual practices were inferior to Christianity and were forced to participate in industrial training.

Today, in the twenty-first century, the indigenous peoples of North America leverage education to promote multifocal, action-oriented, results-focused efforts to reclaim and reassert their inherent rights and manifest holistic, traditional worldviews. Much of the contemporary discourse about

decolonization credits educator Paulo Freire with articulating the concept of critical consciousness and developing a model for decolonizing education (Freire and Ramos, *Pedagogy of the Oppressed*, 1970).

Indigenous scholars with strong cultural identities contribute to the decolonization of their tribal communities by educating and advocating for critical examination of behaviors, ideologies, institutions, policies, and economies that maintain the subjugation or exploitation of indigenous peoples, lands, and resources. Decolonizing education is guided by indigenous wisdom and promotes indigenous thought. It is based on ecological order and sustainable development.

Indigenous nations each have their own unique culture and, therefore, their own way of asserting their autonomy and sovereignty. However, several fundamental principles are common features of decolonization:

- Land is life. This concept holds that indigenous peoples must reconnect with the terrain and geography of their heritage if they are to comprehend the teachings and values of their ancestors, and if they are to draw strength and sustenance that are independent of colonial power and regenerative of an authentic, autonomous indigenous existence.
- Language is power. This principle maintains that indigenous peoples must recover ways of knowing and relating from outside the mental and ideational framework of colonialism by regenerating themselves in a conceptual universe formed through indigenous languages. Decolonization scholars argue that language conveys a worldview, which is why the extinction of tribal languages was a specific focus of boarding schools for Native children.
- Freedom is the other side of fear. This statement suggests that indigenous people must transcend the controlling power of the many and varied fears that colonial powers used to dominate and manipulate them into complacency and cooperation with colonial authorities. They should undertake this task by confronting fears head-on through spiritually grounded action; contention and direct movement at the source of fears are the only ways in which to break the chains that bind people to their colonial existences.
- Decolonize the diet and lifestyle. Advocates of decolonization argue that indigenous people must regain the self-capacity to provide their own food, clothing, shelter, and medicines. They also contend that indigenous peoples must reconstitute their sick and weakened physical

bodies and community relationships through a return to natural sources of food and the active, hard-working, physical lives lived by their ancestors.

- Change happens one person at a time. Indigenous people must reconstitute the mentoring and learning-teaching relationships that foster real and meaningful human development and community solidarity. The movement toward decolonization and regeneration will emanate, decolonization scholars argue, from transformations achieved by small, personal groups and one-on-one mentoring toward a new path of self-determination.

Recent works on decolonization, such as Wilson and Yellow Bird's anthology *For Indigenous Eyes Only*, reveal the many other themes significant in the indigenous movement. In that work, the authors argue that indigenous communities should establish critical thinking centers to help community members understand how colonialism has affected their lives. Other authors call for indigenous peoples to ask schools and sports teams to abandon mascots they find offensive and to protect their cultural patrimony. Still others call on indigenous peoples to integrate traditional political forms and practices into tribal or community governance and to develop tribal or national citizenship requirements that throw off the BIA's blood quantum element (blood quantum is a system of defining tribal citizenship by the percentage of Indian ancestry). Decolonization also requires indigenous peoples to energize education with traditional storytelling and wisdom and to demand the teaching of indigenous languages and culture in indigenous schools and public schools with indigenous students.

Before the introduction of written language, grandparents and gifted storytellers distributed all knowledge orally. It was through their living breath that the ancient tales of their ancestors were passed on and remembered. The stories taught young people how to learn from the environment and their life experiences. One of the many strategies to decolonize indigenous peoples is to remember the ancestral teachings and master the art of storytelling.

Storytelling and language revitalization promote decolonization by conveying indigenous knowledge in indigenous speech. Some indigenous concepts cannot be translated into English words; they can be transmitted only by indigenous language speakers in their own language. Indigenous languages convey a way of thinking and relating to the rest of the universe that distinguishes their speakers from westernized peoples.

Achievements

Systematic colonization and control over indigenous land, resources, and life has persisted for more than five hundred years; however, many scholars continue to misunderstand the ongoing destruction. Indigenous peoples' steadfastness to a postcolonial vision of reclamation and restoration has yielded remarkable change. Many indigenous peoples are developing into strong, growing, vital populations thanks to the development of the decolonization models.

Advocates of decolonization argue that the transformation must be a personal as well as a public journey that can be achieved only when indigenous peoples reclaim the strength and power inherent in their traditional life ways through tribal self-determination and complete liberation from federal and state control. Self-governance, a constituent element of self-determination, was initiated for some tribes in the United States through the Tribal Self-Governance Project in 1988.

Indigenous families were the focal point of colonization in North America in the late nineteenth century, and indigenous communities hemorrhaged, sometimes fatally, from the loss of their lifeblood—their children. The painful consequences of removing children from their homes and communities to attend boarding schools were exacerbated in the 1950s and 1960s when hundreds of indigenous children were adopted by nonindigenous parents through the Indian Adoption Project. In the late 1960s and early 1970s, indigenous activists denounced the project as the most recent in a long line of genocidal policies toward indigenous communities and cultures. Because of the lobbying by indigenous activists, the Indian Child Welfare Act (ICWA) was passed by Congress in 1978, reversing the practices promoted by the Indian Adoption Project. The positive features of the ICWA, in terms of family preservation, ensure that more children are raised in their indigenous communities with access to traditional culture.

Indeed, children reared by their indigenous communities experience greater opportunities to benefit from tribal healing—programs designed to mitigate and prevent the transmission of colonization. More indigenous children are growing up experiencing their place in the world, which supports the type of critical consciousness that undergirds decolonization.

Decolonization and Identity

Critical consciousness of one's tribal identity entails deconstructing socially constructed versions of reality. Individuals begin to understand reality objectively through their inter-

actions with the external environment, including other people engaged in their own interactions and reality-forming processes. Deconstruction of the assumptions about social reality that validate European-centered hegemony is a necessary but not sufficient condition for a decolonized personal transformation. It must be accompanied by a process of reconstructing social reality—both objectively and subjectively—based on understanding one's tribal history and perceiving one's location in it.

This process of centering oneself or affirming tribalism involves purposeful learning about one's tribal history and critically reinterpreting a lifetime of learning. It requires seeking out perspectives other than those legitimated by the Euro-American elite.

Decolonization represents a point of departure from Euro-centric thinking and worldviews, especially among individuals who have declared their intellectual freedom. Indigenous educators and academics are caught between the philosophy of liberation and the methodologies of western academia. Indigenous languages and strategies for transmitting knowledge combine liberatory philosophies with decolonizing methodologies.

The multiple languages that indigenous peoples use today to categorize one another as ethnic groups are imperfect. Race categories tend to evolve at the same time that human beings are evolving in their own ethnic identities, especially in the multicultural society in which many people live today. The contemporary debates over U.S. Census classifications are a case in point. The original creation of racial categories favored the dominant-race groups over other racial groups, creating a system of subordination and perpetuating marginalization.

Some writers argue that the continuing use of obsolete racial terms prolongs that oppression. In fact, racism is based on the politically constructed concept of race that produced racism and cultural genocide in the United States. The discourse on the nomenclature of identity and names helps individuals examine the original construction and evolution of tribal names and how this nomenclature reflects their tribal identity. Therefore, a knowledge base that integrates the topics of "identity" and "names" may lead to a discussion among indigenous peoples of linguistic imperialism—that is, how someone outside their tribal group named them, or how tribes and individuals can rename themselves using their traditional tribal names.

Indigenous scholars have often felt the need to create language or new terms in the most meaningful ways. Some

indigenous scholars find that the English language is often inadequate to express their tribal worldview. Through various terms used in this entry, many critical thinkers suggest that the highest hopes for literacy at this point rest on a vision S. R. Lyons refers to as "rhetorical sovereignty." Indigenous scholar Gerald Taiaiake Alfred counters linguistic imperialism by creating words such as *retraditionalization*.

Summary

To a great extent, decolonization is a process of this retraditionalization. For example, indigenous peoples recover their tribal identities by relearning their historical past, studying their tribal cultures and histories, affirming their ancestors, and assuming responsibility for helping other indigenous peoples decolonize their minds. By expanding on this concept of retraditionalizing programs, indigenous peoples are helping each other build their own sovereign nations. This is the challenge facing new indigenous leadership initiatives today.

Because decolonization as a political process is a struggle to define who indigenous peoples are as tribal people, indigenous peoples are always in the process of reminding themselves of their tribal histories, while creating new ways of knowing tribal worldviews. This educational exercise not only expresses tribal sovereignty, but also liberates the mind from colonized thinking, which is a process of decolonization. Affirming tribal identities transforms ways of looking and being, and thus creates the conditions necessary to move against the forces of domination and extinction and reclaim traditional tribal life.

The thrust of social justice drives many of the theoretical domains and decolonization discourse on indigenous leadership initiatives. The goal of new indigenous leadership is to heal the wounds of past injustices. According to some decolonization scholars, this healing may include an official apology from the United States for the atrocities of history as well as reparations for indigenous peoples. It is, they believe, a question of equity and parity among honorable nations.

Deer, Ada E.

Indian rights activist, educator, public figure, and assistant secretary of the interior during the first Clinton administration, Ada E. Deer (1935–) is perhaps best known for her leading role in the restoration of Menominee tribal status, a signal event that helped change the course of Indian policy during the 1970s.

Ada Deer was born on the Menominee reservation in northern Wisconsin, the daughter of Constance Stockton Wood Deer, a social and political activist from a prominent east coast family, and a Menominee father, Joseph Deer.

Deer entered the University of Wisconsin–Madison at a particularly propitious moment. With a logging and lumbering business providing jobs and social services, the Menominees had been identified as one of just ten tribes able to manage their own affairs. In 1953 the U.S. Court of Claims awarded an \$8.5 million (\$7.6 million after legal fees) settlement of a longstanding lawsuit brought by the Menominee against the U.S. government for mismanaging tribal forests. This increased pressure for the Menominees to accept the termination of federal supervision. Senator Arthur V. Watkins (R–Utah), chair of the Senate Subcommittee on Indian Affairs and a leading proponent of termination, unlawfully linked the distribution of per capita payments from the settlement to tribal acceptance of termination, and the Menominees, whose apparent prosperity masked persistent and pervasive poverty, acceded to the senator's demands. House Concurrent Resolution 108 (1953) officially targeted the Menominee for termination, and in 1954 President Dwight Eisenhower signed the enacting legislation. Menominee termination became official in 1961.

Amidst this turmoil, Deer became increasingly active in human rights. In 1954 she participated in the Encampment for Citizenship in New York City, where she attended a workshop on the democratic process. She graduated from the University of Wisconsin–Madison with a degree in social work in 1957, enrolled in Columbia University's graduate program that same year, and began working in New York

settlement houses. By 1964 Deer had worked as a project director with urban Indians in Minneapolis, as community services coordinator for the Bureau of Indian Affairs' Minneapolis area office, and as a social worker for the Minneapolis public school system. Deer became director of Upward Bound for the University of Wisconsin–Stevens Point in 1969, by which time she had joined the board of LaDonna Harris's Americans for Indian Opportunity (AIO).

Back home, the withdrawal of federal protection had driven the new Menominee County into bankruptcy, closing the hospital; crippling the tribe's lumber mill; and leading trustees of Menominee Enterprises Incorporated (MEI), an entity charged with managing collective resources, to contemplate selling reservation lakefront property to non-Indians seeking recreation homes. The Legend Lake initiative led to the creation of the Citizens Association for the Advancement of the Menominee People (CAAMP) in 1963 and the Determination of the Rights and Unity of Menominee Stockholders (DRUMS) in 1970. Both organizations pressed for the repeal of termination, and both counted Deers as leaders: Constance Deer for CAAMP and Ada for DRUMS.

The drive to reverse termination provided Ada Deer with a cause, a vehicle, and an opportunity to hone her considerable skills. In 1969, with the assistance of the state's legal services agency, Deer forced MEI to open its books. DRUMS picketed the Legend Lake sales offices, organized mass marches to the state legislature, and in 1971 forced MEI to expand the number of trustees on its board. Deer and another DRUMS activist captured the two new seats in a special election, and, after failing to force MEI to dissolve itself, petitioned Congress to repeal Menominee termination. Deer testified before congressional committees and engaged in lobbying and fundraising. After being elected chair of MEI in 1971, she moved immediately to open meetings and democratize processes. Largely due to Deer, the lobbying effort succeeded, and President Richard Nixon signed the Menominee Restoration Act in 1973.

Following restoration, Deer chaired a committee to create a new tribal government and served on the 1975 American Indian Policy Review Commission (AIPRC). Among its many recommendations, the AIPRC called upon Congress to transform the Bureau of Indian Affairs into a social services agency and elevate the commissioner's position to that of assistant secretary. During the 1970s and 1980s, Deer was named a fellow at the Harvard Institute of Politics and a senior lecturer in the School of Social Work and Native

American Studies at the University of Wisconsin–Madison. She served on the board of directors for the Native American Rights Fund and chaired it from 1989–1990.

Deer also embarked on a political career. She ran, unsuccessfully, for Wisconsin secretary of state in 1978 and 1982, was credited for introducing an Indian plank in the National Democratic Platform in 1978 and 1982, was appointed to the party's Commission on Presidential Nomination, attended the Democratic convention as an "at large" delegate for Walter Mondale in 1984, and ran as the Democratic candidate for a U.S. House seat in 1992.

In 1993 Congress confirmed Deer's nomination for assistant secretary of interior for Indian affairs, and she became the first woman to head the Bureau of Indian Affairs. During her four-year tenure, 223 Native villages in Alaska and twelve tribes achieved federal recognition, 130 tribes and twenty-four states concluded gaming compacts, and numerous Native communities contracted with the federal government to run their own services. She advised Congress on amendments to the American Indian Religious Freedom Act and the Indian Self-Determination and Education Assistance Act, mediated a dispute between New York and Wisconsin Oneida Nations, and settled a boundary question affecting the Crow reservation.

Despite Deer's many laudable accomplishments, her outspoken advocacy on many issues alienated many people within and without the bureau. On January 9, 1997, President Bill Clinton's interior secretary Bruce Babbitt requested and received her resignation. Deer then returned to Wisconsin, where she chaired the Native American Studies program at the University of Wisconsin–Madison from 1998–2007. She remains active in those causes that interest her, and particularly in the steady growth and maturation of the College of Menominee Nation.

Deloria Family

Certainly no other extended family exerted more influence on the course of United States Indian policy and law during the twentieth and twenty-first centuries than the Delorias. While Vine Deloria Jr. represents the best known and most prolific member of the family, the story of the Delorias' involvement in U.S. Indian affairs stretches back to his nineteenth-century ancestors and continues through his children and siblings.

Francois Des Laurias (Deloria), the son of a French fur trapper and a Dakota woman, rose to leadership of the White Swan band during the early stages of the Dakotas' reservation experience in the late 1850s and 1860s. During his time as leader, Deloria demonstrated a unique ability to navigate the cultural gulf between the Yankton Sioux and the federal government, earning him the respect and admiration of both parties.

Francois Deloria's son, Philip (1854–1931), likewise took on the role of Sioux leader and cultural mediator. However, rather than serve in a traditional Sioux leadership position, Philip became the first of the Deloria family to seek understanding and reform by adopting some of the methods and structures of the dominant white society. In 1870, having decided that a white education represented his people's best hope for dealing with non-Indians, he relinquished the opportunity to follow in his father's footsteps as band leader and instead became an Episcopalian. He then left the reservation to attend white schools in Minnesota and Nebraska in preparation to enter the Episcopal clergy. By 1883 he had attained the level of deacon, and, approximately five years later, he became the first Indian to lead an Episcopal mission on a reservation when he was posted to the Standing Rock Sioux reservation. He was also instrumental in the founding of the Brotherhood of Christian Unity movement, which sought to break down denominational barriers among Native Americans. He therefore provided the framework for the pan-Indian political movements of the twentieth-century. In his retirement, Philip Deloria returned to the Yankton Sioux reservation and even represented them in claims meetings during the 1920s when he was well into his seventies. Two of his children, Ella Cara Deloria (1889–1971) and Vine Deloria Sr. (1901–1990), continued the family's work in the areas of religion, activism, and education.

Ella Deloria sought to combat cultural stereotypes of Indian people and exerted tremendous influence on American anthropology, the study of Sioux languages and literatures, and Indian education. Having earned a bachelor's degree from Columbia University, she returned there in 1929 and served as a graduate assistant to the prominent anthropologist Franz Boas. While little known at the time, Ella Deloria's fieldwork among Native Americans provided the basis for much of Boas's most important work. Furthermore, Ella Deloria, much like her father and grandfather, sought to mediate between the world of the Columbia anthropology department and the reservation in an effort to make anthropology more relevant and responsive to the needs and lives of Indian people. Throughout her life she authored seven books—both fiction and non-fiction—most of which were published posthumously due to the twin obstacles of being both a woman and an Indian in early twentieth-century America. She also brought tremendous attention to racial barriers in Indian education and fought for the creation of Native Studies programs on college campuses.

Vine Deloria Sr., Ella's younger brother, was initially uninterested in following his father into the ministry, and he did so reluctantly out of respect for Philip's dying wish that he continue his work in the Episcopal Church. Vine Sr. retired in 1968 after thirty-seven years in the ministry, including postings at the Pine Ridge and Sisseton reservations and the national Episcopal Church headquarters in New York City. Much like his father and grandfather, Vine Sr. succeeded in white society while still retaining his Indian identity and garnered the tremendous respect and admiration of his people. His two sons, Vine Jr., and Sam, continued the Deloria tradition of Sioux leadership during a very critical and turbulent time in the history of relations with the United States.

The accomplishments of Vine Deloria Jr. (1933–2005) as an activist and intellectual rank him as one of the most important Native American leaders. While he is perhaps best known for his activism during the late 1960s and his book *Custer Died for Your Sins: An Indian Manifesto*, his later work as a legal scholar might possibly represent his most lasting impact. In books such as *Behind the Trail of Broken Treaties* and *Tribes, Treaties and Constitutional Tribulations*, Vine Jr. marshaled the dominant society's legal system to the defense of Indian sovereignty, rights, and land preservation. His convincing, and in many cases brilliant, arguments provided a theoretical basis that later Indian legal scholars and activists, including

his own brother Sam, continued to use to defend the concept of tribal sovereignty.

Sam Deloria has spent his entire career in the area of Indian law. As the founder of the American Indian Law Center at the University of New Mexico, he has encouraged generations of Native American law students to dedicate themselves to tribal legal issues. Under his direction, the American Indian Law Center also contributed to the revision of Felix Cohen's *Handbook of Indian Law*. In 1975 he also served as the first secretary-general of the World Council of Indigenous Peoples.

Philip Deloria, the son of Vine Deloria Jr., may possibly exert the greatest impact on Indian-white relations by the time his career as a scholar and teacher comes to a close. Through books such as *Playing Indian* and *Indians in Unexpected Places*, he has already made important contributions to our understanding of the subtle and nuanced ways in which often unrecognized assumptions and expectations among the dominant culture regarding Indians continue to color their treatment and depiction. Breaking through these more insidious and psychological forms of prejudice represents for many Indians and non-Indians the ultimate objective in the long struggle for justice.

Deloria, Vine, Jr.

Vine Deloria Jr. (1933–2005) (Standing Rock Sioux), served as a scholarly voice for Native Americans for much of his life. Deloria was born in Martin, South Dakota, to Vine Deloria Sr., an Episcopalian priest, and Barbara Eastman. His

grandfather, Philip Deloria, was one of the first Indians to become an Episcopal priest, and his aunt, Ella Cara Deloria, was an anthropologist of considerable note. After graduating from high school in Faribault, Minnesota, Deloria served in the Marine Corps from 1954 to 1956. He then graduated from Iowa State University in 1958 and from Augustana Lutheran Seminary in 1963.

An outspoken man unafraid to upset others, Deloria began to work on behalf of Native Americans in the 1960s. He believed that education gave Native Americans the means to promote change peacefully rather than through violence. Accordingly, Deloria developed a scholarship program for Native American students through the United Scholarship Service in 1964. He then became the executive director of the National Congress of American Indians in Washington, D.C., from 1964 to 1967. However, by the end of the 1960s, Deloria had become frustrated with his inability to make a difference in the lives of Native Americans. Well aware that many tribes did not know their legal rights, Deloria decided to train Indian attorneys who could help tribes understand their rights and responsibilities. With this goal in mind, he returned to school and earned a law degree from the University of Colorado in 1970. With two other attorneys, he cofounded the Institute for the Development of Indian Law in 1970 to provide training for tribes and educational institutions.

Deloria wanted to make certain that Indians did not forget their roots and also wanted to enlighten whites about Native Americans. In his 1969 landmark work, *Custer Died for Your Sins*, he indicted anthropologists and told them that American Indians refused to be imprisoned by their words and writings. In the process, Deloria helped give birth to the new academic field of American Indian Studies (or Native American Studies), in which Indians themselves would decide what was important.

Deloria taught at Western Washington State College, the University of California at Los Angeles, and the University of Arizona. In 1991 he joined the University of Colorado at Boulder as a faculty member of the history department. He retired from the university in May 2000 and donated his papers to the Denver Public Library.

Deloria published twenty-five books and hundreds of articles and gave thousands of speeches. Over time, he became the best known and most widely respected spokesperson for Indians and one of the most honored Indian writers. Deloria used his writings to plant ideas and question assumptions. His works typically blend theology

with political science, law, and considerable humor. Books such as *We Talk, You Listen* (1970) and *Of Utmost Good Faith* (1971) stress the theme that sin is a major element in American history and whites are the sinners for having stolen and spoiled Indian lands. In all of his works, Deloria asserted Indian rights to the land. He argued that under international law, Native American nations possess an equitable title of occupancy over lands upon which they live and this title can only be lost by voluntary and lawful sale of the lands.

Deloria criticized the research methods employed by other students of Native American issues. Besides challenging the notion that Native American oral histories are less reliable than European-style written documents, he called for researchers to make payments to the Indian community in order to share the benefits of scholarship. He also attacked the idea that Native Americans populated the Western Hemisphere solely by crossing a land bridge from Siberia. Deloria's willingness to take controversial positions did not win him friends throughout the academic world. His challenge to the theory of evolution in *Red Earth, White Lies* (1995) prompted an especially critical response from scientists who accused him of promoting Native American creationism. Deloria died on November 13, 2005, in Golden, Colorado, survived by his wife and three children.

Determination of Rights and Unity for Menominee Stockholders (DRUMS)

The group Determination of Rights and Unity for Menominee Shareholders (DRUMS) challenged federal control over Indians. In 1954 Congress passed legislation ter-

minating the Menominee Tribe of Wisconsin as a federally recognized tribe. The Menominees were selected in part because the tribe had successful forestry and lumbering operations that gave it a strong economic standing. The tribe was given an \$8.5 million settlement for federal mismanagement of the forestry enterprises once they agreed to comply with termination, a requirement later recognized as illegal. In the process of termination, all tribal property was transferred to a corporation, Menominee Enterprises, Inc. (MEI). Each Menominee was considered a shareholder in MEI. Termination of federal involvement left the Menominees without sufficient funding to provide basic services such as a police force, waste disposal, and firefighting capabilities; as a result, the Menominee standard of living dropped. MEI proposed to raise funds by selling tribal land to a private developer who would sell lots to non-Indians.

James White, Ada Deer, and others created DRUMS in 1970 to regain federal recognition for the Menominees and to oppose the land sale. They organized protests and presented candidates for election to MEI's board of directors. In 1971 DRUMS won two seats on the eleven-member board. In 1972 DRUMS gained majority control on the board and blocked the land sale. DRUMS also sought to reverse termination and regain the Menominees' status as a federally recognized tribe. The Menominees succeeded with 1973 federal legislation restoring their status. After DRUMS disbanded, Ada Deer headed the Menominee Restoration Committee to reorganize the tribe with respect to its new status.

Diplomatic Delegations, Tribal

American Indian nations practiced diplomacy hundreds of years before the founding of the United States—with other tribes, with the colonial authorities, and with other countries.

Tribes often sent out delegations to meet with other tribal nations about trade, territorial rights, and war and peace. When Europeans began settling in North America, tribes sent diplomatic representatives to the colonial assemblies, to governors' offices, and to Europe to negotiate issues of land cession and trade and to settle disputes between their people and colonials. In 1710 Peter Schuyler, the mayor of Albany, brought a delegation of four Mohawks to England in an effort to persuade Queen Anne to provide support for a colonial war against French Canada. In 1725 France hosted representatives from the Otos, Missouris, Osages, and the Illinois Confederacy of tribes in an effort to secure their alliance and trade. In 1730 a group of seven Cherokees visited London. And four years later, a group of fourteen Creeks traveled with James Oglethorpe, the founder and governor of Georgia, to the English capital to meet the king.

Native diplomats were typically very skillful in their work, and, for the most part, they established the formal protocols that marked negotiations between European and Indian nations. But they did not always receive courtesy in kind: the Jamestown colony invited area chiefs to a peace negotiation and then poisoned their drinks. Eventually, the colonies and European powers became more hospitable, even though their motives might have been ulterior.

Later, the U.S. government regularly received Native delegations. One of the earliest documented instances in U.S. history of a Native diplomatic delegation was the Haudenosaunee (Iroquois) delegation that traveled from Albany to Philadelphia in 1776. The representatives lodged for a month above the chamber in which the first Continental Congress was in session. In 1783 Seneca chief Cornplanter organized a delegation to Fort Stanwix, in New York, where the United States and the Six Nations Iroquois Confederacy were negotiating a treaty. After the Lewis and Clark Expedition of 1804–1806, the tribes encountered by the explorers along the way sent emissaries to visit President Thomas Jefferson in Washington.

In the nineteenth century, tribes sent representatives to the U.S. capital to conduct negotiations on many issues. They pleaded with the government to remove American trespassers from their territory and asked for compensation for the depredations of white squatters. They also negotiated treaties and land cessions, renegotiated annuities, and settled boundary disputes and conflicts with the United States or with neighboring tribes. The visits typically included tours of the Capitol and the city, with the Indian diplomats staying in a hotel or boarding house. The official visits usually

included an exchange of gifts of various sorts. The Natives may have offered the handiwork of their people, while the U.S. government supplied their Indian visitors with medals, uniforms, flags, canes, guns, knives, and other symbols of influence and power. For the Indian diplomats, the highlight of the visit was usually a personal meeting with the Great Father, the president of the United States. Those Native representatives who were turned away from meeting the chief executive were often disappointed and angry.

Almost every tribe sent representatives to Washington at one time or another, some more regularly than others. The Cherokee Nation maintained a representative in Washington, D.C., for weeks at a time during much of the nineteenth century. During the Removal Crisis from about 1827 to 1838, John Ross, the Cherokee chief, and other Cherokee leaders traveled to Washington to persuade the federal government to forestall the state of Georgia's encroachments on its territory. Later, the Cherokee leaders lobbied Congress, the president, and the secretary of war, without success, to abandon the government's plans to remove the Cherokees west of the Mississippi River.

Because on occasion Native representatives appeared uninvited at the White House or the Capitol, in the late nineteenth century the government devised a policy that prohibited visits by unauthorized delegations.

Meanwhile, the government tried to ensure that those Native diplomats who did visit the nation's capital were intimidated by the size and power of the United States. Although tribal leaders may have thought that by traveling to the capital they could avoid having to deal with unscrupulous federal agents like those often found near their homes, they soon learned that moving diplomatic discussions to Washington did not prevent government agents from attempting to coerce agreements from tribal leaders or obtain the agreements by other nefarious means. For example, in 1865 Struck by the Ree, a Yankton Sioux chief, told the Doolittle Commission (which was investigating the conditions of Indians in the West) that when the Yankton delegation went to Washington in 1858 to negotiate their final land cession and reservation treaty, his companions were kept drunk for four days until they acquiesced and signed the treaty. According to one scholar, the government also may have provided Indian diplomats with prostitutes, or at least looked the other way when those professionals came to ply their trade.

Even after the treaty era ended in 1871, Indian tribes continued to send delegations to Washington, and many fell prey

to unscrupulous lobbyists. In a letter to her son in 1931, Yankton Sioux activist and reformer Gertrude Bonnin told of Indian delegates in Washington being followed right into their hotel rooms and enticed with whiskey. She urged tribal delegates to stay together and watch out for the "schemers." And yet, despite occasional disagreements, condescending insults by U.S. officials, and heavy-handed efforts to intimidate their Indian guests, the practice of diplomacy did encourage the growth of peaceful relations between the United States and most tribes.

Today, many tribes maintain offices in Washington, D.C., and employ their own attorneys, lobbyists, and other professionals to state their cases and negotiate their positions with the federal government.

Discovery, Doctrine of

The New World was colonized under an international legal principle known as the doctrine of discovery. When Europeans and Americans set out to explore and exploit new lands in the fifteenth through the twentieth centuries, they justified their governmental and property claims over these territories and the indigenous people residing in them with the doctrine. This principle, which was established by the Catholic Church during the Middle Ages and applied by the European nations that explored and settled the western hemisphere, was grounded in the belief that Christian nations possessed powers of sovereignty and national title superior to those of indigenous peoples. In reality, if challenged by the indigenous residents, the doctrine of discovery was only useful if it could be enforced by military power.

The doctrine provided that Christian nations acquired rights of property upon the discovery of previously unknown lands. The discovering nation also gained governmental, political, and commercial rights over the inhabitants without the knowledge or the consent of the Native residents. When Europeans and Americans planted their flags and displayed their religious symbols in "newly discovered"

lands, they were undertaking the established legal procedures and rituals designed to demonstrate a legal claim over the lands and peoples. Indigenous people strongly objected to the application of this international law, but the doctrine was still being applied in international and American law in the early twenty-first century.

The English colonists who settled in North America, and the U.S. state and federal governments that followed, all used the doctrine and its foundation of cultural superiority to seize dominion over territory in North America. The United States used the doctrine as a legal rationale to justify the appropriation of Indian land.

The doctrine of discovery is comprised of several underlying assumptions:

- 1) First discovery. The first Euro-American country to discover new lands unknown to other Europeans or Americans gained property and sovereign rights over the lands;
- 2) Actual occupancy and current possession. To fully establish a first discovery claim, an American or European country had to occupy and hold the newly found lands by actual physical possession. Possession was proved by building a fort or settlement and by leaving soldiers or settlers on the land. This occupation had to take place within a reasonable length of time after the first discovery;
- 3) Right of Preemption. The discovering Euro-American country gained the power of preemption, that is, the sole right to buy the land from the Native people. The government that held the discovery power of preemption had the right to prevent or preempt any other European or American government or individual from buying land from the indigenous peoples;
- 4) Indian title. After first discovery, indigenous peoples were considered by Euro-American legal systems to have lost the full property rights and ownership of their lands. They retained only the right to occupy and use their land. If they ever chose to sell land, they could sell only to the Euro-American country that held the right of preemption;
- 5) Tribal limited sovereign and commercial rights. After first discovery, the Indian nations and indigenous peoples were also considered to have lost some of their inherent sovereign powers and the right to trade and conduct diplomatic relations with any government or people they chose. Instead, they could only trade and engage in diplomatic relations with the Euro-American government that had first discovered them;
- 6) Contiguity. Euro-Americans held a discovery claim to a reasonable and significant amount of land contiguous to and surrounding the lands that they actually possessed in the New World. Moreover, the element of contiguity provided that the discovery of the mouth of a river gave the discovering country a claim over all the lands drained by that river, even if that constituted thousands of miles of territory;
- 7) *Terra nullius*. This Latin phrase means a land or earth that is null or void. Under discovery, it meant that vacant lands could be seized by the discovering nation;
- 8) Christianity. Non-Christian people were not deemed to have the same rights to land, sovereignty, and self-determination as Christians;
- 9) Civilization. Euro-Americans thought that God had directed them to bring civilization (as they defined it), education, and religion to indigenous peoples and to exercise paternalistic and guardianship authority over them;
- 10) Conquest. According to this element, a nation acquired the right to extend its legal and political dominion over a people it conquered. But “conquest” also provided that the mere discovery of new lands and peoples created the same legal result and limitation on Native rights as if Euro-Americans had actually conquered the indigenous peoples in a war.

In 1823, in *Thomas Johnson and Graham's Lessee v. M'Intosh*, the United States Supreme Court decided that the doctrine of discovery served as the legal basis for the United States's authority over the lands within its borders, and that it held a title superior to that of Native Americans residing within American borders. The decision still stands and is one of the founding decisions of federal Indian law.

Disease

The health of indigenous peoples in North America throughout the centuries has been characterized by a series of epidemiological transitions, or changes in disease and health patterns, highlighted by several distinct eras. Prior to European colonization, during the Pre-Contact or Prehistoric Era, Native Americans faced a number of endemic diseases (diseases confined to a specific place or people), traumatic injuries, and occasional nutritional afflictions. After contact with Europeans and Africans, imported Old World diseases altered indigenous disease and health patterns. Severe epidemics and pandemics killed many Natives. Another epidemiological transition occurred with the settlement of Native Americans on reservations. During the early reservation period, from about 1875 until the early 1950s, the various infectious diseases that afflicted Native Americans were eventually brought under control due to improved health care and social conditions. However, as the infectious diseases declined, chronic diseases—those that last a long time or recur frequently—emerged and brought new health concerns. Native Americans in the early twenty-first century continue to experience poorer levels of health in comparison to the general United States population.

Pre-Contact Disease and Health Patterns

Scientific knowledge about the specific diseases and afflictions that occurred across prehistoric Native North America is growing rapidly, as new techniques such as DNA extraction from skeletal remains are revealing new insights into the health of indigenous populations. New biological and archaeological data are uncovering the range of variation in health status between Native populations, and have shattered the stereotype that Native North America was nearly a disease-free paradise before the arrival of Europeans. In fact, reconstructions of pre-Columbian epidemiology reveal that Native North American health status was lower than previously expected or assumed. Demographically, Native North America populations as early as 1300 C.E. may have already been in decline. Scientists are now suggesting that the New World was possibly already in a state of extreme epidemio-

logical and demographic change prior to contact with Europeans.

Evidence gained from skeletal materials, in combination with archaeological, genetic, and early historical data, has revealed that pre-contact indigenous populations suffered from numerous afflictions. Malnutrition, anemia, tuberculosis, treponematoses (a type of syphilis), along with several other degenerative, chronic, and congenital (present at birth) conditions plagued prehistoric Native populations.

In addition to the viral, bacterial, and nutritional afflictions, Native populations also experienced periodic trauma such as accidents, warfare, homicides, and sometimes culturally sanctioned practices that resulted in sickness or death. Each indigenous society faced different disease and health challenges depending on local environmental and social conditions, and these major health variables largely determined pre-contact morbidity and mortality patterns.

Post-Contact Disease and Health Patterns

European contact with indigenous societies brought changes in Native health patterns, and most tribes witnessed a decline in both health and population. A prominent factor was the introduction of Old World infectious diseases such as smallpox, measles, or Asiatic cholera, all of which had originated among European and African populations. Most Native societies, after contracting such a disease, experienced severe elevations in morbidity and mortality, especially if the society had no prior exposure to that particular infection. Populations like these, with no previous exposure to a particular disease, are referred to as “virgin soil populations,” and a large number of their members are susceptible to contracting the disease.

Generally, Natives were viewed by the newly arrived Europeans as racially inferior and living largely in a state of savagery. Therefore many European scholars, colonial bureaucrats, and religious authorities viewed the spread of introduced diseases and resultant Native American population decline as either God's will or an effective way to rid the New World of savages so civilization could flourish. Reports of using introduced diseases to purposely reduce Native populations began soon after Europeans arrived in the Americas. Perhaps the most frequently cited occurrence of using smallpox against Native Americans occurred in 1763 during Pontiac's Rebellion. In series of letters written between British commander Jeffery Amherst and his military officers, Amherst ordered the purposeful infection of the Indians using blankets tainted with smallpox. Native American sus-

ceptibility to European infectious diseases and their resulting population decline offered Europeans confirmation for their belief that indigenous people were a vanishing race destined to become extinct.

The impact of introduced European infectious diseases, especially as it pertained to the rate of population decline, remains an issue of scholarly debate. At the core of the debate are two major points of consideration. The first is determining the at-contact population of Native North America, which partially determines the extent of diffusion and severity of Old World infectious diseases. The other issue is the magnitude of population decline among indigenous societies.

Prior to 1966 scholars contended that Native North America population numbers were low, reflecting beliefs that Native American societies were culturally primitive, with unsophisticated technologies and relatively low levels of social complexity that could not support high population densities. However, a growing body of archaeological evidence being discovered mid-century revealed the existence of regional complex social systems and high population densities, accompanied by a technological sophistication that often surpassed achievements in Europe during the same era. Despite this evidence, however, many scholars continued to cling to the mythology of the “primitiveness” of pre-contact Native America with low population densities.

In 1966 Henry Dobyns broke from previous interpretations by proposing that as many as 9.8 million indigenous people may have inhabited Native North America prior to European arrival. His radical revision, especially after he amended his figure upward to eighteen million people, began a scholarly debate that continues into the early twenty-first century. Within the debate are three critical issues that must be determined about Native American depopulation. First is the question of the nature and timing of Native American-European interaction, which is necessary to initiate and sustain continued demographic collapse. Second is the question of the magnitude of mortality following European colonization. Last is what role introduced infectious diseases had on Native American demographic and social change. All three of these issues remain dependent on a central question—how many Native Americans inhabited the continent at the time of contact? Regardless of the differences in scholarly opinion, it is generally accepted that indigenous societies across Native North America experienced, at the least, an estimated 72 percent decline in population before reaching their lowest level in 1890.

Many indigenous societies experienced increases in warfare with Europeans and other Native Americans. Some also faced decreases in available subsistence resources, the loss of lands, and other consequences associated with European settlement. These factors, in combination with infectious diseases, altered the tribal health statuses.

Numerous diseases affected indigenous populations after contact with Europeans. Major recorded diseases included smallpox, measles, bubonic plague, cholera, diphtheria, influenza, scarlet fever, and typhus. Among all of the infectious diseases transported from the Old World to the New World, smallpox has been implicated as the major cause of sickness and death among indigenous societies. The impact of smallpox was recorded in Aztec collections of laws, Plains Indian winter counts (important events drawn on animal hides), and various tribal oral traditions across Native North America.

One of the most devastating epidemic episodes historically documented is the 1837–1838 smallpox epidemic. On the Great Plains, for example, most societies became infected. Among the northern Plains tribes it is estimated that some 17,200 people died, including 8,160 Blackfeet, before the disease had run its course. By the time Plains tribes were confined to reserves, population losses ranged from 98.3 percent among the Mandans to 13 percent for the Arapahos.

Epidemics affected other tribes as well. Over time, many of them, such as the Coahuiltecos of the extreme southern Plains, the Calapooyas of central Oregon, the California Yahis, and the Saponis and Tutelos of Virginia, went biologically and culturally extinct. Epidemic episodes often resulted in a breakdown in the social system, crippling the abilities of the younger, stronger tribe members to care for the sick. The result was heightened morbidity and mortality.

Introduced pathogens not only created a high degree of physical stress, but also sustained cultural stress. These radical health changes challenged Native American cultural beliefs about health and well-being. Despite this, each society attempted to provide culturally relevant diagnoses and cures for the introduced diseases. Medicine people employed a number of religious ceremonies, rituals, and techniques to heal sick individuals and society and reaffirm or restore the perceived relationship between Natives and their world. These healers attempted to use supernatural aids and plant medicines to prevent and cure illnesses. Most indigenous techniques, however, similar to the medical practices among European populations during the same time period, did not alter significantly the course of the affliction with respect to morbidity and mortality.

In response to diseases of European origin and their consequences, Native societies employed a number of adaptive strategies to increase their depleted populations. They altered their kinship and marital practices, often creating more flexible social organizations. Occasionally, remnant tribes would come together to form new tribal societies. Many tribes also began to incorporate and adopt other Native Americans, Europeans, and Africans into their societies to replace people lost to disease.

Tribes also altered their medical systems, sometimes incorporating select western medical techniques such as vaccination along with their established indigenous practices. Native American societies also changed their ideological systems to explain European-borne pathogens.

As European infectious diseases ravaged indigenous societies, basic health services for American Indians began in 1819 under the sponsorship of the War Department. Army physicians, along with missionaries and traders, occasionally administered medical care to Indian peoples. Although some U.S. treaties offered health care as part of their conditions, sustained western medical services did not occur until Native American societies were confined to reservations. Thus, European medical care had little impact in arresting indigenous health problems.

Reservation Disease and Health Patterns

With their confinement on reservations, Native American tribes experienced another epidemiological transition. Severe infectious diseases still occurred from time to time, but eventually those infections gave way to afflictions associated with the impoverished conditions of reservation life. Influenza, tuberculosis, conjunctivitis, trachoma, and dysentery—all diseases often associated with poverty and crowded living conditions—emerged in epidemic proportions. During the 1890 influenza outbreak among the Sioux living at the Crow Creek reservation, the agency physician reported an average of six deaths per day. A 1921 report to Congress concluded that the Native American death rate from 1880 to 1913 steadily increased from 23.6 per 1,000 Indians to 32.24 per 1,000. By 1900 trachoma was being diagnosed in up to 40 percent of the population in some tribes.

In 1873 the Office of Indian Affairs developed a basic structure for reservation health care delivery under the Division of Education and Medicine. Over the next forty-eight years, a system of hospital-based care and a civilian corps of physicians and field matrons were instituted. The

Indian Office created a system of tuberculosis sanatoria and by 1935 instituted widespread tuberculosis vaccinations. Reservation medical services targeted trachoma, infant mortality, and other afflictions and instituted a number of treatment strategies to alter Native American health behaviors and beliefs. Under the forced assimilation policy, indigenous life ways, especially religious and medical practices, faced obvious persecution from government officials. In 1883 courts of Indian offenses were created to halt, by force if necessary, any Native practices regarded as a hindrance to “civilized” progress. This led to the rejection of Western medical practices by many Indians who believed their cultural healing and religious beliefs were being destroyed. This issue, as well as inadequate facilities, a lack of medical supplies, and geographic isolation, plagued U.S. Indian health care prior to 1940.

Contemporary Disease and Health Patterns

A number of changes in health care delivery were initiated in the post-World War II era. The transfer of American Indian health management to the U.S. Department of Health, Education, and Welfare in 1954 marked a dramatic change, altering disease patterns among Indians. The Indian Health Service (IHS), which was established in 1955, made strides to improve reservation sanitation and nutrition, and to promote health education. The goal of the IHS is to achieve a level of health for American Indians and Alaskan Natives that is comparable to that of the general population. Despite its efforts, however, American Indians’ health in many areas remains below the national average. Primary health care has become more comprehensive, but preventive health care and sustained public health efforts continue to lag behind.

Native Americans have similar epidemiological and demographic profiles as those of people residing in developing countries. Their populations are younger, less educated, and poorer than the general populations of industrialized countries. Their societies have high fertility and mortality rates, with prevalent rises in chronic diseases and social pathologies. Overall, the percentage of American Indians living below the poverty level is 2.4 times higher than the United States All Races average. Impoverished conditions, combined with high unemployment, lower educational achievements, and substandard living conditions affect health status and needs, magnifying the probability of contracting an illness.

Sensitive indicators of health are infant mortality and life expectancy. Although there have been significant declines in

infant mortality among Natives, the rate for indigenous populations remains 22 percent higher than the U.S. All Races rate. However, significant regional differences occur. Among American Indians using the Aberdeen Indian Health Service Area, one of the sixteen health service areas across the United States, for example, the infant mortality rate exceeds the U.S. rate by over 50 percent.

Since 1940, the life expectancy for American Indians and Alaska Natives has risen steadily, although it remains below the national rate. Native people living in the United States have an average life expectancy at birth of 68.7—seven years less than the U.S. All Races rate. At present the three leading causes of death for Native peoples are diseases of the heart, malignant neoplasms, and accidents. Diabetes mellitus and chronic liver disease and cirrhosis rank fourth and fifth as leading causes of death.

Other serious health problems affecting indigenous peoples are injuries and social pathologies. Recent comparative health data has revealed that American Indians and Alaska Natives experience alcoholism and substance abuse, deaths by injuries, homicides, and family violence at rates significantly higher than the general population. According to 2007 statistics, greater than one-third of resource demands made on Indian Health Service facilities are directly related to mental health, alcoholism, or substance abuse.

Indigenous peoples now have to contend with another imported epidemic, the Human Immunodeficiency Virus (HIV) and Acquired Immune Deficiency Syndrome (AIDS). Currently American Indians and Alaska Natives are ranked third in the nation in the rate of AIDS infection when compared to other major races and ethnicities. HIV/AIDS infection has steadily increased, and in 2005 the rate was 10.4 per 100,000 among American Indians and Alaska Natives.

Although the statistics reveal how large the gap is in health equity between the nonindigenous and indigenous populations, improvements have been made on a number of health fronts. The Indian Health Service faces a monumental task in providing primary and preventive health care in an environment of massive underfunding. The Federal Disparities Index recently revealed that IHS funding fell \$1.7 billion short of equality with mainstream health plans. This means that about 160 IHS and tribal facilities are delivering health care with funding at less than 60 percent of benchmark costs.

Through legislative acts, tribes are assuming greater responsibility in controlling their health resources and defining and targeting their health needs. Indigenous peoples are

integrating traditional medical practices with western medical techniques to address their health concerns in a culturally appropriate manner.

Dole, William P.

William P. Dole (1811–1889) served as commissioner of Indian affairs from 1861 until 1865. Born in Vermont, Dole moved to Ohio before spending several years as a merchant and politician in Indiana. In 1860 he settled in Illinois and became a significant force in Republican politics.

Appointed to office by his personal friend, President Abraham Lincoln (1809–1865), Dole knew little about Indian affairs. He supported the policy of removing tribes to reservations as a step toward allotment in severalty and the assimilation of Indians into mainstream American culture. He also worked to appoint honest men as agents for the Indian bureau.

Dole was unable to prevent the Creeks, Choctaws, Chickasaws, Cherokees, and Seminoles from signing treaties of alliance with the Confederacy at the outbreak of the Civil War, and he later suggested that tribes allied with the Confederacy should surrender territory to make room for the western tribes. After he left office, the U.S. government did remove several western tribes to the Indian Territory.

At a time when many in the United States were pushing Congress to abandon the practice of dealing with the tribes by treaty, Dole was a steadfast supporter of the system. His administration signed over forty treaties with numerous tribes; many of them, however, were not ratified by the Senate. Dole was particularly noted for arguing for the recognition of land titles for tribes in the Southwest and California, and some of his treaties with the nations in that region laid the groundwork for the eventual recognition of their claims in the twentieth century.

Although he was not directly implicated in the event, Dole was forced out of office in the wake of the national scandal that erupted after the Sand Creek massacre of November 29, 1864, in which Colorado Territory militia murdered over 150 defenseless Cheyenne and Arapaho men, women, and children.

Donation Land Law

The U.S. Congress passed the Donation Act on September 27, 1850, to support the settlement of the Oregon Territory through federal land surveys and grants, and, more broadly, to contribute to the legal transfer of land from Indian ownership, or "aboriginal title," to American citizen-farmers. Between the mid-1830s and 1848, settlers informally claimed Indian lands for their homes, farms, ranches, and schools, while the Oregon Country (an area encompassing the present-day states of Oregon, Washington, Idaho, as well as portions of Wyoming, Montana, and the Canadian province of British Columbia) remained jointly occupied by the United States and Great Britain. Federal law did not recognize the validity of these land claims because they existed outside the borders of the United States and were situated on unsurveyed, Indian-owned land.

Although the negotiation of the Oregon Treaty between Great Britain and the United States in 1846 placed the majority of these illegal land claims within U.S. territory, they remained Indian land. The Oregon Territorial Act of 1848, which created the Oregon Territory, explicitly honored Indian property rights "so long as such rights shall remain un-extinguished by treaty between the U.S. and such Indians." Hence, when the Oregon Country achieved territorial status, Congress faced the dilemma of "delayed extinguishment"—acquiring legal title to tribal land *after* non-Indian settlement had occurred.

This pre-1848 Euro-American settlement, particularly within the Willamette and Rogue River valleys, had progressed in direct violation of federal law and systematically displaced and dispossessed the tribes of western Oregon. To secure the legal standing of these "squatters," Samuel Thurston, Oregon's territorial delegate to Congress, introduced a resolution to the House of Representatives in February 1850 appealing for the enactment of federal legislation to sanction his constituents' preexisting land claims. The product of Thurston's resolution, the Donation Act, represented both a profound revolution in social order and an extension of federal Indian policies of removal and reservation. On one hand, the bill allowed whites and "American half-breed Indians" of all classes above the age of eighteen the opportunity to acquire land for free. For the first time in American history, small farmers no longer had to bid com-

petitively for land against wealthier buyers or pay a fixed per-acre price. The Donation Act granted 320 acres to authentic settlers who resided in Oregon on or before December 1, 1850, and permitted married settlers to claim an additional 320 acres in their wives' names. Donation Act claimants secured land through their labor rather than capital, and had to prove four years of continuous occupancy and cultivation.

On the other hand, the Donation Act ignored the past illegal occupation of Native lands and allowed settlers to file "new" Donation Land Claims after the completion of the federal land survey and negotiation of treaties with tribes relinquishing or "extinguishing" their property rights. To speed the extinguishment of Native land title, Congress passed the companion Indian Treaty Act of 1850, which authorized commissioners to negotiate treaties of land cession. Between 1853 and 1855, Oregon pioneer Joel Palmer, superintendent for Indian affairs for the territory, negotiated a series of ratified treaties that forcibly removed the western Oregon tribes—including the Kalapuyas, Mollalas, Umpquas, Rogue River Chastas, Scotons, and Confederated Bands of the Willamette Valley—to the coastal Siletz and Grand Ronde reservations.

Ultimately, the Donation Act modeled a legal process for the Euro-American resettlement of the tribal lands, one that was applied throughout the West by the Homestead Act of 1862. In Oregon, the Donation Act hastened a second wave of overland migration and patented 7,437 land claims totaling over 2.6 million acres.

Dragging Canoe

Dragging Canoe (d. 1792; Cherokee names: Tsi-yugunsini, Chincanacina) led the Cherokee military resistance against

settlers in the Tennessee Valley from 1775–1792. He opposed the purchase of the northern half of Cherokee country in 1775 by Richard Henderson, a North Carolina judge and speculator. He organized the Cherokee dissidents and attacked the settlers in eastern Tennessee in 1776 in an effort to force them to return east of the Appalachian Mountains. After being repelled by settler militias, Dragging Canoe and the other dissenters, later called Chickamaugans, moved from the Upper Cherokee Towns. After resettling, they made alliances and trade agreements during the 1780s and early 1790s with the British, French, Spanish, Creeks, and Shawnees in an effort to prevent further encroachment and expel intruders.

During the 1780s the Chickamaugan resistance slowed settler growth in the Tennessee region, particularly the Cumberland area around Nashville, and created a robust trade in stolen horses and slaves. Forced to move farther southwest around 1782, the Chickamaugans created thriving multicultural towns, called the Lower Towns, in present-day southern Tennessee and northern Alabama. The Chickamaugans joined with the Upper Towns in 1788 after the massacre of most major Upper Town peace chiefs by American militiamen.

By 1789 Dragging Canoe and other leaders sought peace with the United States. Dragging Canoe died of an illness in 1792 while organizing resistance to the unsatisfactory Treaty of Holston of 1791, in which the United States pressured or tricked the Cherokees into making a large land cession.

Dull Knife

Known to his Northern Cheyenne people as Morning Star, Dull Knife (c. 1810–1883) earned a reputation as a courageous warrior in battles against the Crows and Shoshones. During the Bozeman Trail War (1865–1868), he allied with the Lakotas to drive the Americans out of the Powder River

country. Despite his bravery on the battlefield, however, Dull Knife eventually realized that further military resistance to the invasion of American settlers was futile and began pursuing a policy of peace.

After signing the Fort Laramie Treaty (1868), Dull Knife stated that he would never again “sharpen his knife” to fight Americans, thus earning his nickname. Although many of the young men in his tribe participated in the Battle of Little Bighorn, Dull Knife retreated with some followers into the Bighorn Mountains. In the aftermath of Lt. Colonel George Armstrong Custer’s defeat, the U.S. military pursued the Lakotas and Cheyennes. On the morning of November 25, 1876, a large military force attacked Dull Knife’s village, killing twenty-five Indians and slaughtering over five hundred horses. The survivors suffered through the winter before surrendering at Fort Robinson in April 1877.

Shortly after surrendering, the Northern Cheyennes were sent to Indian Territory to live with their Southern Cheyenne cousins. In their new home, however, Dull Knife’s people were plagued by starvation, disease, and loneliness. Consequently, a year later, Dull Knife and 350 Northern Cheyennes left the reservation and headed toward their Montana homeland. With the military in close pursuit, they made their way through Kansas and into Nebraska before dividing their numbers. Dull Knife, who remained with the weak and tired members of the group, was captured on October 23, 1878, and held at Fort Robinson.

When Dull Knife and the 128 other Cheyenne prisoners refused to be returned to Indian Territory, the military cut off their food, water, and fuel. On January 9, 1879, Dull Knife and his followers attempted escape. Sixty-four Cheyennes were killed. Dull Knife, however, eluded capture, and found refuge at Pine Ridge Agency. Dull Knife was eventually allowed to return to his homeland, where he died in 1883.

Duncan, DeWitt Clinton

Cherokee attorney and teacher DeWitt Clinton Duncan (1829–1909) was the son of John Duncan and Elizabeth Abercrombie Duncan. The family removed with the rest of the tribe in the late 1830s to the West, where Duncan studied in Cherokee public schools. In 1857 he entered Dartmouth College, graduating Phi Beta Kappa in 1861. Due to the onset of the Civil War (1861–1865), he did not return to his people, but taught in New Hampshire, Wisconsin, and Illinois before settling in Charles City, Iowa, where he practiced law, taught school, and served as mayor. Upon his return to the Cherokee Nation in 1880, Duncan served as its legal counsel, as a delegate to Washington, and as principal of the Cherokee Male Seminary.

Duncan was a prosecutor in the federal case against David L. Payne, leader of a group of illegal settlers on Cherokee land. He devised a system of shorthand for the Cherokee language used by reporters in the Cherokee courts and also composed poetry. He is best known, however, as a political writer during a turbulent time in Indian history. Publishing extensively in the *Cherokee Advocate* and other Indian Territory newspapers, Duncan argued against allotment of tribal lands and the dissolution of tribal governments. He advocated treaty rights and national sovereignty for tribes. His work took several forms, including legal briefs, satirical pieces, and correspondence, much of it emanating from Washington, D.C., where he often wrote eyewitness reports from congressional hearing rooms.

E

Article 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace and its honor is hereby pledged to keep it. The Indians desire peace and they now pledge their honor to maintain it.

Eagle Protection Act (1940)

Congress passed the 1940 Eagle Protection Act to stop the rapid decline of bald eagle populations due to hunting, habitat encroachment, and the use of pesticides such as DDT. The act prohibits any form of hunting, possession, or sale of a bald eagle and provides civil and criminal sanctions for violations. The act protects both dead and live birds, bird parts, nests, and eggs.

In 1962 Congress amended the act to also protect the golden eagle and to establish the American Indian Religious Freedom Act exception. This exception recognizes traditional religious connections American Indians have with eagles. It also created the U.S. Fish and Wildlife National Eagle Repository, which collects and distributes eagles and their parts. The repository operates a permitting system whereby American Indians may obtain eagles and eagle feathers for religious purposes.

The religious exception is a controversial provision that has been the focus of many court cases. American Indians assert the act and the permitting system limit religious practice; it takes years, they say, to receive an eagle and then the bird is often not in suitable condition.

United States of America v. Winslow Friday, decided by the District Court of Wyoming in October 2006, was hailed as a victory by American Indians. The court dismissed charges against an Arapaho man who killed an eagle for a religious ceremony without a permit. The judge said it was clear the government had no intention of accommodating the religious beliefs of American Indians except on its own terms. The decision was under appeal as of June 2008.

Eastman, Charles

Charles Eastman (1858–1939), a Native American author and activist, was the son of Dakota warrior Many Lightnings and a woman of mixed ancestry. Following the 1862 United States–Dakota War, Many Lightnings was arrested and sentenced to hang. Eastman and other relatives fled from their Minnesota reservation to Manitoba, Canada. There, Eastman was isolated from further contact with whites. In 1875 his father (whose death sentence President Abraham Lincoln commuted to three years imprisonment) found Eastman and took him to live at the homesteading community of Flandreau, South Dakota. Many Lightnings then put his son on the path of assimilation.

During the next several years, Eastman attended school, including Dartmouth College and Boston University, where he earned a medical degree. Along the way, he gained influential mentors such as Alfred Riggs, the founder of the Santee Normal School, and Frank Wood, who was active in the Lake Mohonk Conference of Friends of the Indian and the Indian Rights Association. Through these relationships, Eastman began his lifelong involvement with Indian policy.

Eastman actively supported the 1887 General Allotment Act and in 1890 was appointed by the Bureau of Indian

Affairs (BIA) to be agency physician at the Pine Ridge reservation in South Dakota. There he met his wife and future literary collaborator, Elaine Goodale, and witnessed the aftermath of the Wounded Knee Massacre.

From 1890 until 1925, Eastman was a prolific writer, lecturer, and activist. He worked at various times as a lobbyist for the restoration of Santee treaty rights; as an “outing” agent for the Carlisle Indian School (responsible for placing students with potential employers or host families for further training); as an agency physician at Crow Creek, South Dakota; and as a renaming clerk for the Interior Department (assigning surnames to Sioux to facilitate allotment), among others. Eastman was also active in the Society for American Indians and served on the 1923 Committee of One Hundred, whose work laid the foundation for the 1928 *Meriam Report*.

Fundamentally in agreement with the need for Indian people to integrate into American society, Eastman nevertheless balanced his work between supporting assimilation and celebrating traditional Indian life. In his autobiographical writings, *Indian Boyhood* (1902) and *From the Deep Woods to Civilization* (1916), Eastman depicted Indian culture and identity in a way that essentially supported the allotment policy. However, he gradually became disillusioned with BIA corruption, the inability of the “friends of the Indian” to live up to their benevolent speeches, and the failure of allotment to achieve its desired ends. Increasingly, as in his 1911 work *The Soul of the Indian*, Eastman began to articulate a pan-Indian consciousness that stressed the need to sustain the spiritual values of Indian peoples, who he understood as sharing universal cultural traditions that transcended any tribal differences. In this respect, he was at the forefront of the movement to reinvigorate traditional Indian culture that achieved some success in the late 1920s and 1930s with Commissioner of Indian Affairs John Collier’s “Indian New Deal.”

Eastman’s attempts to popularize his positive vision of Indian identity were reflected in his endorsement of the “outdoor movement” of the Young Men’s Christian Association (YMCA) and Boy Scouts of America; in publications such as *Indian Scout Talks* (1914), *Old Indian Days* (1915), and *Wigwam Evenings* (1911); and in the New Hampshire camp he ran with his wife until their divorce in 1921. Retiring from public life in 1925, Eastman lived in a cabin near Detroit until his death from pneumonia in 1939. He remains a compelling figure because his career and writings underscore the tensions between assimilationist pres-

ures and the beginnings of a resurgent Indian “nationalism” during the early twentieth century.

Echohawk, John

John Echohawk (1945–), a member of the Pawnee Nation of Oklahoma, is a leading force in Indian law and policy. One of the first Indians to attend law school under the Indian Law Scholarship Program funded by the Office of Economic Opportunity, Echohawk founded the American Indian Law Students Association, and in 1967 he became the first American Indian to graduate from the University of New Mexico School of Law.

Following law school, Echohawk joined California Indian Legal Services, where he quickly learned the magnitude of the work to be done on behalf of American Indians. Utilizing financial support from the Ford Foundation, Echohawk and other attorneys established the Native American Rights Fund (NARF) in 1970, adopting a policy of using litigation to defend and enhance civil rights.

As the executive director of NARF since 1977, Echohawk has led the organization’s successful advocacy for Indian rights in court and in Congress. NARF has fought for tribal sovereignty, the establishment of historical treaty rights in land and water, and the passage of the Native American Graves Protection and Repatriation Act and amendments to the Voting Rights Act. In 1996 Echohawk spearheaded a large class action lawsuit on behalf of more than 300,000 American Indians, challenging the federal government’s misappropriation of millions of

dollars of Indian trust funds (now commonly known as the *Cobell* litigation).

Echohawk's single-minded devotion to protecting the rights of American Indian tribes and improving the lives of Indians has garnered him a place in the *National Law Journal's* "100 Most Powerful Attorneys" since 1988.

Echo-Hawk, Walter R.

Walter R. Echo-Hawk (1948–) is a Pawnee Indian who has fought to protect the rights of Native Americans. Echo-Hawk was born into the Kitkahahki, or warrior class, of the Pawnee on their reservation in Oklahoma. After completing a political science degree at Oklahoma State University, he enrolled in the Indian law program at the University of New Mexico School of Law. After graduating in 1973, Echo-Hawk joined his cousin, John Echohawk, at the Native American Rights Fund (NARF).

Echo-Hawk's early legal work involved defending the right of American Indian prisoners to wear their hair long, in the customary manner, and to participate in other traditional practices, such as sweat lodge ceremonies and the keeping of sacred objects. These efforts led first to the successful passage of the American Indian Religious Freedom Act of 1978, which formally protected traditional religious practices, and to later amendments in 1994 that legalized the religious use of peyote by members of the Native American Church.

Echo-Hawk also became involved with securing the return of Indian remains, burial offerings, and sacred objects to Native groups. After negotiating several agreements with state archeologists and museum directors for the return of such remains and artifacts, Echo-Hawk led a national effort to enact the Native American Graves Protection and Repatriation Act of 1990. This act established national standards for the return of Native American remains from federal agencies and federally funded institutions.

His work involving tribal water rights in the Northwest earned Echo-Hawk the Civil Liberties Award from the American Civil Liberties Union of Oregon in 1991. In 1994 he published an award-winning book, *Battlefields and Burial Grounds*, which includes examples of his own art.

Edmondson, Ed

A member of a powerful political family, Ed Edmondson (1919–1990) was a U.S. congressman (a Democrat) from Oklahoma from 1953 to 1973. Born and raised in Muskogee, Edmondson served on the Transportation Committee and the Interior and Insular Affairs Committee of the House of Representatives. During his time in office, Edmondson's congressional district, which encompassed the heart of the Cherokee and Creek nations, had one of the largest populations of Native Americans in the United States.

As a member of the House Interior Committee, Edmondson was a consistent voice for tribal sovereignty and empowerment, and his time in Congress saw his involvement in many significant developments for Indian Country. He was particularly involved in resisting the government's termination policies of the 1950s and 1960s. He led the fight in Congress to oppose removing restrictions on the alienability of Indian lands; many times, removal of these restrictions was set as a precondition to permitting Indian owners to receive government benefits. As a result of the removal of these restrictions, Indian ownership of land in Edmondson's district had fallen sharply between 1889 and 1955.

As a congressman, Edmondson was also instrumental in establishing the Five Civilized Tribes Museum in Muskogee. Edmondson ran for the United States Senate in 1972 and 1974, narrowly losing each time. He also lost a bid in 1978, when he ran without his party's nomination. After retiring from politics, Edmondson helped initiate the Sovereignty Symposium, an important legal gathering of scholars and practitioners of Indian law.

Education: Boarding Schools

Indian boarding schools have been portrayed as a tragic symbol of racism, cultural genocide, and forced assimilation, yet some Native people remember the schools as safe havens where they made lifelong friendships and gained valuable skills. These institutions were designed in the late 1800s to “civilize” Native Americans through training in industrial and agricultural skills. Historians have traced the records of these schools through government documents, but of equal or greater value are narratives giving voice to boarding school alumni. In the mid-to-late twentieth century there were scores of Indian boarding schools operated by the Bureau of Indian Affairs (BIA) in the nation, but by the early twenty-first century, only a handful remained.

Historical Background

The common school movement of the 1840s promoted the idea of elementary—and eventually compulsory—public education for all children. As interdenominational Protestant groups founded charitable schools within urban areas, they laid the foundation for a comparable effort on Indian reservations. After the public school system was instituted, funding derived from state taxes and the local community controlled school policies, staffing, and curriculum. That control also allowed states to legislate exclusionary practices and, along with other races, Indians could be prevented from entering public school. Although a few Native students attended public schools in other areas, the federal government was responsible for schooling Indian children.

In 1840 Commissioner of Indian Affairs T. Hartley Crawford portrayed the coeducational Methodist Shawnee mission in eastern Kansas as an ideal model for Indian schools. The need for a common language placed English as the most favored bridge between students and their teachers. By 1842 there were 2,132 students enrolled in forty-five schools in Indian Territory. By 1848 there were sixteen manual labor schools with 809 students and eighty-seven boarding schools with 2,873 enrolled.

The reservation period in American history signified a change in federal Indian policy. With the expansion of the United States to the Pacific Ocean, tribes could no longer simply be isolated from the white Americans. Commissioner of Indian Affairs Luke Lea reported to the secretary of the interior in 1850 and advised that the Indians be kept on the reservations and compelled to farm. Compulsory education and assimilation policies were usually included in land cession and removal treaties.

After the Civil War (1861–1865), most American politicians and citizens held one of two views: either Indians were on the way to extinction or should be saved through education and assimilation. Prompted by the tragedy at Sand Creek and increasing hostilities between whites and Natives, President Ulysses S. Grant appointed the Peace Commission in 1867. The commission’s report in 1868 included a new formula for Indian governance and educational policies that would extend into the twentieth century. The commissioners advised the government to continue using reservations for protection and isolation of all Indian tribes. They also suggested that the government provide schools that emphasized the exclusive and compulsory use of English, that weaned Indian students from their languages and cultures, and that implemented regulations to change student behavior and appearance.

Edward P. Smith, who had worked for the American Missionary Association and the Bureau of Freedmen Refugees and Abandoned Lands, was appointed as the commissioner of Indian affairs in March of 1873. In November Smith submitted his first annual report, suggesting that day schools served only those Indians who were already well on their way to assimilation. Under the heading of “Manual Labor Schools,” he suggested that boarding schools, where only English was spoken, would be much more successful. Despite objections from those who believed in a military solution to the “Indian problem,” within a decade, the Christian humanist philosophy was transformed into legislation that established a network of Indian boarding schools. In 1875 the Board of Indian Commissioners proposed a universal common school system for Indians, just as the states provided public schools for their children.

In 1877 Indian commissioner Ezra Hayt recommended that all Indian children between six and fourteen years old be compelled to attend school—preferably boarding schools where there would be minimal influence from the families and only English would be spoken. Hayt also advised the establishment of industrial schools for students over fourteen

Off-reservation boarding schools, such as Carlisle Indian School, replaced on-reservation day schools in the 1880s. The boarding schools deemphasized Indian traditions and emphasized agricultural and domestic skills to encourage assimilation into white society.

and recommended funding for sending some to eastern colleges to learn to be interpreters.

Despite these numerous plans and recommendations, Commissioner Hiram Price revealed in 1884 that the government had not fulfilled its promises to provide schools for Indians, and over the five previous years had accrued a debt to the western tribes of more than \$2.5 million dollars.

As a federal Indian education plans were slowly being implemented, boarding schools gradually replaced day schools on the reservations, and curricula emphasizing manual labor, farming, and industrial skills was popular for a few decades. Initially these institutions were managed and at least partially funded by the churches and missionary organizations as contract schools. But as the secular structure expanded, government funding for religious education disappeared. Federally funded day schools within the villages and on the reservations provided a brief education and served as “feeders” to reservation boarding schools. Children from urban areas and reservations were sent to off-reservation boarding schools (ORBS). Other early students at the ORBS were Alaska Natives, who were under the jurisdiction of the Bureau of Education, a separate division of the Interior Department.

Off-Reservation Boarding Schools

In 1877 there were 48 governmentally funded boarding schools and 102 day schools on reservations, figures that

increased to 60 and 109, respectively, by 1880. In 1885 there were ninety-eight boarding schools but only eighty-six day schools. By 1880 three experimental off-reservation Indian educational programs were in place: the Hampton Normal and Agricultural School in Virginia (founded as a school for freed slaves), the Carlisle Indian Industrial School in Pennsylvania (sited at an abandoned army barracks), and the Forest Grove Indian Industrial and Training School in Oregon (at Pacific University). Those institutions together marked the beginning of the off-reservation boarding school movement.

The Forest Grove School was relocated to Salem, Oregon, in 1884, and four more ORBS were opened by the U.S. government: the Haskell Institute in Lawrence, Kansas (later the Haskell Indian Nations University); the Chilocco Indian Agricultural School in Oklahoma; the U.S. Indian Industrial School in Genoa, Nebraska; and the Albuquerque Indian School in New Mexico. By the end of the century, 153 on- and off-reservation boarding schools had a population of 17,708, one-third of which were off-reservation. In 1900 twenty-five boarding schools were located off reservations, and in the late 1920s almost half of all Indian students were enrolled at those schools.

As the template was crafted in Washington, D.C., there were few differences between boarding schools. Superintendents, teachers, and other employees were often trans-

ferred from one BIA boarding school to another regardless of their level of knowledge about the tribes whose children they would be teaching. From the government's perspective, an Indian was an Indian. A massive institution resulted, housed in the BIA, with reservation and off-reservation schools as satellites throughout the country. This assured that Indians, despite their geographical location, language, culture, or religious traditions, were taught an identical curriculum: individualism, competency in the English language and basic academic skills, Christian spiritual values, and Euro-American agrarian skills. When Congress passed the General Allotment Act (Dawes Act) of 1887, with its plan for the breaking up and allotment of all reservation lands to individual Indians, students were encouraged to reject tribal communities, to think of themselves as individuals, and to focus on a future in which they would own their land in fee simple, become citizens, and raise a family.

The organization of the schools was militaristic, with a regimen that included marching, discipline, and corporal punishment. Although the original plan for the schools was to train teenaged Indians to work, very young children were enrolled to increase the per-capita-based government funding. The curriculum was at a grammar school level and included some academic classes, but in the early years schedules revolved around an industrial/agricultural program, preparing boys to be farmers. Their labor was an integral part of the construction of school buildings and maintenance of the grounds. Money earned by the students was held by the school superintendent and used to support the school. In the case of one Chemawa school it was even used to purchase land that was then deeded to the government. Girls were taught the "domestic arts," cooking, sewing, laundry, and housekeeping. The courses expanded over time to include more academic subjects and vocational training for outside work such as nursing, tailoring, engineering, and printing. In some cases, "outing" programs placed students at local homes and farms.

Because of the large geographical areas that some reservations encompassed and the limitations on family contact, students at boarding schools on the reservations were often as isolated from their communities as those at Carlisle, Chemawa, or other ORBS. Children from Alaska might be sent to ORBS in Oregon, Kansas, or Pennsylvania, and years could pass before they saw their loved ones again. Some stayed as employees at the school. Other students died at the schools or became ill and died shortly after they were sent home. If and when they did return home, the acculturated Indians faced a bleak future. Few jobs that could utilize their

newly acquired skills were available in their reservations or villages, and they were sometimes even shunned by family and friends.

Education Reforms

To the public, the intrinsic flaws of the boarding school system were unknown or overlooked, and Indian schools were seen as symbols of American philanthropy. But by the 1920s, a new spirit of social reform stimulated questions about the fairness and effectiveness of Indian education. The crusade of John Collier, the commissioner of Indian affairs from 1933 to 1945, and the American Indian Defense Association prompted investigations, the *Meriam Report*, and ultimately the Indian Reorganization Act of 1934 (IRA). Congress began to recognize the value of Indian history and culture had value and allowed those subjects to be taught in the schools. During this same period, Alaska Native education was brought under the jurisdiction of the Bureau of Indian Affairs (formerly the Office of Indian Affairs). The State of Alaska took over management of Native schools in the 1960s.

The Indian Self-Determination and Education Assistance Act of 1975 subsequently authorized tribes to contract to operate their own schools and to decide how their children would be educated. As support for manual labor schools diminished and emphasis on accreditation and a high school diploma grew, federal Indian education philosophies began to parallel those of the public schools. Both on- and off-reservation boarding schools adjusted their curricula to meet national and state district standards. Two important legislative actions helped to shift control of the schools from federal to tribal supervision: the Education Amendments Act in 1978 and the Tribally Controlled Schools Act of 1988, which provided for the formation of tribal school boards and for tribes to hire their own teachers and staff. In 2007 the Bureau of Indian Education funded fifty-two boarding schools, of which twenty-four were tribally operated.

One lasting consequence of the integration of individuals from different tribes in boarding schools was the pan-Indian movement, and the unification of groups who now strive together for tribal sovereignty, self-determination, cultural restoration, and the improvement of Indian education at all levels. An example of this cooperation is the National Indian Education Association (NIEA), founded in 1969, which represents the interests of all American Indians, Alaska Natives, and Native Hawaiians.

From mission schools, reservation day and boarding schools, and off-reservation boarding schools to tribally

operated schools on the reservations, special programs for Indian children attending public schools, and tribal colleges, the evolution of Indian education has been a reflection of changing social attitudes and the persistence of Native Americans.

Education: Higher Education

Higher education as offered by colleges, universities, and other learning institutions was unknown to American Indians before colonization. Instead, apprenticeship with knowledge-

able elders was the route to advanced learning. For European colonists the major goal of higher education was usually to train Christian ministers, as was the case with Harvard University, founded in 1636. Harvard's 1650 charter called for the “education of English and Indian youth,” and in 1653 the Society for the Propagation of the Gospel in New England paid for the construction of a small Indian College building, which served a handful of Indian students before its demolition in 1698. Funds raised in Great Britain were used to print 1,500 copies of an Indian Bible in a dialect of the Algonquian language at the Indian College. The colonists sought to prepare Indians to be missionary teachers so they could go home and convert the other members of their tribe.

In the eighteenth century, Eleazar Wheelock found a promising Indian student named Samson Occom (Mohegan), who learned Greek and Latin and became a teacher and missionary on Long Island, New York. In 1766 Occom went to England to preach and raise money for educating Indians, and Wheelock used the money to found Dartmouth College. Its 1769 charter established it

For the education and instruction of youth of the Indian tribes in this land in reading, writing, and all parts of learning which shall appear necessary and expedient for civilizing and Christianizing children of pagans, as well as in all liberal arts and sciences, and also of English youth and any others.

However, Dartmouth, like other early colleges and universities, educated few Indians until the Civil Rights movement forced it to remember its original purposes and establish a Native American studies program in 1972. By the early twenty-first century, Dartmouth had graduated over five hundred American Indians. In Virginia, the College of William and Mary was founded in 1693, and its first Indian students attended in 1700. In 1723 a house for Indian students was constructed and remained open until the American Revolutionary War (1775–1783).

Overall, there were only small-scale scattered efforts to provide higher education for Indians throughout the nineteenth century and into the twentieth. One of the earliest higher education institutions exclusively for Indian students was the Croatan Normal (teacher training) School that opened in North Carolina in 1887 with fifteen students from the Lumbee tribe. The state's general assembly recognized the Lumbee Indians in 1885 and authorized them to have their own schools because they wanted to avoid being educated in segregated schools with African Americans. Its

FIGURE 1: Educational Attainment in Population 25 Years and Older, 2000

American Indians rank lower in educational attainment compared with the total U.S. population. According to the 2000 Census, about 12 percent of American Indian and Alaska Native populations over 25 years old had earned a bachelor's degree or more.

early curriculum was nonstandard and nontraditional and considered to be below an eighth grade level. Students originally needed to be at least fifteen years old to attend. In 1911 the school was renamed the Indian Normal School of Robeson County. In 1913 it became the Cherokee Indian Normal School, which it was called until 1941 when it became Pembroke State College for Indians. In 1953 it was opened to non-Indians due to the court-ordered end to school segregation. As it graduated more and more Indian students, pressure was put on the state to open its graduate and professional schools to Indians. In reaction to the desegregation of the university and the Indian militancy of the early 1970s, a Native American Studies department was added in 1972 and authorized to offer a major in 1984, one of only two such majors then offered east of the Mississippi

River. Between 1981 and 1992, about 24 percent of students at Pembroke were American Indians.

Bacone's Indian University

Three years after the founding of the Croatan Normal School, an instructor at the Cherokee National Male Seminary, Almon C. Bacon, supported by the American Baptist Home Mission Society, helped establish the Indian University in Tahlequah, Oklahoma. It began in 1880 with three students and was chartered a year later by the Muscogee-Creek Nation. John D. Rockefeller, the oil magnate and a friend of Bacon's wife, provided financial support. Its first catalog declared in 1881 that "Its primary object is to prepare native teachers and preachers for a more effective Christian work among the Indian tribes." Its first

bachelor's degree was awarded in 1883, and construction on Rockefeller Hall began in 1884 in Muscogee, Oklahoma. Only five students, all Cherokees, graduated between 1883 and 1888. In 1889–1890 there were fifteen students enrolled in a normal (teacher preparation) class and ten in a theological class. It was reported that sixty students had been prepared for teaching and thirty-three for the ministry. Most of the faculty in the early days spoke an Indian language. All students received daily religious instruction, and German, Spanish, French, and Latin were offered for a year each.

Indian University graduates entered various professions, including medicine, law, journalism, and business. Only ten students were in the college department during the 1904–1905 school year, and from 1911 to 1916 there were no college level students.

In 1910, after Bacone's death, the college was renamed for him. Fifteen different tribes were represented in the student body in 1919, 24 tribes in 1922, and 306 students from 40 tribes in 1933. In 1928 there were ten Indian faculty members and a curriculum emphasizing Native music and art. From 1943 to 1948, the Reverend Early Louis Riley, a Creek Indian and alumnus, served as president.

After World War II (1939–1945), Bacone focused on providing programs that other schools for Indians did not offer, and more non-Indian students enrolled. In the late 1950s, the school received regional accreditation, and in fall 2001 the enrollment of 436 students was 45 percent Indian, representing twenty-three tribes.

Despite the long history of Indians in higher education, only a tiny fraction of Indians actually attended the available schools. As the Indian Office improved its education system it began to think more about post-secondary education. The large off-reservation boarding schools in the late nineteenth century added teacher preparation and business departments. After Carlisle Indian Industrial School in Carlisle, Pennsylvania, closed in 1918, Haskell Institute in Lawrence, Kansas, took its place as the flagship federal off-reservation boarding school. It became Haskell Indian Junior College in 1970 and Haskell Indian Nations University in 1993. The focus of the school shifted in 1970, when it began offering only college-level classes and changed its name to the Haskell Indian Junior College.

In 1932 Secretary of the Interior Ray L. Wilbur announced that Indian students could get educational loans from federal and tribal funds, room and board at nearby Indian schools in return for part-time-work, their tuition

paid from federal funds, and scholarships. However, Indian students enrolling in mainstream colleges had a very high drop-out rate, and some colleges would not take them.

Tribal Colleges

The failure of mainstream colleges and universities to recruit and retain Indian students led to the exploration of special colleges for American Indians, similar to the historically African American colleges established after the Civil War (1861–1865). The Office of Economic Opportunity (OEO), established in 1964 as the “flagship” of President Lyndon Johnson's “War on Poverty,” was designed to work outside existing federal departments that many activists felt had failed to adequately help the poor. The OEO operated under the policy of “maximum feasible participation” by the poor. Across Indian Country OEO programs fostered leadership and career opportunities and funded graduate education for Indians. The OEO also established Indian adult education programs, which led directly to the establishment of tribal colleges.

In 1957 the Navajo Tribe started a scholarship fund financed by oil royalties. However, over 50 percent of Navajo students dropped out in their freshman year. This led Navajo leaders to explore starting their own college. In 1965 they were able to convince the OEO to do a feasibility study, which concluded that a tribally controlled community college should be established. The OEO provided funding in 1968, and the Navajo tribal council passed a resolution founding Navajo Community College (NCC). It started as an open admissions institution in January 1969, in the U.S. government's Bureau of Indian Affairs (BIA) high school in Many Farms, Arizona, with 309 students. In 1971 the Congress passed the Navajo Community College Act to regularize federal support. A permanent campus was opened in 1973 in Tsaile, Arizona, and branch campuses were established around the reservation. In 1978 the enrollment was 1,241 students.

The establishment of the NCC with federal support was part of the general policy shift from assimilating Indians into the general population to Indian self-determination that was articulated by President Richard Nixon in 1970. The NCC's second president, Ned Hatathli (Navajo) declared, “This is an Indian owned and an Indian operated institution, and we certainly don't want any people other than Indian to dictate to us what is good for us” (Margaret Connell Szasz, *Education and the American Indian: The Road to Self-Determination Since 1928*, 3rd ed., 1999). Some Indian activists and traditional-

ists rejected much of mainstream thinking on what should go into the NCC's curriculum. On the other hand, modernists, including long-time Navajo tribal chairman Peter MacDonald, wanted tribal colleges to be patterned more after non-Indian community colleges and prepare students directly for jobs or to leave the reservation to enter mainstream four-year colleges. The NCC was renamed Diné College in 1997.

Other tribal colleges were established soon after the founding of the NCC. In 1967 volunteers associated with the University of Colorado founded Ogalala Lakota College (OLC) on the Pine Ridge reservation in South Dakota. Its 1978 mission statement emphasized "the importance of maintaining the Lakota culture and fostering tribal self determination" while preparing students "to understand the ways of the larger society." To better serve the dispersed reservation communities, it had nine centers rather than one central campus.

Sinte Gleska College on the Rosebud Sioux reservation in South Dakota was started in 1971 with six centers. From the beginning it had a large non-Indian enrollment, sometimes representing over 50 percent of the student body. Another pioneer tribal college was D-Q (Deganeweda-Quezalquotl) University, founded with the help of the California Indian Education Association, which was started in 1971. It was located near Davis, California, in an abandoned army installation that was taken over peacefully by Indian activists. It was forced to close its doors in 2006 because of financial problems, but in 2008 students still struggled to keep it open, continuing to live on campus and engaging in civil disobedience in protest against the board of trustees. The university's students were mainly urban Indians, and the only Indian language it taught was Lakota.

The presidents of the first six tribal colleges banded together in 1972 to form the American Indian Higher Education Consortium (AIHEC) to promote expansion of Indian-controlled higher education. The AIHEC's 1973 mission statement identified four objectives: "maintain commonly held standards of quality in American Indian education; support the development of new tribally controlled colleges; promote and assist in the development of legislation to support American Indian higher education; and encourage greater participation by American Indians in the development of higher education policy." AIHEC leaders lobbied Congress for support between 1973 and 1975, visiting every congressional representative with a tribal college in their district, and these efforts continued into the mid-2000s. South

Dakota senator James Abourezk, who had grown up on the Rosebud reservation, provided key support for the passage of the Tribally Controlled Community College Assistance Act in 1978, despite the objections of the BIA and the U.S. Office of Education. However, as of the early twenty-first century, the total authorized funding under this act had never been appropriated.

In 1994 tribal colleges were awarded land-grant status, which made new sources of federal funding available to them. Accreditation through regional accreditation associations, especially the North Central Association of Colleges and Schools (NCA), opened up sources of federal funding for tribal college students and helped keep them independent of tribal politics.

Tribal colleges serve Indian students who would otherwise have little chance to attend college and offer a second chance to students who have gone to mainstream colleges and dropped out. They play an important role in improving the quality of life on reservations. In 1989 a two-year study by the Carnegie Foundation entitled *Tribal Colleges: Shaping the Future of Native America* concluded, "The growing network of tribally controlled colleges offers great hope to the Native American community and the nation as a whole." The long-serving president of Sinte Gleska College, Lionel Bordeaux, wrote, "These founders [of the tribal colleges] foresaw the need to preserve the Indian culture so cultural preservation is really the foundation of the tribal colleges" ("Higher Education from the Tribal College Perspective," in *Opening the Montana Pipeline: American Indian Higher Education in the Nineties*, edited by Deborah Wesit LaCounte and Patrick Weasel Head, 1991).

In the 1990s a few tribal colleges moved to become four-year institutions. Both Diné College in Arizona and Haskell Indian Nations University in Kansas developed teacher education programs.

American Indian and Native American Studies

Pressured by the beginning of the Civil Rights movement, mainstream colleges and universities also responded to the demands of Indian leaders for more higher education opportunities. In 1955, at the request of university administrators and American Indian representatives, regents of the University of South Dakota organized the Institute of American Indian Studies. The South Dakota state legislature recognized the institute in 1974. The institute collected oral histories, among them the 1974 book *An Indian Philosophy on Education*, which was a collection of essays by American

Indian professionals that described how American Indian children should be taught.

Many Indians moved to cities in the 1950s, drawn by promises of economic opportunities from the BIA relocation program, but they often found those promises to be empty. Some of these disappointed urban immigrants became community activists, as was the case in San Francisco with the Alcatraz Island takeover in 1969. Many of them were college students, some from emerging Native American Studies (NAS) programs at the University of California at Berkeley, the University of California at Los Angeles, and San Francisco State College. Within these programs courses were developed in Native American literature, American Indian legal-political studies, Native American arts, Native American religion and philosophy, Native American education, American Indian languages, and American Indian tribal and community development. Jack D. Forbes, who helped found the University of California at Davis's NAS program, wrote that the "thrust of Indian Studies is not primarily to study the Indian community but to develop practical programs for and by the Indian community" (*Handbook for the Development of Native American Studies*, 1971).

In 1996 there were 131,902 Indian students enrolled in nontribal colleges and 10,234 in tribal colleges. By 2008, most Indian students were enrolled in mainstream educational programs that did not reflect or build on their Indian heritage. However, the number of Native American Studies programs in the United States and Canada has soared to over one hundred since the late 1960s, with over twenty colleges offering graduate degrees and at least forty offering bachelor's degrees.

Education: Mission Schools

As part of the attempt to "civilize" American Indians, missionaries of all denominations opened schools to educate Native people. The first mission schools in North America were founded in the mid-sixteenth century by the early Spanish explorers and were located within the Spanish missions. These missions also served as fortresses, supply stations, and religious institutions. The main goal of the first mission schools was to teach Catholic principles to American Indians, which necessitated the learning of some reading, writing, and language skills as well. Unfortunately, these early missionaries, and those who followed, frequently gave little thought to how their schools might harm the culture and structure of indigenous communities.

As colonization of the North American continent continued, so too did the creation of missions. With the French Catholics came more mission work, particularly in the upper Northeast, the adjacent regions in Canada, and later in the South. In New England, Puritan colonists established "praying towns" where Native American Christian converts resided and received instruction on English culture and trades.

The Second Great Awakening, a movement from the 1790s to the 1840s that sought to revive interest in religion

in the United States, stirred the missionary spirit among many different religious groups. Many religions worked to form and support mission schools and mission societies with the purpose of teaching Native American people the religious beliefs of their specific group. Large-scale coordinated efforts were generally difficult during this period because of lack of money and the distance between the mission societies and the Native populations. However, after the War of 1812 (1812–1814), a growing sense of nationalism, along with slow improvements in transportation, communication, and organization, helped missionary operations become more organized. The mission societies were able to form groups who could collect funds from around the country to support mission schools.

The American Board of Commissioners for Foreign Missions was tasked with placing agents, ministers, and teachers in the mission field. The board founded its first Indian mission school (for the Cherokees) in Brainerd, Tennessee, in 1816, and built schools away from Indian territory in Cornwall, Connecticut, in 1817, and Kentucky (the Choctaw Academy) in 1825. Cyrus Kingsbury, a Presbyterian missionary, founded mission schools for the Choctaws in Eliot, Mississippi, in 1818 and Mayhew, Mississippi, in 1821.

Because the mission schools' primary goal was to teach Native people about religious devotion, basic educational skills, and American work habits, the U.S. government encouraged the schools and supported them in the years between the War of 1812 and the Civil War (1861–1865). In 1819 Congress appropriated \$10,000 per year for the purpose of teaching Native people agriculture and instruction in reading, writing, and math. Much of this money, which continued to be appropriated until 1873, was allocated to Christian denominations. In 1824 the House Committee on Indian Affairs reported that the funds had been used to establish eighteen new schools.

After the Civil War, President Ulysses S. Grant's "Peace Policy" provided new government subsidies for American Indian education. The policy was to pay the mission schools per pupil for educating Indian children. The idea was that it was less expensive to educate and "civilize" Natives than it was to continue fighting costly "Indian Wars." As the government subsidies became standardized, the Catholic Church, using funds from wealthy benefactors and Sunday collections from regular parishioners, quickly organized the Bureau of Catholic Indian Missions and built mission schools around the United States to capitalize on the gov-

ernment's offerings. This rapid expansion of Catholic schools concerned the Protestant citizenry to the point of protest, and the federal government responded to the complaints with changes in how the contracts or subsidies were paid to mission schools. As a result, the contract mission schools began being replaced by federal Indian schools, which were officially nondenominational but clearly favored a Protestant model and included religious practice as part of the curriculum.

Colonel Richard Henry Pratt opened the Carlisle Indian School in Pennsylvania in 1879. Pratt pushed legislators and influential citizens to accept his belief that the military model of Indian education was the most effective. Consequently, many of the mission schools moved to the Carlisle or Pratt Model during the late nineteenth and early twentieth centuries. This model is often summarized with the infamous quote, "Kill the Indian, save the man." Pratt's school used military discipline and abusive tactics to subdue the students while enforcing a policy of strict cultural assimilation. Students learned trades and skills most useful in eastern urban environments, despite the fact that most of them returned to homes that were not necessarily in the east and certainly not urban. The Carlisle School enrolled Natives from many tribes across the country. Students from different communities often had to learn English as a way to communicate with one another. There were many instances of resistance by Natives to the harsh teaching methods and several student deaths.

In the twentieth century, the mission schools provided soldiers for both world wars, since the students already had military backgrounds from their educational experiences. School attendance began to build a pan-Indian cultural identity, as students began to identify with other Indians and the issues they had in common despite being from different tribal backgrounds.

Some of the mission schools, such as St. Michael's Indian School in the Diné (Navajo) Nation and Red Cloud in present-day South Dakota, still exist but function very differently than their predecessors. Those schools that survived learned to at first accept, and then later to celebrate and incorporate, local American Indian beliefs and customs into their principles and curricula. The most successful schools meld traditional Native knowledge with dominant cultural educational skills to create mission schools that truly serve American Indian communities on terms dictated by those communities.

Education: Public Schools

The United States Constitution does not mention education, and historically public schools have been a local responsibility overseen by locally elected school boards and often supervised by state departments of education. The U.S. Department of the Interior's schools for Indians have been a unique intrusion by the federal government into the direct provision of education that has only been paralleled by the creation of Department of Defense schools for children of military members.

During certain periods of the nineteenth and twentieth centuries, U.S. policy was to eradicate the tribal cultures of Indians and assimilate them into the general population. Since most non-Indian children in the country attend public schools, part of this assimilationist policy was a long-term effort to also enroll Native children in public schools. However, a policy of removal of Indians to the west in the first part of the nineteenth century, followed a few decades later by a policy of placing them on reservations, ran counter to this assimilationist policy. In addition, racial prejudice against Indians by the dominant white population discouraged the integration of Indians into public schools well into the twentieth century.

The major purpose of schooling in colonial America was to teach all children to read the Bible. In 1819 Congress passed the Indian Civilization Act, which provided funding to religious groups and others willing to live among Indians and teach them “the habits and arts of civilization,” which included converting them to Christianity. In the 1830s and 1840s, the “common school” movement started to shape the look of the modern public school. President Thomas

Jefferson and others had previously noted that the new American republic required an educated and moral citizenry in order to have good leaders elected to office. Later, Horace Mann, first secretary of the Massachusetts Board of Education from 1837 to 1848, was the leading advocate for public schools that would promote social harmony and assimilate students, especially immigrants, into America's democratic republic. The Indian education policy of the new United States of America supported Mann's goals.

Breaking up Indian Reservations

The passage of the 1887 General Allotment Act (Dawes Act) allowed white settlers onto many Indian reservations and opened the way for the establishment of public schools for their children. Ardent assimilationists like Richard Henry Pratt, who founded the Carlisle Indian Industrial School in 1879, saw putting Indians into public schools where they learned side by side with whites as the best way to “civilize” them. At Carlisle, Pratt placed Indian students with local white families under an Outing System in which they were paid for their work and attended public schools. Like many others of his day, J. D. C. Atkins, commissioner of Indian affairs from 1885 to 1888, found no value in Indian culture and demanded Indians be taught only in English.

Thomas Jefferson Morgan, who followed Atkins as commissioner (1889–1893), wanted Indians to have “A comprehensive system of education, modeled after the American public school system . . . embracing all persons of school age, compulsory in its demands and uniformly administered” (Harry J. Sievers, “The Catholic Indian School Issue and the Presidential Election of 1892,” *Catholic Historical Review*, vol. 38, no. 2, 1952). The Carlisle Indian School publication, the *Red Man*, supported Morgan's belief that public schools were vital to training American citizens. Superintendent of Indian Schools Dr. William N. Hailmann told the National Educational Association's 1895 annual meeting that he supported an assimilationist Indian policy, including abolishing Indian reservations and placing Indians in public schools.

Abrogating (abolishing) numerous treaties, Congress forced the Cherokees, Creeks, Choctaws, Chickasaws, and Seminoles in the Indian Territory to give up their self-government with the 1898 Curtis Act. The president of the United States appointed their principal chiefs from that point until 1970; the Department of Interior took over their schools and transformed them into state-operated public schools.

To encourage public schools to enroll Indian students, the Office of Indian Affairs began contracting with individual school districts to pay for their education. However, in his 1904 annual report, Commissioner of Indian Affairs William A. Jones declared that “too frequently where contracts are made with [public] school districts the money to be paid by the Government is the main thing sought, and not a sincere desire to benefit the Indian.” These contracts required Indian students to be educated equally alongside white students, but this was not always done and some contracts were cancelled.

Cato Sells, commissioner of Indian affairs from 1913 to 1921, stated in his 1917 Declaration of Policy that all students whose parents could pay for their education or who lived near public schools should be removed from Indian schools. This resulted in the closing of boarding schools in eight states as well as some day schools. In 1923 the secretary of the interior convened a Committee of One Hundred, comprised of leading political figures, to recommend changes in Indian policy. The group elected Arthur C. Parker as their chair. Parker was a Seneca author, anthropologist, and great-nephew of Civil War general and former commissioner of Indian affairs Ely S. Parker. The committee’s report noted that there had been a rapid increase in Indians enrolled in public schools alongside non-Indian students, but that Indians had poor attendance. There were only nine hundred Indian students in public schools in 1909. This figure grew to 37,730 in 1926 and 48,000 in 1932. In 1916 enrollment in federal government schools reached a high of 27,764.

The U.S. policy of assimilation also included the passage by Congress in 1924 of the Indian Citizenship Act, which made all Indians U.S. citizens. However, the act did not affect the actual status of Indians very much. Luther Standing Bear in his 1993 book *Land of the Spotted Eagle* called it, “The greatest hoax ever perpetrated upon him [the Indian] . . . The signing of that bill changed not in the slightest measure the condition of the Indian. . . . Indian boys and girls are still segregated in school life.” Recollections of some public school graduates from the 1950s support Standing Bear’s observation. They recalled how the “full-blooded” Indians sat in the back of their public school classroom, the mixed-blood students in the middle, and the white students up front.

An Indian New Deal

In the 1920s a number of activists became very vocal in criticizing federal policy because they claimed it was making Indians poor instead of civilized. To counter this growing

criticism, the government commissioned a privately funded study of the Indian Office in 1926 known as the *Meriam Report*. The study condemned the poor quality of services the Indian Office provided and found that allotment was impoverishing Indians. In response, President Herbert Hoover in 1929 appointed a fellow Quaker and president of the Indian Rights Association, Charles J. Rhoads, as commissioner of Indian affairs. Rhoads appointed W. Carson Ryan Jr., a progressive educator who helped write the education section of the *Meriam Report*, as director of Indian education (1930–1935). Ryan’s program included supporting federal-state contracts to put Indian children in public schools and gradually phasing out boarding schools.

As part of the so-called Indian New Deal that ended allotment under President Franklin D. Roosevelt and Indian Commissioner John Collier (1933–1945), the United States gave tribes more self-government. Congress passed the Johnson-O’Malley (JOM) Act in 1934, which for the first time authorized the secretary of the interior to enter into contracts with states or territories to pay public schools to educate Indians. This altered the practice of dealing with each school district individually that had been in place since 1891. By 1934 these local contracts ran into the thousands. Between 1934 and 1941 four states with large Indian populations signed contracts under the new law.

Indian students faced many problems in public schools. Historian Margaret Connell Szasz concluded in her 1999 book *Education and the American Indian: The Road to Self-Determination Since 1928*, “Rural teachers who had to conform to the attitudes of the local populace often found it difficult to regard their Indian pupils with even ordinary civility and kindness.” In *They Call Me Agnes: A Crow Narrative Based on the Life of Agnes Yellowtail Deernose* (1995), Deernose remembered, “Even in the thirties and forties Crow children entered school without any real background in English. They didn’t have interpreters in the classroom then. . . . By the time the Indians were in fourth grade in public school, most of them were too far behind to keep up with the White kids in reading.”

Mark Monroe (Sioux), who attended the Alliance, Nebraska, public schools in the late 1930s and early 1940s, remembered in his 1994 autobiography, *An Indian in White America*, that “all Indian children regardless of age” were put in an “Opportunity Room” where: “they weren’t taught anything. They weren’t given a report card. They weren’t advanced from one grade to another. They just stayed in this room, drew pictures, and marked on the blackboard.” He

concluded, “This was the white school system’s way of obeying the state law to keep Indian children in school without teaching them.” In Alliance, Indians were at the bottom of the pecking order, below Mexicans and blacks, and stores in the town had signs saying “No Indians or dogs allowed.”

Termination

After World War II (1939–1945) there was a conservative reaction to the Indian New Deal and a renewed call by Congress to terminate Indian reservations and assimilate Indians. In 1952 there were an estimated 127,957 Indian children between the ages of six and eighteen, but less than 30 percent of them attended Bureau of Indian Affairs (BIA) schools. Fifty-two thousand attended public schools, of which 60 percent were supported with JOM funds for a cost of over \$2.5 million a year. The rapid progress being made to enroll Indian students in public schools fit the federal government’s new termination policy.

Public schools were further encouraged to enroll Indian students with the passage of Impact Aid. Because public schools were largely funded by property taxes, which Indians living on reservations did not pay, it was hard to build the schools on Indian reservations. In 1950 Public Laws 874 and 815 authorized funds for public schools in federally impacted areas to ensure that children living on tax-exempt land, such as military bases, did not cause a financial burden for public schools. In 1953 these laws were amended to include Indians living or working on reservations or other federal trust land. By the early twenty-first century, Public Law 874 provided a large part of the operating expenses of many reservation public schools, while Public Law 815 funds were used to build many of them. With the new Public Law 874 funds available to support Indian students in public schools, JOM funds were reduced and shifted from schools’ general operating funds to providing programs that delivered special services to Indian students. This could mean anything from providing Indian counselors to furnishing school supplies that parents could not afford.

On the large Navajo reservation there was not enough classroom space for all the students. The solution was to build dormitories in border towns to house students while they attended public schools. In 1954 agreements were signed with school boards in Arizona, New Mexico, and Utah, and by 1965 there were 4,200 students in BIA dorms attending public schools. In 1998 the BIA’s directory listed fourteen peripheral dorms housing students that were attending public schools.

Self-Determination

The Civil Rights movement of the 1960s helped reverse the termination policy and fostered more Indian involvement in the education of their children. In 1969 Indian educators founded the National Indian Education Association, which helped gain the passage of the Indian Education Act of 1972. This act provided for the first time federal funds for special programs for Indian students not living on reservations.

In 1971 the National Association for the Advancement of Colored People (NAACP) published a report titled *An Even Chance: A Report on Federal Funds for Indian Children in Public School Districts* that documented how JOM funds meant to help Indian students were being put into schools’ general operating budgets and used to educate all students, both Indian and non-Indian. New JOM regulations drawn up in 1974, in consultation with representatives of nearly forty Indian organizations, called for their use to fund only supplementary programs designed to meet the special needs of Indian students. Parent advisory committees were required for JOM programs and progress was made to shift the flow of JOM money from states to Indian groups. Despite the progress made, a 1976 Arizona study entitled *A Study of Public Schools On and Off Indian Reservations in Arizona* found: “While increasingly, Indian parents are encouraging their children to attend and complete the public school program, the students apparently feel an estrangement between their homes and schools. Most Indian parents are reported to feel rejected by the schools.”

In 1990 Congress finally reversed the English-only educational policy of the nineteenth century and termination era and passed the Native American Languages Act, which makes it government policy to “preserve, protect, and promote the rights and freedom of Native Americans to use, practice, and develop Native American languages . . . including [in] publicly supported education programs.”

The U.S. secretary of education’s Indian Nations at Risk Task Force reported in 1991 that during the 1989–1990 school year, 10 percent of Indian students were in BIA-funded schools, 3 percent were in private schools, and 87 percent were in public schools. Testimony gathered at the task force’s hearings indicated that many of these Indian students attended schools with a Eurocentric curriculum, low teacher expectations, and “overt and subtle racism.” The task force found “an unfriendly school climate that fails to promote appropriate academic, social, cultural, and spiritual development among many Native students,” which contributed to

Indians students having the highest high school dropout rate (36 percent) of any minority group in the United States.

Recent Initiatives

Public schools have been under increased attack since the publication of a widely studied 1983 report titled *A Nation at Risk: The Imperative for Educational Reform* because of their alleged failure to adequately educate students, especially ethnic minorities. The No Child Left Behind (NCLB) Act of 2001 focused attention on the gap between the academic achievement of Indians and other minorities and called for extensive testing. Title VII of the NCLB, the most recent version of the Indian Education Act, contains rhetoric about the need for culturally sensitive education for Indian students. However, a report by the National Indian Education Association on its implementation in Indian Country found the rhetoric to be empty and that the act was being used to eliminate a culturally relevant curriculum in favor of an emphasis on teaching reading and mathematics to prepare students for government-mandated standardized tests.

A few states are taking action to make their public schools more accommodating to their Indian students. In 1999 the Montana legislature passed the Indian Education for All Act that stated “every Montanan, whether Indian or non-Indian, is to be encouraged to learn about the distinct and unique heritage of American Indians in a culturally responsive manner.” New Mexico’s 2003 Indian Education Act established an Indian Education Advisory Council and required school districts with many Native students to make sure those students are offered culturally relevant classes, that Native language classes are taught in the schools, and that Native students are provided with more bilingual teachers and administrators. The state asks districts to actively recruit those professionals. In 2007 South Dakota officially created an Office of American Indian Education and required all new teachers to complete a course in South Dakota Indian studies. The state also mandated that public schools have to offer Lakota language courses to students who want to take them.

Education: Reservation Schools

The reservation period of United States Indian policy began in the mid-nineteenth century, and provisions for school buildings and teachers for the reservations were included in most treaties. The schools were designed to teach Indian students at an elementary level and to train them in agriculture and industry, thus preparing them for assimilation into white society as independent, English-speaking, Christian farmers and laborers. Missionaries operated the first reservation schools, but as the states began public education programs, responsibility for Indian education was gradually assumed by the federal government. In 1840, with the support of social reformers, Commissioner of Indian Affairs T. Harley Crawford lobbied for betterment of Indian education and manual labor schools. But Indian education on the reservations was underfunded and mostly neglected until the 1880s. In addition to the schools on reservations, a number of industrial training boarding schools were constructed around the country.

In 1889 Thomas Jefferson Morgan was appointed commissioner of Indian affairs. He was determined to reform and unify the Indian educational system. His policies promoted industry, patriotism, individualism, “English only” coeducation, and the rejection of tribal affiliation in favor of American citizenship. Morgan’s plan for assimilation was to move the Indian child from the reservation day school to the reservation boarding school, and then on to the industrial training school off the reservation. The plan failed for a number of reasons, not the least of which was underfunding and objections by Indian families and some missionaries.

By 1900 enthusiasm for off-reservation boarding schools was declining and Indian commissioner William A. Jones decided that the best education for Indians was at boarding schools located on the reservations. Commissioner Francis E. Leupp subsequently expanded boarding and day schools on the reservations and encouraged the off-reservation schools to continue specializing in industrial training. Over the next few years, public schools for Indians were promoted as the final solution, but were soon found to be unsatisfactory for the unique needs of Indian children.

In 1928 the *Meriam Report* criticized the quality of education that reservation Indians received. The efforts of Commissioner John Collier and the Indian Reorganization Act of 1934 brought needed changes and a shift away from forced assimilation policies. The federal government constructed more schools within Indian communities, and Native art and history were introduced into the curriculum.

In the latter part of the twentieth century, Indian rights activists precipitated radical changes in Bureau of Indian Affairs (BIA) education. Tribal self-determination and sovereignty movements gained power, and by 1995 tribes managed half of the elementary and secondary schools on reservations. By the 2003–2004 school year, through grants and contracts, the tribes were operating 120 of the 184 BIA-funded elementary and secondary schools, with 45,828 students on sixty-three reservations in twenty-three states. In 2007 the Bureau of Indian Education (BIE) was removed from under the jurisdiction of the Bureau of Indian Affairs, reorganized, and placed separately under the U.S. Department of the Interior. In 2008 the vast majority of Indian students on reservations attended public schools that received federal funding.

Eisenhower, Dwight D.

Dwight D. Eisenhower (1890–1969) served as president of the United States from 1953–1961. During his tenure, Congress enacted three programs that dramatically impacted the lives of many Native Americans: termination, relocation, and the transfer of federal law enforcement jurisdiction over reservation areas to the states (Public Law 280).

These measures promoted complete assimilation of Native Americans into the dominant society. Eisenhower approved termination and Public Law 280, as well as other legislation, with the condition that Native Americans and tribal governments be actively involved and consulted when facing relocation, termination, or the transfer of federal jurisdiction. In reality, the tribes were rarely—if ever—consulted about the policies affecting them, and Eisenhower was unable to enforce cooperation.

The two commissioners of Indian affairs during the Eisenhower administration were advocates of termination—a policy which sought to remove Indians from federal protection and assimilate them into mainstream American society. Dillon Myers was strongly criticized for his insensitivity in dealing with Native Americans and Native issues, so Eisenhower’s request for his resignation in 1953 relieved many concerns. Eisenhower’s choice to replace Myers was Glenn Emmons, a banker from Gallup, New Mexico, who had the support of the Navajos. This appointment indicated Eisenhower’s interest in fostering a better relationship with Natives, but at the same reinforced termination as a goal of his administration. Emmons promoted tailoring the withdrawal of federal supervision over tribes to the needs of the specific tribes, but he also hoped to see trusteeship rapidly brought to an end.

While Eisenhower inherited the policy of termination from President Harry S. Truman, he continued to promote it

during his administration through his appointments and approval of assimilationist legislation.

Elk v. Wilkins (1884)

In the important civil rights case *Elk v. Wilkins* (1884), the U.S. Supreme Court ruled that Indians were not citizens of the United States. Prior to passage of the Indian Citizenship Act of 1924, the question of Native American citizenship was a complicated issue. A limited number of tribes had been granted citizenship through conditions set by various treaties, but the majority remained noncitizens. The Fourteenth Amendment, ratified in 1868, opened the door for Native American citizenship. The amendment states that all persons who are born within the United States and subject to U.S. jurisdiction are citizens of the United States and the state in which they reside.

Whether the Fourteenth Amendment granted Native Americans citizenship was decided by the Court in *Elk*. John Elk, a member of the Omaha tribe of Nebraska, was denied the right to vote in 1880 by Charles Wilkins, a voting registrar in Omaha. Elk argued that he had “completely surrendered himself to the jurisdiction of the United States” by severing his tribal allegiances and taking up farming away from the reservation. Denied the right to vote based solely on his Indian heritage, Elk filed suit in the federal courts. In a split decision, the Court majority ruled against Elk, arguing that Indian tribes’ peculiar status as domestic dependent nations did not make them subject to the jurisdiction of the United States. Citizenship for Native Americans, the Court argued, could only be granted by a congressional act. Consequently, three years later, a provision for Indian citizenship was provided for in the General Allotment Act (Dawes Act) of 1887. Those Indians who took allotments of land under the act qualified for citizenship. The Indian Citizenship Act of 1924 finally granted citizenship to all Native Americans.

Emmons, Glenn L.

The commissioner for Indian affairs from 1953 until 1961, Glenn Leonidas Emmons (1895–1980) was born in Alabama. He worked as a locomotive fireman from the age of fifteen and then for a lumber company before entering banking in Gallup, New Mexico. From 1935 to 1964 he served as president and chair of the board of the First State Bank in Gallup. During World War II (1939–1945), Emmons was a lieutenant in the army and later became treasurer of the Bankers’ Association. A Republican, Emmons became active in politics in New Mexico and was a prominent and eager supporter of termination, a program that sought to remove Indians from government protection and assimilate them into mainstream American society.

Emmons carried out the termination policies begun by his predecessor, Dillon Myer. The Eisenhower administration had replaced Myer, who was unpopular with Natives, and had undertaken to “consult and confer” over Indian policy decisions. Emmons also pushed through the policy of relocation, moving many Native Americans from reservations in the hope that they would assimilate and adopt an urban lifestyle.

During his tenure Emmons visited 150 reservations and was disturbed by the poor living conditions of the Indians and their opposition to termination. As a result, he modified his own views on the policy and decided to devote himself to improving education, raising the standard of Native health care, and expanding economic possibilities for Indians. After leaving office he returned to banking and retired in 1964.

Employment, Regulation of

Increasing numbers of American Indian tribes engage in diverse businesses and enterprises to strengthen their economies and further their self-sufficiency. Although gaming is the most visible Indian enterprise, relatively few tribes actually operate multimillion dollar casinos. Many tribes engage in a range of industries such as manufacturing, construction, forestry, recreation, agriculture, and technology. Because tribes are governments, revenue from such activity is like tax revenue generated by states and the federal government: tribal businesses and enterprises fund government, infrastructure, education, cultural development, health care, housing, elder care, and other social services. They also provide job training and employment for tribal citizens who might otherwise lack these opportunities. Tribes may also employ Indians of other tribes or non-Indians. Tribal enterprises located near non-Indian communities may contribute significantly to the economies of those communities; for example, Indian casinos located near large population areas may employ more than a thousand people.

Regulation of Employment by Tribal Law

With the employment relationship comes issues concerning its formation, dissolution, terms, and conditions. A vast body of federal and state law governs nontribal employment in the private and government sectors. Even though tribes are sovereign governments, they face many of the same issues as other employers. They have therefore developed laws and policies to govern their status as employers and their relationships to persons they employ. The tribal workplace is fundamentally regulated by tribal law, and disputes regarding it are resolved in tribal forums. Some aspects of tribal employment, however, may be regulated by federal law. State law generally does not apply to tribal employment unless tribes have consented to state regulation.

Each tribe draws upon its own distinct culture, customs, and traditions in shaping its laws. Because tribes differ in these respects as well as in economic status and scope of employment and workforce, tribal employment law varies among tribes. Tribes may regulate employment in their constitutions, written laws, or common law. They may also address terms and conditions of employment in personnel policies, practices, and procedures. All of these sources must

be consulted first in examining an employment issue involving a tribal employer.

Some tribes adopt specific federal or state employment statutes and common law; others regard them as advisory only. Most often, tribal laws governing the employment relationship resemble federal or state laws but are adapted to the customs, traditions, means, and needs of the particular tribe as well as the nature of its operations, the size of its workforce and, significantly, its status as a sovereign entity. That status enables a tribe, like any other government, to limit suits against it for monetary damages. A tribe might create a medium for resolution of employment disputes outside of tribal courts in an administrative or conciliatory forum, or it might limit remedies, including damage awards, in tribal courts.

Tribes have legislated workers compensation systems, employee benefits, wages and hours, unemployment compensation, antidiscrimination laws, labor-management relations, and right-to-work laws and tribal employment rights ordinances (TEROs). Tribes with large workforces may develop their own workers compensation programs by contracting with insurance providers, or they may adopt the system of the states in which they are located. The latter course is often not favored, as it cedes jurisdiction to the state over the issue. State courts have been uniformly held to lack jurisdiction over tribal workers compensation cases because state workers compensation law does not cover Indian tribes unless the tribe has placed itself under state coverage in its own laws or policies or in an agreement with an insurance carrier. Many tribes have also legislated prohibitions against harassment, including sexual harassment, and discrimination on the bases of sex, religion, age, disability, veteran status or other characteristics. These prohibitions generally do not specify race or national origin, as TEROs give preference in hiring to tribal members or to Indians generally, and tribes are exempt from federal antidiscrimination laws, as discussed below.

Regulation of Employment by Federal Law

As to the question of whether federal laws apply to Indian tribes, it must be remembered that the U.S. Congress, under the so-called Indian Commerce Clause of the Constitution, may enact legislation regulating the activities of Indian tribes. One example pertinent to tribal employment is the Indian Civil Rights Act (ICRA), which imposes limitations on actions by tribes similar to those imposed on the federal government by the Constitution. Like the Constitution, the ICRA requires that tribes provide due process and equal

protection of the law to individuals under their jurisdictions; however, those concepts need not mirror the requirements of the Constitution. Indeed, Indian tribal societies and governments have historically embodied the notions of fairness and equality of treatment in custom and tradition, and tribes incorporate relevant principles into laws governing the treatment of employees. Even though the ICRA is a federal statute expressly applicable to tribes, disputes concerning due process and equal protection requirements of the act are resolved in tribal courts rather than federal courts.

When a federal statute is silent with respect to Indians or Indian tribes, it is a more difficult task to determine whether the statute applies to them. Most federal labor and employment statutes make no mention of Indian tribes. Since the 1960s the legislative and executive branches of the federal government have generally advanced laws and policies recognizing tribal sovereignty and encouraging tribal economic development and self-sufficiency. Indian tribes as sovereign governments possess the rights to govern their lands, raise funds, manage their economies, and regulate consensual relationships such as employment between themselves and others. Courts are to err in favor of retention of Indian rights, particularly a tribe's rights as a sovereign government, in issues that involve vague or confusing wording in statutes concerning them. However, despite the uncertainty created by congressional silence as to coverage of Indian tribes as employers, lower federal courts have increasingly diminished tribal authority over their employment relationships by imposing federal labor and employment laws on tribal businesses and enterprises, thereby placing them under the jurisdiction of federal courts and exposing them to federal administrative procedures and liabilities.

Federal labor and employment statutes typically exclude nontribal government employers from coverage or limit their liability regardless of whether those employers' economic activity is governmental or commercial in nature. However, federal courts have begun to view many tribal economic activities not as economic activities resembling those of public-sector government employers, but as those of nontribal employers in the private sector. Those courts label tribal economic activities as either commercial or governmental, and apply federal labor and employment statutes to activity they deem commercial. Factors influencing courts to find that tribal economic activity is commercial include the nature and location of the activity, employment of non-Indians, and participation of non-Indians in the activity. Courts have limited tribal governmental employment activ-

ity to that taking place on tribal land and directly involved in the political, social welfare, or public service arms of tribal governments.

Federal antidiscrimination laws have been held not to apply to tribal employment. Two such laws expressly exclude Indian tribes from their definitions of "employer": Title VII of the Civil Rights Act of 1964, which prohibits discrimination in employment because of race, color, sex, religion, and national origin; and Title I of the Americans with Disabilities Act (ADA), which requires employers to reasonably accommodate individuals with disabilities. Legislative history of Title VII indicates that this exclusion was enacted because of reluctance to interfere with tribes' power as sovereigns to conduct their own economic activities; the ADA exclusion purposely followed that of Title VII. Likewise, a general antidiscrimination statute prohibiting employment discrimination because of race and race-based ethnicity, 42 U.S.C. § 1981, has uniformly been held not to apply to Indian tribal employers.

The governmental or commercial distinction appears in almost every federal court's analysis of whether a federal labor and employment statute applies to a tribal employer. The Age Discrimination in Employment Act of 1967 (ADEA), which prohibits employment discrimination against persons aged forty and older, is silent with respect to Indian tribes, although its definition of "employer" is otherwise like that of Title VII. Federal courts that have addressed the issue of coverage have held that this law does not apply to Indian tribes, linking it to Title VII's exclusion of tribes and interpreting the vagueness of coverage in favor of tribal sovereignty. However, one court noted as significant the fact that a complaining employee was a member of the tribe that employed him; another court relied on the fact that the employee worked for the tribe's housing authority, an arm of its government.

Courts have similarly analyzed federal statutes that govern terms and conditions of employment and are silent as to Indian tribes. The Fair Labor Standards Act (FLSA), which regulates wages and hours, exempts certain categories of public-sector jobs, such as law enforcement. In a case involving claims by game warden police employed by a union of tribes holding hunting and fishing rights, a court equated that job to the FLSA's law enforcement personnel exemption and held that the statute did not apply to the wardens. Another case applied the same reasoning to tribal police officers. Both courts distinguished the tribal employees' governmental jobs from jobs of a commercial nature, implying the FLSA might

apply to a tribe if employment of a different sort were involved. On the other hand, tribal farms and lumber mills were found to be covered by two statutes that otherwise exempt government employers: the Occupational Safety and Health Act (OSHA), which sets and enforces standards for workplace health and safety, and the Employee Retirement Income Security Act (ERISA), which regulates employer-funded health and pension plans. These were applied because some of the employees of the operations were nontribal citizens and the products were sold in interstate commerce.

Questions regarding application of federal statutes are currently arising from attempts by unions to organize workers in Indian casinos pursuant to the National Labor Relations Act (NLRA), which is administered by the National Labor Relations Board (NLRB). The NLRA regulates union-management relations; it protects union organizing activities and requires employers to recognize unions elected by employees as their representatives in collective bargaining over wages, benefits, and other terms and conditions of employment. Significantly, the act excludes governmental employers from coverage but is silent with respect to Indian tribes. From 1976 to 2004, NLRB decisions treated Indian tribes operating businesses on their lands as governments and therefore exempt from the act's regulation of employee organizing and bargaining activities. However, it abruptly changed course in a case involving a casino owned and operated by the San Manuel Band of Serrano Mission Indians on tribal land. The NLRB's decision to apply the NLRA to the casino was affirmed by the U.S. Court of Appeals for the D.C. Circuit in 2007.

While the court acknowledged the casino to be the primary source of revenue for the tribe's government, it nevertheless found operation of a casino was not "a traditional attribute of self-government," and that employment of non-tribal citizens and patronage by noncitizens were not matters implicating tribal sovereignty. Thus, the court concluded, application of the NLRA to tribal casino operations would not infringe on tribal sovereignty. The court further held that the NLRB's determination that Indian tribes do not fall within the NLRA's exemption of governmental employers was a permissible construction of that statute.

In its underlying decision, the NLRB differentiated between activity of a commercial nature, such as operating a casino, and activity of a governmental nature, such as operating a hospital. Although it determined that Indian tribes fall within the NLRA's definition of "employer," it exercised its discretion not to assert jurisdiction over tribal employ-

ment of a governmental nature. It therefore declined to take jurisdiction in another case involving a tribally governed health services program operated with federal funds, but whose patients are 95 percent Native Alaskans. The NLRB assesses each case involving tribal employment individually to determine whether it is commercial or governmental.

Immediately after the 2004 NLRB decision regarding the San Manuel casino, bills were proposed in Congress to amend the NLRA to exclude Indian tribes from coverage. However, after the D.C. circuit court affirmed coverage of casino employment in 2007, efforts to amend the NLRA have remained ineffectual. Recent legislation, enacted a month before the circuit court ruling, suggests congressional approval of the governmental or commercial characterizations of tribal economic activity. Congress amended ERISA's exemption of "governmental plans" to include plans established and maintained by Indian tribal governments when employee participants in the plan perform "essential government functions," but not when plan participants perform commercial activities, regardless of whether those activities amount to essential government functions.

The distinction between an Indian tribe's role as an employer and its role as a sovereign lawmaker arose in a NLRA case in the U.S. Court of Appeals for the Tenth Circuit involving union efforts to organize a casino operated by the San Juan Pueblo Indians. At issue was the validity of the San Juan Pueblos' right-to-work law, which applied not only to its own employment activity but that of private sector employers operating businesses on its land. "Right-to-work" is the common name for state laws that prohibit the requirement of union membership as a condition of employment; this requirement is called a "union security clause" under the NLRA. The NLRA permits "states and territories" to enact laws invalidating union security clauses. The court held that tribal governments are "major policy-making units" that fall within the NLRA's "states and territories" language and upheld the Pueblos' right-to-work law. Significantly, the court declared the Pueblos' enactment of the right-to-work law to be "an exercise of sovereign authority over economic transactions on the reservation." This decision is at odds with the D.C. circuit court decision holding that Indian tribes fall within the definition of "employer" under the NLRA, however, because that definition does not include "states and territories" or other governmental entities.

Although the issue of coverage of tribes by federal labor and employment statutes differs from the issue of a tribe's

ability to enact laws governing its territory, both are united by the overarching issue of the extent to which the federal government recognizes Indian tribes as sovereign entities that possess the ability to govern economic transactions between themselves and others on their own lands.

Employment Division v. Smith (1990)

Employment Division v. Smith (1990) dramatically altered the test used to determine whether the government had violated the First Amendment's guarantee of free exercise of religion. The case arose when two men, who were members of the Native American Church and who ingested peyote as part of a church ceremony, were fired from their jobs as drug rehabilitation counselors for failing a drug test. The two applied for unemployment compensation benefits but were denied on the grounds that they were fired for work-related misconduct. The two men filed suit, alleging the denial of unemployment benefits violated their right to free exercise of religion.

Prior to *Smith*, the relevant test under the free exercise clause was the *Sherbert* test (from *Sherbert v. Verner* [1963]), which first asked whether the government placed a substantial burden on the practice of religion. If so, the government was required to show that it enacted the law to further an

important governmental purpose and that the law used the least intrusive means possible to achieve that goal.

In *Smith*, the Supreme Court declared that the proper first inquiry was not whether the government substantially burdened a religious practice, but rather whether the law was a neutral law of general applicability. Neutral laws of general applicability do not intentionally discriminate against religion and apply equally to the general population. Oregon's drug use laws were at the heart of *Smith*. Oregon included peyote on the list of prohibited substances, and the case focused on whether Oregon had to provide an exemption to its drug laws for those who used peyote as part of a religious ceremony.

Until *Smith*, the test under the free exercise clause examined the effect of a particular law on a religion. In *Smith*, the Court changed the test to focus on the motivation behind the law, on whether it was written with the intent of discriminating against a particular religion. Because neutral laws of general applicability do not draw distinctions based on religion, they do not, according to the Court, violate an individual's right to free exercise of religion. Any burden on the practice of religion is an incidental side effect of the law and does not trigger constitutional scrutiny. If the law is not neutral and generally applicable, courts will inquire whether the law is justified by a compelling governmental interest and whether it is properly tailored to achieve that interest.

Congress reacted to *Smith* by enacting the Religious Freedom Restoration Act (RFRA) in 1993, which sought to reinstate the *Sherbert* test. In *City of Boerne v. Flores* (1997), the Court declared that Congress lacked the constitutional authority to impose RFRA on the states, but that it could impose the higher standard on the federal government.

While *Smith* could have far-reaching consequences for all religions, those consequences could be even greater for American Indian religions. Some Native religions center on land and require certain ceremonies be performed at certain locations. Others are sacrament-based and require certain rituals, but not at certain locations. The Court has addressed both land-based (in *Lyng v. Northwest Cemetery Protective Association* [1988]) and sacrament-based (in *Smith*) American Indian religions. The Court used both cases to alter its approach to interpreting the free-exercise clause. In *Lyng*, the Court narrowed the definition of "substantial burden" in such a way as to exclude the burden suffered by the Indians in that case, resulting in a decision of no constitutional violation. In *Smith*, the Court refused to apply the substantial burden test, instead declaring that neutral laws of general

applicability (such as laws prohibiting possession and ingestion of peyote) did not violate the free exercise clause, regardless of the burden they placed on a religion. Prior free exercise cases held that denial of unemployment compensation benefits was a substantial burden for purposes of the *Sherbert* test. *Smith* and *Lyng*, both cases concerning Indian law, resulted in major changes in the interpretation of the free exercise clause and in findings of no violation of American Indians' right to free exercise of religion.

By altering the legal test for determining whether the government violated a person's right to free exercise of religion, the *Smith* decision potentially reduces each individual's constitutionally protected religious freedom. To prove a violation of that right, a person must now demonstrate that a law discriminates against religion, and not just that the law substantially burdens the practice of religion. Congress has held the federal government to a higher standard, and the federal government can pass a law that substantially burdens religion only if it has a compelling justification.

Endangered Species Act (1973)

The Endangered Species Act (1973) provides broad protection for threatened or endangered species of fish, wildlife, and plants. The act created two categories for listing a species (threatened or endangered), provides for the protection of a species' critical habitat, outlines procedures the government must take if actions may affect a listed species, and details how a recovered species is removed from the threatened or endangered list.

The U.S. Fish and Wildlife Service has stated that its organization and American Indian tribes have the common

goal of saving declining species and their ecosystems. However, the service recognizes Indian lands are not federal public lands or part of the public domain, and as such they are not subject to federal public land laws. Therefore, the secretaries of the interior and commerce issued Secretarial Order #3206, which clarified the responsibilities of the government when taking actions under the act that might affect Indian lands, trust resources, or the exercise of tribal rights.

The act has been the subject of much litigation. Certain federal courts have held that it abrogates (repeals) the treaty rights of American Indian tribes to hunt and fish where a threatened or endangered species is involved. In *United States v. Billie* (1987), a federal district court in Florida found that Congress had considered the conflict between the act and treaty rights, and that Congress's intent had been to abrogate treaty rights to hunt and fish where they conflicted with the act.

Environment and Environmental Protection

Environmental protection law in the United States is widely considered to have originated in the 1970s, at least as a matter of federal legislation. For Indian tribes, however, involvement in environmental protection has historically been tied to efforts to maintain their cultures, identities, and rights of self-government. Many Native American tribes have special cultural or religious connections to specific locations in North America. Various wildlife and plant species are important for material cultural traditions and Indian ceremonies. The centuries of Native efforts to hold on to their aboriginal territories through treaties with the federal government—or through other means, such as armed resistance—can be seen as a form of environmental management. The tribes sought to retain control over

enough of their homelands to provide for the continuation of the tribe's material culture.

The status of Indian tribes within the American system of government is alluded to in the Constitution, specifically in the Commerce Clause and the Treaty Clause, but more comprehensive judgment on the issue is found in a body of court decisions, acts of Congress, and policies and decisions of the federal government's executive branch. Many of these legislative efforts arose from disagreements over natural resources and the ways they can be used, such as hunting, fishing, forestry, farming, and mineral mining. Many of the court decisions also involved disputes over which level of government had the authority to regulate or tax such uses: the federal government, the states, or the tribes. In many of these cases, the executive branch attempted to protect tribes from encroachments by the state in accordance with a legal doctrine called the federal trust responsibility, in which the federal government acted as trustee for the tribes. In other cases, tribes sued the federal government for alleged violations of its trusteeship duties.

Measured Separatism within Reserved Tribal Homelands

The practice of entering into treaties to establish reservations for Indian tribes, which began in the colonial era, was based on the recognition that Indian nations were sovereign entities with the power to govern their own territories. Through treaty making, the colonial powers, and later the United States, acquired the rights to vast areas of land. One of the most important promises that each of the tribes received in exchange for their land was that the United States would protect tribal rights within the territories that tribes reserved for themselves, including that of self-governance. Professor Charles Wilkinson has described the essence of this arrangement as "measured separatism" (Charles Wilkinson, *American Indians, Time, and the Law*, 1988). After 1871, when Congress unilaterally ended the practice of entering into treaties with tribes, the federal government continued to establish reservations, generally by executive order or act of Congress.

The "measured separatism" of the treaties reflected the fundamentally different belief systems of Natives and colonial officials regarding the natural world and the relationships of humans to that world. At the risk of oversimplification, it is generally accurate to say that the settlers from Europe and their sovereigns treated land as a commodity that could be bought and sold, and they believed that individual landown-

ers had the right to exploit the resources of their lands in order to make profits. In tribal cultures, on the other hand, land was not treated as a commodity. Rather, Native attitudes toward the land might be described by the concept of stewardship. Human beings were believed to have responsibilities to other living things, to future generations, to the graves of ancestors, and to spirit beings. In tribal cultures, people hunted, fished, gathered wild foods, and engaged in agriculture, but there was a concept of balance, of not taking more than was needed. This is not to say that all Indians consistently adhered to such principles; tribal oral traditions often include stories that emphasize the consequences of not following the rules—the existence of such stories suggests that sometimes the rules were broken.

The practice of establishing Indian reservations allowed for accommodation of tribal attitudes toward land within the American legal system. Indian lands within reservations were generally considered to be held in common ownership. This ownership was generally considered to be divided between the federal government and each of the tribes—the federal government held the legal title, what lawyers call the "fee," and the tribe held the beneficial title, or the rights to use and occupy the land. This concept of ownership is described as the federal government holding Native land "in trust" for the Indians. Federal trust ownership still applies in the early twenty-first century to most tribal lands, although on many reservations much of the land base is owned by individual Indians and non-Indians as a result of federal laws enacted during the allotment era of federal Indian policy, which stretched from the late nineteenth century until 1934.

For some tribes, particularly those in the Pacific Northwest and Great Lakes regions, treaties also included rights that extended to off-reservation resources, such as usual and customary fishing sites. Some tribes have statutory rights to harvest resources in certain federal lands. Tribes in Alaska do not have reservations (with one exception), but Alaska Natives do have statutory rights under the Alaska National Interest Lands Conservation Act to carry on their cultural practices. Under the Native American Graves Protection and Repatriation Act of 1990, all tribes have statutory rights regarding the graves of their ancestors on federal lands, and, under the 1992 amendments to the National Historic Preservation Act, each tribe has the right to be consulted when a proposed federal action might affect a property that holds historic religious or cultural significance for that tribe.

The First Generation of Federal Environmental Laws

Current environmental protection is carried out through a collection of federal laws, most of which were first enacted in the 1970s. These laws include the National Environmental Policy Act; the Clean Air Act; the Clean Water Act; the Safe Drinking Water Act; the Endangered Species Act; the Resource Conservation and Recovery Act (also known as the Solid Waste Disposal Act); and the Comprehensive Environmental Response, Compensation, and Liability Act (also known as “Superfund”). The basic approach of most of these statutes was to create a partnership between the federal government and the states, a partnership that is sometimes called “cooperative environmental federalism.” Under this arrangement, the federal government takes the lead role in some aspects of environmental protection, while the states take the lead in others. For instance, under the Clean Water Act, the states are responsible for adopting water quality standards for surface water bodies, but these standards must be approved by the federal Environmental Protection Agency (EPA). Some programs that begin as federal responsibilities can be taken over later by the states. Turning again to the Clean Water Act for an example, the EPA administers the permit program that regulates so-called point sources of water pollution (pollution that occurs when a harmful substance is emitted directly into a body of water), but this program can be delegated to the states.

The cooperative federalism arrangement recognizes that the enactment of laws to protect the public health and safety is an aspect of governmental authority that is within the inherent sovereignty of the states, and that the states should play a major role in creating environmental regulatory programs. For example, while federal policies establish minimum conformity requirements for environmental statutes, states can generally implement programs that are stricter than required by the federal law. This can mean regulating pollutants that are not covered by federal law.

In the 1970s, when Congress enacted the first generation of federal environmental regulatory statutes, it paid very little attention to how tribal governments would fit into cooperative environmental federalism. Federal Indian policy was emerging from the era of termination—during which the federal government sought to end its financial responsibilities to the Indian tribes—and moving into the era of tribal self-determination. In the 1960s, as federal policy shifted away from termination, there were hundreds of federally rec-

ognized Indian tribes, each of which still possessed inherent sovereignty, but the great majority of these tribes lacked the financial resources to exercise much in the way of real governmental authority.

The Indian Self-Determination and Education Assistance Act of 1975 began to change this by establishing a framework through which tribes could take over responsibility for governmental programs administered by the Bureau of Indian Affairs (BIA) and Indian Health Service (IHS). Contracts signed between these two organizations and the tribes provided the tribes with the funding to run the programs. During the next decade, Native Americans increasingly became the primary providers of governmental services within their reservations. This positive change, however, came after the enactment of the first generation of environmental laws.

Environmental Protection Agency Policy for Indian Lands

The EPA is charged with carrying out and overseeing implementation of most of the federal environmental laws. In the 1970s and early 1980s, the agency was faced with some decisions regarding how the laws would be implemented within Indian reservations, and some of those decisions were subsequently challenged in court. In light of legal principles derived from the body of federal court decisions, the EPA generally took the position that the federal environmental statutes did not authorize states to exercise environmental regulatory authority within reservations. In an early example of this approach, in the mid-1970s the EPA issued regulations implementing a program created by the Clean Air Act intended to keep air from becoming polluted. The program was called Prevention of Significant Deterioration (PSD). The EPA designated most areas where the air quality was already in compliance with the national standards as Class II and authorized states and tribes to “redesignate” areas under their jurisdiction to either Class I (allowing very little incremental pollution) or Class III (allowing more pollution than Class II while still meeting the national standards. The Northern Cheyenne tribe in Montana redesignated its reservation as Class I, the most stringent classification, but when the EPA approved the classification, its decision was challenged in court by several parties representing mining interests. In *Nance v. Environmental Protection Agency* (1981), the federal Court of Appeals for the Ninth Circuit upheld the EPA’s decision. Before the case was resolved in court, Congress amended the statute to explicitly authorize tribes to redesignate their reservations.

Another early case involved the hazardous waste regulatory program under the Resource Conservation and Recovery Act, a program that is administered by the EPA but which carries the option for states to apply to the agency to take control of it. The State of Washington sought EPA approval to administer its hazardous waste regulatory program within Indian reservation boundaries under the act. The EPA denied the request, and the Ninth Circuit upheld the EPA's decision in *State of Washington Department of Ecology v. Environmental Protection Agency* (1985). As the court pointed out, this did not leave a regulatory void because the federal hazardous waste regulatory program remained in place within reservations.

In 1984 the EPA formally adopted the "Policy for the Administration of Environmental Programs on Indian Lands." This policy acknowledges a "government-to-government" relationship between the EPA and each tribe; recognizes tribes as the "primary parties" for setting standards, making policy decisions, and managing programs within reservations; acknowledges the federal trust responsibility; and pledges the EPA to working to change provisions in federal statutes and regulations that hinder the agency from working with tribes in a manner consistent with their sovereign status. The EPA was the first federal agency to adopt a formal policy on its relations with Indian tribes, a practice which has since been followed by numerous other agencies.

Treatment of Tribes in the Same Manner as States

Beginning in 1986, Congress enacted amendments to several of the environmental regulatory statutes to treat tribal governments like states. Affected acts included the Safe Drinking Water Act; the Clean Water Act; the Clean Air Act; and the Comprehensive Environmental Response, Compensation, and Liability Act. These statutory amendments use the term "treatment as states" (TAS), although the EPA uses the term "treatment in the same manner as states." To date, most of the actual involvement of tribes in implementing federal statutes has occurred in setting water quality standards (WQS) under the Clean Water Act, for which TAS provisions were enacted in 1987. The rulemaking process took several years for the EPA to complete, and by the mid-1990s, a number of tribes had applied to the agency under the WQS program. For several of these tribes, the EPA's decision to approve their application ended up in court, and the courts consistently upheld the agency's decisions. In *City of Albuquerque* (1996), the federal district court and Tenth Circuit Court of Appeals both upheld the EPA's

approval of the WQS set by Isleta Pueblo for the Rio Grande, which required Albuquerque to upgrade its waste water treatment plant that discharges into the Rio Grande upstream of the Pueblo. The Isleta WQS, which are more strict than necessary for EPA approval, were designed, in part, to allow for the performance of tribal religious ceremonies in the river. In *Montana v. Environmental Protection Agency* (1998), the federal courts upheld the EPA's decision approving the Confederated Salish and Kootenai Tribes for TAS to set water quality standards for all surface waters within their reservation, including those on, and adjacent to, privately owned lands. In this case, the EPA had required the tribe to show that it still possessed inherent sovereignty over lands that had passed out of trust status as a result of laws enacted during the allotment era of federal Indian law. In *Wisconsin v. Environmental Protection Agency* (2001), the courts upheld the EPA's approval of the Sokaogon Chippewa Community's WQS designed to protect wild rice, which ultimately resulted in the abandonment of a proposal for a large-scale mine upstream of the community's reservation.

In its regulations implementing TAS for the Clean Water Act, the EPA has required tribes to show that they possess sufficient inherent sovereignty to carry out water quality regulatory programs. This requirement corresponds to a series of rulings by the U.S. Supreme Court, beginning with *Montana v. United States* in 1981, in which the Court ruled that inherent tribal sovereignty generally does not extend to the conduct of nonmembers of the tribe on nontrust lands, but that there are exceptions to this general principle. As a practical matter, the EPA's requirement means that if there are nontrust lands within a tribe's reservation, the tribe must demonstrate, to the satisfaction of the agency, that regulating conduct affecting surface waters not on trust lands is justified in order to protect the health and welfare of tribal members.

Under the Supreme Court's rulings, tribes can also exercise federal power delegated to them by Congress. In its regulations implementing the TAS provisions of the Clean Air Act, the EPA interpreted the act as a delegation by Congress of federal authority to tribes to regulate all sources of air pollution within their reservations. This interpretation was upheld by the Federal Court of Appeals for the D.C. Circuit in *Arizona Public Service Co. v. Environmental Protection Agency* in 2000. This means that tribes do not have to prove inherent tribal sovereignty to be treated like states for Clean Air Act programs.

The number of tribal programs under the Clean Water Act and Clean Air Act has grown over the years, but many

tribes still have not taken on regulatory roles pursuant to the federal statutes. In addition, not all of the federal environmental statutes authorize the EPA to treat tribes like states, and there are other gaps in the environmental protection framework. For the most part, on reservations where tribes do not have TAS status, the EPA remains responsible for environmental regulatory programs. In response to the range of challenges that arise, the agency has created an approach called a Direct Implementation Tribal Cooperative Agreement. Under such agreements, the environmental programs on reservations are carried out by tribal government agencies that exercise federal authority.

Other Federal Environmental Laws

The body of federal environmental law includes a number of statutes for which the EPA is not the lead agency. One example is the National Environmental Policy Act (NEPA), which applies to all federal agencies and requires the preparation of an environmental impact statement (EIS) prior to any proposed major federal action significantly affecting the quality of the human environment. Because approval of the Bureau of Indian Affairs (BIA) is required for many kinds of transactions involving Indian trust land, NEPA often applies to proposed development projects within Indian reservations. In the self-determination era, in which tribal governments have taken over many of the programs that were formerly conducted by the BIA, tribal agencies now play leading and supporting roles in NEPA compliance, including the preparation of environmental assessments, a less-detailed kind of NEPA document that is used to determine whether or not an EIS is required. Tribes are increasingly involved in all aspects of the NEPA process, from participation in the preparation of EISs as cooperating agencies to bringing lawsuits challenging federal agencies for alleged shortcomings in their compliance with NEPA.

Like NEPA, the National Historic Preservation Act (NHPA) applies to proposed actions of federal agencies. The NHPA includes an environmental review and consultation process intended to ensure that federal agencies take into consideration the effects of their actions on properties that are listed on, or eligible for, the National Register of Historic Places. This process is overseen by the Advisory Council on Historic Preservation, an independent federal agency, and includes a prominent role for state historic preservation officers (SHPOs). As amended in 1992, tribes can establish tribal historic preservation officers (THPOs), and as of May 2008 some seventy-six such officers had been

approved by the secretary of the interior. The 1992 amendments also provide that tribes (and Native Hawaiian organizations) have a right to become consulting parties when a proposed federal undertaking would affect a historic property to which they attach religious and cultural significance.

Another federal statute in which many tribes have been involved is the Endangered Species Act. Some tribes have used this law to force federal agencies to change their practices to lessen impacts on culturally important wildlife species. In 1997 the secretaries of the interior and commerce issued Joint Secretarial Order 3206 on "American Indian Tribal Rights, Federal-Tribal Trust Responsibilities, and the Endangered Species Act," which seeks to reconcile the federal and tribal interests that sometimes come into conflict.

Given the importance of the environment for the survival of tribal cultures, the involvement of American Indians and Alaska Natives in the implementation of the full range of federal environmental laws can be expected to grow as the tribes become increasingly experienced in their governmental capacities. Tribal governments in the twenty-first century are establishing environmental programs that embody their cultural values, which are rooted in respect for the natural world.

Equal Footing Doctrine

The Equal Footing Doctrine, written into the 1787 Northwest Ordinance, described the process for the admission of new states into the Union, as well as setting the boundaries of federal and state powers. While the doctrine guaranteed that new states would be admitted on "equal footing with the original States in all respects whatever" and granted the rights of sovereign states, the federal government retained power and authority over Native American issues. The prevailing legal thought, established through such cases as *Worcester v. Georgia* (1832), has been that the federal government supersedes state powers in issues concerning Native Americans. Also, despite the equality afforded to the states under the doctrine, courts have consistently held that with only a few exceptions, new states are obliged to honor treaty arrangements with tribes regardless of the fact that the original thirteen states did not always do so.

Among the exceptions the U.S. Supreme Court has made to the Equal Footing Doctrine are those relating to activities on non-Indian reservations and navigable waterways. In *United States v. McBratney* (1881) the Court held that Colorado possessed criminal jurisdiction over a case when a non-Indian killed another non-Indian on a reservation, noting that the relevant treaty did not provide for federal or Native jurisdiction over crimes involving non-Indians. In *Choctaw Nation v. Oklahoma* (1970) and *Idaho v. United States* (2001), the Court ruled that waterway rights should lie with Native American tribes, often on the basis of treaties or evidence of original title. But in *Montana v. United States* (1981), it held that the Crow tribe was not the rightful owner of the Big Horn riverbed because the treaty creating the reservation did not express ownership rights in "clear and especial"

wording over the waterway, even though the river lay within reservation boundaries.

Equal Protection

Equal Protection clauses prohibit governments from treating people differently based upon factors such as race, religion, or gender. The U.S. Constitution's Fourteenth Amendment and similar clauses in state constitutions prohibit states from denying equal protection of "the laws," while the Fifth Amendment's due process clause prohibits the federal government from "invidiously" (unfairly) discriminating. Similarly, the Indian Civil Rights Act (ICRA) of 1968 prohibits tribes from denying anyone equal protection under tribal laws. Some tribal constitutions also require equal treatment of tribal members, at least to some extent.

Generally, racial and religious classifications imposed by federal or state governments are subject to strict judicial scrutiny and upheld only if seen by the courts as narrowly tailored to further compelling governmental interests. The Supreme Court approved narrowly tailored racial admissions preferences (including for Native Americans) to further a law school's interest in a diverse student body in *Gutter v. Bollinger* (2003), while rejecting point-based racial preferences for undergraduate admissions at the same university in *Gratz v. Bollinger* (2003).

Victims of a state's forbidden racial, religious, or gender discrimination in voting, employment, education, public accommodations, or public facilities can usually sue for relief under the Civil Rights Act of 1964, although federal and tribal governments are exempt from its employment provisions. In approving hiring preferences for Indians at the Bureau of Indian Affairs in *Morton v. Mancari* (1974), the Supreme Court said that tribal membership is a political

classification rather than a racial classification for equal protection purposes, and that it would approve Indian preference laws if “the special treatment can be tied rationally to the fulfillment of Congress’ unique obligation toward the Indians.”

Ex Parte Crow Dog (1883)

The decision *Ex Parte Crow Dog* was handed down by the U.S. Supreme Court in December 1883. The case reversed the 1881 murder conviction and death sentence of Crow Dog (Kan-gi-shun-ka), a Brule Sioux, for the killing of Spotted Tail (Sin-ta-ga-le-Scka), his chief on the Rosebud reservation in Dakota Territory. The Court stated that the Brule retained some measure of tribal sovereignty and, as an attribute of that sovereignty, Brule law, rather than United States law, was the law of their reservation. Accordingly, Crow Dog argued, he could not be tried in a U.S. court.

The opinion was unanimous and had far-reaching consequences. On its face, it recognized broad sovereign powers of the hundreds of Indian nations, still the law even as America expanded into the last arable land in the West. It also recognized that a form of legal dualism existed in the United States, with hundreds of thousands of Indians on their reservations under tribal law while all others, including Indians off reservations, were under U.S. law. And the opinion was reached in the face of an expansive assimilationist policy being aggressively promoted by the U.S. government against the sovereignty of the various Indian nations.

At immediate issue was an interpretation of two Sioux treaties, which the U.S. government argued limited Brule sovereignty. One treaty had standard language providing that

if “bad men among the Indians shall commit a wrong . . . the Indians agree to deliver up the wrong-doers to the United States.” But the Court found parallel language requiring the United States to punish “bad men” who committed wrongs against Indians. The treaty, in reality, required nothing less than mutual extradition, in effect recognizing the tribes as sovereign and having their own law. A subsequent treaty (1877) provided that “Congress shall secure to them (Brule) an orderly government; they shall be subject to the laws of the United States,” but again, the Supreme Court held that, in the context of the history of United States–Indian relations, this meant that the United States intended to protect the Indian nations as they moved toward “civilization.” This treaty language did not change the fundamental status of the Indian nations as distinct nations operating both within and “under the protection” of the United States government.

There was a considerable reaction to the *Crow Dog* decision within the U.S. government, for it undermined its assimilationist Indian policy. Moreover, Crow Dog, a member of a traditional Brule faction opposed to accommodation with the United States, had killed Spotted Tail, who was involved in ongoing negotiations with the United States and was a recognized chief residing in a house not far from the Indian agency. This kind of intratribal conflict, an outgrowth of differences within the Indian nations over their own strategies of dealing with American incursions on their lands, was seen as especially dangerous in the immediate aftermath of the Sioux wars, which had ended in the previous decade (1876).

Although not the last of the great “sovereignty” line of cases stemming from the holding of Chief Justice John Marshall in *Cherokee Nation v. Georgia* (1831) that the Indian nations were “domestic dependent nations” recognized politically as distinct nations, *Crow Dog* was an important event, setting the stage for increased legal and political attacks on tribal sovereignty by the U.S. government, including the passage of the Major Crimes Act in 1885.

Although the Supreme Court upheld Brule sovereignty, the opinion is filled with paternalistic and condescending terms, describing Indians as “uncivilized” and characterizing Brule law as “red man’s revenge.” In actuality, Brule law was complex, emphasizing the restoration of kinship and harmony in a society based on hunting. The relatives of Crow Dog and Spotted Tail had met, discussed the killing, and settled the matter under tribal law for \$600 in cash, eight horses, and one blanket. Crow Dog, after his release from prison, announced that the white man’s law was inferior to Brule

law, moved to a far corner of the reservation, resisted the allotment of Brule land, and led a traditional faction that still exists. He died at age seventy-five in 1911. *Crow Dog* remains the law; the Indian nations retain criminal jurisdiction over their own people, limited only by the Major Crimes Act.

Exhaustion Doctrine

When a non-Indian is named as a defendant in a civil lawsuit filed in a tribal court, the tribal court must determine that the non-Indian is within the court's jurisdiction or authority. Several lawsuits filed with non-Indians as defendants have resulted in those defendants seeking to remove cases from the tribal court's authority to U.S. federal courts. In response to such requests, the U.S. Supreme Court has in a series of decisions created the "tribal exhaustion doctrine." This doctrine requires federal courts to stay their hands until the plaintiff exhausts all levels of tribal remedies.

In the case *National Farmers Union Ins. Co. v. Crow Tribe* (1985), the Court stated that the question of whether a tribal court has jurisdiction over a non-Indian is a federal one, and that federal courts *are* permitted to hear those cases, but only after all tribal court proceedings, including appeals, are concluded.

Normally, federal courts are limited to jurisdiction as set forth by federal law, but there is no federal law granting them jurisdiction over tribal courts. Under title 28, section 1331 of the United States Code (28 U.S.C. §1331), federal courts have jurisdiction over actions that arise under the Constitution or any U.S. laws or treaties. By the reasoning in the *National Farmers Union* case, the Court has found the basis for federal court jurisdiction over tribal court cases to

be in federal common law, which is the law created by federal court decisions rather than expressly authorized by 28 U.S.C. § 1331.

This type of federal jurisdiction and the tribal exhaustion doctrine are somewhat controversial due to the idea that federal jurisdiction has been found by federal courts when a non-Indian party simply questions a tribal court's authority to hear a case. One may critically view the tribal exhaustion doctrine as placing tribal courts into administrative fact-finding roles where the case will be eventually removed to a federal court that will decide its outcome. Another view of the tribal exhaustion doctrine is that federal courts are showing deference to tribal courts in allowing a case involving a non-Indian party to proceed first through all levels of the tribal court system.

In a subsequent case, *Iowa Mutual v. LaPlante* (1987), the Court held that in federal diversity cases, which require that the parties to the case are from different states and must meet a threshold monetary amount in the lawsuit, the tribal exhaustion doctrine still applies for removal of a case from a tribal court to a U.S. federal court.

Extension Laws

Extension laws are attempts by states to exercise jurisdiction over Indian affairs. Where permitted to stand, legislative extension challenges the principle of retained tribal sovereignty. The possibility of extension laws demonstrates the fluctuating and insecure position Indian rights have historically occupied in the United States.

In a classic confrontation from the early nineteenth century, the state of Georgia and the Cherokee Nation tested their relative sovereignty. In the 1820s Georgia, in attempting to drive the Cherokees out of the state, sought to extend

its control over the lands within the northwest corner of the state. This territory had historically been claimed by the Cherokee Nation, and the borders of its domain had been acknowledged by the United States in the treaties of Hopewell (1785) and Holston (1790). The tribe responded in 1827, declaring that it was an independent republic, complete with a constitution, a National Council, and courts. Georgia's answer was a series of laws extending its jurisdiction over the Cherokee Nation in the most complete sense—denying the tribe's sovereignty, nullifying its laws, taking its lands, and imposing state authority over its affairs. With these extension laws, the state hoped to drive the tribe westward.

The Cherokees tested Georgia's extension laws in three famous cases. In *Georgia v. Tassels* (1830), the state mooted the tribe's challenge of Georgia's authority to convict a Cherokee for murder by executing the defendant before the U.S. Supreme Court could hear an appeal. In *Cherokee Nation v. Georgia* (1831), in which the tribe asked the Court to enjoin enforcement of Georgia's extension laws within its territories, the Court dismissed the case because it lacked original jurisdiction over the Cherokees. In *Worcester v. Georgia* (1832), however, the Court struck down Georgia's law requiring state permission for a white missionary to live among the Cherokees and included broad language denying legitimacy to Georgia's extension laws and strongly supporting tribal sovereignty.

Openly contemptuous of the Court's decision in *Worcester*, the state did not enforce it. Georgia, in effect, nullified the ruling and continued to extend its jurisdiction over the Cherokees. Six years later, the Cherokees were exiled from their land and compelled to travel the Trail of Tears to the Indian Territory. Throughout this era, Georgia and the

states of Alabama, Mississippi, and Tennessee built a strong and useful legal foundation for legislative extension. These states rehearsed and refined arguments regarding their power to extend their jurisdiction over Indians and to counter federal Indian policy that they would, within a few years, employ to justify secession.

The language of *Worcester* survived and supported the principle of retained tribal sovereignty, seemingly creating very little room for extension laws. But as non-Indians expanded westward, states persisted in passing these laws. According to one scholar, every state east of the Mississippi River except for Minnesota attempted to extend its criminal laws over the Native people within their borders. Sometimes, extension laws were challenged in court, but if not, the laws, and the actions taken under them, controlled events. The federal government has itself legislated the extension of state authority over Indian affairs—for instance, in Public Law 280, passed in 1953. Extension laws are one more example of the many challenges to their sovereignty Indians have faced in the American federal system. Where legislative extension is permitted to stand, state authority diminishes—and can even extinguish—tribal sovereignty.

F

Article 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace and its honor is hereby pledged to keep it. The Indians desire peace and they now pledge their honor to maintain it.

Factory System

At the request of President George Washington, in 1795 Congress enacted into law the federal factory system, which was a chain of trading posts that the government operated across the Indian frontier. Congress used these factories to exercise its power over Indian affairs and to monopolize all trade and commercial relationships with the Indian nations. President Washington's hope in creating the factory system was that shopping at federal trading posts would bind Indians and their tribes to the United States, and that the problems that dishonest private traders had so often caused for the English and Americans in the past could be avoided. The factories were not designed to make a profit for the federal government, but were operated at cost merely to maintain the original amount of money Congress appropriated to start the program. Congress repeatedly reauthorized the system at the suggestion of Washington and later presidents.

Many Indians were happy to have a steady source of trade goods. They often supported a trading post by offering protection and providing food to keep it open. Several treaties between the U.S. government and various Indian nations even required the United States to build a trading post within the tribe's territory.

President Thomas Jefferson was a strong advocate for expanding the federal trading program to exclude private traders from the Indian trade and for controlling and befriending the Indian nations through trade and commerce. But Jefferson also instructed agents to use the trading posts to lure Indians into debt so that the Indians would be inclined to sell off tribal lands to pay what they owed—a plan that met with some success.

Ultimately, the federal government operated twenty-eight federal factories or trading posts across the western frontier from 1795 to 1822. However, complaints regarding the federal program persisted throughout the decades, coming primarily from private commercial interests, including the American Fur Company, that wanted to earn profits from the Indian trade. These objections led Congress to terminate the federal factory system in 1822.

Fall, Albert B.

As secretary of the interior under President Warren G. Harding from 1921 to 1923, Albert B. Fall (1861–1944) is best known for his role in the Teapot Dome oil reserves scandal, which eventually forced his resignation and led to his conviction on conspiracy to accept bribes.

Fall was a strong proponent of Indian assimilationist policies and firmly opposed reformers who sought a less ethnocentric approach. In this, he was generally supported by the

staff of the Office of Indian Affairs (OIA). Fall tried to prohibit many Indian dances and religious ceremonies and advocated opening reservations to businesses seeking mineral and petroleum resources. In 1922 Fall backed a bill introduced into the Senate by Holm O. Bursum of New Mexico that sought to legitimize the land titles of white settlers who had bought land directly from the Pueblo tribes before New Mexico statehood. Indian rights advocates believed the bill unfairly put the burden of proof over questionable titles on the affected tribes. John Collier, later commissioner of Indian affairs, emerged as the leading opponent of the Bursum Bill. This fight eventually led to the adoption of the Pueblo Lands Act in 1924, which provided for legitimizing the titles of white land owners, but also provided compensation to the Pueblos for lost land and water rights. By that time, Fall had resigned from the interior department.

Fallen Timbers (1794), Battle of

The Battle of Fallen Timbers took place along the Maumee River in Northwest Ohio on August 20, 1794. The Indian confederacy was led by the Miami chief Little Turtle and the Shawnee chief Blue Jacket and included most of the Indians of the Northwest Territory. They faced the American Legion commanded by General Anthony Wayne.

After the American Revolutionary War (1775–1783), the newly formed United States attempted unsuccessfully to negotiate land treaties with the Indians of the Northwest Territory. In 1789 Arthur St. Clair was charged with determining whether the Indians would remain defiant, and he advised President George Washington that the best course of action was to chastise the Indians with military force. The army sent two expeditions led by General Josiah Harmar (1790) and General Arthur St. Clair (1791) against the Indian confederacy. On both occasions, the Indians were victorious.

Washington then assigned General Anthony Wayne to lead a third military expedition against the Indian confederacy. Unlike the previous two missions, Wayne took the time

to train his troops, the American Legion, in Indian warfare. Throughout 1793 and 1794, the legion slowly advanced into the Northwest Territory, building forts for protection and supply depots along the way. After repulsing an Indian attack on Fort Recovery, the legion advanced towards the center of Indian resistance. After successfully overtaking the Indian villages at the Glaize, Wayne's army continued along the Maumee River toward the Indian encampments.

The Indians, noting the advancement, established a location for the upcoming battle about six miles from their camp at Swan Creek on ground littered with trees felled by a tornado. Arriving at Roche de Bout, an Indian council location along the Maumee River, Wayne stopped to build Fort Deposit on August 18, 1794. Expecting the Americans to attack that day, the Indians prepared for battle by eating no food, a common practice. The U.S. advance did not occur that day or the next. As a result, the morning of August 20 found many Indians in camp preparing food rather than anticipating battle. When Wayne's forces advanced, the Natives were surprised. The Indians rallied quickly only to be routed after the short forty-five-minute battle. The Indians hoped to regroup with aid from the British at Fort Miamis, but the gates were closed against them. The Native forces were demoralized.

The battlefield loss, combined with the deteriorating numbers in the Indian confederacy and the betrayal by the British, prompted the Indians to agree to the Treaty of Greenville (1795). The treaty established a line of settlement that opened two-thirds of the Ohio Country to American settlement. Wayne's negotiations initiated the treaty procedures that continued to move the Indians of the Northwest Territory westward and eventually across the Mississippi River.

Fetterman Massacre (1866)

Known to the Plains Indians as the Battle of One Hundred Slain, the Fetterman Massacre was a decisive Lakota victory over the United States Army. The massacre was part of a larger conflict known as the Bozeman Trail War (1865–1868; sometimes called Red Cloud's War), a conflict that erupted over the military occupation of the Powder River region in northeastern Wyoming and southeastern Montana. To protect American gold seekers who were traveling to Montana via the Bozeman Trail, the U.S. Army established three forts in the prized hunting grounds of the Lakotas: Fort Phil Kearny, Fort C. F. Smith, and Fort Reno. Lakota leaders such as Red Cloud and Crazy Horse were determined to drive the Americans from their homeland. After a series of small skirmishes, the war climaxed with the Fetterman Massacre.

On December 21, 1866, Lt. Col. William J. Fetterman led a detachment of eighty men from Fort Phil Kearny to rescue a party of woodchoppers who were under attack. Fetterman ignored his orders not to pursue the Native American attackers and put his men in pursuit of a small party led by Crazy Horse. Crazy Horse led the unsuspecting military column into a ravine where concealed Lakotas pounced on them. Within an hour Fetterman and his entire command were dead.

The Fetterman Massacre played an important role in ending the Bozeman Trail War. The Treaty of Fort Laramie (1868) ended hostilities, and the military abandoned the three forts. Although only a temporary victory, the Fetterman Massacre was important to the Lakota, and 1866 was remembered as the year that “one hundred white men were killed.”

Film

For many people in the United States, impressions of American Indians are more likely to be forged by images in books, newspapers, cartoons, and television rather than real-life encounters. Cinematic portrayals of Indians have emerged in the thousands of movies that comprise the landscape of Hollywood films, most typically in the genre of the Western.

A Western movie can provide an illustrative platform to examine the role of formal government policies and informal, unwritten policies that shape stories about the relationships between Indians and settlers. Note, however, that the stories unfolding in American movies often reflect fictional tales of invented Indians.

The Western

The history of Westerns follows a trajectory that has reflected U.S. policy and public sentiment on several fronts. For example, Westerns that were produced during the first and second world wars glorified American fighting forces by showing the U.S. cavalry battling “savage” Indian tribes. Westerns created during the social turmoil of the 1960s and 1970s, when civil rights, women's rights, American Indian rights, and the war in Vietnam occupied the sociopolitical stage, were more sympathetic to Native Americans. An apt illustration is the contrast of two period films: *They Died with Their Boots On* (1941) and *Little Big Man* (1970). *They Died with Their Boots On* featured Errol Flynn as Lt. Col. George Armstrong Custer, and portrayed him as sympathetic to the Sioux, which historian Alvin M. Josephy Jr. noted was completely fictitious. While the film depicts Custer as wanting to protect the Sioux's sacred Black Hills, Josephy wrote that Custer himself spread the rumor that gold was buried in the hills, thus setting the stage for battles over Lakota territory. In the film, Custer dies heroically on the battlefield, although Josephy noted no one knows how he died. In contrast, the 1970 movie *Little Big Man* portrays Custer as a buffoon who shoots children and women and wholly ignores warnings that countless Indians were ready to rally at Little Bighorn to protect their home. Custer leads the cavalry to its doom. While the 1941 film painted a picture of an heroic Custer, the 1970 film portrays a villainous fool.

Land as the Central Theme

Perhaps the most common theme that runs throughout Westerns is the portrayal of Indian and settler disputes over land. Many have sketched the settler occupancy of North

America against the backdrop of Manifest Destiny and the Frontier Thesis. Historian Francis Jennings wrote that colonization meant Indians were framed as “savage” in order for the settlers occupying the new territories to seem more “civilized”: a divine sanction that allowed the settlers to conquer the wilderness in the name of progress (often referred to as Manifest Destiny). Historian Frederick Jackson Turner, who had great influence in characterizing popular notions of the West, regarded the conquest of the American wilderness as liberty infused with progress—a concept known as the Frontier Thesis. The Western frontier meant to settlers the image of fertile, virgin, and unclaimed landscapes. Such landscapes promised what Henry Nash Smith considered a new-found “agrarian tradition” that propelled Americans to think of themselves as destined to claim the “agricultural interior of this continent” regardless of those who already occupied the land (Nash, *The American West As Symbol and Myth*, 1950).

Cinematic portrayals of such landscapes offer lush vistas of the East (*Last of the Mohicans* [1992] and *The New World* [2005]), expansive prairies of the Northern Midwest (*Dances with Wolves* [1990]), and the breathtaking mesas and canyons of the Southwest (*The Vanishing American* [1925]). Against these landscapes, Indian-settler relationships are infused with the notion that Indians are untamed, wild, and savage denizens (occupants) of the land, a characterization that served the U.S. policies that sanctioned the settler trespasses of the past.

Denizen Meets Citizen

Distinguishing the Indian as *denizen* and the settler as *citizen* illustrates a key difference between the two. “Denizen” stems from the French for “within” (*denz*) and Middle English (*denizeine*) for “inner part,” and refers to the person within the space—an inhabitant of “place.” Citizen, on the other hand, comes from the French word for city (*cit  *)—a formal collection of occupants: citizens. The Indian (*denizen*) emerges from place, which is all-defining, according to Native scholars Vine Deloria Jr. and Daniel R. Wildcat. Culture, power, values, beliefs, and identity are all drawn from place, and are inseparable from it. In contrast, the citizen defines place as property and commodity, which sets the settler’s definition of land above that of the denizen in the context of an economically defined homeland. As the modern conception of land became equated with civilization and progress, the indigenous view of land-as-place became marginalized as quaint and outmoded. Deloria and Wildcat, in their 2001 *Power and Place: Indian Education in America*,

argued that American legal institutions failed to grasp that “American Indian and Alaska native claims that some places on the planet possess a degree of sacredness that precludes treatment as real estate, private property, or public lands.”

The contested views of land between denizen and citizen permeate Westerns. In the 1993 film *Geronimo: An American Legend*, a prospector tells an Indian: “We make things out of this country—was nothing here before us and wouldn’t be nothing if we left it to you.” Settlers are seen as “bringing civilization” to the new world, and in the 1950 film *Broken Arrow*, a homesteader claims: “We’re bringing civilization here. Clothes. Carpets. Hats. Boots. Medicine . . . Whiskey.” Ironically Indians already had their own medicine and clothing, and had no need for carpets or whiskey. “Civilization” and Manifest Destiny would mean, for Indians, that their sacred homelands, essential to self, would be drastically reduced.

Raising the Specter of Morality

The idea of Manifest Destiny also allowed citizens to claim land on moral grounds. An example from *Northwest Passage* (1940) demonstrates this view. In one scene, Robert Rogers (played by Spencer Tracy) explains to his men that soldiers should expect to die and “have to take their chances.” Citizens, however, are portrayed as innocents: “But your folks on the border farms, they weren’t fighting anybody. They were clearing woods, and plowing and raising children, trying to make a home of it. And then one night Abenaki tomahawks hit the door. If it was over quick they were lucky.” In contrast, denizens get little sympathy, and when Rogers and his men find an Indian village, he says: “We’re under orders to wipe out this town so see that you do it. Kill every fighting Indian and kill them quick and kill them dead.”

Historian Francis Jennings noted that Indians were hunters and foragers who also sustained life by cultivating crops. But this reality failed to mesh with the settlers’ needs for the land, and the nomadic Native was invented. According to Jennings, settlers destroyed Indian farms and seized property, fueled by the false belief that the denizen roamed the land rather than inhabited it. Jennings noted in his 1976 *The Invasion of America: Indians, Colonialism, and the Cant of Conquest* that, “Property and liberty were synonyms in the seventeenth and eighteenth centuries. When the Indian was dispossessed of his land, he lost all hope of finding any niche in the society called civilized, except that of servant or slave.”

The notion of “civilization” justified the slaughter of the Indians, and mass media portrayals of denizens, from the dime store novel to the moving picture, relied on the image

of the bloodthirsty savage. Cinema served this ideology well, depicting the denizen as a vestige of prehistory, resistant to taming or nourishing the land in “appropriate” ways. Theodore Roosevelt echoed this view in his 1889 book, *The Winning of the West*: “The truth is the Indian never had any real title to the soil; they had not half so good a claim to it. . . . The settler and the pioneer have at bottom had justice on their side; this great continent could not have been kept as nothing but a game preserve for squalid savages.”

For Indians, morally and thematically, place equates to home and hearth. Policies imposed by the United States dramatically displaced Indians from their homelands, with millions of acres sold to or stolen by settlers, and thousands of denizens forced onto unfamiliar and barren reservations.

Roosevelt’s wild, unconquered West required taming, and Indians were often portrayed in mass media as woefully uncivilized. Early films in particular frame Indians as marauding bands attacking the stagecoach and wagon trains, whooping and hollering, and hacking away at some poor settler’s scalp. Some early films depicted Indian language by playing the soundtrack backward, insinuating that Native speech was gibberish. Most films limit the portrayal of denizens to a few Plains tribes (Lakotas, for example), ignoring the rich diversity of tribes from coast to coast, and thus painting a narrow and inaccurate portrait of the American Indian. Moreover, Native icons such as Geronimo, Crazy Horse, and Sitting Bull are shown as undisciplined adversaries unable to adapt to civilization, thus fueling the stereotype of the unreasonable savage. Rarely seen is the version of policy from the viewpoint of the Indian, who, cinematically, had to yield to the stagecoach, railroad, and homesteader.

The White Indian

While moving pictures often illustrate the common notion that denizens were stupid, backward, illiterate, and savage, some cinematic white men (and women) adopted the ways of Natives. James Fenimore Cooper (1789–1851), one of the most famous writers about the West, romanticized Indians both as noble and brutish, and appointed his action hero, Natty Bumppo, a settler-turned-Native. Bumppo is a white denizen with a moccasin in both worlds in the films *Last of the Mohicans* (1920, 1932, 1936, and 1992), *The Deerslayer* (1957), *The Pathfinder* (1952), and *Leatherstocking* (1924). Although white, he assumes the personage of an Indian.

The citizen thus embraced the ways of the denizen to tame and transform the wilderness, and, arguably, to assume for themselves idealized Indian characteristics. This is partic-

ularly apparent in *The Last of the Mohicans*, where the Euro-American character Hawkeye is clothed in pseudo-Indian attire such as fringed buckskin. Hawkeye embodies an image that fleshes out Turner’s thesis of the uniquely American experience—the citizen freed from his European shackles, conquering the new world and reinventing his persona by adopting Native ways.

Non-Native men and women in films have absorbed the denizen, creating an imitation Indian endowed with the citizen’s rights and privileges, but clothed in indigenous garb and able to float between two worlds. Professor Richard Slotkin called these counterfeits “Men Who Know Indians.” Several films feature at their center such white men who have adopted the Indian robe and mantle. The white soldier John Dunbar (portrayed by Kevin Costner) serves as the principal character in the award-winning film *Dances with Wolves*. Dunbar narrates the story of a white stranger who is eventually welcomed into the Lakota Sioux tribe, is the first to find the buffalo, and adopts a Native name and lifestyle. *Dances with Wolves* signaled the birth of a new breed: the white Indian. In the final scenes, when Dunbar and his white wife, who had been living with the Lakotas, leave their Indian community, his friend Ten Bears says: “I do not see a white soldier. I see only a Sioux named Dances with Wolves.” Similarly, white protagonists Jack Crabb (played by Dustin Hoffman) of *Little Big Man* and John Morgan (portrayed by Richard Harris) of *A Man Called Horse* (1970) embody Slotkin’s “Men Who Know Indians.” By becoming (pseudo) Indians, these white men embrace the culture, character, and language of their Native brethren. But in absorbing the Indian, the characters played by Costner, Hoffman, and Harris not only speak for the Indian, they are more eloquent in telling stories than the Indian could ever hope to be. In short, they have the power to name, define, and reframe what it means to be Indian. They displace and replace the Indian.

Native Assimilation in Film

While Western films focus on the relationship of denizen and citizen framed against property and place, a secondary theme of assimilation (a long-held government policy), coupled with the contradictory theme of isolationism, runs through many movies. *Tell Them Willie Boy Is Here* (1969) shows a pack of joyful Native youngsters attending classes run by a white superintendent, while the young Indian in *The Education of Little Tree* (1997) suffers at the hands of brute teachers when forced to attend boarding school. In the 1969 film, the Native children are content in their newly adopted

surroundings, while, twenty-eight years later in *Little Tree*, the child is shown as being abused under the cloak of assimilation. The Indian Nophaie in *The Vanishing American* tries to assimilate by embracing Christianity, and receives a powerful message when the Bible he had tucked into his shirt stops a bullet from killing him. In other films, Indians are assimilated cinematically by joining the U.S. armed forces, such as in *Devil's Doorway* (1950) and *Windtalkers* (2002). Such assimilation is typically temporary, with the hero dying (*The Vanishing American*) or returning to his tribe (*Windtalkers*). Audiences learn that assimilation through interracial coupling is generally deplored, as illustrated in *The Vanishing American*, *The Searchers* (1956), *Cheyenne Autumn* (1964), and *Last of the Mohicans*. The offspring—the so-called half-breeds and mixed-race children—suffer because of fractured identities and because they belong nowhere. The mixed-ancestry characters in *Thunderheart* (1992), *Smilla's Sense of Snow* (1997), and *Hidalgo* (2004) are loners and outsiders who fit in neither world, thus illustrating the prevailing message that cinematic Indians lost hearth and home.

Native Filmmakers Usher in a New Era

On balance, assimilation of Native Americans was a failure, according to the movies. Even when such issues are addressed by Indian writers and directors, such as Sherman Alexie in *The Business of Fancy Dancing* (2002), the protagonist is uncomfortable in both the city and on the reservation. Alexie's protagonist says: "Every time I sit down to write a new poem I want it *not* to be about the reservation. But the reservation won't let me go." Indian directors have tackled reservation life in such movies as *Skins* (2002) and *Smoke Signals* (1998), telling stories with a Native voice, but many modern films focus on relationships rather than government policies. For example, *Fast Runner* (*Atanarjuat*; [2001]) observes Inuit kinship within and across families, depicting jealousies and deadly feuds without any mention of the infusion of white settlers. *Johnnye Greyeyes* (2000) tells the story of a contemporary Indian woman and her lover in prison: a remarkable departure from the stereotyped roles of Native women in Westerns. Many Indian actors are mainstreamed into current films without fanfare: Gary Farmer plays a radio producer in *The Republic of Love* (2003), Eric Schweig is a cook in *Big Eden* (2000), Steve Reevis is a mechanic in *Fargo* (1996), and Elaine Miles plays a housekeeper in *Mad Love* (2001). The fact that they are Indians is merely a postscript.

Native writers and directors seem to prefer stories of everyday life, discarding the Western motifs and signaling an

important movement toward normalizing the onscreen Indian. Since Westerns often are narrated by the white male protagonist and reinforce policies of assimilation and isolation in the context of disputes over land and self-governance, they add to the legacy of tired, old stereotypes about American Indians. The entrance of Native storytellers into filmmaking promises an important shift in cinematic portrayals of American Indians.

First Seminole War (1817–1818)

The First Seminole War was the initial battle in a series of three conflicts known collectively as the Seminole Wars, which were fought between the United States and Indian and former slave communities living in Florida. The first war began in 1817 and lasted less than a year.

The United States had long desired the Spanish colony of Florida. Events during the War of 1812 (1812–1814) only increased this interest. Britain and Spain both armed and traded with the Creeks and Seminoles in the northern areas of the state. The Seminoles, fearful of aggressive American expansion to their north, proved ready and willing allies. As a result, there were frequent skirmishes between Americans and Seminoles along the Georgia–Florida border. During the war, the British-backed Red Sticks, a militant revivalist faction of the Creek Nation, attacked American settlers, drawing the United States into the Creek Civil War (1813–1814). After U.S. forces under Andrew Jackson destroyed the Red Sticks at the Battle of Horseshoe Bend (March 27, 1814), thus effectively ending the Creek Civil War, many of the surviving Red Sticks fled to Florida.

Florida continued to serve as a harbor for escaped slaves during the War of 1812 as well. These former slaves, sometimes called Maroons, found asylum in the Spanish colony. When the British left Florida after the War of 1812, Maroons took over the British fort at Prospect Bluff. Americans referred to the garrison as the Negro Fort, and it served as an outpost for other runaways in the area.

The presence of hostile, ungovernable Indians and Maroons and continued British access to the peninsula convinced many U.S. leaders that the country's southern border would never be secure until Americans controlled Florida. Tensions remained high along the United States–Florida border following the end of the War of 1812, and in 1816 U.S. troops invaded Florida and destroyed the Negro Fort. In November of 1817 the American garrison at Fort Scott in southern Georgia argued with the nearby Mikasuki Seminole village of Fowltown over the right to chop firewood in disputed territory. The disagreement confirmed Seminole fears of further American expansion into their lands. When the Fort Scott garrison destroyed Fowltown, the Seminoles retaliated the following week by attacking a supply boat heading for the fort. The Scott Massacre—named for the boat's commander, R. W. Scott—marked the beginning of the First Seminole War.

Secretary of War John C. Calhoun ordered Andrew Jackson to invade Florida in response to the Scott Massacre. Accompanied by eight hundred regular army soldiers, two thousand volunteers from Tennessee and Georgia, and about 1,400 Creek allies, Jackson entered Florida in mid-March 1818. He constructed a new fort, Fort Gadsen, at the site of the old Negro Fort and used it as an early base of operations.

By the end of the month he had destroyed the two large Indian towns of Tallahassee and Miccosukkee.

However, retaliation against hostile Indians was not the only purpose for the invasion of Florida. Jackson—perhaps with the complicit support of President James Monroe—saw his campaign as the perfect opportunity to seize control of the state. From Fort Gadsen, Jackson marched to the Spanish fort at St. Marks, where he insisted that the Spanish garrison surrender to his forces. Jackson believed, wrongly, that many Indian and Maroon leaders were hiding in the fort, and he was convinced that the Spanish garrison could not be trusted to defend the fort against Indian attack. The Spanish commander refused to surrender, but Jackson easily took the fort.

In a series of further engagements from his new base of operations, Jackson destroyed Red Stick, Maroon, and Seminole strongholds throughout western Florida. However, many Indians and Maroons simply retreated into the swamps, out of Jackson's reach. Jackson was able to capture several prominent prisoners, including two British citizens—Alexander George Arbuthot, a Scottish trader, and Robert Armbrister, a former royal marine—both of whom Jackson blamed for arming and inciting hostile Indian groups. Jackson had both men executed.

With the power of the hostile communities temporarily broken, Jackson declared the First Seminole War over. However, before returning home, Jackson made one final march, this time to Pensacola, the capital of Spanish Florida. Upon arrival, he demanded the surrender of the city. When the governor refused, Jackson captured both the capital and the nearby fort. With the exception of St. Augustine, Jackson had now effectively ended Spanish control of Florida.

Though outraged by Jackson's actions, Spain realized that it did not have the power to regain Florida, and agreed to sell its colony to the United States in 1821. Two years later, the United States and Seminole leaders signed the Treaty of Moultrie Creek, in which the Seminoles relinquished all claims to the new United States territory in exchange for a reservation in central Florida. However, continued conflicts between Indians and white settlers in Florida eventually sparked the Second Seminole War, which lasted from 1835–1842.

Fishing, Hunting, and Gathering Rights

For most indigenous peoples in North America, subsistence and trade has traditionally depended on regular and well-planned seasonal rounds of hunting, fishing, and gathering. Even among groups that developed agricultural practices or adopted the herding of livestock after European contact, wild foods enriched family diets and provided security against the failure of crops or the loss of livestock. After colonization, federal assimilation policies and ecological changes gradually undermined indigenous subsistence activities, yet they still occupy an important place in the economic, social, and spiritual lives of Native communities across the continent.

Many tribes expressly reserved the right to continue hunting, fishing, and gathering on ceded lands through treaties with the U.S. government. Since the late nineteenth century, however, bitter disputes have erupted regarding the exact nature and extent of Indian treaty rights. In some cases state authorities and private citizens have tried to limit or stop tribal hunting and fishing outside reservation boundaries. Indians have fought back with acts of civil disobedience, legal test cases, and endless appeals to the U.S. government. Although the government's support has been unreliable at best, federal courts have generally upheld treaty rights (with qualifications) since the early twentieth century. Tribes have also become co-managers of valuable natural resources, using their treaty rights to win a place in ongoing discussions of how to preserve species and ecosystems endangered by decades of environmental degradation.

Reserved Rights to Fish, Hunt, and Gather

The fishing, hunting, and gathering provisions in many treaties represented a significant concession to the demands

of Native negotiators. Although the federal government expected Indians to assimilate into American society, treaty commissioners recognized that tribal leaders would not sign papers that failed to protect their access to traditional subsistence resources and sites. Thus, in order to soften the shock of land cessions and ease the expected transition to Euro-American lifeways, many treaties explicitly secured Indian rights to hunt, fish, and/or gather on ceded lands. In 1789, for example, the Wyandot Treaty stated that “individuals of the said nation shall be at liberty to hunt within the territory ceded to the United States, without hindrance or molestation, so long as they demean themselves peaceably, and offer no injury or annoyance to any of the subjects or citizens of the said United States.” The 1837, 1842, and 1854 treaties with the Lake Superior Ojibwes guaranteed, “The privilege of hunting, fishing, and gathering the wild rice, upon the lands the rivers, and the lakes included in the territory ceded . . . during the pleasure of the United States.” After Congress unilaterally terminated formal treaty-making in 1871, executive orders, federal statutes, and congressional agreements occasionally secured Indian hunting, fishing, and gathering rights on ceded lands. By the end of the nineteenth century, however, Indians seeking to exercise these rights often had to contend with white competitors and state laws intended to conserve declining stocks of fish and game.

The resulting confrontations and court battles typically reflected the ambiguous and contested language of the treaties themselves, as well as differing cultural conceptions and uses of natural resources. The principles of treaty construction established by the U.S. Supreme Court (most notably in *U.S. v. Winans* in 1905) dictate that treaties must be interpreted as the Indians would have understood them at the time, that all doubtful or ambiguous terms must be resolved in favor of the Indians, and that treaties in general must be liberally construed to the benefit of the Indians. In practice, though, the courts have considered only clear-cut treaty or statutory language reserving off-reservation hunting, fishing, and gathering rights. Native oral traditions concerning treaties and treaty councils are typically dismissed as hearsay. For Indian negotiators more used to oral agreements than written ones, the accords consisted of everything said and solemnized at the councils, not merely the words written in the official documents. Decades later, descendants of treaty signers continued to relate stories of promises made but not recorded on paper. Most importantly, they insisted that their treaty rights had been reserved in perpetuity and free of non-Indian interference. As Yakama fishing rights

Indians fish on platforms over Celilo Falls on the Columbia River on the Oregon-Washington border in 1956. Tribes have often struggled with the federal government to gain fishing and hunting rights, especially in off-reservation areas.

activist David Sohapp Sr. was quoted as saying in Andrew H. Fisher's 1999 article, "This I Know from the Old People": Yakama Indian Treaty Rights as Oral Tradition," his ancestors understood that their 1855 treaty would endure "as long as that mountain stood there, as long as the sun rose in the east and long as the grass grows green in the spring and the rivers flow. To me, that meant forever, not to be abrogated or changed or done away with any other way. That's the way the old people talk."

States' Rights versus Tribal Sovereignty

The central issue in most state-tribal disputes has been the extent to which the states can regulate Indian treaty rights. Faced with dwindling fish and game populations, state governments began implementing conservation programs that openly favored non-Indian sport and commercial interests over Indian use. Although they were not primarily responsible for the depletion of the resources, Native Americans found their off-reservation subsistence activities increasingly constrained by a web of regulations governing illegal gear, trespassing, licensing, closed seasons, prohibited areas, catch limits, and the sale of game or fish. When Indians hunted or fished in violation of these laws—either knowingly or unknowingly—state authorities prosecuted them for poach-

ing. Many Indians also had their guns or gear confiscated, adding to the economic and cultural hardships posed by the inability to take fish and game for subsistence, ceremony, and sale. This assault on their treaty rights confounded traditional Indians and tribal leaders, who generally regarded their foods as sacred gifts from the Great Spirit, not the property of state governments representing alien intruders. As Chief Meninock of the Yakama Nation protested in 1915, "I was not brought from a foreign country and did not come here. I was put here by the Creator. We had no cattle, no hogs, no grain, only berries and roots and game and fish. We never thought we would be troubled about these things, and I tell my people, and I believe it, it is not wrong for us to get this food" (Fisher, "This I Know from the Old People," 1999).

In defense of their hunting and fishing rights, Indians generally argued that treaties signed with the U.S. government constituted the supreme law of the land and therefore superseded state laws. State courts typically dismissed the concept of reserved rights, however, while federal courts alternated views on the subject. In one of the first precedents it handed down, *Ward v. Race Horse* (1896), the U.S. Supreme Court held that Wyoming's game laws trumped Shoshone-Bannock treaty rights because of the Constitution's "equal footing" doctrine. According to this line of argument, Indian

treaties negotiated during the territorial period were implicitly abrogated (abolished) when a territory joined the Union with the all rights and powers of the existing states. In the Pacific Northwest, state courts also used the common treaty phrase “to fish . . . in common with the citizens of the Territory” to contend that Indians had only the same rights as non-Indians and thus were equally subject to state laws. Treaty tribes in Washington and Oregon repeatedly challenged this interpretation while also fighting to preserve access to their fisheries in the face of non-Indian enclosure efforts. Starting with *U.S. v. Winans*, which declared that treaties are “not a grant of rights to the Indians, but a grant of rights from them—a reservation of those not granted,” Northwest fishing rights cases reached the U.S. Supreme Court seven times during the twentieth century. On each occasion, the Court affirmed the validity of Indian treaty rights but failed to take away fully the states’ power to regulate them. State governments, in turn, continued to cite *Race Horse* and to prosecute Indians for hunting and fishing in violation of state regulations.

Decades of litigation climaxed in the “fish wars” of the 1960s and 1970s. Following a series of “fish-ins” and increasingly violent clashes with state authorities, the Justice Department filed suit on behalf of fourteen northwest treaty tribes. In *U.S. v. Washington* (1974), better known as the Boldt decision, federal district judge George Boldt held that the phrase “in common” guaranteed the tribes the right to harvest 50 percent of the allowable catch (later extended to shellfish) and to participate in management of the fisheries. Five years later, the Supreme Court affirmed Boldt’s ruling, and the Ojibwes and Ottawas of northern Michigan won recognition of their treaty rights in *U.S. v. Michigan*. In 1983 their relatives in Wisconsin scored an even greater victory with the U.S. Court of Appeals’ decision in *Lac Courte Oreilles Band v. Voigt*, which upheld the off-reservation fishing, hunting, and gathering rights of the Lake Superior Ojibwe. Although each of these decisions triggered a vicious anti-Indian backlash—aided and abetted by strong state attempts to obstruct and overturn them—the various interest groups involved have gradually moved away from litigation as a solution to the controversy. The resurgence of states’ rights and property rights ideologies within the federal judiciary keeps alive the possibility of Indian rights abolishment, but the present political climate emphasizes the negotiation of differences and the cooperative management of natural resources. Tribal organizations such as the Northwest Indian Fisheries Commission, the Columbia River Inter-Tribal

Fish Commission, and the Great Lakes Indian Fish and Wildlife Commission have become central to these efforts.

Current Criteria for State Regulation of Reserved Rights

The current criteria for state regulation of Indian treaty rights depend on the particular treaty or statute and the various federal, state, and tribal interests involved. Generally speaking, tribes may regulate on-reservation fishing, hunting, and gathering free from state interference. In some cases, however, tribal governments lack the authority to prevent non-Indians from hunting or fishing on reservation lands that are not owned by tribal members or the tribe itself. Furthermore, some federal conservation laws (such the Eagle Protection Act) supersede both on- and off-reservation treaty rights. State governments may only regulate Indian off-reservation hunting, fishing, and gathering when absolutely necessary for conservation or public safety. To justify such regulation, the state must demonstrate that a significant risk exists, that the state cannot meet its objectives by regulating non-Indians alone, and that the regulation represents the least restrictive option available. Poor environmental quality and dwindling stocks of fish and game pose the most serious threats to Indian treaty rights. In the Pacific Northwest, for example, salmon runs have declined dramatically due to decades of overfishing, hydroelectric development, habitat destruction, industrial pollution, and flawed hatchery policies. All of the great aboriginal fisheries on the Columbia River have been inundated by dams, while inter-tribal disputes over harvest allocation recently triggered a fresh wave of litigation on Puget Sound. Although Phase II of *U.S. v. Washington* affirmed the treaty tribes’ right to protection of the resource, powerful economic and political opposition has slowed the implementation of effective salmon recovery plans. Meanwhile, in the Great Lakes region, mercury contamination endangers the health of Indians and non-Indians alike.

Whatever the future may hold, it seems certain that American Indians will continue to fight for their treaty rights and the resources that sustain them. Although relatively few Native people in the United States (excluding Alaska) now depend on hunting, fishing, and gathering for subsistence, those activities have become powerful symbols of Indian identity. To those who still exercise them, treaty rights are integral to cultural and religious practices that define what it means to be a tribal person. Accordingly, many elders lament the fact that younger people often express little

interest in traditional hunting, fishing, and gathering practices. "Today it's hard to be an Indian person, and it's easy to be white," observed Edward James (Umatilla) in a 2005 interview for the *Confederated Umatilla Journal* during the tribe's recent sesquicentennial commemoration of its 1855 treaty. "If we don't hunt, fish, dig roots and pick berries then what are we? We're certainly not being *Natitayt* [Indian people]." To protect the "old ways," however, Native Americans have also developed the legal, political, and scientific expertise necessary to secure a place at the negotiating table. Contemporary tribal leaders understand that both traditional and modern forms of knowledge must be passed on to future generations. They also know that the battle to uphold their rights has not ended either in the court of law or in the court of public opinion. Having fought so hard to protect their hunting and fishing rights from non-Indian usurpation and state regulation, Indians must continue to fight to ensure that the resources do not disappear. After all, as Judge William Orrick noted in Phase II of *U.S. v. Washington*, "fifty percent of nothing is nothing."

Fitzpatrick, Thomas

Thomas Fitzpatrick (c. 1799–1854), also known as Broken Hand and White Hair, was appointed in 1846 to serve as the first Indian agent with the newly created Upper Platte and Arkansas Agency. Prior to his service, Fitzpatrick, an Irish immigrant, was a trapper and guide for pioneers Marcus Whitman, Pierre De Smet, and John C. Frémont.

Fitzpatrick's appointment as agent followed white encroachment into Native American territory and the federal government's recognition that it needed a mediator with the tribes in the region. He believed the ultimate survival of the Indian people would come only if they adopted the trade and agriculture of white people. He pressed for an end to the liquor trade with Natives, strong punishments for Native attacks on whites, military surveillance of commonly traveled routes, and forceful conquest of tribes that did not acculturate.

In his time as an agent, Fitzpatrick negotiated many treaties. He brokered peace with the Cheyenne and Arapaho tribes and kept them from allying with the Kiowas and Comanches. He was also instrumental in bringing about the 1851 Treaty of Fort Laramie, which guaranteed safe passage for white travelers through Indian territories and allowed for the construction of military forts. Two years later, Fitzpatrick negotiated with the Comanche, Kiowa, and Apache tribes that had refused to join the 1851 treaty. The resulting Fort Atkins Treaty ensured the right of the United States to build roads, military posts, and railway depots in Indian territories, while granting to Native Americans annuities and the right to retain assimilated Mexican captives among their tribes. When traveling to Washington, D.C., to negotiate details of this treaty with lawmakers, Fitzpatrick contracted pneumonia and died in 1854.

Fletcher, Alice Cunningham

Alice Cunningham Fletcher (1838–1923), a well-educated New Yorker, worked initially as a governess and then became involved in intellectual and social reform movements. She participated in women's clubs in the 1870s and served as secretary for the Association for the Advancement of Women. She became a traveling public lecturer, taking up the topic of ancient America. In 1879 she contacted Frederic Ward Putnam, curator of the Peabody Museum at Harvard. Putnam subsequently encouraged Fletcher to study archaeology at the museum, and she began an apprenticeship under Putnam in 1880.

In 1881 Fletcher traveled through Dakota Territory, observing Sioux culture with Sisseton La Flesche, an Omaha Indian whom Fletcher had originally met in 1879, and La Flesche's husband, Henry Tibbles. The experience launched Fletcher's transformation into an anthropologist. Fletcher also became acquainted with the Omaha tribe's effort to secure legal title to their lands, and she lobbied Congress on the tribe's behalf, resulting in 1882 Omaha allotment legislation. Subsequently, the Office of Indian Affairs recruited her to make allotment assignments to the Omaha, and after passage of the 1887 General Allotment (Dawes) Act, Fletcher was hired to allot the Nez Perce reservation. During this time, Fletcher urged Congress to modify the Dawes Act to provide allotments for married women, who received no land under the act's original terms. Congress passed an amendment in 1891 that accomplished this goal.

Fletcher continued her study of anthropology, including a successful research collaboration with Francis La Flesche that culminated in the 1911 publication of *The Omaha Tribe*.

Forestry

Indian Country includes sixteen million acres of forestlands, spread across 214 reservations. Indian tribes have full beneficial ownership of these forestlands, which not only support timber economies, but also provide subsistence and medicinal plants, fish and wildlife, firewood, recreation, watershed integrity, and cultural resources. Sustainable management of these lands is therefore crucial.

Historically, the federal government has wielded a heavy hand in Indian forest management. Today, though, tribes are gaining their own management capabilities and assuming control of their forest resources, with oversight by the Bureau of Indian Affairs (BIA). Although the federal government has trust ownership of Indian land as part of its trust relationship with tribes, the Supreme Court in *White Mountain Apache Tribe v. Bracker* (1980) stated clearly that the United States must manage tribal forest resources exclusively for the "benefit of" the tribes.

Three primary statutes govern the majority of activities associated with forest management on tribal and allotted lands. The 1910 Indian Timber Act provides for the sale of timber on both Indian land allotted pursuant to the General Allotment Act of 1887 and unallotted Indian land. Section 7 of the act authorizes the secretary of the interior to sell timber on tribal trust land. Regulations passed under this section require tribal consent for such sales. Section 8 allows allottees to sell timber on allotted lands with the consent of the secretary.

The Indian Reorganization Act of 1934 requires the secretary of the interior to enact regulations for the operation of "Indian forestry units" in accordance with the principle of "sustained yield management." John Collier, the commissioner of Indian affairs from 1931 to 1945 and the principal author of the act, included this provision in response to BIA mismanagement and overcutting of Indian forests. The BIA enacted regulations in 1936 to require reforestation and restrict clear-cutting of large contiguous areas.

In 1990 Congress passed the National Indian Forest Resource Management Act (NIFRMA), a comprehensive law aimed at giving tribes a more active role in the management of their forests. The statute sets forth provisions on forest planning and administration, tribal forestry programs, and cooperative agreements and contracts between the federal government and the tribes. It also provides educational and technical assistance to tribes in developing forestry programs and capabilities.

Under self-determination and self-governance agreements pursuant to the Tribal Self-Governance Act of 1994, an increasing number of tribes have developed and implemented forestry programs. The success of tribal programs will depend in part on the adequacy of federal funding and technical assistance. As tribes assume a more substantial role in managing their forestlands, the federal role will shift from one of direct involvement to one of oversight.

In addition to encouraging greater tribal control of timber management, NIFRMA also specifically maintains the federal trust responsibility to the tribes.

Modern Indian Forest Management

Historically, the BIA emphasized commercial timber production, often eradicating complex forest ecosystems in favor of tree plantations that could provide maximum net growth and economic return. NIFRMA created a management framework designed to emphasize tribal values and sustainability. The act calls for developing forest management plans (FMPs) through full consultation with the tribe. Such plans must be consistent with an overall tribal integrated resource management plan, which coordinates the overall management of the tribe's natural resources. FMPs are subject to approval by the BIA, and the integrated resource management plan is subject to approval by both the BIA and the tribe. All timber harvests must be consistent with the forest plans approved by the BIA, and the secretary of the interior must comply with all tribal laws pertaining to Indian forestlands.

NIFRMA reinforced the sustained yield mandate of the Indian Reorganization Act by requiring management of forestlands "in a perpetually productive state in accordance with principles of sustained yield." The statute also broadened the traditionally narrow emphasis on timber output by defining "sustained yield" to support the continual production of "forest products" as a whole. In a departure from the traditional, singular emphasis on commercial timber, NIFRMA and its implementing regulations define "forest products" expansively to include many other forest resources, such as

fuelwood, nuts, berries, roots, mushrooms, herbs, Christmas trees, and "other marketable material." Sale of these forest products must receive both the consent of the secretary of the interior and authorization of the tribal government.

In a similar vein, the act expressly recognizes other forest values beyond timber output. It requires management of forestlands in their natural state when the tribe determines that the recreational, aesthetic, cultural, or traditional values of the lands represent "the highest and best use." Further, NIFRMA imposes management objectives to protect fisheries, wildlife, grazing, recreation, and aesthetic, cultural and traditional values, and to regulate water runoff, minimize soil erosion, and protect other ecosystem functions.

Application of General Environmental Laws

Although many environmental and historic preservation laws potentially affect Indian forest management, two of the most significant laws are the National Environmental Policy Act of 1969 (NEPA) and the Endangered Species Act of 1973 (ESA). NEPA requires the compilation of an environmental impact statement (EIS) for major federal agency actions "significantly affecting the quality of the human environment." To meet this essentially procedural requirement, the government must study the consequences of, and alternatives to, proposed actions before making a final decision. BIA regulations expressly require compliance with NEPA in carrying out forest management on Indian land.

The federal actions triggering NEPA may be either direct or supervisory in nature. The direct BIA actions include: (1) program development and administration; (2) forest plan preparation; (3) forest enhancement projects (such as reforestation and thinning); (4) fire prevention projects; (5) insect and disease prevention projects; (6) timber sale preparation; (7) development of tribal integrated resource plans; and (8) road projects. The federal oversight actions that trigger NEPA include approval of timber sales, tribal forest management plans, and tribal integrated resource management plans. Even where tribes assume greater management control over their forests, the secretary's role in contracting with tribes and providing grants to tribes triggers NEPA, because federal funding is normally involved.

The Endangered Species Act is the second major environmental statute that applies to Indian forestlands management. Tribal forestlands provide habitat for an increasing number of species listed as threatened or endangered. Two ESA provisions are of particular importance. Section 7(a)(2) prohibits federal agencies from taking action that will "jeop-

ardize the continued existence” of any listed species, or that will destroy or modify “critical habitat” designated for listed species. When a BIA action will likely affect a listed species living in tribal forestlands, the agency must consult with the U.S. Fish and Wildlife Service or the National Marine Fisheries Service to determine whether the action may jeopardize the existence of the species or destroy its critical habitat. One court has held that the BIA’s approval of a tribal forest management plan and timber sales under NIFRMA are federal “actions” subject to section 7’s consultation requirement and jeopardy prohibition.

Section 9 of the ESA prohibits any person from “taking” a listed species, a term the Supreme Court has construed to include habitat destruction. Legally, this provision is problematic where it implicates treaty rights. Although general statutes such as the ESA normally extend to activities on Indian land, the analysis is different if treaty rights would be impaired. In *United States v. Dion* (1986), the Supreme Court determined that federal statutes do not abrogate treaty rights unless there is “clear evidence” that Congress considered the issue and intended to abrogate. The Court left undecided whether the ESA meets that test.

Despite the uncertain context surrounding ESA regulation, several tribes are developing habitat conservation plans, a tool allowed under section 10 of the ESA, to govern timber harvests that may affect ESA-listed species. Recognizing the growing role of ESA regulation in tribal natural resource management, the secretaries of the Departments of Interior and Commerce signed a joint secretarial order in 1997 outlining procedures and principles to guide their agencies in implementing the ESA on Indian lands. Some tribes are turning to conservation easements and other innovative property-based tools to protect their forestlands.

Trust Liability

As in other resource areas, the federal-tribal trust relationship frames federal obligations toward the tribes in the area of forest management. Tribes have pursued various claims against the federal government for breach of fiduciary duties in managing reservation forestlands, administering timber sales, and handling proceeds gained from those sales. Typically such claims are for monetary damages brought under the Tucker Act of 1987, although tribes may sue the BIA for injunctive relief under the Administrative Procedure Act of 1946 as well.

In its landmark decision in *United States v. Mitchell* (1983), the Supreme Court decided that the forest management

statutes and regulations established “‘comprehensive’ responsibilities of the federal government in managing the harvesting of Indian timber” and that such involvement gave rise to a trust relationship for which the federal government is accountable in damages. Presumably, tribes that continue to rely on comprehensive federal management of their resources will be able to sue the federal government for damages for breach of fiduciary obligations in the post-NIFRMA context.

Fort Harmar (1789), Treaty of

On January 9, 1789, the United States government and Indian tribes of the Ohio Country signed a treaty at Fort Harmar, Ohio, in an effort to end violence along the frontier over disputed land claims. Ratified during President George Washington’s first term, the treaty was the first between the United States and a tribal nation under the newly adopted Constitution. Disagreement centered on the continued settlement by whites of Connecticut’s Western Reserve (“Firelands”), established for veterans of the

American Revolutionary War (1775–1783) that had lost their homes during the conflict. These lands extended west of the Cuyahoga River and into Indian Territory as set forth in the Treaty of Fort McIntosh (1785). Accordingly, Secretary of War Henry Knox ordered Arthur St. Clair, governor of the Northwest Territory, to meet with representatives of the Six Nations, as well as the Wyandot, Delaware, Ottawa, Chippewa, Potawatomi, and Sauk tribes, to negotiate a new agreement.

Favoring a peaceable atmosphere to one of conquest, Congress authorized St. Clair to offer the tribes payment, in the form of goods and valuables, and territory bounded by the Muskingum and Ohio rivers to the east and south in exchange for the lands under dispute. St. Clair, however, refused to negotiate such terms. Instead, through bribery and manipulation, he forced the tribes to accept the boundary terms established at Fort McIntosh. Predictably, the new treaty failed to end the frontier violence, and hostilities between the tribes and settlers continued to escalate until the U.S. victory at the Battle of Fallen Timbers in 1794.

Washington's decision to send the treaty to the Senate for ratification established a precedent that the United States followed until 1871. Proponents of Native American tribal sovereignty have argued that by adopting the ratification, early policy makers for the United States were acknowledging the political sovereignty of the Indian tribes.

Fort Jackson (1814), Treaty of

Signed between the United States and the Creek Indians on August 9, 1814, the Treaty of Fort Jackson ended the Creek Civil War (1813–1814). The treaty established a formal peace between the two nations, demanded the return of property taken by Creek warriors during the war, and ceded twenty-three million acres of tribal land to the United States.

This civil war, also known as the Red Stick War, divided the Creek Nation in ways that also affected the War of 1812 (1812–1814). Great Britain allied itself with, and provided assistance to, the Red Stick majority, those Creeks who challenged the cultural and political changes that were transforming Creek society. The United States allied itself with a minority of Creeks who were more accepting of the “civilizing” efforts of the federal government. After a bitter conflict, on March 27, 1814, southern militia forces under Andrew Jackson crushed the Red Sticks at the Battle of Horseshoe Bend on the Tallapoosa River in present-day eastern Alabama.

After significant negotiation with the Creeks, the treaty was signed at Fort Jackson, near Wetumpka, Alabama. Despite a lack of involvement in earlier negotiations, General Jackson dictated the harsh terms of the final agreement. The treaty claimed all the Creek lands in Georgia and much of their lands in Alabama—even though many Creeks had fought with the United States. Some of the land actually belonged to the Cherokee Nation, a mistake that had to be resolved with a subsequent treaty. The agreement also required the Creeks to turn over the rebellion's leaders and to end their trade and diplomatic relations with the British and Spanish agents in the region. The treaty also authorized the United States to establish forts, trading posts, and roads in Creek territory.

Thirty-six chiefs, only one of whom was a Red Stick leader, eventually signed the treaty. The thirty-five others had fought alongside the United States.

Fort Laramie (1851), Treaty of

By 1851 more than 100,000 emigrants had traversed the Great Plains of the United States via the overland trails. This massive movement of people and livestock introduced deadly diseases to the Plains Indians, disrupted bison herds, and despoiled natural resources. As a consequence, frustrated Plains Indians sometimes raided wagon trains and were

viewed by emigrants as a nuisance, if not a threat. To guarantee the safety of overland travelers and to promote peace among the Natives, the federal government called for a grand council with all the Plains tribes during the summer of 1851.

By early September 1851, more than ten thousand Native Americans, comprising representatives from the Arapaho, Arikara, Assiniboiné, Cheyenne, Crow, Hidatsa, Mandan, Shoshone, and Sioux peoples (the Comanches and Kiowas refused to attend) had gathered around Fort Laramie. After several weeks of negotiating, an agreement was made between U.S. negotiators Thomas Fitzpatrick, the agent for the Upper Platte agency; David Mitchell, the superintendent of Indian affairs in St. Louis; and representatives of the tribes. For their part, Native Americans agreed to allow overland emigrants to travel the trails unmolested, to respect tribal boundaries, and to end intertribal warfare. The government promised an annual annuity payment of \$50,000 (to be shared by all tribes) for fifty years. When the treaty came before the Senate for ratification, however, the terms were judged too generous and the annuity payments were reduced from fifty to ten years.

The ever encroaching tide of white settlement and diminishing bison herds, however, guaranteed continued conflict. Just three years later, for example, a disagreement over a missing settler's cow sparked the Grattan Fight near Fort Laramie

Fort Laramie (1868), Treaty of

The 1868 Fort Laramie Treaty ended the Bozeman Trail War (1865–1868). It was signed by representatives of the Lakota

(Sioux) Nation and the United States on April 29, 1868, and ratified by Congress on February 16, 1869. Those who signed the treaty on behalf of the Lakotas included representatives from the Sicangu (Brule), Oglala, Miniconjou, Hunkpapa, Santee, Yanktonai, Oohenumpa (Two Kettle), Sihasapa (Blackfeet), and Itazipco (Sans Arc) bands. The treaty included seventeen articles, some of which dealt with education, crime, farming, and the various tradesmen the United States was to provide to the Lakotas.

The most important articles dealt with the land reserved to the Native signatories (the "reservation") and that given up by the Lakotas in exchange for services, promises, and goods. Article II defined the reserved lands, which included what was known as the Great Sioux Reserve—the western half of South Dakota, one-third of North Dakota, the northern edge of Nebraska, one-quarter of Wyoming, and a good-sized corner of Montana. The United States agreed that except for government employees, no non-Lakotas "shall ever be permitted to pass over, settle upon, or reside in" the reserved lands. The United States also agreed that no white people could pass through that area without first getting Indian consent. The Lakotas were permitted to continue hunting south of the reservation, but gave up their claims to all other lands.

Article XII stated that no agreement to give up any reserved lands "shall be of any validity or force" unless it was "signed by at least three fourths of all adult male Indians, occupying or interested in the same." No such agreement has ever been signed.

The treaty was negotiated when the Lakotas were in a position of strength, having just defeated the United States militarily. It was broken immediately, however, as U.S. citizens continued to trespass on Lakota lands. This came to a head in 1874, when Lt. Col. George Custer led a party into the Black Hills—the heart of the reservation and an area sacred to the Lakotas—to confirm the presence of gold. When his reports became public, non-Indians rushed into the region.

In 1877 Congress passed the Black Hills Act, which abrogated (repealed) portions of the 1868 Fort Laramie Treaty and gave the United States possession of the gold-rich hills. The Lakotas filed a lawsuit in 1923 charging that the act took the Black Hills without just compensation under the Fifth Amendment to the U.S. Constitution. Legal actions around this issue were dismissed and reopened several times; one of the suits reached the U.S. Supreme Court in 1980 in *United States v. Sioux Nation of Indians*.

In its decision, the Supreme Court said that the Black Hills were taken from the Lakotas illegally and that the 1877 act “ignored the stipulation of the Fort Laramie Treaty that any cession of the lands . . . would have to be joined in by three-fourths of the adult males.” The Court awarded the Lakotas \$17.5 million, plus 5 percent annual interest starting in 1877, or about \$106 million. Since 1980 the total award, with interest, has grown to over \$400 million, but the Lakotas have refused the money and continue to demand the Black Hills be returned to their control.

Fort Stanwix (1768), Treaty of

At the conclusion of the French and Indian War (1754–1763), the British enacted the Proclamation of 1763, which prohibited English colonists from settling west of the Appalachian Mountains. The act also established the territory from the Appalachians to the Mississippi River as an Indian reserve. However, colonists continued to move into the area and tensions with the tribes increased. Over the next five years, the British sought a way to end the continual violence along the frontier as the Ohio tribes attempted to halt white expansion upon their lands. To this end, representatives of the British government, led by Sir William Johnson, and the Iroquois Confederacy, or Six Nations, met at Fort Stanwix, New York, to renegotiate the boundary between English settlements and Iroquois lands previously established in the proclamation.

On November 5, 1768, Johnson and the chiefs of the Mohawks, Onondagas, Senecas, Oneidas, Cayugas, Tuscaroras, Mingos, and Delawares signed a treaty that established

a boundary line further west, with the Six Nations ceding to the British the lands south of the Ohio River for monetary compensation. However, the Shawnees, Delawares, and Cherokees—the tribes that lived in the ceded territory—had no part in the negotiations and rejected the Iroquois’ authority to negotiate terms for land they did not occupy. As such, the treaty did very little to end hostilities between encroaching English settlers and the tribes along the Ohio River, particularly the Shawnees, which culminated in Lord Dunmore’s War (1774).

France, Indian Policy of

Most historians credit France with developing the most enlightened Indian policy among the North American colonial powers. Unlike the Spanish, they generally did not depend on military conquest or force Natives to do labor for them. Unlike the English, they did not try to establish an agricultural empire that would encroach on indigenous lands. Perhaps most like the early Dutch, the French interest in America was primarily commercial. Despite their facility for diplomacy and trade, however, the French encountered harsh Native resistance in places as far removed as Florida, the Great Lakes region, and the lower Mississippi River.

The Breadth of Empire

The bulk of the French empire in North America lasted from the first voyage of Jacques Cartier up the St. Lawrence River (1534) until the surrender of New France to Great Britain in the Treaty of Paris (1763). French Louisiana, divided between Spain (1762) and Great Britain (1763), returned briefly to French control in 1800 before Napoleon sold it to

the United States three years later. The empire at its height covered an enormous expanse, ranging from Louisbourg on the Atlantic coast through Quebec and Montreal up the St. Lawrence Valley, stretching beyond Hudson Bay into western Canada and down the Mississippi River to New Orleans.

To explore and later administer such a vast area, the French controlled a network of rivers and lakes that linked the Atlantic Ocean to the Great Lakes and the Gulf of Mexico. It was only with the help of long-term Native allies that they were able to extend the reach of empire from the French royal palace in Paris, later Versailles, to distant fur trading posts in the remote Canadian interior.

Early French attempts at gaining a toehold on the continent met with failure. Excursions to the Montreal area and the east coast of Florida sparked robust Native resistance in the sixteenth century. French settlement did not prove successful until the founding of Quebec in 1608, a development made possible only because the area had been recently deserted by the Iroquois Confederation.

In 1609 French explorer Samuel de Champlain and his Native allies, including the Montagnais, Algonquins, and Hurons, routed the Iroquois in battle, a fateful skirmish that confirmed French control in the St. Lawrence Valley and set the scene for future trade alliances. An intrepid soldier and accomplished statesman, Champlain went on to explore the western country as far as Lake Huron and become virtual governor of Quebec. Aside from an occasional outbreak of peace, the Iroquois would become the enemies of the French for much of their tenure in America. War between Native peoples, until this point waged on a local basis, was destined to become imperial in scope.

New France (the name for Canada later extended to all French North America) was originally administered from Quebec by a governor and *intendant*, or royal officer. In 1627 the Company of New France was established to govern the colony as a commercial monopoly, but in 1663 it became a royal province under a king who claimed to rule by divine right. This centralized chain of command led to greater control than was common in the diverse English colonies and facilitated the establishment of enduring Indian alliances. As New France expanded, its administration grew more complex. Far to the south, Louisiana was administered by the Company of the Indies until the French crown took control in 1731. Covering an immense area based along the Mississippi Valley, this part of New France was administered at different times through Biloxi and Mobile (in present day Alabama) and finally New Orleans.

The Fur Trade

Like other European powers, the French sought to exploit raw materials they found in America—fish; timber; and, most importantly, animal furs. A skilled and willing local population aided them in acquiring furs. The trappers and middlemen in the fur trade were Montagnais, Micmacs, Hurons, Algonquins, and others who allied themselves with the French *voyageurs*, or canoe men, in the backwoods and the merchants in the downriver settlements. In return for trapping and transporting furs, tribal peoples were paid in manufactured goods: mirrors, kettles, axes, glass beads, firearms, and alcohol.

The first fur trading post appeared at Tadoussac in 1600. Within a few years, the French were deeply enmeshed in a trade that trapped the American interior for pelts of fox, marten, bear, and especially beaver, the fur of choice in Europe for the manufacture of broad-brimmed felt hats. Settlements clustered along the main waterways of New France, providing a defensive chain of trading forts that were armed against the British and linked the Atlantic Ocean with the Gulf of Mexico.

The French succeeded in the fur trade by cooperating with Indian allies on a number of levels. Explorers like Cartier and Champlain arranged with Indian leaders to exchange French and Native boys and train them as interpreters. Intermarriage was common between French men and Indian women, at least in the frontier outposts, a practice encouraged by the lack of French women in the colony. The result was a large mixed ancestry (*Métis*) population that made the family yet another instrument of empire. The French were even receptive to Native technology, using the birch bark canoe as a key tool for exploring the interior.

Most Indians chose to be partners with the French, not enemies. And they were a diverse lot, from the hunting-gathering Montagnais in the east to the farming Hurons of central Ontario, close relatives of the Iroquois who resided in permanent villages. But the French were more dependent on their allies than vice versa. Native people were given special status in French settlements, including immunity from paying dues to French lords, forced labor, and punishment for certain crimes.

Religious conversion of the Natives was a prominent goal. Montreal itself was founded as a missionary settlement (1642). The Jesuits who first came to preach in 1625 were bolder, wealthier, better educated, and more inquisitive than

most of their church brethren. They proved a valuable service not only in spreading the gospel of French predominance but in recording some of the earliest accurate ethnographic information on Indian peoples north of Mexico.

Though solicitous of their Native allies, the French clung to the assumptions of empire. It was a widely held notion in New France that Indians should become French in outlook and Catholic in religion. In fact, the *voyageurs* who penetrated the interior were looked down upon by much of New France for their uncivilized ways. And intermarriage may have been fine for Native women, according to the conventional thinking, but not French *mademoiselles*. Like their European rivals, the French living in Quebec and Montreal viewed themselves as culturally superior to the Natives they courted, befriended, and sometimes married.

The French Legacy

Impersonal forces like geography facilitated French success with Native Americans. Outside the Mississippi Delta, most major French settlements were confined to Canada, where arable land was limited. Combined with other factors, this sharply curbed immigration from the Old World—there were only about fifteen thousand French in all of New France in 1700. Fewer settlers made Indian relations easier to broker, and the shared fear of the Iroquois Confederation made close friends of French and Indian allies who might otherwise have been wary competitors.

The failure of Indian policy south of Canada suggests the French were no more inherently disposed to deal fairly with Native peoples than were their European rivals. In the deep south, Florida expeditions under Jean Ribault and René Goulaine de Laudonnière (1562–1565) inspired a violent response from Timucua Indians. The Natchez Indians on the lower Mississippi were brutally scattered in 1729. And the French sought to break the power of the nearby Chickasaws, allies of the Natchez, who blocked control of the Mississippi. A series of failed expeditions beginning in 1736 left the Chickasaws, though severely weakened, still in control of the river—and bitter enemies of the French-allied Choctaws, their cultural and linguistic relatives.

Further north, the French coexisted with Indian peoples in the Great Lakes area for the better part of two centuries. As Richard White has noted, the process was one of accommodation rather than acculturation. Through a complex series of agreements between refugees, traders, villages, and ad hoc allies, a French and Indian coalition based on mutual interests emerged, a version of “empire” that evolved from

local needs rather than absolutist designs. Still, the French could be difficult neighbors. Relations with Great Lakes tribes sometimes became so volatile that the French massacred a Fox village of nearly one thousand inhabitants in 1730. When circumstances permitted, the French could be as unrelenting and cruel as any of their colonial adversaries.

A series of colonial wars between France and Britain, dating to the late seventeenth century, climaxed with The French and Indian War (1754–1763). Though Native fighters and tactics routed Edward Braddock’s British regulars in 1755, the English eventually prevailed. Clashing over claims to the Ohio Country west of the Appalachians, both European powers enlisted Native allies in what became a global struggle known as The Seven Years’ War (1756–1763). Not long after the Treaty of Paris was signed, Pontiac’s Rebellion (1763–1766), named for the spirited Ottawa leader, erupted, supported, if not sponsored by, the French. Uniting tribes from the Ojibwes and Potawatomis to the Miamis, Shawnees, and Mingos, the alliance fought the British to a standstill in a conflict marked by brutality and massacres on both sides. French influence in the continent’s interior gradually but inevitably withered.

The French record in South America was similarly marked by early cooperation followed by political failure. *Truchements*, or interpreters, were used to establish a Protestant colony at present-day Rio de Janeiro in the mid-sixteenth century, just as had been done in Catholic Canada. But fighting between the French and Portuguese, and the Indian rivalries they ignited, spelled doom for a colony under the direction of Nicolas Durand, Chevalier de Villegagnon, the only French settlement of note on a continent they hopefully called “Antarctic France.”

However much Britain and France may have disagreed as colonial powers, they concurred in their assumptions about how to solve the “Indian problem.” Early in the seventeenth century, the French opened boarding schools to “civilize” Native students. In 1637 they introduced a reserve system that anticipated later Anglo policy about how to civilize and protect Native people by setting them apart from white communities.

The colonial policy of France would influence later U.S. administrations directly and indirectly. In competing with the French, the British developed a policy of negotiating with tribes as sovereign bodies on some level and compensating them for ceded lands—an inexpensive way to acquire Native land and assert ownership against the claims of other imperial powers like France. The British system of purchas-

ing “aboriginal title” later became the basis for Indian treaty-making by the United States government.

The early presence of French on the continent shaped the United States in other ways. It was the French whose resistance to British expansion provided the thirteen colonies with a precedent for defying King George. More practically, the tactics used during the French and Indian War influenced how the colonists would fight the American Revolutionary War (1775–1783). Eventually, the contested and sometimes violent fate of Native people in the United States would be the result of the long and bitter struggle of the colonial wars that preceded the war.

Frank, Billy, Jr.

Billy Frank Jr. (1931–), an activist and fisherman, has dedicated himself to the protection of the habitats, natural resources, and lifeways of Native Americans in the Pacific Northwest. At age fourteen he was arrested by Washington State wildlife wardens for fishing in the Nisqually watershed, an event which likely influenced his later actions. During the 1960s, African American civil rights “sit-ins” inspired Native American “fish-ins.” This focused national attention on Frank’s Landing—an area in the Nisqually River basin inhabited by Natives—as a key battleground in the fight between Indians and the federal government. The region’s Indians demanded that the government uphold treaty rights to end a century of Washington State interference that jeopardized tribal survival and sovereignty.

This struggle created a new level of awareness of the well-developed body of law defining the scope of Indian hunting and fishing rights in the United States. Billy Frank’s Nisqually forbearer, Chief Leschi, insisted that the Native community signatories to the 1854 Medicine Creek Treaty secured the reserved “right of taking fish, at all usual and accustomed grounds and stations . . . in common with all citizens of the Territory.”

In 1974 federal judge George Boldt ruled that “in common” meant that Indian fishers were entitled to half the harvestable catch of salmon. Despite resistance to this decision by state officials and commercial fishing interests, the end result has been cooperation between federal, state, and tribal governments over fisheries comanagement since the U.S. Supreme Court upheld the Boldt decision in *U.S. v. Washington* (1979).

Billy Frank Jr. galvanized and sustained Native American efforts that produced the most significant Indian rights case of the twentieth century. He currently chairs the Northwest Indian Fisheries Commission, which seeks to restore the environment and natural resources of the western Washington treaty tribes. In 2004 the *Indian Country Today* newspaper presented him with its Inaugural American Indian Visionary Award.

Franklin, Benjamin

Benjamin Franklin (1706–1790) was one of the most noted Americans of the eighteenth century, winning fame as a scientist, printer, writer, statesman, and ultimately as a leader of the American Revolution. Franklin's activities in several of these capacities had lasting effects upon the history of American Indian peoples.

As a printer in Philadelphia, Franklin published (between 1736–1748 on his own and from 1748–1762 with partner David Hall) the proceedings of at least thirteen Indian treaties and conferences. The bulk of these treaties were between Pennsylvania and the Iroquois Six Nations or the Delawares (Lenapes). Other parties to the treaties included the colonies of Maryland, Virginia, Delaware, and New York, and regional Indian nations such as the Shawnees, Miamis, Nanticokes, and Conoys. Franklin's treaty records were often reprinted throughout the colonies and were a major source of information about Indians for Anglo-Americans.

Franklin's disposition towards American Indian peoples in his writings was often contradictory. In *Plain Truth* (1747) Franklin focused on the potential for French-allied Indians to threaten British North America, a reality that led him to endorse writer Archibald Kennedy's 1751 proposal to incorporate the Six Nations into an intercolonial defensive scheme. Franklin's initial draft of the Articles of Confederation (1775) also held a place for the Six Nations. Yet in his 1751 essay *Observations Concerning the Increase of Mankind*, Franklin imagined European settlers expanding over the North American continent, one assumes displacing the Indian population.

During the American Revolutionary War (1775–1783), Franklin served along with Patrick Henry and James Wilson as commissioners for the middle department on Indian affairs for the Continental Congress. Franklin was also the United States's leading negotiator of the Treaty of Paris (1782–1783), which ended the war. The treaty failed to mention any American Indian nation, an omission that allowed Native commissioners to claim Indian lands by the "right of conquest," a doctrine the United States first put forward to the Six Nations of the Iroquois at the Treaty of Fort Stanwix (1784).

Fredericks, Thomas W.

Thomas W. Fredericks (1943–) is a member of the Mandan, Hidatsa, and Arikara Nation and is currently a partner in the Colorado law firm of Fredericks, Peebles and Morgan. As an associate solicitor with the Department of Justice (1978–1980) under President Jimmy Carter, he wrote an unpublished opinion on the Alaska Native Settlement Claims Act of 1971, which revoked federally held land trusts and transferred them to tribal villages and corporations. Fredericks asserted that the Department of the Interior did not have the discretion to hold any former reservation lands in trust for Native communities. Fredericks also served as the assistant secretary of the interior for Indian affairs in 1981, at which time he oversaw the development of an interagency task force charged with coordinating federal Indian programs.

Freedmen

Prior to the 1860s, the Cherokee, Chickasaw, Choctaw, Creek, and Seminole tribes permitted their citizens to engage in slavery as a matter of tribal law. The institutionalized slavery within these nations mirrored slavery in the Southern states, with individuals of African descent enslaved by wealthy individuals to support an agricultural economy.

Although slavery within Native nations predated the forced removal of tribes from the Southeast, the practice intensified following the reestablishment of tribal governments in Indian Territory. During this time, tribal legislatures

passed laws that protected the property rights of slave owners, forbade intermarriage with slaves, and provided assistance for the return of runaway slaves.

The abolition of slavery within Indian nations occurred during or immediately after the American Civil War (1861–1865). Although some tribal governments voluntarily ended slavery by tribal law, the post–Civil War treaties between the United States and the Five Tribes contained emancipation provisions outlawing slavery within the Indian nations. In addition to their emancipation, these treaties secured legal rights for the so-called freedmen, including tribal citizenship and rights to land allotments.

In the years that followed, freedmen fared differently depending on the tribe to which they now belonged. Within the Cherokee Nation, freedmen voted in tribal elections and were allowed to serve on the tribal legislatures, although the Cherokees challenged the freedmen's right to share equally in tribal assets in federal court. The Chickasaw Nation, on the other hand, never amended tribal laws to provide for freedmen political participation.

Today, the term “freedmen” includes the descendants of individuals who were enslaved within the tribal nations. The extent of freedmen rights within the various tribes has been a frequent topic in courts of law since emancipation. For over 140 years, freedmen have filed legal challenges for the enforcement of tribal citizenship and equal protection rights in tribal and federal courts with varying degrees of success. In recent years, freedmen have renewed legal challenges seeking participation in modern tribal governments. To date, only the Seminole and Cherokee freedmen have had limited success securing tribal citizenship, with all other freedmen excluded from tribal citizenship. Tribal citizenship for freedmen is a controversial political topic, in which the rights of the freedmen must be weighed against the well-established right of the tribes to define eligibility for citizenship.

Frémont, John C.

John C. Frémont (1813–1890), an explorer, surveyor, topographer, Civil War officer, abolitionist, and two-time Republican presidential candidate was born January 21, 1813, in Savannah, Georgia. As a member of the U.S. Army Corps of Topographical Engineers, Frémont served on a team surveying the railroad planned to connect Charleston, South Carolina, to Cincinnati, Ohio, and then went on an expedition to map the upper Mississippi and Missouri rivers from 1838–1839. After completing a survey of the Des Moines River in 1841, Frémont married Jessie Benton, daughter of influential Missouri senator Thomas Hart Benton, a champion of American westward expansion. Frémont's explorations were pivotal in shaping the government's Indian policy and law in the nineteenth century, informing the U.S. programs of removal and expansion and the reservation system.

Frémont's expeditions to the Oregon Trail and the Sierra Nevada with Kit Carson (1841–1846), and his journeys into Wyoming's Wind River Range (1842–1844) led him to become the first white man to view Lake Tahoe, to determine the Great Basin has no outlet, and to map Mt. St. Helens in Washington State. The wide publication of maps, surveys, and topographies of these trips led Frémont to acquire the title of “pathfinder.” These explorations led to the increased settlement of Americans westward, clashes with Native American populations, and ultimately political debates over expansion that resulted in the U.S.–Mexican War (1846–1848). Although Frémont achieved success in the political arena on the local, state, and national levels between 1846–1881, it was his earlier actions as an explorer that helped shape U.S. Indian policy.

French and Indian War (1754–1763)

The French and Indian War (1754–1763), called the Seven Years' War in Europe, was the culmination of a series of major wars that pitted European nations against one another in a struggle for imperial supremacy. In North America, the French and Indian War involved French troops and their (primarily Algonquian) Indian allies against the British military, colonial militias, and Native allies principally drawn from the Iroquois confederacy. By 1760 the English had gained the upper hand, which forced the French to turn over the Louisiana Territory to the Spanish and, in the Treaty of Paris (1763), their Canadian possessions to the English. The war led to a greater emphasis by the British to engage American Indians in diplomatic relations even as the historic divide grew larger between American colonists and Native Americans.

The expansion of European empires in America led to increasing tensions and conflict during the seventeenth and eighteenth centuries. The Spanish claimed the southern lands, ranging from Florida east to California. The French claimed the St. Lawrence Valley, the Great Lakes, the major tributaries of the Mississippi River (Ohio, Platte, Missouri, Arkansas), and the Mississippi River itself. The English, meanwhile, claimed the eastern seaboard stretching from Georgia to Maine. The English and French encroached on the lands of Algonquian tribes of the East Coast, such as the Abenakis; the five major tribes of the Southeast (the Cherokees, Chickasaws, Choctaws, Creeks, and Seminoles); the Iroquois Confederation; the tribes of the Great Lakes and northern plains, such as the Ottawas and Sioux; and the Plains Indians.

The first major conflict in North America between the British and the French, King William's War (1689–1697), was followed by others: Queen Anne's War (1703–1713), Dummer's War (1722–1725), and King George's War (1744–1749). Generally these were wars between the French and English, implacable enemies because of centuries of conflict in Europe. The wars were caused by rival claims of American empire, competition over the resources (such as furs) of the American interior, and conflicting religious views, the French being primarily Catholic and the English predominantly Anglican and Puritan. Control of the fur trade, in particular, brought American Indians into the conflict between the French and the British.

The French were more successful in befriending the Americans Indians, partly because they were less condescending toward the Indians than the English, and also because of the activities of French missionaries in converting the Indians to Catholicism. The English required their British-American colonies to have active militia comprised of citizen-soldiers, led by British regular troops. The French and Indians fought guerrilla warfare, which elicited the same response from the British. Both sides took scalps (the visible sign of the death of an enemy warrior). Indians such as the New England Algonquians were adept at raiding British-American settlements, killing, burning, looting, and kidnapping. The British responded in kind, committing appalling acts against Indian villages. For example, after years of heinous crimes committed by the St. Francis Indians against New Hampshire settlements, Major Robert Rogers led a band of rangers against the St. Francis village in October 1759, killing many innocent women and children.

The French and Indian War began in 1754, when Virginia governor Robert Dinwiddie sent Major George Washington of the Virginia militia to try and expel the French from the confluence of the Monongahela and Allegheny rivers. Washington fought a few skirmishes with the French but had to retreat. The next year a much larger British force under the command of General Edward Braddock returned to western Pennsylvania, but was defeated by the French stationed at Fort Duquesne. The French fort held out until 1758, when the English and their Native allies, including the Cherokees from the south, ousted the French. So tenuous was the relationship between the Cherokees and the American colonists that conflict erupted in 1758 into a full scale war, the Anglo-Cherokee War, which lasted until the defeat of the Cherokees in 1761. Meanwhile William Johnson, the British superintendent of Indian affairs, having befriended the Iroquois, led them north to attack the French fortification of Crown Point on Lake Champlain, the loss of which would allow the British to ascend Lake Champlain into Canada. Johnson was stopped, however, and had to retreat to Lake George, where he built Fort William Henry.

The French responded with forces under the command of the Marquis de Montcalm, attacking the fort and driving the British from the lakes of upper New York. The tide changed, however, when the British responded with a huge build-up of troops and ships, attacking the French fortress at Louisburg, which left the St. Lawrence Valley defenseless. Fort Frontenac on Lake Ontario fell soon after. These French defeats allowed British forces in 1759 to move up the

St. Lawrence River to attack Quebec. The most significant battle occurred on the Plains of Abraham, where the British, led by James Wolfe, defeated the French under Montcalm. After the surrender of Quebec, Montreal followed suit a year later, and the British controlled New France.

Even so, some French allies refused to give up. When the British occupied the former French forts at Detroit and Michilimackinac, the neighboring Ottawas, Potawatomis, and Hurons refused to accommodate them. Led by the Ottawa chief Pontiac and inspired by a Delaware Indian called Neolin the Prophet, in 1763 the Indians of the Great Lakes and Old Northwest resisted British forces. Bloodshed and violent acts committed by both sides returned to the shores of the Great Lakes; British forts at Michilimackinac, Presque Isle, and Le Boeuf fell; and British-American farms and small settlements were overrun by the Senecas, Delawares, and Chippewas. Fort Detroit held out, and British reinforcements arrived. Pontiac sued for peace, and the region was again pacified.

Pontiac's War (1763–1766) exemplified the problems the British would encounter in trying to administer their expanded empire in North America in the wake of the French and Indian War. The British were wary of continuing conflicts between their settlers and trans-Appalachian Indian tribes, and King George III issued the Proclamation of 1763, which restricted American movement across the Appalachians and into the lands of the Ohio River Valley. To pay for the costs of the French and Indian War and to administer more effectively their expanded empire, the British tightened up old navigation laws, imposed the Sugar Act on the colonies, and passed the Stamp Act in 1765 to raise revenue; these acts were met with violent protest in the thirteen colonies. The French and Indian War and its aftermath convinced the British that they needed a permanent military presence in the colonies, which made worse the growing fear among many colonists that the British were attempting to impose a repressive tyranny on them.

Native American tribes, however, began to see the British colonies as a greater threat than the British Empire. The peace treaty that ended Pontiac's War showed the British willingness to engage in diplomacy with the American Indians. At the same time, however, British-American colonists still considered many North American tribes as enemies. When the American Revolution began in the 1770s, most American Indian tribes in the East sided with the British.

Fur Trade

The North American fur trade began before the arrival of the Europeans when, for millennia, Native peoples trapped and hunted the plentiful fur-bearing animals of the continent, trading surplus furs to other tribes in return for those their own tribe needed. Indians used furs for warmth in cold climates and for ceremonial dress. Throughout history, tribes were often obliged to defend their hunting grounds against intruders, such as the European immigrants who came to America looking to establish colonies and generate trade and wealth. French and English trappers and traders competed for the fur trade during the seventeenth and eighteenth centuries, followed by a century of competition between Americans and Canadians for control of the fur trade of the Rocky Mountains.

The objects of trade were beaver, otter, mink, marten, raccoon, and fox pelts; bear and deer skins; and buffalo blankets. Pelts from fur-bearing animals were usually best in quality during the fall, when the animal was fat and healthy, or in the early spring after the cold winter had yielded a thick coat. Indians and some American hunters used a trap called a culheag to catch bear or marten. The culheag consisted of two logs, propped one atop the other, held in a scissor fashion by a twig that was attached to another stick that held the bait. The area was scented with meat, which attracted the animal. When the animal placed its head between the logs to tug on the bait, the top log fell upon it, killing the animal but preserving the fur. The Indians used snares or bows and arrows to catch some prey before they began to utilize the iron traps traded to them by European hunters.

The fur trade between European and Native Americans served as a major vehicle for colonial economic development, as well as a means to establish relations with Indian tribes.

Indian hunters traveled to hunting grounds on foot or by canoe. Noting this, French and English hunters learned how to make Indian canoes to facilitate their movements through the forest. By the late eighteenth and early nineteenth centuries, American fur traders and Canadian *voyageurs* used pirogues, wooden boats propelled by oars, on larger rivers such as the Missouri.

John Bradbury, the English botanist who travelled the Missouri River in 1811 with hunters from the Pacific Fur Company, learned that the hunters had to know much about the animals they tracked, and that they could exactly imitate the animals' cries. Beavers were very intelligent, the hunters told Bradbury, and could teach their young to be wary of traps. Jeremy Belknap, who wrote a natural history of New Hampshire in 1791, claimed that Indians and settlers prized raccoon pelts as much as beaver. He wrote that hunters preserved their pelts by salting and packing them tight, skin side in.

European Fur Trade

The earliest European explorers of coastal North America discovered the plentiful fur-bearing animals to be had by the industrious trapper. Competition between the English and

French accelerated during the seventeenth century, as each country tried to outdo the other to establish friendly trade relations with the Algonquians in order to gain a hold on the fur trade. The French took the lead during the 1600s and 1700s. French settlements along the St. Lawrence River Valley were less extensive, so there was less a threat that their population would take over Indian hunting territories. By contrast, the English settlements were more populous, spreading out along the east coast between the Atlantic and the Appalachians from Maine to Georgia. The French were also great explorers, penetrating the trans-Appalachian forests and plains to and beyond the Mississippi River. As French explorers descended and ascended the various tributaries of the Mississippi, they established trade relations with the Native inhabitants. French explorer B nard de La Harpe, for example, in 1719 journeyed up the Red River and then explored the Arkansas River, making contact with the Wichita tribe, which was rich in beaver pelts, deer hides, bear skins, and buffalo robes. Additionally, when the Osages entered into the Arkansas Valley in the 1750s, they offered French and Spanish traders at Three Forks bear and deer skins and beaver and rabbit pelts.

From their base in New Spain, Spanish explorers also journeyed into the gulf coast areas to trade for deer skins,

and into the southern Rockies to trade with Native tribes for beaver pelts. Trading centers in the colonial period existed at Santa Fe, New Orleans, Pensacola, and St. Louis.

At the end of the French and Indian War (1754–1763), the French turned over their lands to the English, at which point they became a lesser threat to the fur supply than the expanding thirteen colonies. When English surveyor James Chadwick journeyed up the Penobscot River in Maine in 1764, he marked a place at Treat's Falls, just below Old Town, beyond which settlers were to limit their beaver trapping per the orders of Massachusetts governor Francis Bernard. The Abenaki tribe had requested that the governor limit white settlement in the interior, as the beaver supply was slowly diminishing. The Abenakis claimed that their practice was to trap two-thirds of the beaver every third year but leave one-third to breed. The English, however, took beaver without limit.

Although it provided the basis for a relationship with the Indian tribes and served as a major source of economic development for the English colonies, the fur trade created unique problems for the colonial governments. The most difficult was the regulation of dishonest traders and merchants who swindled their Indian trading partners. These traders used rigged scales and other means to cheat their customers, physically abused their clients, and provided alcohol to the Indians in order to render them too drunk to realize they were being conned. Because the fur trade was based on the credit system, in which European traders supplied goods on credit that would be covered by later payments in furs, many Indian individuals and families amassed debts that they could never pay. In some cases, traders kidnapped family members of indebted Indians and sold them into slavery to pay off the debts. Actions like these provoked violent rebellions such as the Yamasee War of 1715–1717, in which most of the tribes in the Southeast revolted against the colonial traders and nearly destroyed the colony of South Carolina. In other cases, the colonial governments demanded that a tribe surrender land to pay its accumulated fur trade debts. During his administration, President Thomas Jefferson quietly embraced this colonial strategy and encouraged William Henry Harrison, the governor of the Indiana Territory, to use it to secure Indian land cessions in the region.

American Trading

The fur trade was centered along the Mississippi River and its tributaries during the mid- to late 1700s. After the defeat of the French in 1763, American hunters and fur traders began to cross the Appalachian Mountains. Daniel Boone,

for example, took men through the Cumberland Gap into Kentucky, which was a fur trader's paradise. The greatest center of trade after the French and Indian War was in St. Louis. Founded by Pierre Laclede and August Choteau in 1763 and 1764, the town was on the western shores of the Mississippi River just below its confluence with the Missouri River. By the time the United States acquired Louisiana from France in 1803, St. Louis was a trading hub where merchants, French *voyageurs*, Indian traders, and American hunters and trappers met. The leading fur traders in the town were the French Chouteau family and Manuel Lisa, a Spanish entrepreneur from New Orleans.

It was in St. Louis that Meriwether Lewis and William Clark prepared for their journey up the Missouri River in 1804. Their expedition traveled across the Continental Divide and down the Columbia River, then back to St. Louis, between 1804 and 1806. Along the way they discovered which tribes would make good trading partners, where the best trading posts should be located, which Frenchmen were available to act as interpreters and guides for traders, and which regions offered the best furs. One of Lewis and Clark's men, John Colter, became a well-known and well-traveled mountain man, trapper, and fur trader after he departed from Lewis and Clark in 1806 on their return journey. In 1807 Colter joined Manuel Lisa's new fur company in present-day Montana. Lisa's company sent explorers in different directions to exploit the fur trade. One explorer, Ezekiel Williams, journeyed from the southern Rockies down the Arkansas River, opening the fur trade in the southern Louisiana Territory. Meanwhile George Drouillard, another of Lewis and Clark's men, explored the fur country of the Rocky Mountains.

The greatest source of furs was the lands west and north of the Great Lakes. To exploit this vast resource, and to try to establish an American presence in the Canadian fur trade, which had long been dominated by the Hudson's Bay Company and the Northwest Company, John Jacob Astor created the Pacific Fur Company as a subsidiary of his American Fur Company. Using several bases of operations, such as St. Louis and Mackinac Island (where lakes Superior, Michigan, and Huron meet), Astor sent expeditions west beginning in 1810. One expedition, led by Wilson Price Hunt, departed Mackinac Island and proceeded by canoe southwest to Green Bay, where it traveled up to reach the Fox River. From the Fox, the expedition made a brief portage to the Wisconsin River, eventually meeting the Mississippi River near the trading center of Prairie du

Chien. The Pacific Fur expedition then descended the Mississippi to St. Louis. There Hunt and his men wintered, in the spring loading pirogues for the ascent of the Missouri in March 1811. The expedition included the most famous fur traders of the age: Hunt; two leaders of the Pacific Fur Company, Ramsay Crooks and Donald McKenzie; John Colter; and Pierre Dorion, a Frenchman who had been a guide for Lewis and Clark. Their immediate destination was Fort Mandan in North Dakota, where Lewis and Clark had spent their first winter in 1804–1805. Mandan was a bustling trade center, where French, Canadian, and American trappers and traders met to purchase supplies, camp, and share stories of the trail. Hunt's expedition halted here while its members made plans for an overland route to the Pacific coast. Eventually, they established a trading post called Fort Astoria at the mouth of the Columbia River.

Upon the ratification of the Constitution in 1789, the federal government began to oversee trade with foreign countries and Indian tribes, and in 1790 Congress began passing trade and intercourse acts. Responsibility for overseeing trade with Natives fell to the secretary of war, who tried to use licensing and bonding requirements to regulate American entrepreneurs who traded furs with the Indians. Traders who violated federal law were subject to stiff penalties, but in some areas there was not a sufficient federal presence to guarantee enforcement. In 1796 the government established the factory system, a series of trading establishments across Indian Country where Natives bought goods at cost and sold furs to federal agents. The limited number and isolation of these factories encouraged abuses by independent traders, who ran a black market fur trade and often provided intoxicating liquors to Indians. Private firms such as the American Fur Company, angry that the government held a monopoly over the fur trade, convinced Congress to abandon the factory system in 1822.

In the 1820s the Office of Indian Affairs was established within the War Department to supervise Indian issues, including trade. However, dishonest and unlawful dealings by American traders continued to cause unrest with the Indian tribes, just as in the colonial era. Proponents of Indian removal argued that relocation across the Mississippi River would distance the eastern tribes from the influence of these unsavory characters. Even after removal, however, regulating the fur trade remained a constant source of concern for the U.S. government, until the business declined as a primary source of economic interaction with Indians over the course of the nineteenth century. The fur trade disappeared with the coming of the Industrial Revolution, as factories began to produce inexpensive quality cloth, thereby displacing the demand for beaver pelts, bear skins, and buffalo robes.

G

Article 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace and its honor is hereby pledged to keep it. The Indians desire peace and they now pledge their honor to maintain it.

Gaines, Edmund P.

Edmund Pendleton Gaines (1777–1849) was a noted American army officer who held the post of Indian commissioner in the Southeast following the War of 1812 (1812–1814). He also served in the First and Second Seminole Wars (1817–1818 and 1835–1842, respectively) and the Black Hawk War of 1832.

After serving in the War of 1812, during which he reached the rank of brigadier general, Gaines was appointed Indian commissioner in 1817 and given command of the army's southern district. During this time, Gaines began negotiations with the Creek Indians and sought to exert control over the Seminoles in eastern Florida. Violence between the white settlers and the Seminoles was frequent, and settlers were accusing the Seminoles of harboring runaway slaves. Gaines dispatched troops from Fort Scott, Georgia, against the Seminole village of Fowltown. This attack helped start the First Seminole War.

Gaines was assigned to command the army's Western Department in 1821. He negotiated the agreement with the Mesquaki leader Black Hawk that ended the Black Hawk War. During the Second Seminole War, Gaines led troops to Tampa Bay and fought three small, inconclusive battles with Osceola. Gaines's efforts were unauthorized, and led to a bitter dispute with General Winfield Scott. Gaines went on to participate in the U.S.–Mexican War (1846–1848) and command the army's Eastern Department before his death on June 6, 1849.

Gallatin, Albert

Albert Gallatin (1761–1849) was a prominent federal official of the early Republic period who had a long-standing scholarly interest in Native American language and culture. In his various governmental positions, Gallatin supported plans aimed at educating and assimilating the Native population.

After a career serving in the Pennsylvania House of Representatives, the U.S. House of Representatives, and as secretary of the Treasury from 1801–1814, Gallatin went to Russia in 1814 as part of a commission that sought a peace treaty to end the War of 1812 (1812–1814) between the United States and Great Britain, at which time he had to deal with the British demand to create a permanent Indian reservation in the Old Northwest. The demand was dismissed and not included as part of the final treaty.

Throughout his public career, Gallatin drew upon government contacts with Indians and tribal delegations to further his research in Native American language and culture, and received information on Native culture from Indian agents and explorers such as Lewis Cass and William Clark. Gallatin's research resulted in two publications, *A Table of Indian Languages of the United States* in 1826 and *Synopsis of Indian Tribes of North America* in 1836. Gallatin felt that the Indians of North and South America were linguistically and culturally related, had common ancestors from Asia, and were not the descendants of any European or Judaic society. He founded the American Ethnological Society with John

Russell Bartlett in 1842. Gallatin died on August 12, 1849, in Astoria, New York.

Gaming

Gaming has historical sacred and social significance in Native American culture. Bone dice and moccasin singing contests were incorporated into traditional religious and ceremonial rituals. Tribal social events around festivals, powwows, and potlatches were occasions for recreational diversions and included games of chance such as dice and sticks and the wheel, as well as games of dexterity, such as the hoop and pole, archery, and horse races. Gaming also was essential to tribal economies. Wagering games transferred personal belongings such as clothing, food, weapons, and horses needed for subsistence living, while social gaming encouraged

personal contacts and trading with other Indian communities, thus extending a tribe's political and economic influence.

Indian gaming in the early twenty-first century often is referred to as the new buffalo for Native Americans because it has provided tribes the economic means to achieve self-sufficiency, much like the buffalo abundantly provided for the Plains tribes' subsistence needs many generations ago. The devastating consequences of the failed federal removal, reservation, and allotment policies left most tribal reservations impoverished and tribal governments wholly dependent on federal assistance. Gaming has brought desperately needed revenue to Indian reservations, which has allowed tribal governments to provide essential services to tribal members and families, such as employment, health care, housing, and education. Indian gaming is currently a \$23 billion business, with more than 225 tribal governments operating 391 gaming facilities in twenty-eight states. These gaming operations are governed by the Indian Gaming Regulatory Act of 1988 (IGRA), a federal law enacted in response to the decision of the United States Supreme Court in *California v. Cabazon Band of Mission Indians* (1987), which held that neither state nor county governments have authority to regulate gaming activities on Indian reservations.

California v. Cabazon Band of Mission Indians

In the late 1970s and 1980s, against the backdrop of dire poverty and limited economic opportunities, tribes began

Members of the Colville Confederated Tribes gather outside a courthouse to pressure federal officials not to seize slot machines from reservation casinos. Gaming has a long history in Native nations. Its contemporary manifestation in casinos serves as a means of self-sufficiency.

operating high-stakes bingo and card games, packing their reservation bingo halls with non-Indians. Tribes were immediately challenged by county sheriffs and state law enforcement officials who threatened to arrest anyone playing bingo or cards in their gaming halls. Most state laws prohibited bingo games unless they were conducted by charitable organizations in compliance with defined conditions of operation. Relying on the general rule that state laws do not apply to Indian tribes on reservations except where Congress expressly makes them applicable (the plenary power doctrine), tribes sought protection from state prosecution.

The issue to be resolved by the court was whether the state law was criminal or civil in nature. If it was criminal and prohibited gaming, state law would apply through a federal law commonly called Public Law 280, which granted certain states, including California and Minnesota, authority to exercise broad criminal and limited civil jurisdiction on Indian reservations. Public Law 280 did not extend state regulatory or civil authority over tribes and reservation activities since subjecting internal tribal matters to state regulation would result in the destruction of tribal institutions and values.

In its first decision concerning the applicability of state gaming laws to tribes, *California v. Cabazon Band of Mission Indians* (1987), the U.S. Supreme Court explained that if state law prohibits certain conduct, it falls within Public Law 280's grant of permissible criminal jurisdiction. If state law permits an activity, even though it may be subject to regulation or even misdemeanor penalties, it is an impermissible regulatory law. The Supreme Court concluded that California laws regulated rather than prohibited gaming. It further found that since the state was involved in a substantial amount of gaming activity, such as the state-operated lottery, horse race betting, and bingo games, the tribal gaming activities did not violate the state's public policy. Finally, the Court determined that state jurisdiction over tribal gaming activities was otherwise preempted by the strong federal and tribal interests in promoting economic development and self-determination on reservations.

IGRA

During the late 1980s many tribes and the Bureau of Indian Affairs (BIA) began to realize the tremendous economic potential of tribal gaming. Federal policy formally supported tribal bingo operations as appropriate means by which tribes could achieve economic self-sufficiency, and tribes began moving beyond bingo to casino-style gaming. Federal and state governments raised concerns about this heightened

activity, particularly about the need for regulation, oversight of tribal financial and management arrangements, and the possibility of organized crime infiltration. When Congress began holding hearings on Indian gaming in 1984, the discussions centered on the games that would be regulated by tribes, such as bingo, and the extension of state jurisdiction to all other forms of gaming. After the *Cabazon* decision, Congress moved swiftly to enact legislation establishing a federal statutory basis for the operation and regulation of Indian gaming.

Sponsored by Senator Daniel Inouye, chair of the Senate Select Committee on Indian Affairs, and Senator Daniel Evans of Washington, the Indian Gaming Regulatory Act (IGRA) of 1988 has three main provisions: the classification of gaming with varying levels of regulatory oversight, the establishment of the National Indian Gaming Commission (NIGC), and the compacting process through which tribes and states determine the scope and regulation of casino-style gaming. Although the IGRA's stated purpose is to promote tribal economic development, self-sufficiency, and strong tribal governments, the act also provides a significant state role in regulating gaming activities on Indian lands. An obviously hurried legislative compromise, the IGRA raised concerns among both the tribes, who regarded the act as a serious compromise of tribal sovereignty, and the states, which sought authority to regulate all gaming activities within their borders.

Gaming Tribes and Indian Lands

The IGRA applies to gaming activities of federally recognized Indian tribes on Indian lands. The IGRA defines Indian lands as those within a reservation and individual or tribal trust lands over which the tribe exercises governmental power. The act prohibits gaming on lands away from the tribe's reservation that were acquired by the secretary of the Department of the Interior for the tribe after 1988. Excepted from this prohibition are lands within, or touching, the tribe's existing reservation; lands for initial reservations for newly recognized tribes or restored lands of restored tribes (with the exception of the Catawba tribe of South Carolina); and lands acquired in settlement of land claims (with the exception of the Penobscot and Passamaquoddy tribes in Maine, the Narragansett tribe of Rhode Island, and the Ysleta del Sur Pueblo of Texas). Acquired trust lands qualify as restored if they have cultural or historical significance to the tribe and were within land it formerly ceded.

The IGRA allows gaming on newly acquired Indian lands provided the secretary, after consultation with appropriate tribal, state, and local officials, approves such gaming and determines that it would be in the best interest of the tribe and its members, and would not be harmful to the surrounding community. The governor of the state must concur with the secretary's decision.

Classification and Regulation of Indian Gaming

Indian gaming is classified according to the type of game and its corresponding regulation. Class I gaming consists of social and traditional games and is regulated exclusively by tribes. Class II gaming includes bingo and other games of chance such as lotto, pull-tabs, punch boards, tip jars, instant bingo, and games similar to bingo. Bingo games may be conducted with electronic, computer, or other technological aids. The IGRA specifically excludes electronic or electromechanical facsimiles of any game of chance and slot machines from Class II gaming. Poker and other nonbanking card games (where players play against each other and not the house) are permissible under Class II unless they are specifically prohibited by state law. A tribe may conduct Class II gaming if the state in which the tribe is located permits such gaming for any purpose by any person, organization, or entity, and the governing body of the tribe adopts a gaming ordinance which is approved by the chair of the NIGC. Class II gaming is subject to regulation by tribes and the NIGC. States have no role in the regulation of Class II gaming.

Class III gaming, or casino-style games, includes all other types of gaming such as banked card games (where players play against the house and not just each other), roulette, craps, blackjack, slot machines, pari-mutuel wagering, and jai alai. Electronic games, such as video poker, are considered Class III games. A tribe may conduct Class III gaming if the state in which the tribe is located permits such gaming for any purpose by any person, organization, or entity; the tribe and the state have negotiated a compact which has been approved by the secretary; and the tribe has adopted an ordinance which has been approved by the chair of the NIGC. Class III has become the most important and lucrative type of gaming for tribal gaming operations.

The Compacting Process

The IGRA sets out a formal process and specific time frames for negotiating a Class III gaming compact, a legal agreement establishing the types and regulation of games offered at a tribal gaming facility. A tribe initiates the compacting

process by submitting a notice and request to the state to negotiate a compact. After the parties conclude their negotiations, they present the proposed compact to the secretary of the interior, who has forty-five days to approve or disapprove it. The secretary may disapprove a compact if it violates the IGRA, any other federal law, or the trust obligation of the United States to Indians.

The act does not require states to enter into compacts with tribes, only that they negotiate in good faith. The IGRA also does not require states to negotiate with tribes over gaming activities that are prohibited under state law. If a state refuses to negotiate or does not negotiate in good faith, Congress authorizes tribes to bring suit in federal district courts. A court can compel a state to negotiate a tribal gaming compact. In determining whether a state has negotiated in good faith, the court considers the public interest, public safety, and the adverse economic impacts on existing gaming operations. If the court finds that the state has failed to negotiate in good faith, it may order the parties to conclude a compact within sixty days. In the event a compact is not subsequently reached, the parties then submit their last best offers to a court-appointed mediator who then selects the compact that most agrees with the IGRA. The state has sixty days to accept the compact selected by the mediator. If the state refuses to accept the compact, the mediator notifies the secretary of the interior who, after consulting with the tribe, prescribes procedures consistent with the compact selected by the mediator, thus allowing the tribe to conduct Class III gaming.

In 1996 the provision in the IGRA granting federal courts jurisdiction over states was found to violate the Eleventh Amendment to the U.S. Constitution. In *Seminole Tribe of Florida v. Florida*, the Supreme Court held that the Indian Commerce Clause does not grant Congress the power to abrogate (abolish) the states' sovereign immunity from suit. This ruling left tribes without any judicial remedy if states refused to negotiate Class III compacts or negotiated in bad faith. However, when a state raises its Eleventh Amendment immunity from suit, tribes may obtain secretarially prescribed Class III gaming procedures pursuant to the judicial bypass process discussed above and regulations issued following the Supreme Court's decision in *Seminole Tribe*. Only two tribes operate gaming facilities pursuant to such procedures, the Mashantucket Pequot tribe of Connecticut (1991) and the Northern Arapahos of the Wind River reservation in Wyoming (2006).

Tribal-State Compacts

Tribal-state compacts deal with specific areas of interest related to public safety and regulation of gaming set out in the IGRA, such as licensing key employees, establishing and enforcing standards of operation and management, and auditing the tribe's gaming revenues. Nongaming activities also may be addressed in compacts, such as the sale and distribution of alcoholic beverages and taxation of cigarettes and other commercial and entertainment-related transactions within the tribal gaming facility. Tribes bear the cost of this state regulation through fees assessed in the compact.

The IGRA requires that compacts define rights and remedies for the breach of the compact. Some states and tribes have provided limited waivers of sovereign immunity for certain legal actions. A compact takes effect when notice of its approval by the secretary is published in the *Federal Register*.

Tribal Gaming Ordinances

Before any gaming may be conducted on Indian lands, a tribe must enact a law or ordinance providing for the regulation of its gaming activities. The chair of the NIGC will approve a tribal gaming ordinance if it provides that: 1) the tribe will have the sole proprietary interest in the gaming operation; 2) net revenue from tribal gaming operations will be used to fund tribal government operations, provide for the general welfare of tribal members, promote economic development, donate to charitable organizations, or help fund local government agencies; 3) annual outside audits of the gaming operations will be submitted to the NIGC; and 4) there is an adequate system for conducting background investigations on key employees and primary management officials, issuing licenses, and notifying the NIGC of the investigation results.

Tribal gaming laws are further supported by other laws dealing with commercial activities and civil actions arising from, or occurring within, the gaming facilities. Tribal regulations also govern gaming, environmental, and health and safety issues. Tribal courts exercise extensive jurisdiction over disputes concerning contracts for goods and services, personal injury claims, and employment and labor issues, and have authority to render legal and equitable remedies.

National Indian Gaming Commission

The IGRA established the National Indian Gaming Commission, an independent federal regulatory agency within the Department of the Interior. The NIGC has

authority to conduct background investigations on key employees involved in Indian gaming activities, audit tribal gaming operations, undertake enforcement actions such as assessing civil fines, issuing closure orders, and reviewing tribal gaming ordinances. Tribes are assessed fees to pay the cost of the NIGC's regulation.

The NIGC set forth extensive standards on Class III gaming operations that are stricter than those provided in most tribal-state compacts. A recent federal appellate court decision held that the IGRA restricts the NIGC's regulatory authority to Class II gaming only and that the NIGC lacked authority to impose the standards.

Management Contracts

Tribes usually seek management assistance for the operation of their tribal gaming facilities. To ensure that tribes are the principal financial beneficiaries of these agreements, the IGRA requires their approval by the chair of the NIGC. Management contracts must contain several provisions, including adequate accounting procedures, consent to tribal access to the gaming operations to verify the daily revenues and income, minimum guaranteed payments to the tribe with preference over the retirement of development and construction costs, a ceiling for the repayment of debt that does not exceed a maximum term of seven years, and grounds and procedures for terminating the agreement.

Management fees may be based on the revenues of the gaming operation if the NIGC chair finds that the fee is reasonable, generally up to a maximum of 30 percent of net gaming revenue. A 40 percent fee may be approved if the chair is satisfied that the management company's capital investment and the income projection for the tribal gaming operation justify the higher percentage. The decision of the chair to approve a management contract may constitute a major federal action significantly affecting the quality of the human environment. Accordingly, these contracts generally are not approved until the environmental assessment requirements established by the National Environmental Policy Act are addressed.

To avoid the lengthy and intrusive review process, management contracts often are drafted under a different guise with overlapping terms and relationships, such as an equipment lease, or a financing, development, consultant, or employment agreement. The failure to submit a management contract for approval may result in an enforcement action and a tribe may recover fees paid without an approved contract.

Enforcement

Unlawful operation of Class III gaming without an approved compact, or conducting Class II gaming in violation of NIGC regulations, are punishable by federal criminal laws that extend all state laws pertaining to gaming, including criminal laws, into Indian Country. Enforcement in states with exclusive federal criminal jurisdiction is made through the Organized Crime Control Act, which prohibits operation of a gambling business in violation of state law, and the Johnson Act, which prohibits gambling devices on Indian land. The IGRA expressly excepts the Johnson Act to Class I gaming, Class II gaming regulated by the NIGC, and Class III gaming activities conducted pursuant to an approved tribal-state compact.

The IGRA allows a tribe or state to enjoin Class III gaming activity conducted in violation of a tribal-state agreement. Although the IGRA waives tribal sovereign immunity for such suits, it does not allow the state to enjoin Indian gaming conducted without a compact, which would impermissibly extend state regulatory authority into Indian Country. The IGRA does not allow an individual to sue a tribe or a tribal officer. For example, a management company or a private citizen cannot bring a legal action against a tribe alleging a violation of the IGRA. The IGRA generally preempts the field of Indian gaming law so that claims relating to the tribal gaming operation, particularly management contracts, raise a federal question for purposes of court jurisdiction. Finally, unless specifically provided in a compact, tribal gaming information obtained by states through their regulatory activity is not protected under state public records laws.

Gaming Revenue

Tribal gaming is the primary revenue source to fund essential governmental services for many tribal governments. Tribes use gaming revenue for specific governmental operations and reservation infrastructure. Reservations are being transformed with new community centers, schools, health care facilities, roads, and houses. Many tribes devote gaming revenue to programs that protect and restore their traditional culture and languages, and they share their wealth with other tribes through social gatherings, powwows, financial arrangements. Tribal members may receive individual distributions of gaming revenue through per capita payments. Per capita distributions must be part of a tribal revenue allocation plan approved by the secretary of the interior and are

subject to federal income, the Federal Insurance Contributions Act (FICA), and social security taxes.

The National Gambling Impact Study Commission, established by Congress in 1996, has reported numerous positive impacts of Indian gaming on tribal economic well-being and in local and regional economies.

Revenue Sharing Agreements

A revenue sharing agreement is a commitment from a tribe to pay a portion of its gaming revenue to the state in exchange for the right to conduct casino-style games or for more gaming machines and sometimes for the exclusive right to conduct gaming. Some revenue sharing agreements provide for payments in lieu of taxes for lands taken into trust and for costs associated with local or regional services such as road maintenance. Revenue sharing agreements are controversial because tribes consider gaming an inherent legal right; they believe they should not have to “pay to play.” While the IGRA does not address revenue sharing agreements, it expressly prohibits taxing tribal gaming operations. Moreover, states are compensated for their regulatory costs through tribal-state compacts.

States increasingly are asserting political leverage over tribes by insisting on a share of gaming revenue. In the first revenue sharing agreement, signed in 1992, the Mashantucket Pequot tribe agreed to pay Connecticut 25 percent of its slot revenues in exchange for the exclusive right to operate slot machines in the state. In California, over sixty tribes participate in a unique revenue sharing arrangement in exchange for the exclusive right to conduct casino-style gaming in the state. When such an agreement is part of a compact, the compact is deemed lawful only if the tribe obtains separate consideration for the revenue sharing provision.

Political Activities

Gaming revenue has allowed tribes to develop regional and national networks such as the California Indian Gaming Association and the National Indian Gaming Association. Tribes also participate in the political process at all levels of federal, state, and local government to protect their legal and financial interests. Since they lack formal representation in either Congress or state governments, tribes rely on lobbying efforts and campaign contributions to draw attention to their issues and concerns. While tribes have been criticized for using gaming profits to pursue political influence, some tribes have been politically exploited by criminally corrupt lobbyists such as Jack Abramoff and Michael Scanlon, who

Poverty status was determined for everyone except those in institutions, military group quarters, or college dormitories, and unrelated individuals under 15 years.

Source: U.S. Census Bureau, Census 2000 special tabulation.

While gaming has become a lucrative financial resource for several tribes, it has failed to substantially reduce the poverty rate. Almost 26 percent of American Indians and Alaska Natives live in poverty, as compared to 12 percent of the total U.S. population.

were convicted for deceiving and swindling their tribal clients.

Social Costs

The remarkable success of tribal gaming has not been without social costs. Old problems with drug and alcohol abuse have increased and new issues with political in-fighting and membership disputes have erupted. Indian gaming also has fueled arguments over the legitimacy of tribal governments and sparked numerous tribal groups to seek federal recognition. While a few tribes reap huge financial benefits, many tribes barely make a profit. Although tribal sovereignty has been compromised beyond what Congress intended in the IGRA, gaming undoubtedly has served to restore and build stronger tribal governments and tribal economic self-sufficiency. It also has proven to be one of the most innovative

ways to develop stronger and more cooperative tribal-state relations.

Gates, Merrill E.

Merrill E. Gates (1848–1922) worked as a distinguished educator, serving as the principal of the Albany Academy and later as the president of Rutgers University (1882–1890) and Amherst College (1890–1899). During the late nineteenth century, he became an important leader of the Indian reform movement. In 1884 he was appointed by President Chester Arthur to the Board of Indian Commissioners, an organization established to reform the corruption in the Indian administration and to provide advice on Indian policy. Gates served as president of the board from 1890–1899 and as secretary from 1900–1911. For a number of years, Gates was chosen to preside over the Lake Mohonk Conference of Friends of the Indian.

In speeches, Gates advocated “civilizing” Indians and making them citizens of the United States. A deeply religious man, he believed in the brotherhood of man and promoted the idea that Indians were not inferior or inherently different from other human beings. Gates believed that the first step towards assimilating Indians was destroying tribal society and the Indian reservation. Living on reservations, Gates insisted, allowed Indians to remain dependent on government subsidies, to maintain a hunter and gatherer subsistence, and to continue to practice “savage” customs such as polygamy and Native religions. He promoted the breakup of tribal society and the individualization of Indians through Christianization, American-style education, and the allotment of tribal lands.

General Allotment Act (Dawes Act) of 1887

The 1887 General Allotment Act, also known as the Dawes Act, authorized the president to select reservations to undergo allotment in severalty, the process of dividing collectively held lands into individually owned parcels.

The practice of awarding or assigning individual tracts of land to Indians was not new. The U.S. government had granted parcels of land to Indians who helped secure land cessions, and it had provided individual lands for Indians who resisted removal. Treaties beginning in the 1850s often contained provisions allowing the survey of lands and assignment of individual allotments. Not until the 1880s, though, did the idea of universal allotment of Indian lands gain widespread support.

Some tribes lobbied for allotment, seeing it as a means to forestall removal and secure their title to reservation lands. The Omaha tribe in Nebraska and the Umatilla bands in Oregon both succeeded in obtaining allotment legislation for their reservations in 1882 and 1885, respectively. Other tribes, such as the Seneca Nation of New York, fought against allotment legislation. The Seneca argued that they were adequately “Americanized” under their system of common land tenure.

The Senate passed general allotment legislation at nearly every session between 1879 and 1886, but the House deferred debate on the issue until late 1886. By this time, seemingly dissimilar interest groups—humanitarian reformers and western developers—had agreed that allotment in severalty was the solution to the so-called Indian Problem. Self-described “Friends of the Indian” believed that owning private property would transform Indians into self-sufficient farmers and help them assimilate into the American mainstream. At the same time, advocates of economic growth saw Indian reservations as a barrier to American progress and wanted to open up those lands and resources to development. Allotment legislation offered them the promise that

land not needed for allotments would be opened to non-Indians for purchase.

Senator Richard Coke of Texas introduced the first general allotment legislation in 1879 and introduced bills at each session until 1884, when Senator Henry L. Dawes of Massachusetts joined Coke in proposing the legislation. Dawes soon assumed control over the allotment campaign, and Coke's role has been largely forgotten. Dawes, a member of the Boston Indian Citizenship Association and chair of the Senate Committee of Indian Affairs, was a vocal proponent of Indian assimilation and allotment in severalty. Senator Henry Teller of Colorado opposed the Coke bill, arguing that many tribes were not prepared for individual land ownership. Teller became secretary of the interior in 1882, but even from that position he was unable to stop the legislation.

President Grover Cleveland signed the General Allotment Act on February 8, 1887. The legislation authorized the president, at his discretion, to select a reservation to be surveyed and allotted in severalty. The allotments would be held in trust for the individual Indians for a period of twenty-five years. Upon receiving a parcel, the allottee became a citizen of the United States. Once the allotment process on a reservation was complete, the president could negotiate with the tribe for purchase of unallotted—or “surplus”—lands and open those lands to settlement. The Dawes Act also provided that Indians not residing on reservations could take allotments on the public domain. The five major tribes from the Southeast in the Indian Territory (Cherokees, Chickasaws, Choctaws, Creeks, and Seminoles) were among those exempted from the original legislation, but the Curtis Act extended allotment to them in 1898.

Some tribes successfully resisted allotment in severalty, while others asked the government to allot their reservations, seeing it as a way to gain firmer control of their lands. When Indians selected allotments, they did so with their own cultural and economic needs in mind, which did not always align with the government's agrarian, assimilationist agenda.

By 1934, when the Dawes Act was overturned, 118 of 213 reservations had undergone allotment, resulting in over forty million acres of allotments and over twenty million acres of surplus lands opened to non-Indians. Amendments to the Dawes Act made it possible for Indians to lease and ultimately to sell their allotments. These included the 1906 Burke Act, which authorized the secretary of the interior to issue a fee patent to “any Indian allottee [who] is competent

and capable of managing his or her affairs,” before the normal twenty-five year trust period on an allotment expired. According to a 1934 report on Indian land tenure, economic status, and population trends, the Indian land base shrank from about 140 million acres (which included the acreage of reservations at their creation plus any acquisitions) to about 52 million acres in 1934. That reduced figure included 22.7 million acres opened to settlement and 23.2 million acres of allotments.

Ultimately, the Dawes Act failed in its goal of assimilating Indians, in part because of these amendments and in part because Indians found other ways to adapt to the expansion of the American marketplace economy into their homelands. However, the act's undermining of tribal land bases, particularly through opened surplus lands and allotments, damaged Indians' economic well-being and, in some cases, disrupted cultural practices.

Gerard, Forrest J.

Forrest J. Gerard (1925–), a member of the Blackfeet tribe, was born in Browning, Montana. He served as a technical sergeant during World War II (1939–1945) before graduating from Montana State College. Gerard served as commissioner of the Bureau of Indian Affairs (BIA) and later as an

assistant in the Senate Subcommittee on Interior and Insular Affairs. In 1977 the Jimmy Carter administration reorganized the BIA, and Gerard was appointed as the first assistant secretary of the interior for Indian affairs. He served in that capacity until 1981. His main priorities at the bureau were improving relationships between Native tribes and other governments, improving the delivery of services to Native groups, and ensuring that Native Americans kept the rights to their water.

Geronimo

Geronimo (1829–1909; Gokhlayeh, Goyathlay), a Chiricahua shaman and war leader, resisted encroachment on his people's territory by conducting raids against settlers in Mexico and southern Arizona in the 1870s and 1880s. He was born and raised near the headwaters of the Gila River. His father was a Chiricahua Apache, and his mother, a

Bedonkohe Apache, had been a captive among the Mexicans.

As a young man, Geronimo fought under the Chiricahua Apache leader Cochise and Mimbreno Apache leader Mangas Colorados. He became known within the tribe for his skill and courage in battle. In 1858 a group of Mexican soldiers from Sonora killed Geronimo's wife, his mother, and his three children, and he spent the next several years engaged in revenge campaigns.

In 1872 Cochise agreed to end his war against the United States and move his people to a reservation at Apache Pass. Unwilling to surrender, Geronimo led attacks into Mexico for the next several years, escaping to the reservation for refuge. The United States responded to these attacks by closing the Apache Pass reservation and moving the Chiricahuas to San Carlos reservation in northern Arizona. Geronimo, however, took his supporters across the border into Mexico, where they continued to carry out raids against settlers. In 1877 the U.S. government arrested Geronimo and sent him to San Carlos.

In 1881 a Ghost Dance movement led by the prophet Noch-ay-del-klinne spread among the Apaches, and many of

Geronimo, right, stands armed with two Apache warriors. Both a shaman and a warrior, Geronimo spent much of his life exacting revenge against Mexico and evading capture by the U.S. government.

them left their reservations. While the U.S. Army sent most of the resisters back to their reservations, Geronimo and his followers evaded capture and continued to raid settlements. The forces of U.S. Army general George Crook, with the authority of the Mexican government, tracked Geronimo's men into Mexico. In 1884, after his Apache allies Chato, Juh, Loco, and others had been killed or captured, Geronimo returned to San Carlos. By this time Geronimo had become a well-known figure among his own people and to the U. S. government. In May 1885 Geronimo and approximately 150 supporters left the reservation, again with the intention of returning to the Sierra Madre in Mexico. Troops pursued the band, and on September 4, 1886, Geronimo surrendered to General Nelson Miles at Skeleton Canyon, some sixty-five miles south of Apache Pass.

Geronimo and hundreds of other Apaches were then transported in chains to Florida, where they were imprisoned. After one year, Geronimo and the captured Apaches were relocated to Mount Vernon Barracks in Alabama, where many of the prisoners died from tuberculosis and other diseases. Geronimo's followers accepted the Comanches' and Kiowas' offer to move to their reservation in the Indian Territory.

Geronimo attempted to become a farmer, dictated his memoirs, and joined the Dutch Reformed Church. He made public appearances at the national expositions in St. Louis and Omaha and in Theodore Roosevelt's 1905 president inaugural procession.

Ghent (1814), Treaty of

The Treaty of Ghent (1814) officially ended the War of 1812 (1812–1814) between the United States and Great Britain. The treaty is sometimes known as the Christmas Eve Treaty because it was signed on December 24, 1814. It is noteworthy

that the Battle of New Orleans, which garnered a great deal of military fame for future president Andrew Jackson, occurred after the treaty was signed. Due to slow communications, American and British forces involved were unaware the war had ended.

The United States sought peace early in the conflict. As early as June 18, 1812, the day war was officially declared, Secretary of State James Monroe summoned the British minister to inform him of the declaration and to urge him to work toward peace.

In March 1813 the Russian minister to the United States, Andrei Dashkov, told the James Madison administration he would help lead negotiations, though the British eventually rejected the use of the Russian intermediaries. Prior to this rejection, Madison chose three peace commissioners to send to Moscow: Treasury Secretary Albert Gallatin, American ambassador to Russia John Quincy Adams, and James Bayard of Delaware. The three arrived in Russia unaware that the British had already rejected the Russian proposal. In January 1814 Gallatin and Bayard left Russia after six months of nonnegotiations and traveled to London en route to the United States. They found the British willing to negotiate. A new peace commission was then formed that included Adams, Gallatin, Henry Clay, and Jonathan Russell.

Negotiations lasted from August 8, 1814, to December 24, 1814. The British wanted the Indian tribes on the western frontier of the United States to be protected in the peace settlement and called for the installment of a permanent barrier or reservation to be established for them in the Old Northwest. They also sought title to northern Maine and northern present-day Minnesota and wanted the United States to demilitarize the Great Lakes. The British were concerned about the safety of Canada, which was the focus of many of their demands, particularly the Indian buffer-zone.

The United States representatives rejected the British proposals. They were particularly upset with the Indian barrier, which they claimed undermined American sovereignty, national security, and plans for westward expansion. The British exchanged their demand of an Indian barrier for a pledge to restore the status of the Indians in the Old Northwest to their 1811 status, or before the Battle of Tippecanoe. The United States refused this proposal as well, and in October 1814 the British suggested that each side retain whatever territory it held at the end of the war. Again the Americans refused.

With the threat of another expensive year of overseas fighting ahead of them and still engaged in a war with

France, the British relented on their demands. The Treaty of Ghent restored the *status quo ante bellum*, or the state that existed before the war. Each side agreed to evacuate enemy territory and not carry off enemy property. In addition, each nation promised to make peace with the Indians and return to them possessions, rights, and privileges which they had enjoyed before the 1811 battle. A commission was established to answer questions about the Canadian-American border, and both nations promised to end the slave trade.

Gifts

Anthropologist Marcel Mauss recognized that gifts often have a social as well as an economic context and that such exchanges are used to create and perpetuate the social and/or political ties necessary to convert an outsider from potential enemy to friend. Other anthropologists, such as Pierre Bourdieu, Jonathan Parry, and C. A. Gregory, extended this insight by differentiating between what the act of exchange means in capitalist versus precapitalist societies: a market exchange is a trade of commodities that establishes a relationship between the objects exchanged, whereas the gift exchange that characterizes precapitalist societies establishes a relationship between the partners engaged in the exchange. In a gift-oriented economy the goal is to expand social relations, while in a commodity-oriented economy the goal is to appropriate goods.

Therefore, gifts or presents—although often misinterpreted by Europeans as bribes—served the basic diplomatic purpose within Native American societies of transforming strangers (enemies) into kinfolk (allies). This was true whether this transaction took place between two hunters in the woods, between two Indian nations, or between Native and European nations. While the expansion of kinship for individuals meant an expansion of options for assistance should local conditions result in temporary problems with

the food supply, the expansion of kinship for leaders sometimes led to alliance networks for war and peace. Indeed, allied nations frequently used kinship terms such as brother, father, uncle, and grandfather among themselves and with various European and American envoys.

Although the act of exchange rather than the item or items exchanged was what created value, the physical present also reminded the individual of the reciprocal obligation the exchange created. This was particularly true in areas and time periods when wampum (strings of shell beads used for a number of ceremonial rituals, diplomatic protocols, and economic transactions) became scarce, eliminating the images woven with them that served to remind the leaders of the agreement terms. In the absence of wampum, leaders exchanged other gifts, such as pipes, to serve that purpose. Leaders used lesser gifts to redistribute among their people to gain support for various political positions.

Native Americans initially engaged in the fur trade according to their own expectations regarding gift exchange. As Europeans and, later, Americans increasingly pressed market valuation on these transactions, Native peoples had increasing problems with the trade and its meaning. In their cultural context, Natives continued exchange in an ongoing cycle with one party always obligated to the other—to completely balance out the exchange could potentially end the kin connection, which was its core value. However, as the trade became increasingly tied to the market, traders became more reluctant to extend credit to tribes, making the Indians more suspicious of the national entities those traders represented. The early United States, perceiving that American Indians would eagerly accept credits beyond their ability to pay in furs (and misinterpreting why the Indians did so), used this practice to leverage land sales from various tribal leaders.

Girty, Simon

Simon Girty (1741–1818) was an American frontiersman who fought with the British during the American Revolutionary War (1775–1783). He was considered by both his contemporaries and later nineteenth-century writers a traitor to both the patriot cause and to the white race. Born in Pennsylvania, Girty was taken captive in a Seneca raid in 1756. The Senecas eventually adopted him, and he learned their language. Girty came to prefer his Indian life to the life he had left behind. He became a scout and interpreter for the British Army during the latter years of the Seven Years' War (1756–1763), and in 1774 served in Dunmore's War alongside many of the same Virginians who later became his adversaries.

The outbreak of the American Revolutionary War placed Girty, like many other cultural intermediaries, in an uncertain position. At first he served the colonies as an interpreter and ambassador to the Six Nations of the Iroquois and as a member of the Virginia militia. In 1778, however, he threw his lot in with the British, moved to the Ohio country, and began to lead Loyalists and Indians in ferocious Indian raids against American backcountry settlements, including attacks on Bryan's Station and Blue Licks in Kentucky. His exploits earned the intense fear and hatred of backcountry settlers. The capture and ritualistic burning of an American officer named Colonel William Crawford in 1782, on which sources differ as to Girty's participation, cemented his unsavory reputation in American eyes.

After the war, Girty continued to conspire with the British and to lead troops against American settlements. He participated in many of the major battles on the American western frontier, including the pivotal Battle of Fallen Timbers in 1794. He died in 1818 in Canada, where he had been forced to move after Great Britain surrendered its claim to Detroit after Jay's Treaty.

Gold and Gold Rushes

A series of gold discoveries on Indian lands beginning in the early nineteenth century resulted in rushes by non-Indian miners who felt no guilt about claiming, settling on, and working Native lands without the permission of the tribal owners. Thus, gold rushes obviously produced antagonistic relations between miners and Native people; in the worst cases, miners attempted to exterminate Indian people who lived on land with gold deposits. Mining and the settlements of miners also caused irreversible environmental damage. Although these developments caused difficulties for those responsible for U.S. Indian policy, in several cases the initial gold rush created opportunities for the U.S. government to accelerate the process of acquiring Indian lands and removing Indians to new lands or reservations.

The Cherokee Nation Gold Rush

In 1828 prospectors discovered gold in the mountains of what is now northern Georgia, on lands belonging to the Cherokee Nation, and swarms of miners moved into Cherokee territory to stake claims. This trespass inflamed already tense relations between whites and Indians. The state of Georgia had already begun seeking to extend its jurisdiction over the Cherokee Nation in an attempt to force the Indians out of the state and seize their lands. The gold rush only worsened the pressure on the Cherokees to remove.

Soon after the rush, the state legislature sent surveyors to the Cherokee Nation to make preparations for seizing its territory and distributing the land to white citizens. In 1830 Congress passed the Indian Removal Act, which provided President Andrew Jackson with the authority to negotiate certain treaties with the Indian tribes living east of the Mississippi. In these treaties, the Indians would exchange their homelands for new territories in the West. The president quickly signed the act and appointed commissioners to try to sign treaties with the tribes in the Southeast. In 1832 Georgia held a land lottery that awarded forty-acre tracts of Cherokee land to the winners; some of these tracts included mineral rights provisions that provided owners with the right to any gold found thereon. In 1835 a dissident faction of Cherokees signed a removal treaty at New Echota, and in 1838–1839 almost all of the Cherokees were relocated to new lands in the Indian Territory (in what is present-day Oklahoma).

During the Gold Rush, many Native Americans were driven off of their lands by illegal prospectors who ignored treaties and territories in their quest to mine for gold.

California

In February 1848 the United States acquired sovereignty over Mexican lands, including California, under the Treaty of Guadalupe Hidalgo that ended the U.S.–Mexican War (1846–1848). The California Indians fared no better under the U.S. Constitution than they had under Mexican rule. A month before the treaty was signed, on January 24, 1848, an employee of John Sutter named James Marshall found the first gold nugget at Sutter’s Mill, a sawmill located on the American River about forty-five miles northeast of Sacramento. After Marshall’s initial discovery, his boss and an associate, Charles Weber, began using Indians to mine the gold, following the Mexican tradition of using Indian labor to extract natural resources.

Experienced Cherokee gold miners trekked to California during the Gold Rush of 1848 and applied their mining expertise to these new strikes. By the end of 1848, four thousand Indians worked the gold fields compared to two thousand whites. In 1849 Indians created the “Long Tom,” or the sluice box, an oblong box filled with running water that collected gold particles. As news of the gold discoveries spread, more Europeans, Australians, Chinese immigrants, and Americans from the East arrived in California looking to get rich. Soon thereafter, white miners forced the Indians to leave the mines.

In 1851 Congress ordered three federal Indian agents to negotiate eighteen treaties with 402 California Indian leaders who purportedly represented 139 bands or tribes. (In fact, subsequent studies demonstrated that as many as 175 tribes failed to sign treaties during this period, and that many of the leaders who did sign only represented local towns or villages and not entire tribal groups.) The U.S. government promised the Indians 8.5 million acres on ten reservations in exchange for the rest of California. However, California legislators who feared that the reservation lands still held riches and who did not want to recognize the right of tribes to negotiate treaties successfully pressured Congress to not ratify the treaties. An 1852 California Assembly report proposed that Indians be quickly removed, with suggested destinations including Oklahoma, Oregon, New Mexico, Utah, and Catalina Island. By 1900 fewer than sixteen thousand Indians remained in California. Those who remained were removed through special agreements (but not treaties) to small reservations in the state.

Colorado

In 1859 the discovery of gold drew thousands of Midwesterners to the Pike’s Peak country of the Southern Rocky Mountains, establishing the first sizeable European-American population in the region. Many disappointed gold

seekers left in the early 1860s, but the people that stayed, especially farmers, began encroaching on Native American hunting areas. The Ute lived in the mountain and plateau regions, and the Cheyennes and Arapahos controlled most of the plains. Indians raided the stage routes between Denver and the Missouri River, and during the Civil War (1861–1865), the Union government withdrew the federal troops posted in Colorado, leaving citizens without adequate defenses against the raids. On November 29, 1864, Colonel John M. Chivington attacked a village of sleeping Cheyennes and Arapahos at dawn, killing several hundred men, women, and children. His attack, known as the Sand Creek Massacre, caused a national controversy. Despite public sympathy for the Indians, in 1867 regular army troops forced all of the Indians except the Southern Utes off the Colorado plains and onto reservations in Oklahoma.

The Black Hills

In 1868 the United States government ratified the Treaty of Fort Laramie, designating the Black Hills, a one-thousand-square-mile region that the Sioux held sacred, as belonging to the Sioux. The treaty stated that any future cession of Sioux land would require the consent of 75 percent of the men of the tribe. The treaty also banned whites from the Black Hills, but gold irresistibly lured them there.

In 1874 George Armstrong Custer led an expeditionary force of one thousand men, including geologists and miners, into the Black Hills. A few months after the force arrived, Horatio N. Ross discovered gold along French Creek. A great gold rush into the hills followed. Prospectors came to Deadwood Gulch in November 1875 and discovered large gold deposits, leading to thousands of gold seekers rushing into the new town of Deadwood the following year. The U.S. government tried to intimidate the Sioux into selling their remaining twenty million acres. When this did not work, U.S. negotiators compelled the Sioux to cede the Black Hills; only 10 percent of the adult male Sioux population signed the treaty. As of the early twenty-first century, the Sioux people were continuing to work to recover the Black Hills.

Nevada

The discovery of the gold and silver of the Comstock Lode at Virginia City, Nevada, in 1857 precipitated a crisis for the Paiute Indians. Over the next ten years, prospectors penetrated every part of the territory, and boom towns dotted the desert. The introduction of livestock and the destruction of

native food plants further threatened the Indian way of life. Indians had guns and horses by this time and fought the whites in clashes that began about 1860, prompting the U.S. government to establish military posts. On October 1, 1863, the government appropriated the territory of the Western Shoshones, and included within it the northern part of the lands that the Northern Paiutes occupied. On March 19, 1874, the government set aside a reservation for the Paiutes at Walker River; and on March 23 it established another reservation at Pyramid Lake. The government took over the remainder of the Paiute and Ute lands without the Indians formally relinquishing them.

Oregon

In winter 1851–1852, packers on the trail to California discovered placer mines in southwestern Oregon and within weeks a population of miners from California surged into the area. The lives of the Indians of the Rogue River country in what is present-day southern Oregon were forever disrupted, despite the fact that their land had been reserved in treaties negotiated in 1853 and 1854 with Anson Dart, who had negotiated several treaties with the Native people in Oregon. Miners drove Indians from their villages, which were located on old stream terraces that were, unfortunately for them, prime locations for placer deposits. The white miners hunted the game, decimating the deer and elk populations. Miners and the settlers that followed them into the region formed volunteer companies and perpetrated massacres against the Indians. Finally, the U.S. Army removed the Indians of the Rogue and Umpqua valleys and the southwestern Oregon coast to the Siletz and Grand Ronde reservations.

Alaska

After Alaska was transferred by Russia to the United States in 1867, the Tlingits, Haidas, and other Native peoples of the territory remained for a time isolated from the consequences of the transfer. In July, 1897, however, a ship returning from Alaska arrived in Seattle with a ton of gold on board, setting off a frenzy as thousands of prospectors invaded the Yukon-Klondike regions of the territory looking for quick riches. The Klondike gold rush devastated and transformed the Alaska Native economy. Native workers in the mines were routinely paid less than whites and given the worst jobs. They provided hauling services in their canoes, and a contemporary observer noted that they were cheaper than mules. Wage labor supplanted subsistence living and degraded Native societies' political independence. "Miner's law"

was the rule, a euphemism that legitimized trampling on aboriginal property rights. The Tlingits worked as mining laborers, although they were not allowed to make their own mining claims until 1931.

In 1953 the joint Haida-Tlingit Land Claims Council formed to seek compensation for lands taken illegally during white settlement, and in 1971 the United States Congress passed the Alaska Native Claims Settlement Act. The largest land claims settlement in United States history, it extinguished Alaska Native claims to the land by transferring titles to twelve Alaska Native regional corporations and over two hundred local village corporations.

Goldwater, Barry

Born in Phoenix, Republican senator and presidential candidate Barry Goldwater (1909–1998) grew up idealizing Arizona's Hopi and Navajo Indians. During his years as a businessman, he collected Indian art and took photographic portraits of Native Americans. While serving in the Senate, he sponsored legislation protecting sacred Indian sites, as well as the Navajo-Hopi Settlement Act of 1974, which resulted in the relocation of thousands of Navajos.

In the 1930s and 1940s, Goldwater managed his family's department store, flew airplanes, became an avid photographer, and began buying ceremonial Hopi Kachina dolls. The latter two hobbies brought him to Navajo Country, the region of Arizona surrounding Monument Valley. He took formal portraits of Indian elders in traditional clothing and

candid pictures of Indians at work, including an image of Navajo girls herding sheep in the snow that made the cover of *Arizona Highways* in 1946. He also organized relief flights, flying Indians and medicine to reservation hospitals and dropping hay and feed to Navajo livestock stranded by winter storms.

In World War II (1939–1945) Goldwater served as a pilot for the U.S. Air Corps and the Ferry Command. Returning to Phoenix after the war, he entered politics, taking a seat on the city council (1949–1952) and serving on an Indian Affairs advisory committee within the Department of the Interior (1948–1950).

In 1953 Goldwater entered the Senate, where he focused some of his time on the needs of Hopi Indians, a small tribe of agrarian Indians surrounded by Navajo herdsman. He had the joint Navajo-Hopi office within the Bureau of Indian Affairs separated in 1954, enabling the Hopi to lobby for their own interests.

Goldwater ran against Lyndon Johnson for president in 1964. Considered a warmonger and an extremist by some Democrats, he only won in Arizona and five southern states. However, he sparked a conservative movement in Republican politics that culminated in the election of Ronald Reagan as president in 1980.

Back in the Senate, Goldwater turned his attention to a Navajo-Hopi land dispute concerning 1.8 million acres held jointly by the tribes since 1962. The Hopi Tribal Council, as well as southwest energy companies, wanted to divide the property in order to access its oil, gas, and coal, and to keep the Navajos from encroaching further onto Hopi territory. Arguing that the Hopis had original claim to the land, Goldwater sponsored the Navajo-Hopi Settlement Act of 1974, which partitioned the Black Mesa region and called for the relocation of ten thousand Navajos and 160 Hopis. The act infuriated members of both tribes; led to a bitter feud between Goldwater and the Navajo tribal leader, Peter MacDonald; and was later blamed for destroying traditional lifestyles and raising the rates of alcohol and drug abuse, divorce, and domestic violence.

Following the Navajo-Hopi dispute, Goldwater considered less controversial Indian legislation. In 1978 he provided New Mexico Zuni Indians access to sacred grounds in Arizona, and in 1984 he sponsored legislation permitting the Zuni to purchase twelve thousand acres surrounding the site. Goldwater retired from the Senate in 1986 and resumed his passion for photography and Indian art.

Gorton, Slade

Slade Gorton (1928–), Republican senator from the state of Washington, threatened Indian fishing rights and attacked Indian treaty rights. His career as state attorney general from 1969 to 1981 featured extensive litigation against off-reservation fishing rights, culminating in efforts to obstruct and overturn the 1974 Boldt Decision (*U.S. v. Washington*). Gorton entered the U.S. Senate in 1981. He lost his reelection bid, but was returned to his seat in 1989. He spent his entire congressional career serving on the Indian affairs and appropriations committees. Gorton left the Senate after a narrow loss to Democrat Maria Cantwell in 2000.

One of Gorton's first acts as senator was to amend the 1900 Lacey Act in order to make illegal fishing a felony offense. This amendment was immediately used to prosecute David Sohapp Sr. and other Indians along the Columbia River following the "Salmonscam" sting operation. The trial garnered international attention and sent several men to federal prison for three to five years. Gorton also argued that Indians were using their treaty rights as a shield against civil lawsuits and to make tax-free profits. He attempted without success to deny federal funds to Indian tribes that made more than a certain amount of money from gaming or other forms of economic development.

Gover, Kevin

William Kevin Gover (1955–) entered private practice in Washington, D.C., after clerking in the U.S. district court system, and became known as a prominent Indian lobbyist and lawyer. Gover played an important role in the 1992 Clinton-Gore presidential campaign and was instrumental in securing the American Indian vote that helped win the election. Gover served as Clinton's assistant secretary of the interior for Indian affairs from 1997–2001. During his term, Gover offered a formal apology for the role that the Bureau of Indian Affairs (BIA) played throughout history in disposing American Indians of land and institutions, and for acts against the cultural integrity of Indian people.

Upon leaving the BIA, Gover joined the Washington law firm of Steptoe & Johnson. He joined the faculty of the Sandra Day O'Connor College of Law at Arizona State University in 2003 and began serving as a tribal court judge for the Tonto Apache and San Carlos Apache tribes. In 2007 Gover became the second director of the Smithsonian Institution's National Museum of the American Indian. Gover holds a bachelor's degree from Princeton University and a law degree from the University of New Mexico School of Law.

Government-to-Government Relations

At the most fundamental level, the relationships between the United States and Native nations are considered government-to-government relations. This theory maintains that the tribes are independent sovereign nations dealing with the United States on a nation-to-nation basis. Since the first treaties were signed between the United States and Indian tribes, the federal government's policies have shifted between

forming relationships easily recognizable as government-to-government ones and attempting to put or keep Native nations in a dependent or inferior position.

Precedents for Defining U.S.-Tribal Relations

Proponents of tribal sovereignty maintain that the Indian tribes of North America are inherently sovereign. They also maintain that the United States acknowledged that sovereignty early in its history by negotiating treaties with the tribes in the same manner that it dealt with European nations. The initial U.S. policy of dealing with Indians on a nation-to-nation basis began to change in the early 1800s as the federal government removed Native people from the eastern parts of the new country. During this period the federal courts attempted to define U.S.-Native relationships. In its 1831 decision in *Cherokee Nation v. Georgia*, the Supreme Court declared that Native tribes were nations, but not nations “foreign” to the United States. Chief Justice John Marshall described the tribes as “domestic dependent nations” and said that the relationship between the United States and an Indian tribe resembled “that of a ward to his guardian.” Consequently, since that case federal courts began to argue that the federal government maintained a fiduciary (or trust) relationship over the Indian tribes, who were supposedly incapable of managing their own affairs.

The next year, in *Worcester v. Georgia*, the Court stated that the Indian tribes retained considerable powers of sovereignty and that Congress had plenary (complete) power over the relations with Native nations to the exclusion of the states. This language implied to some subsequent courts, most notably in *United States v. Kagama* (1886), that Indians were subject to the dictates of Congress. The concept of plenary power has been used to justify a number of U.S. policies that have circumscribed the autonomy of the tribal nations and threatened the principle that Native nations and the United States have a government-to-government relationship.

When removal of most eastern tribes had been completed, the United States turned its attention to the Native nations west of the Mississippi River. There, the United States continued its policy of acquiring Indian land and removing Native Americans from the path of national expansion. In the latter half of the 1800s, this policy had three main components. First, the United States sought to end Indians’ military resistance to encroaching Euro-American populations and move Native individuals onto reservations. Second, in 1871 it ended the practice of making treaties with Native nations and recognizing Indian gov-

ernments as sovereign nations. And third, the allotment policy broke reservations into individual land-holdings, which was designed in part to encourage the assimilation of Indian individuals and to disrupt traditional Native societies and tribal affiliations. While the United States continued to recognize individuals as “leaders” of Native groups when it suited its purposes, for a time these policies essentially ended the government-to-government relationships that had been formed in early treaties.

The Indian New Deal and Termination

The allotment policy ended with the 1934 Indian Reorganization Act (IRA) or Wheeler-Howard Act. This act also renewed the U.S. policy of creating government-to-governments relations with Indians, but on a very limited scale. The IRA allowed reservation-based populations to form new tribal governments, but not as a resurgence of relationships among sovereign equals. The situation was dominated by the United States. The IRA authorized the creation of new governments by the tribes, but a new tribal government had to be recognized by the U.S. Department of the Interior before it was considered one with which the United States would maintain relations.

Still, the concept that Native governments could—and did—exist was reborn within U.S. policy, and the country again recognized the existence of organized Indian governing entities. This facilitated communication between reservation populations and the federal government. It also, however, facilitated the separation of Native nations from their natural resources by providing a legitimized, “recognized” body with which the federal government and companies could negotiate. While the new governments were supposed to negotiate resource extraction contracts on behalf of all their members, the reality was what one scholar called the “Rubber Stamp Era” in tribal politics, meaning that the United States held the authority to influence the nature, powers, and actions of tribal governments.

The United States reversed its position on expanding government-to-government relations again in the 1950s with the termination policy. Congress decided that tribal governments and reservations should be ended—or “terminated.” The Menominee reservation, for example, was turned into a county within the state of Wisconsin. Its administration became a county rather than a tribal government. The federal government also provided incentives to individuals who left reservations and relocated to urban centers. There, they often lost the ability to participate in reser-

vation-based governments. The termination policy was never implemented on most reservations and was a pronounced failure where it was put in place. It was abandoned fairly quickly, although it threw a shadow over Indian efforts toward self-governance that persisted for many years.

Modern Era

In the fluid political environment of the 1960s and early 1970s, Indian activists and attorneys created a movement for tribal sovereignty based on the legal structure provided by treaties and court decisions. This movement culminated in a 1970 message to Congress by President Richard Nixon supporting the general idea that the tribal nations held significant powers of self-determination. In 1975 Congress passed the Indian Self-Determination and Education Assistance Act (Public Law 93-638), which provided the tribes with meaningful opportunities to regain control over their internal economic and social affairs. From that point forward, the term “government-to-government relations” came into common use and took on a more nuanced meaning.

Government-to-government relations under the Indian Self-Determination and Education Assistance Act meant something substantially less than full, independent Native nation sovereignty. In general, it recognized a limited form of self-government and described relationships in which the United States remained generally dominant. Under the 1903 *Lone Wolf v. Hitchcock* decision, however, tribal nations remain subject to the general authority of Congress. Typically, Native nations might have the ability to administer programs, the right to contract, and the ability to pass internal regulations. The Indian Self-Determination and Education Assistance Act increased tribal governments’ authority by allowing them to manage programs and services that had previously been overseen by the federal government.

These programs were set up under what became known as “638 contracts,” which were named after the act’s Public Law designation. These contracts provide federal funds to tribal governments for specific purposes. The tribes then administer the programs, as instructed by the appropriate federal authorities. The federal government retains the power to overturn tribal government decisions.

In the self-determination era, federal departments developed individual policies to define their government-to-government relationships with tribes. For example, a Department of Energy (DOE) policy statement read that, “Tribes are sovereign governments,” with sovereignty that predated European contact. It went on to say that tribes were

not “mere administrative extensions of federal programs,” but separate governments. The policy differentiated a government-to-government relationship with elected tribal leaders from federal relationships with “American Indian individuals, groups, organizations, and communities,” and it stated a preference for the former.

Government-to-government relations were recognized by both the Ronald Reagan and George H. W. Bush administrations. This support coincided with the Republican administrations’ broader efforts to downsize government, reduce federal expenditures, and transfer government functions to a more local level. A 1984 policy statement from the Bureau of Indian Affairs (BIA) captured the conservative meaning of “government-to-government relations” during this period. The statement concentrated on federal-tribal contracts, the downsizing of the BIA, and a movement toward placing the bureau into more of an administrative support role. In true Reagan-era style, the goal was a transition to self-determination at the local or, in the case of Indians, tribal level.

Reagan-era efforts to reduce the federal presence included major cuts in social service funding, which in many cases sabotaged tribal governments’ efforts to provide basic services to their members. In this policy environment, tribal governments were pushed to find and create alternative sources of revenue—generally new forms of taxation, targeted federal grants, and tribally directed economic development. In the process, they continued to move toward being less dependent on the federal government.

Additional issues also became prominent, such as the difficulty of using reservation lands as collateral for loans, the taxation of nontribal members on tribal territory, and the protection of tribal government sovereign immunity. Despite these and other problematic issues, some economic efforts were successful. For example, the Mississippi Band of the Choctaws developed a wide range of financially successful business enterprises.

After its passage in 1991, the Tribal Self-Governance Demonstration Project Act gave tribal governments more power to select which programs received federal funds by forming compacts with the federal government. Three years earlier, in 1988, Congress had passed the Indian Gaming Regulatory Act. This law provided another tool that helped tribal governments increase their revenues if they could negotiate the cooperation of the relevant state governments. As gaming became widespread, some tribal governments lost money, some held their own, and a few earned substantial

revenue. Some used gaming revenues to replace federal funding and move to a more independent status. The most successful even gave funds to other tribal governments. However, chronic underfunding of reservation programs remains a problem in the early twenty-first century.

In 1994 President Bill Clinton hosted a White House meeting with 322 tribal leaders. In a memorandum titled "Government-to-Government Relations with Native American Tribal Governments," Clinton acknowledged the United States' commitment to respect for tribal sovereignty and self-government and promised to continue consultation with tribal governments. Clinton did not differentiate between consultation, which meant that the United States would talk to tribal governments before implementing its policies, and sovereignty, which meant that Native nations had the right to independent and full authority within their national boundaries.

The similar lack of clarity in his executive orders 13084 (1998) and 13175 (2000) suggested that he was attempting to please the tribes, the states, and the federal bureaucracy. In one paragraph in the 1998 document, he described the "unique legal relationship with Indian tribal governments." He began by saying that "the United States has recognized Indian tribes as domestic dependent nations under its protection" since it was formed. He went on to describe treaties as "guaranteeing the right of Indian tribes to self-government," and then mentioned that "as domestic dependent nations, tribes exercise inherent sovereign powers over their members and territory." Policy statements by George W. Bush used similarly ambiguous language.

To some extent, the confusion is understandable. Other federal laws—particularly those related to environmental regulation—allow tribal governments to take over their enforcement by achieving a status known as "treatment as a state." These federal policy statements did not signal a return to attempts to eliminate tribal governments. They did typify the difficulty of defining "government-to-government relations" in the context of U.S. policy toward Native nations.

The Future of Government-to-Government Relations

In recent years the situation has become even more complicated as some states have developed their own policies to promote government-to-government relations with tribal governments. These discussions are probably an improvement over the quarrelsome state-tribal relations of the past. However, they also mean the understanding of government-

to-government relations among Native nations, the states, and the federal government is even more complex. As David E. Wilkins noted in his 2002 work *American Indian Politics and the American Political System*, "The study of an intergovernmental relations matrix that includes tribes will remain a complex and tedious field. Complicating factors are legion." One of these complicating factors in recent years has been the failure to use the term "government-to-government relations" in a clear or consistent manner.

Despite this, the concept of government-to-government relations has been applied to improve the bargaining position and autonomy of tribal governments and to increase their ability to set their own agendas and policies. It has also both allowed and encouraged innovation, as tribal members and their governments use the space created by the concept to identify and implement new solutions to poverty, cultural disorganization, environmental destruction, and the outside control of health care, law enforcement, courts, and schools.

Shared geography, language, history, religion, and culture are the traits of nations—and of independent governments with which the United States government can have structured relationships. The relationships between the federal government and the tribal governments is not one in which both sides have equal power. In contrast to the period between the 1870s and the 1960s, however, they are clearly now relations between distinct, somewhat autonomous governments.

Grant, Ulysses S.

Ulysses S. Grant (1822–1885), who was a commander in the army and served as U.S. president from 1869 to 1877, attempted to lessen the impact of inevitable white encroachment on Native peoples by focusing on assimilating the western tribal nations into mainstream society. The federal government had for many years been confining Indians on reservations, and Grant agreed with that approach. Most Americans believed living on reservations would help Natives learn self-sufficiency (mainly by turning them into farmers), pacify their “savagery” through the teaching of Christianity, and protect them from white intrusion. Grant’s efforts to place American Indians on reservations were diverse, difficult, and often violent. He put into practice policies that he believed, if honestly administered, would end hostilities with Natives and provide the only feasible safeguard for their continued existence. He dubbed this plan the “Peace Policy.”

At the age of seventeen, Hiram Ulysses Grant entered the United States Military Academy at West Point where he was mistakenly enrolled as Ulysses Simpson Grant. He graduated in 1843 without ever having corrected the error. Grant served in the U.S.–Mexican War (1846–1848) before spending nearly two years in California and Oregon among Native peoples whose lands were being overrun by American settlers. The vast expansion in the area’s American population brought about the demise of traditional western Indian lifestyles, including the decimation of the Pacific Slope Native population, which occurred while Grant served there. The young lieutenant wrote his wife from Oregon Territory in 1853 that Natives would prove nonaggressive if not intruded upon by settlers.

Grant resigned from the army briefly before returning at the outbreak of the Civil War (1861–1865). He quickly rose to commander of the western armies of the United States. After significant victories in Vicksburg and Chattanooga, Grant became commander of all the Union armies. Grant’s leadership of U.S. forces helped bring about Confederate general Robert E. Lee’s surrender at the Appomattox Courthouse in Virginia in April 1865 and made him a national hero.

After the Civil War, Grant believed American Indian extinction to be a real possibility due to the westward migration of American citizens, the railroad’s rapid spread across Native territories, and the destruction of the buffalo herds. The lack of any substantive Native presence in the eastern United States led Grant and others to believe that without the government placing western Natives on reservations they would not survive. In 1868 General Grant embarked on an inspection tour of the Plains.

Upon becoming president in 1869, Grant stated his support for assimilation and citizenship for Natives. Once Indians entered reservations, even if forced there, Grant hoped to ensure their safety, fair treatment, and eventual assimilation into society. The “fair treatment” would be assured by placing religious missionaries from a variety of denominations on reservations to run them. This formed the major part of the Peace Policy, which became known as the Quaker Policy.

As general of the army, Grant had pushed the government to move the Indian bureau back to the War Department, and during the early part of his first term, he placed retired officers in several of the vacant Indian agent positions. However, as president-elect, Grant had met with several members of the Hicksite Society of Friends, a Quaker sect, to discuss policy toward Native Americans. The Friends wanted a chance to convert the Plains Indians to Christianity, much as they had done with the Seneca Indians in Pennsylvania. Grant’s aide at the meeting, Lieutenant Colonel Ely S. Parker (1828–1895), a Seneca Indian, understood the history of relations between the Quakers and his tribe and recalled the conscientious treatment his ancestors received from the Quakers. Parker helped persuade Grant to try the Friends’ idea of Christian, nonmilitary intervention. President Grant gave two agencies (reservations) to the Friends for their new missionary policy. The Quaker Policy worked well enough that Grant extended it to other Christian denominations, and most Plains reservations were soon staffed by church officials.

Christian reservation agents, as Office of Indian Affairs employees on reservations were called, held responsibilities that included supplying Native nations with their rations, setting up schools, and converting Indians to Christianity. They sought to educate the Natives and teach them to farm so that they would ready for assimilation into mainstream American society. Grant's plan, though certainly insensitive to the value of Indian culture, was somewhat of an improvement over the traditional spoils system of appointing agents that often led to corruption.

Grant named Parker commissioner of the Office of Indian Affairs, making him the first American Indian to hold the position. He also formed the Board of Indian Commissioners to oversee the Office of Indian Affairs. The board served as an advisory group to the secretary of interior about all Indian affairs, but specifically about the purchase of supplies for the reservations. Furthermore, under Grant the government funded five inspectors to report on reservation conditions directly to the secretary of interior.

In 1871, with the support of Parker and Grant, Congress ended the treaty system and the official practice of recognizing the tribes as sovereign nations. The act, however, required the government to continue to abide by treaties negotiated in the past. The new practice gave the House of Representatives a voice over Indian policy, something it had previously lacked. From that point forward, the government dealt with the tribes by the means of legislative acts and executive orders. In 1875 Grant extended the Homestead Act to include American Indian families.

Grant oversaw a military strategy of relentlessly pursuing hostile Natives to enter and remain on their reservations. Federal troops were engaged in a number of serious conflicts during his administration, including the Modoc War in California (1872–1873), the Red River War in Texas (1874–1875), the Black Hills campaign of George Armstrong Custer, and the latter's disastrous defeat by the Sioux and Cheyennes at the Battle of Little Bighorn (June 25, 1876). While Grant had hoped to establish peace between the United States and the tribes in the West, there can be little doubt that the army's actions during his administration helped bring about the beginning of the end of armed Native resistance.

As was typical of his approach, Grant first attempted peace in most situations. For example, in June 1873, Grant issued an executive order closing the Willowa Valley in Oregon to white settlement. Notwithstanding Grant's edict, settlers flooded onto Nez Perce lands, and the undermanned

army could do little to stop them. In June 1875, under pressure from white Oregonians, Grant realized the futility in resisting the settlement, and reopened the valley to homesteaders despite his 1873 order. He issued a decree that required the Nez Perce, who had not signed a treaty, to settle on a reservation. After many attempted negotiations to establish a reservation favorable to the tribe, war ensued. Only after Grant left office did the army defeat the Nez Percé and place them on a reservation.

The Peace Policy remained relatively popular until Grant's second term, when corruption afflicted his administration. Many scandals erupted, but only one directly impacted Indian policy. It involved Secretary of War William W. Belknap, who was charged with taking bribes from Indian traders in what was known as the "Indian Ring." Though impacted by this scandal, the president was never directly connected to it.

In addition, the Quaker Policy began causing problems. Interdenominational jealousy created constant conflict. Some denominations envied the number of agencies other denominations received, and almost all believed they could convert the Indians most effectively. In the 1880s the government abandoned the practice of assigning reservation administration to the churches.

Grant's name was put into nomination for a third term at the Republican convention of 1880. He lost his life's savings in an investment business and lived his last years in poverty. His memoirs, commissioned by Mark Twain and completed just before Grant's death, received critical and popular acclaim.

Grattan Fight (1854)

On August 19, 1854, Second Lieutenant John L. Grattan of the U.S. Army and twenty-nine men under his command were killed by Lakotas near Fort Laramie, Wyoming. The Grattan Fight, or "massacre" as it is more popularly known, grew out of long-standing issues related to the overland trails.

Since 1840 more than 150,000 overland emigrants had traversed the overland trails, passing directly through Lakota hunting grounds. This heavy traffic led to the dispersal of the bison herds, introduction of diseases, and occasional conflicts between Native Americans and emigrants. In 1851, therefore, the federal government attempted to protect emigrants and bring an end to intertribal warfare through the Fort Laramie Treaty (1851). By signing the treaty, the Lakotas agreed to allow travelers through their territory unmolested in exchange for annual annuities.

When a lame cow wandered away from a Mormon emigrant train in the summer of 1854, the tentative peace established by the Fort Laramie Treaty came to an end. High Forehead, a Miniconjou Lakota, killed and butchered the lost animal. Upon arriving at Fort Laramie, the Mormon emigrant reported to military officers that Indians had stolen the cow and demanded that something be done. Sensing that trouble was brewing, Chief Conquering Bear met with the commanding officer, Lieutenant Hugh Fleming, and offered to make compensation for the lost cow. Fleming made no immediate decision on a course of action, but when his junior officer, a brash, young West Pointer named John L. Grattan insisted that he be allowed to arrest High Forehead, Fleming approved.

When Grattan and his detachment arrived at Conquering Bear's village to arrest High Forehead, a standoff ensued. Grattan, who had little respect for Native Americans, demanded that the culprit be handed over, but High Forehead, backed by his Miniconjou relatives, stood firm and refused to surrender. Conquering Bear and Man Afraid of his Horses, a respected Oglala chief, worked frantically to avoid conflict, but when a messenger reported that High Forehead would die rather than surrender, Grattan ordered his soldiers into the Lakota village. When the soldiers formed a skirmish line, High Forehead and five Miniconjou warriors stepped out of a tepee and began loading their muskets.

Without orders, a nervous soldier fired a round, striking a Lakota. The defiant Miniconjou warriors responded by firing a volley into the skirmish line, dropping one soldier. Grattan retaliated by ordering his troops to fire on Conquering Bear, who by this time had ceased negotiations and was retreating into the village. Soon Conquering Bear and five other Lakotas lay dead or dying. Immediately, hundreds of Brule and Miniconjou Lakotas, along with a handful of Oglalas, pounced on Grattan's soldiers. Lakota warriors quickly overwhelmed the outnumbered soldiers, killing Grattan's entire command.

The Grattan Fight was a turning point in Lakota-American relations. The following year General William Harney led a campaign into Lakota territory and attacked a village on Blue Water Creek near Ash Hollow, Nebraska. More than twenty-five years of intermittent warfare ensued after the Grattan Fight, culminating with the 1890 massacre at Wounded Knee.

Grazing Rights

During the open range era, which stretched from the early nineteenth century through the passage of the Taylor Grazing Act (TGA) in 1934, Euro-American graziers (raisers of cattle, sheep, horses, and other grazing animals) established "accustomed ranges" for their livestock on public land by performing the first and consistent beneficial "use" of a particular natural pasture. Local custom in the public domain states of the American West—those states containing vacant and unclaimed federal land—observed the Western Doctrine of Prior Appropriation, which asserted "first in time is first in right" for natural resource extraction on public lands. The discovery of an unreserved, unclaimed public resource—such as native forage grass—and its subsequent beneficial use by the original appropriator created a vested, common-law "right of use." In contrast to the Midwestern stock-farming

model of fenced, private-land ranches, the culture of free-range herding followed the animals' seasonal migration patterns to pastures of varying elevations, and depended on public domain grazing rights.

In the mid-nineteenth century, the federal government negotiated treaties of land cession with Native Americans that relinquished tribal land ownership to extensive grazing areas. The treaties also recognized off-reservation Indian grazing and pasturing rights within the legal framework of "accustomed ranges" or long-term customary occupancy. The scope of these grazing rights varied by treaty. In some cases, such as the Walla Walla Treaty of 1855 negotiated with the Cayuses, Umatillas, and Walla Wallas of the Columbia Plateau region, "the privilege of . . . pasturing their stock on unclaimed lands in common with citizens" neither reserved rights exclusive to the tribe nor extended to all ceded lands. In other cases, such as the 1855 treaty with the Nez Perce the "privilege of . . . pasturing their horses and cattle upon open and unclaimed land" was exclusive to the tribe.

The first federal agency to regulate public land grazing, the General Land Office (GLO), largely honored treaty grazing rights. The General Land Law Revision Act of 1890 authorized the president to withdraw forest reserves from the public domain, and by 1898 presidents Benjamin Harrison and Grover Cleveland had reserved over thirty-nine million acres of forests containing extensive rangelands. To prevent overgrazing, restore pasturage, and achieve "sustained yield" of natural resource production, the GLO instituted a fee-based grazing permit system in 1901. Non-Indian stock growers applied for grazing privileges attached to allotments (individual grazing plots or areas with specific boundaries) with preference determined by priority use and proximity of residence. The GLO, and after 1905 the United States Forest Service (USFS), acknowledged that national forests encompassed ceded tribal lands bearing off-reservation grazing rights, and collaborated with Office of Indian Affairs (OIA) agents and reservation superintendents to ensure tribal members enjoyed continued and preferential access to their accustomed ranges. Tribes are exempted from paying grazing fees, and have typically brokered a memorandum of understanding with the USFS. The tribes also generally oversee the issuance of permits to tribal members to ensure compliance with range management practices.

Although the BIA mission of cultural assimilation sought to turn Native peoples into sedentary farmers like white Americans, problems arose when reservation lands were unsuited for raising crops. To combat this, local superintend-

ents developed on-reservation livestock raising and cattle ranching as an alternative. Local BIA agents supplied livestock acquired under the pledges of original treaties as well as supplemental purchases. Superintendents also allowed tribal authorities to grant free grazing privileges to tribal members.

Although Native graziers enjoyed a "right of use" to animals provided to them by the federal government, the government retained legal ownership. Congressional legislation, such as the Appropriations Act of 1884, restricted the autonomy of on-reservation Native American graziers by limiting their sale of federally provided livestock (and its offspring) to fellow tribal members only. The act blocked them from marketing their animals to other tribes or non-Indian buyers without the written consent of federal officials. The Appropriations Act of 1919 extended constraints and prohibited Native graziers from loaning, leasing, or gifting their livestock to nontribal members. It also banned the removal of livestock from the reservation and enforced this rule by universally marking animals with a tribal brand or the Interior Department initials, "I.D."

On-reservation grazing rights eroded further under the General Allotment Act (Dawes Act) of 1887, which divided reservations into smaller plots, or allotments, and forced tribal grazing grounds open to non-Indian ranchers. To advance the adoption of farming and ranching lifestyles, the federal government issued tribal members individual land patents to specific allotments and originally held the titles in trust for twenty-five years. Reformers hoped the trust period would prevent land-hungry non-Indians from interrupting the "civilizing process" by buying the allotments before Native allottees had a chance to become self-sufficient agriculturalists.

Amendments to the Dawes Act passed in 1891, 1910, and 1921 responded to pressures from western politicians and white livestock raisers seeking access to reservation pastures and authorized grazing leases on trust allotments and unallotted reservation lands. By the end of the allotment era in 1934, local elite white graziers and corporate ranches had consolidated vast tracts of long-term leaseholds on reservation grazing lands. The Indian Appropriations Act of 1902 accelerated tribal dispossession by enabling Natives to sell inherited allotments prior to the termination of the trust period. Non-Indian graziers who had invested capital improvements on their leased grazing allotments exploited the 1902 law to ensure they gained permanent title to their long-term leaseholds.

In 1934 the TGA expanded the federal regulation of public land grazing to the remaining federal rangelands outside

forest reserves and reservations. The law also reinforced the principle that federal permits represented revocable privileges and not affirmation of preexisting property rights. The TGA and its amendments empowered the secretary of the interior to withdraw 142 million acres of vacant, unclaimed public lands from all forms of disposal, private claims, and homesteading. Touted as the “New Deal on the Range,” President Franklin Roosevelt endorsed the TGA as a hallmark of his administration’s natural resource policy and hoped the act would stabilize the economy of the livestock industry and regenerate the overgrazed range.

Although TGA districts also covered ceded off-reservation tribal land, unlike the USFS, the Department of the Interior (DOI) required tribes (applying as corporations) or tribal members (applying as individuals) with accustomed ranges to participate in the federal adjudication (dispute resolution) of public domain range rights with the same status and eligibility as non-Indians. A series of highly influential opinions issued by the DOI solicitor in 1937 and 1938 regarding the respective permit applications of pueblo communities and individuals on New Mexico TGA district lands established a precedent that would be followed by the U.S. Grazing Service and its successor agency, the Bureau of Land Management (BLM). The solicitor ruled that both corporate and individual Indian applicants must demonstrate the ownership or control of private (tribal, nonfederal) “base property” with sufficient water and feed to support the applicant’s livestock when not permitted on the federal range. The opinion confirmed the right of individual Indian applicants to claim communal “base lands,” and entitled them to priority preference if they also owned individual property.

The Indian Reorganization Act of 1934 (IRA), dubbed the Indian New Deal, accompanied the passage of the TGA, and shared as part of its vision a similar conservationist objective that affected on-reservation grazing as profoundly as the TGA changed grazing rights outside reservation boundaries. Sponsored by the progressive commissioner of Indian affairs, John Collier, the IRA reversed the policy of assimilation, ended allotment, fostered self-determination, and advanced the reconsolidation of communal lands and resources. Collier, influenced by the 1928 *Meriam Report*, committed the BIA to combating overgrazing as the primary method of preserving reservation range lands.

Although the diversity of tribal experiences renders generalizations difficult, ultimately, Collier’s implementation of the IRA was subject to significant regional variations. On Northern Great Plains and Intermountain West reserva-

tions, Collier replenished tribal herds depleted during the allotment era by providing cattle and creating a BIA agricultural credit fund that expanded loan opportunities for tribal members purchasing livestock and supplies. He also mobilized the Indian Civilian Conservation Corps to coordinate a range rehabilitation program, including the construction of stock water facilities, the re-seeding of natural grasses, and the eradication of noxious weeds. In contrast, many southwestern reservations suffered dramatic stock reductions under the IRA, which devastated families and communities on the Navajo, Tohono O’odham, and other reservations.

The Sagebrush Rebellion of the 1970s (an antifederal protest movement of rural western landowners and county governments) witnessed a resurgence of many non-Indian public land graziers rejecting the legality of the TGA and asserting their vested range rights based on prior appropriation. Native American graziers have similarly condemned the alleged violations of off-reservation treaty rights by the USFS and BLM throughout the twentieth century and into the new millennium. The adjudication of Indian grazing rights continues to evolve, as reflected by the 2002 public demonstration conducted by members of the Western Shoshones at the BLM Nevada State offices in Reno. The rally sought to raise public awareness about the terms of the Ruby Valley Treaty of 1863 with the Western Shoshones in light of the BLM’s recent confiscation of unpermitted cattle owned by two Shoshone livestock raisers. The cattle were grazing on ceded tribal land.

Great Britain, Indian Policy of

While the first recorded contact between English officials and Native Americans occurred as early as 1502, Britain's government did not begin to develop a coherent national Indian policy for another 250 years. (Indeed, it is not entirely proper to speak of a single British government until 1707, when the Act of Union united the Scottish and English Parliaments.) In the seventeenth century, the English Crown generally left Indian relations—the regulation of trade, the purchase (or extortion) of land, the establishment of missions, and the execution of wars—to the assemblies and governors of the individual North American colonies.

In the early eighteenth century, the Board of Trade, a semi-independent royal committee that Parliament created in 1696, did occasionally intervene in colonial Indian affairs. The board members, known alternatively as the lords of trade or the commissioners of trade, arranged to send regular shipments of presents to the British colonists' Iroquois, Creek, and Cherokee allies. By 1748 these shipments were worth £3,000 a year. They also convinced the king to veto Virginia and South Carolina statutes that created public fur-trading monopolies in those colonies. These were, however, irregular acts of a fairly obscure committee that did not consider Native Americans to be its primary clients or field of interest.

The Origins of Great Britain's Indian Policy

The impetus for a unified British national Indian policy came from the British American colonies. Between 1730 and 1755, Edmond Atkin, Cadwallader Colden, Benjamin Franklin, Archibald Kennedy, James Logan, and other imperial-minded colonists argued that the security of the south-

ern and middle colonies depended upon those colonies' alliances with powerful Indian neighbors, particularly the Iroquois of western New York, who helped protect English frontier settlements from attack by French-allied Indians. Fur traders and backcountry settlers were threatening those alliances, however, by cheating Indian hunters in trade and encroaching on tribal lands. The reformers argued that Britain could no longer trust the colonial assemblies to protect the king's Indian allies from fraud and violence, and that it was time for the Board of Trade or Parliament to appoint an overall superintendent for colonial Indian affairs.

The British government proved receptive to these proposals because Britons had become increasingly aware of the importance of Native American alliances to their growing empire. During the first half of the eighteenth century (notably in 1710, 1730, and 1734), colonial officials brought delegations of Iroquois, Cherokee, and Creek "kings" to London to meet the British monarch and build support for various military and colonial projects. These visitors caught the imagination of the British public, who experienced their visits either as spectators or by listening to ballads, reading press reports, and purchasing illustrated broadsides composed or written about the Indian sojourners. Britons increasingly viewed Native Americans, in the words of one historian, as exotic "embodi[ments of] the possibilities of empire" for an expanding British nation-state (Eric Hinderaker, "The Four Indian Kings," 1996). The idea naturally followed that what weakened Britain's alliances with Native Americans weakened the mother country, and that the British government should regulate Indian-white relations in order to preserve them.

The First Indian Superintendents

In 1756 the Board of Trade appointed two superintendents to oversee Indian relations, one for the northern colonies and one for the southern. The northern superintendent, William Johnson, was a former fur trader who had served as "Colonel of the Six Nations" since 1747 and had long-standing personal connections with the Mohawks. The first southern superintendent, Edmond Atkin, was one of the colonial reformers who advocated greater Crown control of Indian affairs; he proved an uninspired official and the board replaced him with John Stuart in 1762. The commissioners of trade also issued a decree banning private purchases of land from the Indians, and in the early 1760s Superintendent Johnson advocated drawing a firm and unbreakable boundary line between white and Indian settlements.

In 1762 British Lt. Henry Timberlake and interpreter William Shorey escorted three Cherokee leaders to London. The group, which included renowned Cherokee leader Ostenaco, met King George at St. James's Palace.

The new superintendents of Indian affairs initially exercised little real power, however. During the Seven Years' War, known in the colonies as the French and Indian War (1745–1763), the conduct of Indian relations fell largely to Governor Henry Lyttleton of South Carolina (in the south-east) and to the commanders in chief of the British armed forces (in the Great Lakes region). Lyttleton's harsh response to disputes between settlers and Cherokees—namely, embargoing gunpowder sales to the Cherokees and taking visiting chiefs hostage—caused Cherokee leaders to start a war with their former British allies in 1759. The two-year conflict resulted in the destruction of more than twenty Cherokee towns and the deaths of at least five thousand Indians.

Meanwhile, one of the commanders of the British army in North America, Jeffrey Amherst, responded to the end of hostilities with the French on that continent by adopting an overbearing policy toward the northern Indian nations. He garrisoned the old French forts in the Great Lakes district, stopped distributing presents to the region's Indians, banned sales of rum and gunpowder to Native Americans, and demanded the return of all white captives that Indians had taken. Amherst's policies soon contributed to the outbreak of another war, Pontiac's Rebellion (1763–1766), in which

warriors from nations formerly allied with France destroyed two-thirds of Britain's western posts and killed over one thousand soldiers and settlers. Such conflicts were a convincing argument in favor of placing Indian-white relations in the hands of civilian professionals.

The Proclamation of 1763 and the Plan of 1764

The signing of the Treaty of Paris in 1763 gave Britain sovereign authority over present-day Canada and the eastern half of the present-day United States, and the king and the commissioners of trade moved to consolidate Crown control over Indian policy. In October 1763 George III banned white settlements and private land purchases west of the Appalachian Mountains, although he also decreed that Britain would eventually give land grants to colonial officers and soldiers who had fought in the Seven Years' War. In 1764 the Board of Trade instituted an Indian-relations regime developed by General Thomas Gage and Superintendent William Johnson. The so-called Plan of 1764 required private fur traders to obtain a license from their colony's governor and post bond for their good behavior, and restricted them to specified trading sites—British forts in the north, Indian towns in the south. It also empowered the superin-

tendents to send agents into Indian communities with the legal powers of justices of the peace, which gave them authority to punish petty crimes and keep the peace. Royal troops on the frontier would help the superintendents and agents enforce these regulations.

In practice the new regulations proved unenforceable. Traders and whiskey peddlers swarmed into Native American towns, driving the licensed Baynton and Morgan Company out of business and undermining the licensing regime. White intruders settled on Indian land in western Pennsylvania and the eastern Tennessee Valley, or hunted game in the Indian hunting preserve of Kentucky. British soldiers found it difficult to protect their own supply convoys from bandits, let alone protect Native Americans from white law-breakers.

Deregulating the Frontier, 1768–1774

The year 1768 brought another significant shift in policy. The new secretary of state for the American Department, Lord Hillsborough, moved British troops out of their frontier posts and into American cities where they could help colonial governors stop riots and insurrections. By 1771 there were only four small British garrisons on the American frontier, at Fort Niagara, Detroit, Michilimackinac, and Kaskaskia. The treasury also cut funding for Indian agents, translators, and blacksmiths at these posts. Britain's political influence with the northern Indians declined sharply, and its military authority on the northern frontier virtually collapsed.

At the same time, the Board of Trade lifted most of its earlier restrictions on the fur trade and returned the regulation thereof to the colonial assemblies, which proved no more able than the superintendents to regulate Indian commerce. By the early 1770s, Southern Indian Superintendent John Stuart was receiving routine complaints from the Creeks, Choctaws, and other southeastern nations about liquor smuggling and whites trafficking in stolen goods. Several colonies tried to hold an intercolonial congress on the fur trade in 1770, but the meeting never took place.

The commissioners of trade also authorized William Johnson and John Stuart to negotiate treaties with the Iroquois and Cherokees and “adjust” the Indian boundary established by the king in 1763. The superintendents accordingly negotiated and signed the Treaty of Fort Stanwix and the Treaty of Hard Labor (both in 1768), which moved the colonies' border into southwest Pennsylvania and present-day West Virginia and Kentucky. Several years later, in 1772, the British ministry authorized a further “adjustment”: it

allowed the colony of Georgia to swap the Creek and Cherokee Indians' commercial debts for a 2.1-million acre land cession, subsequently known as the “Ceded Lands.” When Creek warriors protested the cession by attacking settlers in the Ceded Lands, Stuart increased British military aid to the Choctaws, who were then fighting a war with the Creek confederacy, and encouraged them to kill Creek hunters and raid Creek towns.

As thousands of Europeans moved into the newly opened frontier districts, wealthy Britons and colonial merchants formed companies to speculate in Native American lands. In 1772 one consortium, headed by Thomas Walpole, received approval from the Privy Council (the supreme executive council of the British government, consisting of the cabinet ministers and other confidential advisors to the king) to form a new colony, Vandalia, on the Ohio River. The following year, the Privy Council ruled that the colonies themselves could make frontier land grants to veterans of the Seven Years' War, as King George had stipulated in his Proclamation of 1763. Lord Dunmore, the governor of Virginia, used the council's ruling to issue land grants in southwestern Pennsylvania and Kentucky. Dunmore bolstered his colony's claims in 1774 by occupying old Fort Pitt with provincial troops, fighting a brief war in the Ohio Valley with the Shawnees (Dunmore's War), and obliging that nation to cede Kentucky to the Virginia colony.

The Quebec Act and the Coming of Revolution

The shifts in British Indian policy in the 1760s and early 1770s were products of English political instability—government ministers rarely held their offices for more than a couple of years during the first decade of George III's reign—and of Parliament's conflict with the colonies over taxes and trade regulations. In October 1774 Parliament finally approved a statute, the Quebec Act, that it believed would bring some stability and direction to Indian relations. The act created a civil government for the colony of Quebec and extended the borders of the province south to the Ohio River, incorporating therein all of the lands around the Great Lakes. Three months later, the Colonial Office gave the Quebec governor's council the authority to regulate the fur trade on the northwest frontier and ordered the province's governor to restrict white settlement south of the lakes to the small French-speaking communities of Kaskaskia, Cahokia, Vincennes, and Detroit.

However noble its framers' intentions might have been, the Quebec Act only increased the political instability in the

American colonies. Colonial critics of the statute objected to its expansion of Quebec's boundaries and to its creation of an appointed government in the colony, which some colonists believed would provide Parliament with a precedent for the termination of representative government everywhere in North America. New Englanders also objected to the act's formal establishment of the Catholic Church as the official faith of the province of Quebec. Together with the Coercive Acts, which Parliament had passed earlier in the year, the Quebec Act became an "intolerable act" which drove colonial leaders into armed rebellion against the mother country.

With the outbreak of the American Revolutionary War (1775–1783), the primary objective of British-Indian relations abruptly shifted. Instead of trying to regulate the fur trade or purchase Indian land, British officials now merely sought to ensure the western Indians' loyalty and to employ their warriors as military allies. General Thomas Gage authorized the recruitment of Indian warriors in the fall of 1775, and for the next seven years British superintendents, agents, commissaries, and fur traders flooded the trans-Appalachian Indian communities with pro-British speeches and trade goods.

The American Revolutionary War

While most Woodland Indian chiefs and matrons preferred to adopt a policy of neutrality during the Revolutionary War, young warriors and war captains generally sought to join Britain in its fight against the United States. To them, the war offered the opportunities to drive encroaching American settlers off tribal lands; to win glory and property in battle; and to obtain British trade goods, which were otherwise scarce due to the wartime disruption of the fur trade. At least twelve thousand Native American warriors fought for Great Britain during the war.

Despite the British army's success at recruiting Indian allies, Native American warriors did not provide it with an unqualified military advantage in the war. While they were generally quite skilled at reconnaissance, raids, and irregular warfare, Indian warriors proved less effective at siege operations (because they rarely carried large quantities of supplies) and at defending British fortifications (because they were usually reluctant to follow British officers' orders). Northwest Indian warriors helped screen British Canada from American attack, but were unable or unwilling to protect the British posts at Kaskaskia and Vincennes from George Rogers Clark's expeditionary force in 1778–1779.

Southern Indian gunmen were similarly unable to prevent the fall of Pensacola and Savannah to Spanish and American forces in 1781–1782. In addition, American officers used Indian warriors' raids on civilian settlements and their practice of taking scalps and captives as propaganda to recruit additional white militiamen in frontier districts. Native American allies may therefore have inhibited Britain's war effort nearly as much as they helped it.

Britain and the Northwest Indians, 1783–1795

In 1783 Great Britain signed a peace treaty with the United States and nominally surrendered jurisdiction over the Indians residing south of the Great Lakes. Two official decisions over the course of the next year, however, ensured that Britain would retain some influence among Natives in eastern North America. One was the agreement by Frederick Haldimand, the governor of Canada, to provide a reserve on Grand River (in present-day Ontario) for Indians who had fought for King George in the war. By 1785 over 1,800 Iroquois and other Indians had settled in this reserve, including Mohawk officer Joseph Brant, who would shortly become one of the leaders of the Native American military confederacy gathering in the Ohio Valley.

The other decision was made by Lord Sydney, the British home secretary, who in 1784 ordered British garrison commanders in the Great Lakes region not to surrender their forts to the United States until the Americans fulfilled their treaty obligations to British creditors and property owners. Niagara, Detroit, Oswego, Michilimackinac, and four other posts remained under British control, and one thousand British troops remained on American soil for the next twelve years. When Indian war captains formed a multitribal military confederacy to resist American expansion in the Ohio Valley, British garrison commanders allowed them to use these forts as council sites, and British traders and Indian agents used the posts as supply bases from which to provide the confederated warriors with muskets, ammunition, powder, and other supplies.

After confederated Indian warriors defeated the American armies led by Josiah Harmer and Arthur St. Clair in 1790–1791, the British government took an even more direct role in U.S. Indian affairs. In 1792 the British foreign minister, Lord George Grenville, and George Hammond, minister to the U.S. government, proposed the creation of a Native American homeland between the Ohio River and the Great Lakes, from which both Britain and the United States would agree to withdraw their troops and settlements.

Not surprisingly, the George Washington administration in Philadelphia rejected the proposal.

Two years later, when a second Anglo-American war threatened to erupt over Britain's seizure of American ships in the Caribbean, Canadian officials moved to revive Britain's wartime alliance with the Woodland Indians. Lord Dorchester, the governor of Quebec, told the Canadian Indians to prepare for war with the United States, while John Graves Simcoe, lieutenant governor of Upper Canada (present-day Ontario), began arming the Iroquois and ordered construction of Fort Miami on the Maumee River near present-day Toledo, Ohio. The new alliance began to fall apart, however, after the Battle of Fallen Timbers (August 20, 1794), when the commandant of Fort Miami refused to shelter Indian warriors fleeing from General Anthony Wayne's victorious Legion of the United States. By the end of 1795, it was finished: the Northwest Indians signed a peace treaty with the United States at Greenville, and the U.S. Senate approved a new Anglo-American treaty (Jay's Treaty) under which Britain agreed to surrender its forts on the Great Lakes to the United States.

British influence south of the Great Lakes declined after 1795. Jay's Treaty allowed British fur traders to continue operating on the northern Great Plains and in the Mississippi Valley, but many went bankrupt after 1803, when a new war with Napoleon's French Empire wrecked the fur market in Great Britain. British officials in Canada watched for Native American discontent in the United States. In 1810–1811, British agents sent supplies to Prophetstown, the headquarters of Tecumseh and Tenskwatawa's new pan-Indian confederacy, and during the War of 1812 (1812–1814), British officers recruited Plains and Woodland Indian men into the forces defending Canada. About ten thousand Indian warriors, including several thousand from Tecumseh's confederacy, helped British troops take American forts on the Great Lakes in 1812 and raided American settlements in 1813. However, after American troops defeated Tecumseh's warriors at the Battle of the Thames (October 5, 1813), the slain Indian leader's allies signed separate peace treaties with the U.S. government. The next year, in the Treaty of Ghent (December 24, 1814), British commissioners agreed to drop a clause which would have created an Indian homeland south of the Great Lakes and north and west of the old Greenville Treaty Line. This marked the end of Britain's involvement with Indian affairs inside the United States.

Britain and the Canadian Indians after 1815

During the subsequent decades, Whitehall also withdrew from involvement in Canadian Indian affairs. In 1818 the British treasury stipulated that all future Indian land purchases must be financed by the Canadian provincial governments. As Canada's white population grew (from 500,000 in 1815 to 2,500,000 by 1867), Canadian officials embarked on a series of Indian land purchases using the monies paid by private purchasers and mining companies to provide annuities to the ceding Indian nations. Provincial Indian officials increasingly confined eastern Canadian Indians to reserves or small villages, particularly in Quebec and the Maritime provinces. Like the pre-1830 United States government, Canadian officials embarked on a program of Indian "civilization" aimed at assimilating resettled Mikmaqs, Mississaugas, Ojibwes, and other Indian peoples. They provided Indian treaty signatories with gifts of livestock and farm equipment, built schools for them (more than twenty by 1841), and encouraged missionaries to settle in Indian towns and preach the gospel. The culmination of the Canadian civilization project was the 1857 Gradual Civilization Act passed by the legislature of the United Provinces (Quebec and Upper Canada), which offered citizenship to Indians who agreed to attend school and accept individual land allotments. Provincial officials hoped that this would hasten the dissolution of the Canadian Indians' land base and collective identity, though in practice very few Native American men qualified for citizenship under its terms.

One significant department of the British government did continue to intervene in Indian affairs in a particular region of North America until the 1880s. The region in question was the northern Pacific coast of America, and the department was the British Admiralty, which oversaw the Royal Navy. Until the mid-nineteenth century, British and Canadian political authority over the Pacific Northwest was limited, partly because of the distance of the territory from the centers of government, partly because Britain had agreed to share the Oregon Country with the United States, and partly because of the broad commercial powers enjoyed in the district by the Hudson's Bay Company, whose trading posts constituted the principal European presence between Russian Alaska and Spanish California. The reciprocal and generally peaceful commercial relationship between British fur traders and the Pacific Northwest Indians broke down, however, after Britain divided the Oregon Country with the United States in 1846, and particularly after European farm-

ers and gold miners began to settle on Vancouver Island and the Fraser River. James Douglas, the first governor of what would become the colony of British Columbia in 1858, initially pursued a policy of Indian land acquisition similar to that of the U.S. government—that is, dispossession by treaty—but by 1858 he had abandoned that policy in favor of unilateral expropriation of tribal lands and the establishment of Indian reserves.

Douglas also sought to establish firm control over the Indian peoples in his colony, and since much of British Columbia's Native American population resided on or near the seacoast, he repeatedly called on the British Admiralty for military support. From the 1850s through the 1880s, Royal Navy ships patrolled the province's coast, working to suppress the liquor and slave trades. In addition, in the 1860s navy gunboats shelled the towns of Indians accused of attacking white miners and sailors, most notably at Clayoquot Sound in 1864, where a naval raid destroyed nine Ahousat villages and killed at least fifteen people.

By then, the rest of the British government had finished its withdrawal from the process of Indian policy making. In 1858 the treasury stopped providing Canadian officials with funds for the purchase of Indian gifts. Two years later Great Britain formally transferred all remaining responsibility for Indian affairs to Canadian provincial authorities. This effectively ended a century and a half of direct British involvement with North American Indian policy.

Great Father

"Great Father" was a term used by both nineteenth-century American diplomats and Native Americans to refer to the president of the United States. Its origins stretch back to the colonial period. As early as the late seventeenth century, Indians allied with the French near the Great Lakes, Upper Mississippi, and Ohio rivers began referring to the French governor in Montreal by the French term *Onontio*. The word meant "father" and signified less a dependent relationship between the French and the Indians than a common kinship of heretofore differing Native peoples as allies of the king of France. The relationship was one of mutual give-and-take and required specific duties of both the French and the Indians.

At the dawn of the nineteenth century, Meriwether Lewis and William Clark used the term "great father" in their various meetings with Native Americans west of the Mississippi River, and it became common in United States–Indian negotiation language. However, the term reflected the strictly paternalistic attitude of U.S. government policy toward Indians during this period, as opposed to linking allied Indians in a common kinship. This usage stressed the duty of the U.S. government—as the authority figure in the relationship—to "care" for the Indians as if they

were dependent children. By the late nineteenth century, the term had fallen out of usage among both Native people and government officials, but the paternalistic tendencies of U.S. policy continued well into the twentieth century. To underscore the significance of this attitude, noted historian Francis Paul Prucha titled his study of United States–Indian relations *The Great Father: The United States Government and the American Indians*.

Greenville (1795), Treaty of

On August 20, 1794, the forces of U.S. general Anthony Wayne defeated a confederacy of Native American nations from the Old Northwest at the Battle of Fallen Timbers on the Maumee River near present-day Toledo, Ohio. The following summer Wayne negotiated a treaty with the defeated nations at nearby Fort Greenville. Included among the Native signatories were representatives from the following nations: Chippewa, Delaware, Kickapoo, Miami, Shawnee, Ottawa, Potawatomi, Shawnee, Wea, and Wyandot. Questions exist, however, about the legitimacy of the Kickapoo, Shawnee, Wea, and Wyandot signatories.

The treaty, which served as a model for subsequent treaties and talks, attempted to establish peace between the United States and the Native American nations in the region and required the nations to surrender title to about two-thirds of present-day Ohio and a large section of present-day Indiana. In addition, the nations relinquished title to sixteen other smaller parcels in the Old Northwest so that the United States could use them to establish forts and trading posts. The agreement conditionally recognized the rights of the nations to their remaining lands, including the authority to drive American settlers off those lands; established new borders between the United States and the nations (commonly known as the Treaty of Greenville line); and stated that the nations could sell their remaining territory only to the United States. In return, the United States agreed to supply the signatory nations immediately with \$20,000 of trade

goods and promised to pay them annuities of \$500 or \$1,000 in goods in perpetuity. The United States also recognized the right of Native individuals to hunt on the ceded territory. Additionally, the agreement called for an exchange of prisoners and provided American citizens with a right of passage through specific points of the territory reserved by the nations.

The subsequent Native council to consider the treaty was boycotted by about half of the members of the confederated nations, who refused to recognize the negotiations and simultaneously held their own council in Detroit. The United States was also unable—or unwilling—to restrain white settlement on the reserved Indian land. In addition, Article V of the treaty allowed for the United States to usurp land at will. War broke out again in 1811 between the United States and a confederacy of nations led by Tecumseh and Tenskwatawa. With the defeat of Tecumseh's confederacy in 1813, successful Native resistance to American expansion and settler trespasses effectively ended. In 1803 Congress admitted Ohio as a state.

Guadalupe Hidalgo (1848), Treaty of

The United States and Mexico signed the treaty ending the two-year U.S.–Mexican War (1846–1848) in Guadalupe Hidalgo, a small town near Mexico City on February 2, 1848. Mexico ceded to the United States approximately 55 percent of its territory, including the present-day states of California, Nevada, New Mexico, Utah, and Arizona, as well as parts of Colorado, Oklahoma, Nebraska, and Wyoming. Mexico recognized United States claims over Texas and

established the Rio Grande River as its border with that state. The United States paid Mexico \$15 million and recognized Spain's and Mexico's land grants in the southwest United States.

Two treaty articles put the citizenship of the Pueblo Indians and other Native peoples living in the ceded territory up for debate. Article VIII stipulated that the United States extended citizenship to Mexican citizens regardless of ancestry if they remained in ceded territories, and Article IX granted Mexicans who became U.S. citizens all the rights afforded other citizens. Yet problems soon arose due to conflicts between Mexican and U.S. citizenship laws.

After Mexico's independence from Spain, the new nation abolished racial restrictions on citizenship. This placed the Mexicans conquered by the United States—including those Indians living on the newly ceded lands—in a legally ambiguous position. At that time, the U.S. Constitution granted states the power to determine citizenship requirements, and many of them barred Indians from obtaining full citizenship rights. Debates ensued over whether states should extend the same legal status to Indians in ceded territories that belonged to the “Indian tribes” referenced in the Trade

and Intercourse Act of 1834, or if they should be extended citizenship pursuant to the treaty with all the political rights white citizens enjoyed. It was not until the twentieth century that the Pueblos were determined to be “Indians” deserving of protection under the 1834 act.

One of Mexico's concerns in negotiating the treaty was to prevent Indian tribes near its border from conducting raids into the country. Article XI of the treaty required the United States to keep Indians from crossing into Mexico and provided that the United States would compensate for losses that resulted from unrestrained incursions. The treaty also prohibited U.S. citizens from acquiring property seized by Indians in Mexico.

H

Article 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace and its honor is hereby pledged to keep it. The Indians desire peace and they now pledge their honor to maintain it.

Hagler

Hagler (c. 1700–1763; King Hagler, Nopkehe) was the primary leader of the Catawba Indian Nation from 1750 until his death in 1763. He cemented an important alliance with the British colonial governments that helped secure Catawba autonomy and preserve the nation's cultural independence.

The exact date and place of Hagler's birth is unknown, but it is assumed that he was born in the early eighteenth century in what is present-day northern South Carolina. Known to the Catawbas as Nopkehe, in English he is usually known as Hagler. Given his long-standing and successful participation in negotiations with various British colonial governments, historians believe the English name may be derived from the term "haggler." In the spring of 1750, Hagler was chosen to be the chief of the Catawba Nation, an office known as the eractasswa. As eractasswa, Hagler pursued a policy of alliance and accommodation with the British colonial governments of South Carolina, North Carolina, and Virginia—a sensible approach given the extensive losses the Catawbas had suffered in the early eighteenth century due to warfare and disease.

Hagler led the Catawbas to end a long-standing rivalry with the Iroquois Six Nations and traveled to Albany to conclude a peace with them in 1751. During the Anglo-Cherokee War (1758–1761), the Catawbas joined the British colonials against the Cherokees and also aided them during the longer Seven Years' War (1756–1763). Hagler's negotiations secured a formal grant of territory to the Catawbas in 1763 in northern South Carolina, which became one of the first reservations. Hagler was killed in August 1763 by a party of Shawnees.

Hall, Louis

Louis Hall (c. 1918–1993) was a leader in the Mohawk Warrior Society, which embraced confrontational and sometimes violent methods to preserve and defend Mohawk traditions.

Hall lived on the Mohawk reserve of Kahnawake, which spanned the New York–Canadian border, and was a member of its council in the early 1970s when the Warrior Society was formed. In 1973 the Longhouse (an Iroquois kin-based community unit) at Kahnawake attempted to evict all non-Indians from the reserve. The attempt was unsuccessful and unpopular among many Mohawks. Due to this, in 1974 Hall and his allies left Kahnawake and created the settlement of Ganienkeh near Moss Lake, New York. Tensions soon erupted with the surrounding white community, resulting in two shootings. After the shootings, state authorities intervened, but the Warrior Society members resisted and remained at the site until agreeing to be resettled in Altoona, New York, in 1978. The new settlement became involved in cigarette sales, gambling, and farming.

In 1980 Hall wrote the Warrior Society manifesto, *Rebuilding the Iroquois Confederacy*, which reinterpreted the

Iroquois constitution to allow for violent strategies. In the manifesto and other writings, Hall rejected Handsome Lake's teachings and advocated for the execution of chiefs who were passive to white intrusions. He supported guerilla tactics and embraced a form of Indian supremacy which declared that whites were biologically inferior to Natives.

In 1988 the Warrior Society blocked a Montreal bridge for a month. Two years later Hall helped organize an armed seventy-eight-day stand-off between Warriors and police after a planned golf course threatened Mohawk lands near Oka, Quebec. Hall died in 1993 at the Kahnawake reserve.

Hallett, William E.

William E. Hallett (1942–) served as commissioner of Indian affairs during the administration of President Jimmy Carter (1977–1981). Hallett first worked as director of housing and manpower programs for the Red Lake Band of Chippewa Indians in the mid-1960s. After serving briefly as a consultant to the National Council on Indian Opportunity and on the President's National Advisory Council on Minority Business Enterprise, he joined the Bureau of Indian Affairs in 1970.

As commissioner, Hallett warned that the federal government in the recent past had failed to develop a comprehensive economic development plan for Native American communities. He observed that tremendous amounts of federal monies had gone to Indian communities for improvements in education, health care, housing, public employment, and roads. However, he warned, without substantial economic development, Indian communities would become overwhelmingly dependent upon government subsidies for survival and thereby lose both self-determination and self-sufficiency.

Hampton Normal and Agricultural Institute

The Hampton Normal and Agricultural Institute was founded in 1868 in Hampton, Virginia. Founded by the American Missionary Association and supported by the Bureau of Refugees, Freedmen, and Abandoned Lands, the boarding school provided both academic and industrial education to freed slaves and later to Native Americans. Founder and first superintendent Samuel Chapman Armstrong explained that he wanted Hampton's graduates not only to become effective teachers but workers skilled enough to earn a living and provide for their own material needs.

As the goal of the Hampton school was to assimilate Indians into mainstream American society, classes were conducted only in English; students were required to wear "white man's clothing"; and the curriculum emphasized manual labor, private property ownership, Christianity, and citizenship. This approach, designed initially for freedmen, was also adopted for off-reservation schools.

Hampton's program was well formed by 1878, when Lieutenant Richard H. Pratt arrived from Florida with seventeen Indian prisoners-turned-scholars. Pratt used the Hampton model to found his own school exclusively for Indians in 1879—the Carlisle Indian Industrial School in Carlisle, Pennsylvania. Although a second off-reservation Indian industrial training school was also authorized that year, in Forest Grove, Oregon, Hampton was technically the first. From 1877 until 1923, Hampton's Indian population was small, with only 1,388 Indians of both sexes from sixty-five tribes attending during those years.

In 1891 the federal appropriation for Hampton was \$167.00 per capita for 120 Indian students. Other funding came from the state and charitable contributions. Government support for the program ended in 1923, but in 1991 the American Indian Educational Opportunities Program began to bring Native Americans back to the school, now known as Hampton University.

Hancock, Winfield Scott

A native of Pennsylvania, Winfield Scott Hancock (1824–1886) distinguished himself at Gettysburg during the Civil War (1861–1865) and went on to serve in a number of capacities with the U.S. Army, including that of commander of the Department of the Missouri. After the Fetterman Massacre in late 1866, Hancock led U.S. troops on a march through Kansas to protect railroad workers and migrants on the Santa Fe Trail and to impress upon local Indians the futility of waging war against the United States.

In 1867 he met with representatives of the Comanches, Kiowas, Lakotas, Southern Arapahos, and Southern Cheyennes in an effort to compel those tribes to remain south of the Arkansas River. When Southern Cheyennes and Lakotas refused to cooperate, Hancock attacked and burned their village at Pawnee Fork, Kansas. This led to an outbreak of war on the Plains that helped persuade the U.S. government to rethink its general policy towards the tribes.

Soon after Hancock's provocation, he was ordered to serve as the Reconstruction governor of Louisiana. In 1869 he returned to the West to serve as commander of the Department of Dakota, a position he held until 1872. His record in that post, along with his long military history, persuaded the Democratic Party to select him as their nominee in the presidential election of 1880. Hancock lost to the Republican candidate, James Garfield.

Handsome Lake

As a young man, Handsome Lake (1735–1815) participated in the French and Indian War (1754–1763) between the French and the English; Pontiac's Rebellion (1763–1766) between various Indian nations and the British; and the American Revolutionary War (1775–1783), during which he fought for the British. Following the American Revolutionary War, he saw the Seneca population had been decimated and their traditional lands reduced from 4,000,000 acres to fewer than 200,000 acres as factionalism, disease, and land cessions threatened the solidarity of the Iroquois League, to which the Senecas belonged.

On June 15, 1799, Handsome Lake collapsed and entered a coma, in which he experienced his first of three visions in which the Creator revealed to him a new religion and way of life for Iroquois people. The first message instructed him to preach against alcohol, witchcraft, love magic (the manipulating of power to attract a desired partner), and abortion. The second vision, one month later, revealed to him a strict moral code that he was to take to his people. His third vision, in February 1800, told him that the Seneca people were to return to the practice of important cultural ceremonies. Failure to carry out these ceremonies would result in the world's destruction by fire.

Following his visions, Handsome Lake traveled widely and preached temperance, peace, land retention, acculturation, and domestic morality. Handsome Lake next used the *Gaiwio*, or "Good Word," to develop a survival strategy that he felt would establish peace with the encroaching colonists. He lobbied the U.S. government to refrain from acquiring Seneca land and attempted to revitalize Seneca culture by adopting many of the central tenets of the civilization program administered by the Quaker missionaries. Seneca men would remain sober and become agriculturalists. Women would perform domestic chores. A Seneca village would come to roughly resemble a typical frontier settlement.

After a generation of disorder and the conversion attempts of Christian missionaries, disciples of Handsome Lake revived his words and organized them into a new religion, the Code of Handsome Lake, which was incorporated into the Longhouse religion that is still practiced today.

Harmar, Josiah

Josiah Harmar (1753–1813) was born in Philadelphia, Pennsylvania, on November 10, 1753, and educated by Quakers. Harmar joined the American Revolutionary War (1775–1783) as a captain at the age of twenty-two. When the war ended, the Continental Congress chose him to deliver the ratified Treaty of Paris to Benjamin Franklin.

Harmar was promoted to brigadier general in 1787 and led several expeditions against the Indian tribes in the Ohio Valley and the Old Northwest. He established a number of fortifications throughout the territory, witnessing the treaty signing with the tribes at his namesake Fort Harmar in 1789. A year later, he commanded a force against an Indian coalition led by the Miami chief Little Turtle. Although successful at first, his outnumbered and ill-prepared troops were defeated at Kekionga, on the Maumee River, in an engagement known as the Battle of the Miami Towns. Harmar returned with a larger force and again engaged the coalition, but the fight ended in a stalemate.

After being relieved of command and replaced by General Arthur St. Clair, Harmar requested a court-martial for his negligence and failure to subdue the tribes. As the enterprise had been seen by many, including President George Washington, as a doomed operation from the start due to the lack of congressional and logistical support, he was cleared from blame. Harmar retired from the military in 1792, having served as the senior officer of the U.S. Army from 1784 to 1791. He died at his home near Philadelphia on August 20, 1813.

Harney, William S.

William Selby Harney (1800–1889), a United States Army commander, gained his military reputation for his ruthless

campaigns against Indians, but concluded his public career as a government peace commissioner. Born in Tennessee in 1800, Harney received a lieutenant's commission in 1818 and began his army service on the Indian frontier with the 1825 Atkinson-O'Fallon treaty-making expedition up the Missouri River. For the next three decades, Harney's duties brought him into armed conflict with the Sac and Fox tribes during the 1832 Black Hawk War, with the Seminole tribe in Florida during the Second Seminole War (1835–1842), and with the Mexican army in the U.S.-Mexican War (1846–1848).

In 1855 Harney, now a colonel in the Second U.S. Dragoons, took command of an expedition to punish the Lakotas, who had destroyed the troops of Lieutenant J. L. Grattan near Laramie, Wyoming. Harney's forces could not locate the band responsible for the Grattan fight, so they attacked a Brule Lakota village led by Little Thunder in western Nebraska. Harney reported that his men killed eighty-six Lakota men and captured seventy women and children. A tentative peace treaty with the Dakota, Nakota, and Lakota Sioux followed at Fort Pierre in 1856. Harney was then appointed to command the Department of the West. He returned to Florida to conduct operations in the Third Seminole War (1855–1858). In 1859 Harney assumed command of the Department of Oregon.

As a southern general in the Union Army and a Jacksonian Democrat, Harney's career stalled under President Abraham Lincoln, but was revived after the 1865 election of Andrew Johnson, a fellow Tennessean. Johnson chose Harney as a member of his Indian Peace Commission, which negotiated several treaties with Plains tribes in 1867–1868. The most famous and far-reaching of these agreements was the Fort Laramie Treaty of 1868, when Harney met with former Lakota foes in an atmosphere of mutual respect and trust. This proved to be Harney's highest public service achievement.

Harris, Fred

Fred Harris (1930–) was born in Walters, Oklahoma, and became highly active in Democratic Party politics as a prominent advocate of Native American rights. He served in the Oklahoma State Senate from 1956–1964, in the United States Senate from 1964–1972, and ran for president in 1972 and 1976 before leaving politics to join the political science department at the University of New Mexico. As both a state and U.S. senator, Harris, in partnership with his Comanche wife, LaDonna Harris, tirelessly advocated for self-determination for Indian people. His speech on the new destiny of American Indians given to Congress in 1966 outlined his commitment to bettering the conditions and opportunities available to Natives. He advocated for community action programs in Indian communities, maintaining that localized tribal control of resources was vital to economic self-sufficiency. He also supported numerous legislative measures aimed at improving Indian health care and education.

Harris played an important role in securing the restoration of the sacred Blue Lake to the Taos Pueblos. He also supported measures to protect land rights of Alaska Natives in the debate over the 1971 Alaska Native Claims Settlement Act. He supported his wife in her efforts to found two Indian advocacy organizations—Oklahomans for Indian Opportunity and Americans for Indian Opportunity—and was generally hailed as a leading expert on Indian rights by his congressional colleagues.

Harris, LaDonna

LaDonna Harris (1931–) founded Oklahomans for Indian Opportunity (OIO) in 1965 and Americans for Indian Opportunity (AIO) in 1970. She utilized her role as the wife of U.S. senator Fred Harris (D-Okla.) to draw national attention to the conditions facing Native Americans. In the 1960s her primary focus was on improving economic and social opportunities for Native people within mainstream

society. The OIO received funding from the Office of Economic Opportunity that allowed Indian tribes to reassert tribal sovereignty through President Lyndon Johnson's community action programs. She worked with her husband to ensure the return of the sacred Blue Lake area to the Taos Pueblo Indians, to protect the land rights of Alaska Natives in the Alaska Native Claims Settlement Act of 1971, and on numerous other projects.

After serving from 1968–1970 as an original member of the National Council on Indian Opportunity, Harris grew convinced of the need for an independent organization to act as a liaison of sorts between Indian tribes and the federal government. Through her work with the AIO she has been at the forefront of some of the most significant gains in Indian self-determination in the twentieth century. The AIO has provided an important link between Indian communities, federal Indian law and policy, and policy makers. By issuing news bulletins and hosting conferences and seminars, Harris and her staff have played a crucial role in educating tribal leaders about Indian law and the practical application and responsibilities of sovereignty.

Harrison, William Henry

William Henry Harrison (1773–1841) served in the U.S. Army during the Old Northwest Indian wars (1791–1794) and the War of 1812 (1812–1814), as governor of the Indiana Territory, and as a lawyer. In 1840 he was elected president of the United States, but died of pneumonia a month after his inauguration.

Harrison served as aide de camp to General Anthony Wayne in the 1793–1794 campaign against the Indian confederacy of the Northwest. He was present at the Battle of Fallen Timbers in 1794 and received commendation for his actions. In 1798 Harrison resigned from the army to serve in the territorial governments of Ohio and Indiana. He was appointed governor of the Indiana Territory (1800–1813),

and during his tenure he sought to acquire American title to as much Indian land as possible. Harrison concluded several land cession treaties with local tribes, including the Treaty of Vincennes (1802), the Treaty of Grouseland (1805) and the Treaty of Fort Wayne (1809). In all, Harrison's work saw the Indian cession of approximately thirty million acres and most of present-day Illinois, Indiana, Michigan, and Wisconsin.

Harrison also led forces that helped bring an end to the powerful pan-Indian confederacy in the Old Northwest. The Shawnee village of Prophetstown, in Indiana, home to Tecumseh and his brother Tenskwatawa (also known as the Shawnee Prophet), lay just outside the boundary lines established in the Treaty of Fort Wayne. Prophetstown had emerged as a center of a Nativist revitalization movement that sought to drive white settlers out of Indian territory. As governor of the Indiana Territory, Harrison feared a resurgence of an Indian confederacy and attempted to maintain order by negotiating treaties with the Delawares, Miami, and Weas. These treaties antagonized Tecumseh, and in the summer of 1811, Tecumseh met with Harrison at Vincennes and requested that the lands near Prophetstown not be surveyed by the army. After the meeting, Tecumseh traveled to the South to recruit for Tenskwatawa's movement. Knowing Tecumseh was absent, Harrison marched his army north to the Tippecanoe River near Prophetstown. On November 6, Harrison arrived at the Tippecanoe, allegedly to hold a council with Tenskwatawa the next day. Tenskwatawa prepared his warriors for a battle with the American soldiers and attacked in the predawn hours of November 7, 1811. Harrison's troops took heavy losses but defeated Tenskwatawa's forces, and his victory at the Battle of Tippecanoe earned him his nickname, "Old Tippecanoe," and gave rise to his 1840 presidential campaign slogan of "Tippecanoe and Tyler, too." The victory, however, did not quell Indian unrest in the region.

Shortly after the Battle of Tippecanoe, the War of 1812 broke out between the United States and Great Britain. Leading the western militia and then the regular army, Harrison fought the combined forces of the British and the Indians. He built Fort Meigs along the rapids of the Maumee River to prevent the British from approaching overland into the Ohio Country. This ten-acre fort withstood two sieges by enemy forces led by Tecumseh and the Indian confederacy. In the fall of 1813, Harrison led an American attack upon the retreating British army. At the Battle of the Thames, the Indian confederacy made its last stand against

the Americans. After the death of Tecumseh in battle, the confederacy deteriorated and Harrison signed an armistice with the tribes. He then solidified American land holdings with treaties at Greenville (1814) and Spring Wells (1815).

After the War of 1812, Harrison retired for a time to civilian life in Hamilton County, Ohio. In 1836 and again in 1840, he was called by the Whig party to be their presidential candidate. Harrison's reputation as an Indian fighter enhanced his prestige and helped win him the office in 1840. He became ill and died after only a month in office.

Haskell Indian Nations University

Haskell Indian Nations University in Lawrence, Kansas, has an enrollment of about eight hundred students, most of whom are Native American. Haskell was founded in 1884 as the United States Indian Training School with the aim of assimilating Indian children into the European American culture. Boys received military training and learned such skills as tailoring, wagon making, blacksmithing, harness making, painting, and farming. Girls learned cooking, sewing, and homemaking. In 1895 the school offered the first touch-typing class in Kansas. The training school evolved into a high school and a trade school before becoming a junior college in 1970, and in 1993 Haskell became a four-year college. Haskell offers bachelor's degrees in American Indian studies and environmental science with a chemistry or biological science emphasis, and associate degrees in liberal arts, health and physical education, media arts, social work, theater, natural resources, and natural science.

Many students choose to attend the 320-acre school because of its small size and its Native American population. Young adults who have never lived off the reservation and

who have had little contact with non-Indians find a comfortable atmosphere. Nevertheless, Haskell is diverse with students drawn from many different tribes. The school, funded through the Bureau of Indian Affairs, has struggled with finances, and in 2001 summer school was discontinued because of budgetary problems. Haskell is the home of the American Indian Athletic Hall of Fame.

Hastings, William Wirt

William Wirt Hastings (1866–1938) was a Cherokee lawyer and politician actively involved in the implementation of federal Indian policy in the late nineteenth and early twentieth centuries. Hastings was born in Arkansas on December 31, 1866, to William Archibald Yell Hastings and Louisa J. Stover Lynch Hastings, the latter a member of the Cherokee tribe. Hastings grew up on Beatties Prairie in the Cherokee Nation where he attended Cherokee public school and later the Cherokee Male Seminary in Tahlequah. He then entered Vanderbilt University, earning his law degree in 1889.

After returning to the Cherokee Nation, Hastings practiced law and entered public service for his tribe, serving as a delegate to Washington on several occasions and as advisor to several principal chiefs. He served as superintendent of education, justice of the Cherokee Supreme Court, and attorney general of his people. As attorney for the nation, he was assigned to work with the Dawes Commission and participated in formulating the tribe's final rolls, allotting tribal lands to individual citizens, and trying cases before the Court of Claims and the U.S. Supreme Court.

In 1914 Hastings was elected to the U.S. House of Representatives. After losing his seat in the 1920 elections, he was returned to Congress in 1923 and served until retiring in 1934. As a congressman, he was active in development of Indian policy as a member of the Committee on Indian Affairs and the House Appropriations Committee. He was a prominent opponent of John Collier's Indian New Deal programs in Congress.

Hawkins, Benjamin

Benjamin Hawkins (1754–1816) spent most of his lifetime shaping and implementing U.S. Indian policy. He is best known for putting into effect a "civilization plan" for the southeastern Indians while he served as the U.S. agent to the Creek Nation.

Hawkins served on George Washington's staff during the American Revolutionary War (1775–1783). In 1781 he was elected to the Continental Congress. As a U.S. senator for North Carolina from 1789 to 1795, he served on several committees that oversaw U.S. Indian policy, and later he served as a commissioner to the 1785 treaties signed at Hopewell, South Carolina, with the Cherokees, Choctaws, and Chickasaws, and the 1796 Treaty of Colerain with the Creeks. He also attended the negotiations of the 1790 Treaty of New York with the Creeks.

In 1796 President George Washington appointed him to the temporary position of general superintendent of Indian affairs. During his tenure he dealt with all tribes south of the Ohio River. He then became the U.S. agent to the Creek Nation.

Hawkins focused his efforts on "civilizing" the Creeks. He encouraged the Creeks to embrace many components of American society, especially centralized government, market-oriented agriculture, and western gender norms. In short, Hawkins sought to turn Creeks into self-sufficient farmers and thereby free up thousands of acres of land to American development.

When civil war broke out among the Creeks in 1813, Hawkins and the manifestations of his civilization plan became targets for violence. Hawkins temporarily fled the agency, and his policy was widely deemed a failure. In the aftermath of the war, Hawkins helped negotiate the Treaty of Fort Jackson (1814), which resulted in the dispossession of two-thirds of Creek Country. Hawkins died in 1816.

Haworth, James M.

James M. Haworth (1831–1885) was appointed federal agent to the Kiowa, Comanche, and Apache tribes in 1873 and later became the first superintendent of Indian schools.

Haworth supported the policies of assimilation and acculturation, and his Quaker upbringing inspired him to attempt to change Indians through persuasion rather than intimidation. For example, he began his tenure as agent by dismissing the infantry detachment assigned to guard the Kiowa and Comanche Agency. Decisions such as this caused military personnel to call Haworth incompetent and criticize his pacifism. At the agency, Haworth cultivated relations with Kicking Bird, who supported adopting white ways, and sparred with militants like Lone Wolf.

Haworth's reports to Washington described the conditions that led to the Red River War (1874–1875), including chronic shortages of rations that the Southern Plains tribes had been promised in the 1867 Treaty of Medicine Lodge. Some accounts credit him with helping to postpone hostilities by convincing Texas governor E. J. Davis to release chiefs Santana and Big Tree from incarceration in October 1873.

By the time the war ended, Quaker agents had lost much of their authority in Oklahoma and Texas. Haworth, the last Quaker agent, contracted malaria and resigned in 1877. The following year he served on the commission that created the Pine Ridge and Rosebud reservations. For the next few years he worked as an inspector of schools for the Office of Indian Affairs.

In 1883 Haworth became the first superintendent of Indian schools. He oversaw construction of the Chillico Indian School and the United States Indian Industrial Training School (later Haskell Indian Nations University), institutions designed to remove Indian children from their own culture and educate them for integration into the dominant white culture. Haworth died in 1885.

Hayes, Rutherford B.

The presidency of Rutherford B. Hayes (1822–1893) from 1877 to 1881 occurred at a transitional time in U.S. Indian policy, as the federal government began moving away from the reservation system toward the allotment of Indian land.

After serving in the Civil War (1861–1865), Hayes was elected to the House of Representatives. He also served three terms as governor of Ohio before being elected president in 1877 in one of the most controversial and contested elections in American history.

After his inauguration Hayes appointed Carl Schurz as secretary of the interior. Schurz attempted to respond to calls for Indian affairs reform that were spawned by Colonel George Armstrong Custer's disastrous defeat at the Battle of Little Bighorn on June 25, 1876. Schurz fired John Q. Smith, the commissioner of the Office of Indian Affairs (OIA), and attempted to end the corruption and mismanagement in the organization. He implemented a civil service code, required inspections of agencies, and removed dishonest agents. Schurz ended the Ulysses S. Grant administration's practice of assigning agencies to religious denominations and opposed those who wanted to return the OIA from the Department of the Interior to the War Department.

The Hayes administration supported Richard Henry Pratt's boarding school ideas and the establishment of the Carlisle Indian Industrial School. It lobbied for citizenship for Native Americans and began considering the allotment of Indian land as a solution to the difficulties of administering Indian affairs. Allotment involved breaking up reservations into smaller plots of land that were then given to individual Indians. The belief was that personal land ownership would help Indians assimilate into American society more easily.

Hayes's Indian policy was also marked by the settlement of the Ponca removal affair. In 1868 the Lakota Sioux had ceded what was Ponca land in the Treaty of Fort Laramie, and the Poncas had suffered since that time from Lakota attacks. Schurz ordered the Poncas to a new reservation in the Indian Territory. After many of them died in the reloca-

tion, a presidential commission was created to investigate the conduct of the OIA. The Poncas were provided a reservation and allowed to return to their lands in Nebraska.

During the same period, the United States was completing its conquest of the tribes in the West. During Hayes' tenure as president, the U.S. Army defeated the Nez Perce, the Sioux, the Northern Cheyenne, and the Paiutes and returned them to reservations.

Herring, Elbert

The third and final head of the Office of Indian Affairs, as well as the first commissioner of Indian affairs, Elbert Herring (1777–1876) gained his position when Samuel S. Hamilton was fired as the head of the Indian Office in the War Department on August 12, 1831. President Andrew Jackson nominated Herring to replace him. Despite having no previous experience in Indian affairs, Herring ran the department for the next five years.

Herring took over at a time the U.S. government was involved in developing its removal policy, which sought to relocate the Indian tribes in the states west of the Mississippi River. He justified the policy in five annual reports, calling it necessary for the continued existence of Indians currently residing in the East and describing it as “humane.” Herring oversaw the negotiation of a number of treaties that eventually led to the forced removal of almost all of the major eastern tribes. He met several times with Cherokee leaders John Ross, the principal chief who opposed removal, and John Ridge, who advocated the signing of a removal treaty. In December 1835 Herring's agent, John F. Schermerhorn, negotiated the now infamous Treaty of New Echota, in which a few dissident Cherokees ceded all of the land east of

the Mississippi that belonged to their nation in exchange for \$5 million and other considerations.

In his 1832 annual report, Herring stated that he wanted to continue funding Indian schools and other assimilation programs, for he believed that Indians needed to become acculturated to the American way of life, including farming, individual property ownership, and Christianity, in order to survive as a “race.” He left office in 1836.

Hickel, Walter J.

Walter Joseph Hickel (1919–) served as secretary of the interior from 1969–1970. He had just finished serving as governor of Alaska (1965–1969) when President Richard Nixon appointed him to his cabinet. Once secretary, Hickel favored giving Alaska Natives less than fifty thousand acres and a cash settlement in payment for their land rights. He appointed Morris Thompson, an Alaska Native, to the position of special assistant to the secretary for Indian affairs.

Nixon wanted Hickel to find a Republican Native American who was an outsider to the Bureau of Indian Affairs (BIA) to head the organization. Leaders of the National Congress of American Indians and the National Indian Youth Council put forth their own candidates. Hickel, however, sided with Nixon and appointed Louis R. Bruce as commissioner of Indian affairs in the summer of 1969.

Before Nixon's forceful message about Indian self-determination in July 1970, many Indian leaders suspected Hickel of favoring termination, and some Indian groups called for his removal. At the National Congress of American Indians convention in Albuquerque, New Mexico, in November 1969, young Indian militants loudly opposed Hickel during his speech. Relations between Hickel and Indian leaders improved as he increased the number of federal contracts awarded to tribes and proposed reforms for the BIA. He also approved the hiring of more Indians for top BIA positions.

Despite these actions, the White House faulted Hickel for not formulating new Indian policies that advanced the pres-

ident's goals for Native Americans. Nixon fired Hickel in November 1970 for writing a letter criticizing his policies in Vietnam.

Historians and Historiography

The literature on federal Indian policy is extensive and covers a wide range of topics, spanning the years from early colonial-Indian relations to the self-determination era in place by the early twenty-first century. For more than half a century, historians have used government documents as their main source of research for analyzing and writing major studies about federal Indian relations. More recently, scholars have also begun to use ethnographic evidence and oral history in what is often referred to as the "New Indian History."

Colonial Era

To best understand the major works about federal Indian policy, the literature can be divided into types and eras. The first category is early colonial-Indian relations, which lasted until the early formation of the U.S. government and the establishing of U.S.-Indian relations under the country's first president, George Washington.

The civil rights protests and Indian activism of the 1960s encouraged scholars and the media to focus on Native peoples, and both academic and commercial presses became interested in publishing studies of colonial-Indian relations. Two notable works in this area were Allen Trelease's *Indian Affairs in Colonial New York: The Seventeenth Century*, which appeared in print from Cornell University Press in 1960, and Alden Vaughan's *New England Frontier: Puritans and Indians 1620–1675*, published by Little, Brown and Company in 1965.

As Trelease's and Vaughan's works covered broad time periods and regions, works that followed began to focus on

narrower topics. Wilbur Jacobs introduced academia to the importance of U.S.-Indian trade relations with his 1972 classic, *Dispossessing the American Indian: Indians and Whites on the Colonial Frontier*. Gary Nash presented the interrelations and relations with the new United States of three important racial groups in his 1974 classic *Red, White, and Black: The Peoples of Early America*. Colonial treatment of Indians is the subject in Bernard Sheehan's *Savagism & Civility: Indians and Englishmen in Colonial Virginia*, published in 1980, and Colin Calloway's 1987 *Crown and Calumet: British Indian Relations, 1783–1815*. A year later, notable ethnohistorian Francis Jennings wrote *Empires of Fortune: Crowns, Colonies & Tribes in the Seven Years War in America* (1988).

Recent scholarship of colonial-tribal relations includes Richard White's *The Middle Ground: Indians, Empires, and Republics in the Great Lakes Region, 1650–1815* (1991); James Merrell's *The Indians' New World: Catawbas and Their Neighbors from European Contact through the Era of Removal* (1991); and Kathleen Duval's *The Native Ground: Indians and Colonists in the Heart of the Continent* (2006).

Early Republic

The colonies revolting against England altered tribal relations with the colonies and among the tribes themselves. Barbara Graymont's 1972 *The Iroquois in the American Revolution* was one of the early works on U.S.-Indian relations during the American Revolution. Of more recent scholarship are Colin Calloway's *The American Revolution in Indian Country: Crises and Diversity in Native American Communities* (1995) and Alan Taylor's *The Divided Ground: Indians, Settlers, and the Northern Borderland of the American Revolution* (2006).

At first the Americans sought to make the Indians their allies in the fight against the British, but soon after the war the new United States government took a new stance—one that saw the Indian as the enemy. This is described in Wiley Sword's 1985 *President Washington's Indian War: The Struggle for the Old Northwest, 1790–1795* and Barbara Mann's 2005 *George Washington's War on Native America*.

Washington's policy of trying to keep the Indian nations as allies continued until Thomas Jefferson established a different course in the early 1800s. Jefferson viewed Native people as having the capability to become civilized farmers like white Americans. Francis Paul Prucha produced the first major study of Jefferson's policy of civilization and expansion with his *American Indian Policy in the Formative Years: The Indian Trade and Intercourse Acts, 1790–1834*, published in

1962. Reginald Horsman offered another view in his 1967 *Expansion and American Indian Policy, 1783–1815*. More than ten years later, Bernard Sheehan produced the first prominent work on this Indian policy in his classic *Seeds of Extinction: Jeffersonian Philanthropy and the American Indian* (1973).

Although his revealing book does not focus entirely on Jeffersonian Indian policy, Richard White's *The Middle Ground: Indians, Empires, and Republics in the Great Lakes Region, 1650–1815* (1991) describes how Indians and the imperial powers constructed “middle grounds” of mutually beneficial relations and how the encroachment of the United States into the region brought an end to that equanimity of power. Gregory Evans Dowd described the impact of Native revitalization movements on federal policy in his 1992 *A Spirited Resistance: The North American Indian Struggle for Unity, 1745–1815*. In a slightly more recent work, noted anthropologist Anthony F. C. Wallace penned *Jefferson and the Indians: The Tragic Fate of the First Americans* (1999), in which he details Jefferson's views on land and Indians as possible citizens.

Removal

Jefferson's Indian policy continued until more white settlers pushed westward and began demanding Indian land to farm and build homesteads. Indian removal became the primary goal of Native policy under Andrew Jackson, famed Indian fighter, who was elected president in 1828. His administration passed the Indian removal bill two years later, which called for ninety-four removal treaties to be negotiated and gave congressional authorization to spend \$500,000 to help relocate Indian populations to areas west of the Mississippi River. This policy resulted in devastation for Indian people. This era captured the attention of scholars as early as Grant Foreman with his 1932 book *Indian Removal: The Emigration of the Five Civilized Tribes*, published by the University of Oklahoma Press. Two years later, respected scholar Angie Debo published her first award-winning book, *Rise and Fall of the Choctaw Republic* (1934), also printed by the University of Oklahoma Press. Many years later, Arthur DeRosier Jr. wrote *The Removal of the Choctaw Indians* (1970). In that same year, Reginald Horsman published *The Origins of Indian Removal* (1970).

For the most part, Indian removal literature has focused on the removal of individual tribes, such as Debo's book and Gary E. Moulton's 1978 *John Ross: Cherokee Chief*, Michael Green's 1982 *The Politics of Removal: Creek Government and*

Society in Crisis, Thurman Wilkins' 1986 *Cherokee Tragedy: The Story of the Ridge Family and the Decimation of a People* (2nd ed.), and William G. McLoughlin's 1986 *Cherokee Renascence in the New Republic*.

Few scholars have attempted the daunting task of telling the entire story of Indian removal, rather than focusing on a particular tribe. Dale Van Every accomplished this task in his *Disinherited: The Lost Birthright of the American Indian* (1966). Herman Viola, noted scholar, wrote *Thomas L. McKenney: Architect of America's Early Indian Policy, 1816–1830* (1974). Criticism of Andrew Jackson's Indian policy appeared in two works published in 1975, Ronald Satz's *American Indian Policy in the Jacksonian Era* and Michael Rogin's *Fathers and Children: Andrew Jackson and the Subjugation of the American Indian*.

Recent scholarship has focused on the Jackson administration and the creation of the Indian removal policy. These works include Robert Remini's 2001 *Andrew Jackson and His Indian Wars*, Tim Alan Garrison's 2002 *The Legal Ideology of Removal: The Southern Judiciary and the Sovereignty of Native American Nations*, and Amy H. Sturgis's 2006 *The Trail of Tears and Indian Removal*.

Black Hawk's biography (several editions) and William Apress's 1836 speech on Pequot history (which criticized New England hypocrisy regarding removal) are also noteworthy as early examples of Native voices in the literature of the removal policy.

The Civil War

As the United States expanded beyond the Mississippi, tension increased between states which enslaved Africans to grow cotton and states in the North, which opposed the practice of slavery. The outbreak of the Civil War (1861–1865) led to a new Indian policy while Abraham Lincoln was in the White House. This policy is best articulated in the 1978 work *Lincoln and the Indians: Civil War Policy and Politics*, written by David A. Nichols. Indian groups were torn between supporting the North or the South. Confederate Indian policy was examined in Robert Duncan's *Reluctant General: Life and Times of Albert Pike* (1961) and the more updated *Jefferson Davis and the Confederacy and Treaties Concluded by the Confederate States with Indian Tribes* (1977), by Ronald V. Gibson. *Fighting Rebels and Red Skins: Experiences in Army Life of Colonel George B. Sanford 1861–1892* (1969), by E. R. Hagemann, was one of the earliest main works on Indians fighting in the Civil War, followed by two important works by Laurence Hauptman: *The*

Iroquois in the Civil War: From Battlefield to Reservation (1993) and *Between Two Fires: American Indians in the Civil War* (1995). Christine Schultz White and Benton R. White described the role of the Creeks during the fighting with their 1996 *Now the Wolf Has Come: The Creek Nation in the Civil War*.

Indians as victims of the Civil War are the focus of Stan Hoig's *The Sand Creek Massacre* (1961), as well as in Gary Clayton Anderson's *Little Crow: Spokesman for the Sioux* (1986). A broad coverage of U.S.-Indian relations during this period can be found in Brian Dippie's impressive 1985 work, *The Vanishing American: White Attitudes and U. S. Indian Policy*.

Peace Policy and War in the West

The years of Reconstruction for the United States yielded a "Peace Policy" introduced by President Ulysses S. Grant. The repaired federal government hoped that Indians could be assimilated into mainstream America society, as documented by Henry E. Fritz in *The Movement for Indian Assimilation, 1860–1890* (1963). One of the most important treaties to occur during this period was the Medicine Lodge Treaty (actually a series of three treaties) that moved several tribes onto specific reservations in the West. This development is the subject of the important 1966 Douglas Jones work, *The Treaty of Medicine Lodge: The Story of the Great Treaty Council as Told by Eyewitnesses*. A significant examination of Grant's Peace Policy can be found in Lawrie Tatum's *Our Red Brothers and the Peace Policy of President Ulysses S. Grant* (1970). A more recent work on the subject is Norman J. Bender's *New Hope for the Indians: The Grant Peace Policy and the Navajos in the 1870s* (1989).

Studies on specific tribes during the Peace Policy era include Stan Hoig's *The Peace Chiefs of the Cheyennes* (1980); Clyde Milner's *With Good Intentions: Quaker Work among the Pawnees, Otos, and Omahas in the 1870s* (1982); and Thom Hatch's *Black Kettle: The Cheyenne Chief Who Sought Peace but Found War* (2004). Works that cover the policy effects in a more general sense include *Indian Treaty-Making in the United States and Canada 1867–1877* (2001) by Jill St. Germain, and *American Indian Treaties: The History of a Political Anomaly* (1994) by Francis Paul Prucha. These two books address the making of, and types of, U.S.-Indian agreements during the period.

The failure of the Peace Policy caused the federal government to go to war against the Indian nations. Often overlapping with the documenting of military history, important studies evolved with the following: Carl Coke Rister's *Border*

Command: General Phil Sheridan in the West (1944), a combination of biography, military history, and Indian policy history; Francis Paul Prucha's *Broadax and Bayonet: The Role of the United States Army in the Development of the Northwest, 1815–1860* (1953); William H. Leckie's *The Military Conquest of the Southern Plains* (1963); Mark H. Brown's *The Flight of the Nez Percé* (1971); Richard N. Ellis's *General Pope and U.S. Indian Policy* (1970); William T. Hagan's *United States Comanche Relations* (1976); and Clifford Trafzer's *The Kit Carson Campaign: The Last Great Navajo War* (1982). Other studies of the topic include Paul Andrew Hutton's *Phil Sheridan and His Army* (1985); Robert M. Utley's *The Lance and the Shield: The Life and Times of Sitting Bull* (1993); Elliott West's *The Contested Plains: Indians, Goldseekers and the Rush to Colorado* (1998); and the most recent work of Gary Clayton Anderson, *The Conquest of Texas: Ethnic Cleansing in the Promised Land, 1820–1875* (2005). Dee Brown's *Bury My Heart at Wounded Knee: An Indian History of the American West* (1971) had a dramatic impact on the popular opinion of U.S. Indian policy in the 1970s.

The defeat of the Indian nations led to their confinement on reservations, where conditions were often very poor and few educational or health services were offered. The literature for this era begins with the true classic by Helen Hunt Jackson, *A Century of Dishonor: The Early Crusade for Indian Reform*, a powerful critique of U.S. policy originally published in 1881 by Harper Brothers. Two important autobiographies by Natives from this period are Chief Joseph's *That All People May Be One People: Send Rain to Wash the Face of the Earth* (1879) and Sarah Winnemucca Hopkins' *Life Among the Piutes: Their Wrongs and Claims* (1883).

William T. Hagan made one of the earliest studies on the reservation era in his 1966 *Indian Police and Judges*. Other works on the subject include Robert Winston Mardock's *The Reformers and the American Indian* (1971); Robert Trennert Jr.'s *Alternative to Extinction: Federal Indian Policy and the Beginning of the Reservation System, 1846–51* (1975); Loring Benson Priest's *Uncle Sam's Stepchildren: The Reformation of United States Indian Policy, 1865–1887* (1975); Francis Paul Prucha's *American Indian Policy in Crisis: Christian Reformers and the Indian, 1865–1900* (1976); and Gerald Thompson's *The Army and the Navajo: The Bosque Redondo Reservation Experiment 1863–1868* (1976).

Other important works are Francis Paul Prucha's *American Indian Policy in Crisis: Christian Reformers and the Indian, 1865–1900* (1976); Gerald Thompson's *The Army and the Navajo: The Bosque Redondo Reservation Experiment*

1863–1868 (1976); William T. Hagan's *The Indian Rights Association* (1985); H. Henrietta Stockel's *Shame and Endurance: The Untold Story of the Chirichua Apache Prisoners of War* (2006); and Clara Sue Kidwell's *The Choctaws in Oklahoma: From Tribe to Nation, 1855–1970* (2007). Studies about legal relations with Indians during this era of policy include Charles Wilkinson's *American Indians, Time, and the Law: Native Societies in a Modern Constitutional Democracy* (1987); Sidney L. Harring's *Crow Dog's Case: American Indian Sovereignty, Tribal Law, and United States Law in the Nineteenth Century* (1994); and Blue Clark's *Lone Wolf v. Hitchcock: Treaty Rights & Indian Law at the End of the Nineteenth Century* (1994). A recent work on Indian Country in general during the period is William E. Unrau's *The Rise and Fall of Indian Country, 1825–1855* (2007).

Education and Boarding Schools

Mission and federal boarding schools were introduced shortly after Indians were confined to reservations. General studies on boarding schools include Margaret Connell Szasz's *Education and the American Indian: The Road To Self-Determination Since 1928* (1974); David Wallace Adams' *Education for Extinction: American Indians and the Boarding School Experience, 1875–1928* (1995); and more recently, Jacqueline Fear-Segal's *White Man's Club: Schools, Race, and the Struggle of Indian Acculturation* (2007).

Other school studies include Francis Paul Prucha's *The Churches and the Indian Schools 1888–1912* (1979); Robert Trennert's *The Phoenix Indian School: Forced Assimilation in Arizona, 1891–1935* (1988); Basil H. Johnston's *Indian School Days* (1989); Devon Mihesuah's *Cultivating the Rosebuds: The Education of Women at the Cherokee Female Seminary, 1851–1909* (1993); K. Tsianina Lomanwaima's *They Called It Prairie Light: Story of Chilocco Indian School* (1994); Clyde Ellis's *To Change Them Forever: Indian Education at the Rainy Mountain Boarding School, 1893–1920* (1996); Brenda J. Child's *Boarding School Seasons: American Indian Families, 1900–1940* (1998); and Scott Riney's *The Rapid City Indian School, 1898–1933* (1999).

Two personal accounts written by Natives who attended boarding schools are Charles Eastman's *From the Deep Woods to Civilization* (1977) and Elizabeth Q. White's *No Turning Back: A Hopi Indian Woman's Struggle to Live in Two Worlds* (1992). Another personal account was written by Richard Henry Pratt, the man who started the model of Indian boarding schools. His book is entitled *Battlefield and Classroom: Four Decades with the American Indian, 1867–1904*.

Also worth mentioning are the accounts of Arthur LaFlesche, Luther Standing Bear, Gertrude Bonnin (Zitkala-Sa), and other Native progressives who used their educations to criticize federal policy and shift it in the direction of self-determination.

Allotment and Assimilation

As a part of the civilization and assimilation process, the federal government passed the General Allotment Act (Dawes Act) of 1887. This act broke reservations into smaller parcels of land that were then given, or “allotted” to individual Indians. The belief was that owning land as did white Americans, would help the Indians become assimilated more quickly. Two prominent studies directly on allotment are D. S. Otis's *The Dawes Act and the Allotment of Indian Lands*, (1973) and Janet McDonnell's *Dispossession of the American Indian* (1991). Related studies include Angie Debo's *And Still the Waters Run: The Betrayal of the Five Civilized Tribes* (1940), which has been reprinted by the University of Oklahoma Press; Frederick Hoxie's *A Final Promise: The Campaign to Assimilate The Indians, 1880–1920* (1984); Francis Paul Prucha's *American Indian Policy in Crisis* (1984); Terry Wilson's *The Underground Reservation: Osage Oil* (1985); William T. Hagan's *Theodore Roosevelt and Six Friends of the Indian* (1997); Melissa Meyer's *The White Earth Tragedy: Ethnicity and Dispossession at a Minnesota Anishinaabe Reservation, 1889–1920* (1999); and Emily Greenwald's *Reconfiguring the Reservation: The Nez Percés, Jicarilla Apaches, and the Dawes Act* (2002).

Indian New Deal

The U.S. government's effort to assimilate Indians into mainstream American society continued until the *Meriam Report* was published in 1928. Developed by a task force of social scientists, the report condemned the allotment policy. Prior to this, however, Indians had already been pressuring for reform. Works on this topic include Peter Iverson's *Carlos Montezuma and the Changing World of American Indians* (1982) and Lucy Maddox's *Citizen Indians: Native American Intellectuals, Race, and Reform* (2005). The stock market crash in 1929 and the Great Depression substantiated that a new federal policy was necessary. The Indian Reorganization Act (IRA) of 1934, also known as the Wheeler-Howard Act, was a simplified and diluted version of the bill originally sponsored by Commissioner of Indian Affairs John Collier. Collier had hoped to institute sweeping reform to federal Indian policy through what was referred to as the “Indian New Deal.”

Vine Deloria Jr.'s 2002 *The Indian Reorganization Act* tackles the act itself. Other books focus on John Collier and the administration of the IRA, such as Kenneth Philp's *John Collier's Crusade for Indian Reform, 1920–1954* (1977); David W. Daily's *Battle for the BIA: G. E. Lindquist and the Missionary Crusade Against John Collier* (2004); and Lawrence Kelly's *The Assault on Assimilation: John Collier and the Origins of Indian Policy Reform* (1983). Graham Taylor, in his 1980 work *The New Deal and American Indian Tribalism: The Administration of the Indian Act* wrote on how the tribes applied the provisions of the IRA. A recent work on this part of the IRA is *On the Drafting of Tribal Constitutions* (2007) by Felix S. Cohen, edited by David E. Wilkins.

Other major studies about the policy's effects on specific tribes include Lawrence Kelly's *The Navajos and Federal Indian Policy, 1900–1935* (1968); Donald Parman's *The Navahos and the New Deal* (1976); Laurence Hauptman's *The Iroquois and the New Deal* (1981); and Tom Bilosi's *Organizing the Lakota: The Political Economy of the New Deal on the Pine Ridge and Rosebud Reservations* (1997). A major study on federal-tribal years of the IRA is Tom Holms, *The Great Confusion in Indian Affairs: Native Americans and Whites in the Progressive Era* (2005).

Termination

After World War II (1939–1945) yet another Indian policy replaced the Indian New Deal. During the termination era, the federal government sought to reduce its financial responsibilities for Indian tribes, including its trusteeship position over the Native reservations. This occurred with the passage of the House Concurrent Resolution 108 in 1953. Major works about this policy include Larry Burt's *Tribalism in Crisis: Federal Indian Policy, 1953–1961* (1985); Donald L. Fixico's *Termination and Relocation: Federal Indian Policy, 1945–1960* (1986); and Kenneth R. Philp's *Termination Revisited: American Indians on the Trail of Self-Determination, 1933–1953* (1999). Dillon S. Myer was serving as the commissioner of Indian affairs when termination began, and an important study of him can be found in Richard Drinnon's *Dillon S. Myer and American Racism* (1987).

The termination of certain tribes has been documented in Nicholas Peroff's *Menominee DRUMS: Tribal Termination and Restoration, 1954–1974* (1982); Thomas W. Cowger's *The National Congress of American Indians: The Founding Years* (2001); Warren R. Metcalf's *Termination's Legacy: The Discarded Indians of Utah* (2002); James B. LaGrand's *Indian Metropolis: Native Americans in Chicago, 1945–75* (2002); and

Edward Charles Valandra's *Not Without Our Consent: Lakota Resistance to Termination, 1950–59* (2006).

Self-Determination

As termination continued into the 1960s, Native people rebelled against it and the efforts of the government to relocate them in urban areas. That era of Indian activism has been chronicled in the following works: Vine Deloria Jr.'s *Custer Died For Your Sins: An Indian Manifesto* (1969); Laurence Hauptman's *The Iroquois Struggle for Survival: From World War II to Red Power* (1986); Troy R. Johnson's *The Occupation of Alcatraz Island: Indian Self-Determination and the Rise of Indian Activism* (1996); Paul Chaat Smith and Robert Allen Warrior's *Like A Hurricane: The Indian Movement from Alcatraz to Wounded Knee* (1996); Troy R. Johnson, Joane Nagel, and Duane Champagne's *American Indian Activism: Alcatraz to the Longest Walk* (1997); *Red Power: The American Indians' Fight for Freedom* (1971; edited by Alvin M. Josephy Jr., Joane Nagel, and Troy R. Johnson); and Adam Fortunate Eagle's *Heart of the Rock: The Indian Invasion of Alcatraz* (2002). On Leonard Peltier and the suppression of AIM, see Peter Matthiessen's *In the Spirit of Crazy Horse* (1992) and Steve Hendricks, *The Unquiet Grave: The FBI and the Struggle for the Soul of Indian Country* (2007). A balanced study of federal-Indian affairs of the 1960s can be found in Thomas Clarkin's *Federal Indian Policy in the Kennedy and Johnson Administrations 1961–1969* (2001). Autobiographies from significant activists of the period include Russell Means' *Where White Men Fear to Tread* (1996) and *Ojibwa Warrior: Dennis Banks and the Rise of the American Indian Movement* by Dennis Banks and Richard Erdoes (2005).

While Indian activism and the American Indian Movement continued into the 1970s, the relocation program produced a large urban Indian population. Major works on the urbanization of Indian people are Hazel Hertzberg's *The Search for An American Indian Identity: Pan-Indian Movements* (1971), Elaine M. Neils' *Reservation to City* (1971), Alan L. Sorkin's *The Urban American Indian* (1978), and Donald L. Fixico's *The Urban Indian Experience in America* (2000). Jeanne Guillemin's *Urban Renegades: The Cultural Strategy of American Indians* (1975) deals with the urbanization of Native people in Canada.

Studies about Native peoples in particular urban areas include Joyotpaul Chaudhuri's *Urban Indians of Arizona: Phoenix, Tucson, and Flagstaff* (1974); Edmund Danziger Jr.'s *Survival and Regeneration: Detroit's American Indian Community* (1991); Joan Weibel-Orlando's *Indian Country, L.A.: Maintaining Ethnic Community in Complex Society* (1991); and

James B. LaGrand's *Indian Metropolis: Native Americans in Chicago, 1945–1970* (2002).

In 1975 Congress passed the Indian Self-Determination and Education Assistance Act. This is the prevailing policy and many works have been written on the topic. A sampling includes Alan L. Sorkin's *American Indians and Federal Aid* (1971), Jack Forbes' *Native Americans and Nixon* (1972), Stephen Cornell's *The Return of the Native: American Indian Political Resurgence* (1988), Sharon O'Brien's *American Indian Tribal Governments* (1990), and George Pierre Castile's *To Show Heart: Native American Self-Determination and Federal Indian Policy, 1960–1975* (1998.) Three comprehensive works about this era of Indian policy are Charles Wilkinson's *Blood Struggle: The Rise of Modern Indian Nations* (2005); Renee Ann Cramer's *Cash, Color, and Colonialism: The Politics of Tribal Acknowledgement* (2005); and George Pierre Castile's *Taking Charge: Native American Self-Determination and Federal Indian Policy, 1975–1993* (2006).

Studies about self-determination and its impact on individual tribes can be found in *The Modern Sioux Social Systems and Reservation Culture* (1970; edited by Ethel Nurge), John R. Finger's *Cherokee Americans: The Eastern Band of Cherokees in the Twentieth Century* (1991), *Zuni Courts and the Struggle for Sovereign Land Rights* (1995; edited by E. Richard Hart), Harry A. Kersey Jr.'s *An Assumption of Sovereignty: Social and Political Transformation among the Florida Seminoles, 1953–1979* (1996), and Loretta Fowler's *Tribal Sovereignty and the Historical Imagination: Cheyenne-Arapaho Politics* (2002).

Studies about specific Indian issues related to self-determination include Fay G. Cohen's *Treaties on Trial: The Continuing Controversy over Northwest Indian Fishing Rights* (1986), Robert Doherty's *Disputed Waters: Native Americans & the Great Lakes Fishery* (1990), Lloyd Burton's *American Indian Water Rights and the Limits of Law* (1991), Donald L. Fixico's *The Invasion of Indian Country in the Twentieth Century: Tribal Resources and American Capitalism* (1998), and Mark Edward Miller's *Forgotten Tribes: Unrecognized Indians and the Federal Acknowledgement Process* (2004).

Two important studies on Indian gaming are W. Dale Mason's *Indian Gaming: Tribal Sovereignty and American Politics* (2000) and Steven Andrew Light and Kathryn R. L. Rand's *Indian Gaming and Tribal Sovereignty: The Casino Compromise* (2007).

The History of U.S. Policy

Broad surveys of federal Indian policy include S. Lyman Tyler's *A History of Indian Policy* (1973); Francis Paul Prucha's

The Great Father: The United States Government and the American Indian, 2 vols. (1984); Theodore W. Taylor's *American Indian Policy* (1984); *American Indian Policy in the Twentieth Century* (1985; edited by Vine Deloria Jr.); *Native Americans and Public Policy* (1992; edited by Fremont J. Lyden and Lyman H. Legters); and John R. Wunder's *Retained by the People: A History of American Indians and the Bill of Rights* (1994).

Important studies on U.S.-Indian relations continue to appear on bookshelves every year as federal Indian policy continues to evolve and grow. In the twenty-first century, Indian leaders have finally become partners with the U.S. government in shaping the programs and regulations that affect their social, cultural, and religious lifeways.

More than likely, the scholarship on the history of U.S. Indian policy will continue to be rethought and revised as scholars from Native American communities become increasingly active in critiquing the subject.

Donald L. Fixico

Homestead Act of 1862

Although some scholars consider the Homestead Act of 1862 as one of the most important pieces of Congressional legislation in American history, it was a complete disaster for American Indians.

The act authorized American citizens (excluding people of color and women) to acquire Western lands at no cost by settling and remaining on the lands for a period of five years. They were also required to make improvements to the land by farming it, building homes upon it, or other related activities. Congress intended to encourage non-Indian settlers to occupy and encroach upon Indian lands, forming “a rough, ready, and cheap border militia” (Eric Kades, *The Dark Side of Efficiency*, 2000). The act, along with the General Allotment Act (Dawes Act) of 1887, resulted in the decline of Indian land holdings from 175 million acres to approximately 40 million acres. As the settlers were forced to make the required improvements to the land at their own expense, they were more likely to confront and fight Indians rather than retreat from the area.

Some scholars allege that the act created conditions that led to at least three of the bloodiest and vicious Indian wars: the Apache Wars (1871–1873), the Modoc War (1872–1873), and the Sioux wars (1874–1877). The sudden presence of large numbers of non-Indian settlers led to the devastation of Indian cultures and forced tribal communities to choose

between reservation life or assimilation into mainstream American society.

Hoover, Herbert

Scholars have categorized Herbert Hoover's (1874–1964) Indian policy as a "transitional period" that bridged the old assimilationist era of the late nineteenth and early twentieth centuries and the new era of Indian self-determination and cultural preservation that began in the mid-1930s. As a child, Hoover had lived for a year on the Osage reservation in Indian Territory, and his maternal aunts and uncles worked with Native Americans in Oregon. Consequently, Hoover knew something about the challenges and shortcomings of reservation life, and his Quaker heritage gave him an interest in helping Indian peoples.

Upon his election as president in 1929, Hoover offered fellow Quaker Charles J. Rhoads the position of commissioner of Indian affairs at the Office of Indian Affairs (OIA). After receiving assurances that Hoover would back the reforms outlined in Lewis Meriam's *The Problem of Indian Administration* (or, as it is often referred to, the *Meriam Report*), Rhoads accepted.

Hoover labored to improve the quality and efficiency of Indian bureau personnel. After a year's study, Commissioner Rhoads implemented a plan calling for the division of the Indian service into five areas—health, education, agricultural extension and industry, forestry, and irrigation—each headed by qualified experts who exercised direct executive and administrative powers over their respective divisions.

Indian education during the Hoover years emphasized practical and vocational instruction. W. Carson Ryan, director of Indian education, encouraged parents to enroll their children in public schools where they could learn how white

Americans worked and earned money. The Hoover administration promoted Indian arts and crafts as a means of promoting economic self-sufficiency, and Commissioner Rhoads worked to establish an organization of traders to help market the goods and guarantee authenticity.

Of particular concern to Hoover was the allotment system's continued erosion of the Indian land base. To counter the problem, the OIA under Rhoads suggested that tribes be empowered to develop corporate bodies, particularly on reservations possessing timber, oil, minerals, or water. Rhoads also recommended the government create a special Indian claims commission.

Another Native affairs issue confronting the Hoover administration was that of reimbursable debt, which was a process of collecting charges against Indians for irrigation projects constructed with federal loans. In many instances, officials had never even consulted the affected tribes about the projects. To remedy this, in 1932 Congress passed the Leavitt Act, which canceled all outstanding debts, freeing Indians of liens totaling millions of dollars.

Unfortunately, the Great Depression that so devastated the economy derailed many of the Hoover administration's reform efforts, as government funding and interest in Indian reform receded in the face of the national emergency. During the "Indian New Deal" of the mid-1930s, however, Commissioner of Indian Affairs John Collier built on many of the reforms initiated during the Hoover years.

After leaving office, Hoover served as chair of the Commission on Organization of the Executive Branch of the Government. The Hoover Commission, as it came to be called, was responsible for finding ways to cut federal expenditures by eliminating waste and duplication. One of the committee's recommendations was that the federal government eliminate tribal services and prepare Native Americans for total assimilation into the majority society. Consequently, some scholars have charged the commission with being partly responsible for the government's adoption of the termination policy.

Hoover Commission

In 1947 President Harry S. Truman appointed the Commission on Organization of the Executive Branch of the Government to find ways for the national government to reduce public expenditures by reducing waste, duplicate efforts, and inefficiency. He selected former president Herbert Hoover to lead the organization. The subsequent Hoover Commission report (1948) had significant implications for Indian policy. It argued that Indian assimilation remained the best solution to "the Indian problem" and should become the dominant goal of public policy. Pending achievement of that goal, the commission recommended that the administration of social programs for Native Americans be transferred to state governments, but that states were entitled to reimbursement from the federal government for administering those programs until the Indians' trust status had expired and they were able to pay taxes.

The commission also made recommendations about the tenure and qualifications of reservation personnel, and suggested that reservation superintendents be delegated greater authority. The commissioner of Indian affairs, meanwhile, was to be a professional, permanent administrator, and since the Department of the Interior assumed political responsibility for the Bureau of Indian Affairs (BIA), the secretary of the interior ought to appoint the commissioner. Finally, the Hoover Commission recommended that, pending the discontinuance of all specialized Indian-related activities on the part of the federal government, the BIA be transferred to a new department for social security, education, and Indian affairs.

While Congress refrained from adopting several of the recommendations, including the transfer of the BIA from the Department of the Interior, the Hoover Commission report gave additional impetus to congressional efforts to terminate federal services to Indian tribes during the early 1950s. House Resolution 698, for example, directed BIA staff members to report on the ability of Indians to manage

their own affairs as a prelude to transferring services to other federal agencies or to the states.

Hopewell (1785–1786), Treaties of

The Treaties of Hopewell refer to three separate treaties concluded between the government of the United States (under the authority of the Continental Congress) and the Cherokee, Choctaw, and Chickasaw Indian nations. The treaties were all negotiated at the Hopewell plantation of South Carolina political and military leader Andrew Pickens. The treaties were concluded on November 28, 1785, and January 3 and 10, 1786, respectively.

The negotiation on the Treaties of Hopewell was put in motion by the Continental Congress in 1784. The Congress's Committee on Indian Affairs submitted a report in May 1784 proposing the United States' policy towards the Indian nations in the southern department. Congress ultimately acted on the report and published its own findings in March 1785. Congress desired that the commissioners ensure that the southern nations affirm the Treaty of Paris (1783) and recognize the sovereignty of the United States. It also hoped to secure agreements that could provide for the repatriation of prisoners, confirm boundaries between Indian and settler communities, and establish frameworks for future trade and land transfer agreements between the Indians and the United States. Five commissioners were chosen to direct negotiations with the southern nations: Benjamin Hawkins, Lachlan McIntosh, Joseph Martin, William Peery, and Andrew Pickens. All the men but Peery would be at Hopewell.

The Cherokees were the initial focus of negotiations at Hopewell. Negotiations between the four federal commis-

sioners and the Cherokee leaders (the Tassel of Chota took the lead in negotiating for the Cherokees) lasted from November 18 through November 28, 1785. The major sticking point in negotiations was the boundary line between the Cherokee villages and the American settlements. Ultimately, both parties agreed to a slight modification of a 1777 boundary, which angered observers from North Carolina and Georgia, who were hoping for a more substantial grant of land to the states and their settlers. The treaty also confirmed the authority of Congress to appoint Indian agents and to regulate trade between the Cherokees and the American settlers.

During the negotiations with the Cherokees, word reached Hopewell that delegations from the Choctaws and Chickasaws were en route. All the commissioners except McIntosh remained to negotiate. Both the later two treaties contained substantially the same general terms that had been concluded with the Cherokees.

The Hopewell treaties ultimately proved ineffectual in halting tensions between the Indian nations and the growing population of American frontier settlers, and new negotiations between the United States and the Indian nations were undertaken in the years following the adoption of the Constitution. In later years, proponents of tribal sovereignty would point to provisions in the treaties and claim that the United States had recognized the tribes as sovereign nations, while opponents of tribal sovereignty would offer the protection and regulation of trade clauses as evidence that the tribes had surrendered their sovereignty to the United States.

Hopi-Navajo Relations

Navajo (Diné) and Hopi traditional narratives hold that these two peoples emerged from the earth into what is the present-day Southwest at the same moment. In at least one version of the Navajo creation narrative, the *Diné bahañè* (“story of the people”), the Navajo and Pueblo peoples meet

each other in the fourth of five worlds. There the Pueblo people took the Navajos in as kin and gave them seeds with which to begin growing their own crops. There are periods of strife as well in this narrative.

Far from being traditional or “ancient enemies,” as the U.S. government has tried to label them on occasion, the Navajo and Pueblo peoples, including the Hopis, have a long history of trade and intermarriage, as well as intermittent conflict on a relatively small scale, but they have always lived together and shared land and still retain cultural traditions of this common history. After the Pueblo Revolt of 1680, for example, when the Spanish returned to reinvade and reconquer the Southwest between 1692 and 1696, many Pueblos moved west and took up residence with the Navajos and the Hopis.

Conflict between the two nations has generally been the result of pressures for land imposed by successive invasions, first by the Spanish, then by the Mexicans, and finally by the United States after its annexation of Mexican lands won in the U.S.-Mexican War (1846–1848).

Both Navajos and Hopis farm and herd, but have displayed different emphases on each during different historical periods. The Navajos were farmers before they turned to sheep herding, a change that was probably the result of the influence of Pueblo refugees, who brought sheep culture with them in the 1690s. In the twentieth century, both Native economies were increasingly disrupted by the wage-labor system of U.S. capitalism, which impoverished both communities.

The United States government initiated a war against the Navajos in the early 1860s, spearheaded by the scorched-earth tactics of Christopher “Kit” Carson, the purpose of which was to open Navajo lands in present-day north central and western New Mexico for U.S. settlement. This war ended in defeat for the tribe, culminating in the forced march of half the Navajo people in 1863–1864 (known as the “Long Walk”) to an internment camp at Fort Sumner (Bosque Redondo) in eastern New Mexico territory. The Navajos lived in deplorable conditions at the camp until the United States was compelled to sign a treaty with them in 1868 that created the beginnings of a reservation in north-eastern Arizona and the edge of northwestern New Mexico.

The expansion of this reservation in 1878 and 1880 brought the increasingly concentrated Navajo population into direct contact with the mesas of the Hopis. The Hopis, who had never signed any treaties with the United States, were in the process of being organized by the federal gov-

ernment—a process they were attempting to resist as best they could in the face of ever-growing U.S. political control. It was these conditions that led in 1882 to the beginning of the so-called Navajo-Hopi Land Dispute, which was characterized in the 1962 Supreme Court decision *Healing v. Jones* as “the greatest title problem of the West.”

The Navajo-Hopi Land Dispute

The Navajo-Hopi Land Dispute began on December 16, 1882, when, at the request of Secretary of the Interior Henry M. Teller, President Chester Arthur created a reservation by executive order. This reservation enclosed 2.5 million acres, or 3,900 square miles, encompassing the three mesas on which all but two of the present-day twelve Hopi villages are located.

The secretary himself was responding to a complaint from the federal agent for the Hopi, J. H. Fleming, who had asked Commissioner of Indian Affairs Hiram Price to evict two Anglos from the region because they were aiding Hopi families in resisting federal attempts to send their children to boarding schools. Price informed Fleming that the government had no power to evict anyone from what was then designated as public land under U.S. law. Therefore, Fleming asked that the land in question be designated a reservation, because once it became federal land he would have the power to evict the Anglos.

As a result, what became known as the “1882 reservation” was primarily created not because of a conflict between Navajos and Hopis, but because of a conflict between the federal government and Hopi families. Despite not being involved with its creation, however, three to six hundred Navajos (out of a population of approximately sixteen thousand) found themselves living with the approximately 1,800 Hopis (virtually the entire Hopi population) within the reservation’s borders. Indeed, the language of the executive order stated that the reservation was not only for the Hopis, but also “for such other Indians as the Secretary of the Interior may see fit to settle thereon.” In 1962 the *Healing* decision would find that those “other Indians” were the Navajo and their descendants whose traditional lands had been enclosed by the 1882 reservation.

Between 1882 and 1958, there were no legal or legislative directives issued involving the 1882 reservation; all changes on the reservation were brought about by administrative rulings within the Department of the Interior in response, at least in part, to population growth. By 1958 there were an estimated 8,800 Navajos and over 3,000 Hopis living on the

1882 reservation. During this period, the federal government was working to segregate Navajos and Hopis on the reservation, which, along with population pressures, helped to polarize the two communities. In the mid-1930s, the Office of Indian Affairs (OIA) created Grazing District 6, which comprised approximately 650,000 acres including and immediately surrounding the Hopi mesas. Additionally, the OIA forbade Hopis from grazing their livestock or living beyond this area without the issuance of permits. At the same time, Congress consolidated the twenty-five thousand square miles of the Navajo reservation, which by then completely enclosed the 1882 reservation and added to Hopi fears about being overwhelmed by the Navajo presence.

In the 1950s the Navajo and Hopi tribal councils, under the direction of two Anglo lawyers, John Boyden for the Hopis and Norman Littell for the Navajos, began to develop a legal agenda to decide which tribe held both the surface and subsurface (mineral) rights to the 1882 reservation. Both tribes, under a 1946 ruling by the Interior Department, shared the subsurface mineral rights. To implement this legal agenda, Congress passed Public Law 885-547 on July 22, 1958, which waived the sovereign immunity of both tribes so that they could sue one another in federal court.

Passage of the Act of July 22, 1958, resulted in the *Healing v. Jones* lawsuit, which was named after the two tribal chairs at the time, Dewey Healing of the Hopis and Paul Jones of the Navajos. The federal district court in Arizona decided the suit in 1962, and the Supreme Court affirmed the decision “without comment” in June 1963. The decision designated Grazing District 6 as the official Hopi reservation and appointed the remaining 1.85 million acres of the 1882 reservation as the Joint Use Area (JUA), which was to be shared by the Navajos and Hopis who lived there. However, the JUA was used almost exclusively by the Navajos, because customary living patterns resulted in most of the Hopis remaining relatively close to the three mesas. The decision did not change the 1946 Department of the Interior ruling on shared subsurface rights.

Operating under the auspices of the federal government, this collaboration, not to say collusion, between Navajo and Hopi tribal councils at the instigation of lawyers representing mineral interests (years later, it was proven that John Boyden, the lawyer for the Hopi Tribe, also represented Peabody Coal) is what drove the succeeding stages of the Navajo-Hopi Land Dispute.

Navajo and Hopi Indian Land Settlement Act of 1974

After ten years of lobbying by the Hopi tribal council, which felt that the Navajos were dominating use of the JUA, Congress passed the Navajo and Hopi Indian Land Settlement Act of 1974. The act mandated that the two tribes negotiate for the partition of the JUA, and that if the negotiations failed, the federal district court in Arizona would draw the partition line. Predictably, the negotiations failed, and the court ordered the partition of the land. The process began in February 1977 and eventually created the Hopi Partitioned Lands (HPL) and the Navajo Partitioned Lands (NPL). While only one hundred Hopis found themselves on the Navajo side of the line and thus were forced to relocate by the court, approximately fifteen to seventeen thousand Navajos found themselves on the Hopi side.

The court ordered Navajos living on the HPL to be relocated by the Bureau of Indian Affairs (as the Office of Indian Affairs had been renamed in 1947) to border towns or to lands added to the reservation for this purpose. Often these lands were distant from the homes and families of those relocated, which led to devastating social effects such as mental illness, substance abuse, and violence. Relocation was opposed not only by Navajos living on the HPL, but also by traditional Hopi leaders who viewed the collaboration between the Hopi tribal council and the U.S. government as a violation of traditional Hopi ways. This united front between traditional Hopi leaders and HPL Navajos is another example of the long history of Navajo-Hopi cooperation.

The partitioning of the JUA and the subsequent relocations of thousands of Navajos over the succeeding twenty years was the result of over a hundred years of ill-advised U.S. policy decisions and legal cases. In 1988, in response to the relocation mandate, a group of Navajos living on the HPL brought suit in the federal district court in Arizona to remain on the land. In *Manybeads v. United States*, the principal argument advanced by the HPL Navajos was violation of their First Amendment religious rights, and they sought to assert the sacredness of the land to the community. The suit was dismissed. By that time perhaps three thousand Navajos still remained on the HPL. In 1991 the Ninth Circuit Court of Appeals, in lieu of hearing an appeal of the *Manybeads* case, ordered all the groups involved into mediation in an attempt to resolve the dispute. The result of this mediation was the Navajo-Hopi Land Settlement Act of 1996, which included an Accommodation Agreement (AA).

The act provided HPL Navajos who wished to remain on their lands with the option of signing the AA, which is a lease agreement guaranteed by the United States. Each lease is between the HPL Navajos, the Navajo Nation, and the Hopi tribe. The agreement permits the HPL Navajo to remain on his or her land for seventy-five years, after which time any one of the parties to the AA can discontinue it. Thus, the Hopis have retained the right to eventually evict all Navajos from the HPL if they so choose.

Legal initiatives attempting to reverse the settlement acts of 1974 and 1996 appear to have ended in April 2000, with the Ninth Circuit Court of Appeals' affirmation of the district court's dismissal of the *Manybeads* case. As of 2006, local estimates calculated that between five hundred and one thousand Navajos remained on the HPL.

Horse, John

Also known as Gopher John and Juan Caballo, John Horse (c. 1812–1882) was a Seminole Maroon who fought during the Second Seminole War (1835–1842) and one of the primary advocates for Seminole autonomy in post-removal Indian Territory.

Born a slave in Florida, Horse escaped and joined a community of African Maroons (slaves who ran away from their masters) who were allied with the Seminole Indians in the Florida interior. During the Second Seminole War, he emerged as a leader in the Maroon community and served as an advisor and interpreter for Osceola, Alligator, and other prominent Seminoles.

Horse eventually accepted an offer from the United States in 1838 to remove west in return for a promise of freedom. However, even after Horse led several hundred African Seminoles to the Indian Territory, they found themselves still threatened by slave raiders. Additionally, Creek officials tried to control the Seminoles who moved into their nation.

Horse returned to Florida in 1842 to help the United States convince many Seminole militants to surrender and accept removal. In 1844 Horse and Coacoochee (“Wild Cat”), an influential Seminole leader, returned east to plead unsuccessfully with Washington officials for a separate Seminole reservation. When the Seminoles eventually obtained a separate reservation, Horse’s security was threatened anew by Attorney General John Mason’s declaration that Seminole Maroons were considered runaway property and eligible for reenslavement.

Horse, Coacoochee, and more than three hundred Africans, Seminoles and Kickapoos fled to Mexico where they established new communities. Horse temporarily returned to the United States during the Civil War (1861–1865) and served as a scout in the U.S. Army. After the war he returned to Mexico, where he continued to strengthen the black Seminole community. He died in 1882 in Mexico City.

House Concurrent Resolution 108 (1953)

Congress passed House Concurrent Resolution (H.C.R.) 108 in August 1953. The bill provided congressional support for the policy of termination—the removal from trust status, the end of federal supervision, and the dissolution of federal recognition of Indian tribes in the United States. While H.C.R. 108 specifically targeted only five tribes—the Flathead tribe of Montana, the Klamaths of Oregon, the Menominees of Wisconsin, the Potawatomis of Kansas and Nebraska, and the Turtle Mountain Chippewas of North Dakota—all tribes in California, Florida, Iowa, New York, and Texas were subject to it. The bill laid the foundation for the introduction of numerous other termination bills.

Passage of H.R.C. 108 and similar bills required each named tribe to develop a plan for termination. Legislation was then introduced to terminate individual tribes. Only passage of the final termination plan by Congress could effect termination upon a tribe. Many termination bills were introduced between 1953 and 1955 and underwent a lengthy passage process, usually including a vote by the tribal community in question. Actual termination did not occur until years after passage of an initial bill naming a tribe for termination. The Menominees, for example, were designated for termination in H.C.R. 108 in 1953, but were not officially terminated until 1961.

While H.C.R. 108 passed during the Dwight Eisenhower administration, the impetus for the withdrawal of federal supervision of Indians began in the postwar years of the Harry Truman administration, when the commissioner of the Bureau of Indian Affairs, Dillon S. Myer, advocated for the removal of federal supervision and Senator Arthur V. Watkins of Utah made similar arguments promoting termination in Congress. Lawmakers such as these, through H.C.R. 108, initiated a process that resonated through Indian Country and Congress for decades.

Housing

The lack of safe, sanitary, and affordable housing has been a serious problem in Indian Country since the United States began placing American Indians onto restricted, remote reservation lands. Most American Indians on reservations were living in trailers, wooden shanties, or log cabins well into the 1960s.

The problem finally grew to such a magnitude and the disparity between living conditions on reservations and in the rest of the United States became so apparent that the federal government created a new Indian housing program in the Department of Housing and Urban Development (HUD) in 1962. HUD acted in response to a 1961 Department of Interior task force report that demonstrated the compelling need for federal assistance for Indian reservation housing. HUD's predecessor, the Public Housing Administration, had extended its low-rent public housing program to Indian Country, but it chose not to allow tribal governments to operate these programs. Instead, tribes were required to establish tribal housing authorities under tribal or state law to operate them. These Indian housing authorities were required to be quasicorporate bodies separate from the tribal government.

In the mid-1960s, HUD developed the Mutual Help program to encourage homeownership in Indian Country and the low-rent program. In 1965 Congress amended the 1937 Housing Act and for the first time expressly directed HUD to assist low-income families in areas under tribal jurisdiction, further defining these responsibilities in 1968, 1974, 1988, and 1990. In response to these congressional charges, in 1968 and 1976 HUD established new programs to try to serve the housing needs of reservation inhabitants. HUD also created the Office of Indian Housing, which was later renamed the Office of Native American Programs.

This federal assistance provided a measure of much-needed housing relief in Indian Country. By the end of 1993,

nearly 100,000 reservation housing units had been funded by HUD. Despite this, in 1996 a HUD report estimated that to serve the needs of Indian Country approximately fifty thousand new homes still needed to be built, approximately sixteen thousand existing homes needed to be replaced, and another forty thousand existing homes needed to be renovated. This demonstrated that Natives in Indian Country lived in substandard housing without adequate space, kitchen facilities, or sanitary services at a rate far exceeding that of Americans living in off-reservation locations.

Congress responded to this report and to the need for housing in Indian Country by enacting the Native American Housing Assistance and Self-Determination Act in 1996 (NAHASDA). Congress funded the act the first year by appropriating \$600 million, far exceeding the Clinton administration's request for only \$485 million.

The NAHASDA significantly expands the tribal role in developing and managing housing and mandates that federal housing assistance "should be provided in a manner that recognizes the right of Indian self-determination and tribal self-governance." Congress stated that the primary objective of the act was to serve low-income Indian families by providing affordable housing. It also stated for the first time that the United States "has assumed a trust responsibility . . . for working with tribes and their members to improve their housing conditions and socioeconomic status." Congress provides the federal housing money in block grants to be paid directly to a tribe or their Tribally Designated Housing Entity (TDHE), reducing the amount of control HUD had over these monies. The act mandates that a formula be developed for dividing the federal housing funds amongst the more than five hundred Indian tribes. To receive a grant, a tribe or its TDHE has to draft one- and five-year housing plans demonstrating how it would use federal money to serve its housing needs and how it would protect this federal investment. Tribes and TDHEs are required to undergo audits and file performance reports that HUD must review. Finally, the federal government agrees to guarantee monies that tribes or TDHEs might borrow from private lenders to develop even more housing than the limited federal funds could provide. This demonstrates Congress's wish that tribes leverage the federal funds and raise private money to help develop additional housing.

Significantly, Congress directed that Indian tribes and Alaska Natives were to work with HUD representatives to draft the federal regulations to control the operation of the NAHASDA, and they were to use the federal process set out

in the Negotiated Rulemaking Act. This collaboration had a difficult start as HUD officials tried to improperly control the process and the resulting regulations. Tribal leaders objected and took command of the process after contentious negotiations in meetings in December 1996 and January 1997. The tribes decided that the rules would be drafted by consensus rulemaking, but HUD officials predicted that rules would never be completed in the twelve months allowed for negotiations when just one objecting tribe could stop the process. After this initial struggle with HUD, however, the "neg-reg" committee got to work, and after diligent efforts it drafted regulations in just over two months. HUD published the draft rules, but it made many changes to them without informing or consulting with the tribes. The tribal representatives objected strenuously, and they forced HUD to withdraw these unilateral changes. The regulations were ultimately finalized as the tribes wished.

The NAHASDA worked fairly smoothly in its first decade. A need for more housing and for renovating existing housing in Indian Country still continues, but Congress, HUD, and Indian tribes are beginning to work cooperatively to address this serious issue. The NAHASDA was amended in 2000 to address the housing needs of Native Hawaiians.

Houston, Sam

Sam Houston (1793–1863), president of the Republic of Texas, held Cherokee citizenship and negotiated a removal treaty. When put to work as a store clerk in 1809 at age sixteen, he ran away to live with Chief Jolly, leader of the Western branch of the Cherokees, on the banks of the

Hiawassee River in Tennessee. Jolly viewed Houston as his adopted son and named him "The Raven." The Indians with whom Houston most closely associated operated large plantations with slaves and mercantile establishments.

Houston left the Cherokees in 1812 and spent eight months teaching school in Maryville, Tennessee. In March 1813 he enlisted in the U.S. Army. He fought in Andrew Jackson's campaign against the Red Stick Creek Indians in Alabama and was badly wounded at the Battle of Horseshoe Bend in 1814. After recovering, he remained in the army and became subagent to the Cherokees in October 1817. Most of Houston's assignments involved encouraging the Indians to move westward. Although Houston did not sign the Cherokee removal treaty, he conducted most of the negotiations. This treaty, signed in 1817, proved more favorable than the removal Treaty of New Echota, in which a small number of dissident Cherokees agreed to the removal of their nation. Houston felt considerable pride in removing the Cherokee to the Arkansas River Valley, a land which he thought was beyond the encroachment of white society. Houston resigned from the army and as Indian agent in 1818.

Houston then moved to Nashville, where he briefly practiced law and became a major general in the Tennessee militia. A devout Jacksonian, Houston was elected to the U.S. House of Representatives in 1823 and reelected in 1825. When his second term ended, he ran successfully for governor of Tennessee in 1827. Supposedly one of the most eligible bachelors in the country, Houston married Eliza Allen in 1829. Less than three months later, for reasons that remain unclear, his wife returned to her parents. The separation caused a public uproar. Deeply depressed, Houston resigned his post and returned to live with Chief Jolly.

On October 21, 1829, Houston became a Cherokee citizen. Knowing that the Cherokees did not trust white men and wanting to become as much like his Indian friends as possible, Houston adopted all of the manners of the Cherokees. He reportedly refused to speak English and began to wear some Cherokee garb. In 1830 he married Diana (or Tiana) Rogers, who was part Cherokee. The marriage ended when Houston left for Texas in 1832.

Houston publicly declared that he moved to Texas to seek an arrangement with the Comanches that would facilitate the peaceful settlement of the southeastern tribes in the Indian Territory. The opportunity for financial gain and a return to public life may also have been in his thoughts. He settled in Nacogdoches and practiced law. In 1835 Houston was appointed commander in chief of the Texas army and

fought in the Texas War for Independence (1835–1836) against Mexico. After the war, he served two terms as president of the Texas republic, the first beginning in 1836. After Texas was annexed into the United States, Houston was elected to the U.S. Senate (1846). He died in 1863.

Howard, O. O.

Oliver Otis Howard (1830–1909) was a career army officer renowned for his leadership in the American Civil War (1861–1865) and for his determined service in the Indian wars in the West.

Howard was born in Leeds, Maine, and graduated from both Bowdoin College (1850) and the United States Military Academy (1854). His initial experience with Native Americans came in 1857, when he was stationed at Fort Brooke, Florida, during the Third Seminole War (1855–1858). Howard was assigned the task of finding Chief Billy Bowlegs to offer a peace agreement, but Bowlegs surrendered before a settlement could be discussed, and the diminished Seminoles were pushed into the Everglades.

Howard returned to West Point in September of 1858 to become an instructor of mathematics. He served in the Civil War as a corps commander, participating in many significant battles, and was awarded the Congressional Medal of Honor for his heroic actions at Fair Oaks.

After the Civil War, General Howard championed freedom and equality for former slaves. He became the director of the Freedman's Bureau and helped found the Institute for the Education of Preachers and Teachers in Washington, D.C., which was later renamed Howard University in his honor.

In 1872 President Ulysses S. Grant, wishing to bring an end to the Apache Wars (1871–1873) in southeastern Arizona, dispatched Howard, as Indian commissioner, to make peace with Cochise, chief of the Chiricahua group of Apaches. Howard convinced Cochise to agree to abstain from attacks in exchange for reservation land in eastern

Arizona. The peace, however, did not last. Cochise died in 1874 and his people were sent to another reservation. Still, Howard's compassionate efforts brought peace to a number of tribes including the Apaches, Papagos, and the Pimas, and he helped create new reservations for Native Americans in Seattle and throughout the Northwest.

In the year of Cochise's death, Howard was placed in command of the Department of the Columbia. He traveled west to Oregon's Fort Vancouver in 1877, where he attempted to persuade a Nez Perce band led by Chief Joseph to leave their homeland in the Wallowa Valley for the reservation assigned to them in Lapwai, Idaho. In spite of his sympathies for Chief Joseph and his band, Howard did not hesitate to send troops against them after Nez Perce warriors killed several white settlers. After Chief Joseph's surrender, Howard argued, without success, that the Nez Perce should be allowed to keep their homeland. Howard became nationally renowned for his relationship with Chief Joseph, whom he greatly respected.

Howard's last career dealings with Native Americans came in 1878, when the army sent him to quell a Bannock uprising in the Pacific Northwest. The Bannocks, who had left their reservation at Fort Hall, Idaho, were joined by Cayuse, Umatilla, and Paiute warriors in raids against white settlers trespassing on Indian land. Howard's troops forced the Native forces to surrender. In 1879 Howard led troops against a group of dissident Shoshones and Bannocks known as the Sheepeaters and forced them back to their reservation.

In 1881 Howard left the Department of the Columbia to return to West Point as superintendent. The next year he came back to the West to serve as commander of the Department of the Platte, an area that encompassed Iowa, Nebraska, Utah, and portions of Montana and Dakota. He was promoted to major general in 1886 and ordered to take command of the Department of the East. In 1887 he worked with General George Crook to secure the release of Apaches who were being held prisoner in Florida.

In his dealings with Native Americans, General Howard tried to protect peaceful Natives from the worst abuses of the white settlers. However, he also believed that lasting peace was only possible if Native Americans settled on their reservations and prepared to assimilate into American society.

Hump

A skilled warrior, Miniconjou Lakota chief Hump (c. 1838–1908; also known as Etokeah) was instrumental to Sioux success in several battles between the Lakotas and the U.S. Army and is credited with teaching Crazy Horse warfare tactics. Hump participated in Red Cloud's War for the Bozeman Trail (1865–1868), helping to develop decoy techniques to lure soldiers or emigrants into planned ambushes.

During the resulting Sioux attack on Fort Phil Kearny in Wyoming, often called the Fetterman Massacre, Hump led a dangerous decoy mission in which he lured eighty-one soldiers into a fatal ambush along Peno Creek, three miles from the fort. The battle helped bring about the Fort Laramie Treaty of 1868, in which both sides agreed to peace and the establishment of the Great Sioux reservation. Hump did not sign this treaty; therefore, the U.S. considered him a hostile Indian leader. Hump continued to resist U.S. settlement, employing similar decoy tactics in the 1876 Battle of the Little Bighorn, during which he hid a division of

Miniconjou in a ravine and used them to trap Colonel George Custer's soldiers. Only twenty-nine at the time of this fight, Hump was wounded early, preventing further participation during the battle.

In 1878 Hump's band of four hundred camped on the Cheyenne River. His participation in the Ghost Dance revitalization movement concerned the military, so Hump's former acquaintance, Captain Ezra P. Ewers of the U.S. Army, convinced the chief to move his band to Pine Ridge reservation. After the Wounded Knee Massacre in 1890, Hump traveled to Washington, D.C., with other chiefs to lobby for peace and improved reservation conditions.

I

Article 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace and its honor is hereby pledged to keep it. The Indians desire peace and they now pledge their honor to maintain it.

Ickes, Harold L.

Harold L. Ickes (1874–1952) served as secretary of the interior from 1933–1946, making him the longest-serving holder of the office. As secretary, Ickes was a strong supporter of John Collier’s “Indian New Deal” reforms.

After graduating from the University of Chicago Law School, Ickes became involved in reform politics on the state and municipal levels in Illinois. In the 1920s, in response to Secretary of the Interior Albert B. Fall’s strongly assimilationist policies, Ickes joined with other reformers in efforts to preserve the cultural autonomy, land rights, and economic assets of tribal peoples. He was a charter member of the American Indian Defense Association. When President Roosevelt was elected, Ickes lobbied to be appointed commissioner of the Office of Indian Affairs (OIA). When he was offered the position of secretary of the interior, he strongly advised that John Collier be named commissioner of the OIA. Ickes and Collier achieved several significant reforms in federal Indian policy, most notably the passage of the Indian Reorganization Act in 1934. Ickes also formally ended the program of allotment in severalty, which over the course of more than fifty years had deprived the Indians of over half of their original reservation lands.

After leaving the Department of the Interior, Ickes wrote many works advocating conservation and minority rights and strongly criticized the termination program, which sought to end all special federal responsibility for the Indians.

Imperium in Imperio

Imperium in imperio is a Latin term that means a sovereign state within a sovereign state, or an independent order within a state. The original usage of the phrase implied an internal political force that threatened the nation. The word “imperium,” understood as absolute or indivisible power, makes the phrase somewhat of a contradiction. Some scholars consider an individual state within the United States as an imperium in imperio, for it retains limited powers of sovereignty within the greater union.

Opponents of tribal sovereignty, such as lawyers who supported the removal of the eastern Indian tribes across the Mississippi, used the imperium in imperio argument to argue against the principle that the Indian tribes were sovereign nations. They contended that Article 4 of the Constitution, which prohibits the government from establishing a new state within an existing state, was included in the document to implement the imperium in imperio prohibition. Advocates of tribal sovereignty, on the other hand, pointed out that many, if not most, of the tribal nations predated the establishment of the states and the federal union.

Indian, Definition of

The term “American Indian” references a political status involving unique entitlements and laws. The question of who may claim this status is regulated by both tribal and federal law. In the first case, American Indian tribes use legal definitions to define and limit their citizenry. These definitions regulate political rights within the tribe, such as voting and office holding; they may also determine who shares in tribal revenues, benefits from tribal services, or lives on a reservation.

The fundamental right of tribes to define their membership any way they choose was determined in *Waldron v. United States* (1905) and clarified in *Santa Clara Pueblo v. Martinez* (1978). About two-thirds of all federally recognized tribes of the contiguous United States specify “blood quantum” (degree of tribal ancestry) in their citizenship criteria, with one-fourth blood degree being the most frequent minimum. The remaining one-third of tribes often require only that any citizen be a lineal descendant of another tribal citizen. Some tribes take other factors into account, including residency or community participation.

The federal government has specific purposes for which it must distinguish Indians from non-Indians. Federal definitions of American Indians determine eligibility for services—such as healthcare—resulting from treaties and agreements signed with the government. These services were often promised as compensation for land and resources that Indian nations historically surrendered, often against their will. Federal definitions also affect the exercise of economic rights, such as access to hunting and fishing areas. Finally, federal definitions determine who may benefit from important legal protections. Notable among these are the Indian Child Welfare Act of 1978, which helps ensure cultural continuity for children during foster care or adoption, and the Native American Graves Protection and Repatriation Act of 1990, which safeguards Indian peoples’ right to reclaim ancestral human remains from federally funded facilities. The Indian Arts and Crafts Act of 1990, aimed at protecting Native artists from unfair competition, forbids anyone except tribal citizens from marketing artwork as “Indian produced.”

Because the U.S. Constitution uses the word “Indian” without defining it, Congress has made its own definitions on an ad hoc basis, resulting in considerable variation in who is considered an Indian under different laws. A 1978 congressional survey discovered thirty-three separate definitions of “Indian” in different pieces of federal legislation, and more have been created since. Some federal laws accept tribal citizenship as a criterion of identification, but may also invoke other criteria. Other laws specify no definition of Indian persons, so the courts must determine to whom they apply. Given the wide variation in legal definitions, individuals who are considered Indians for tribal purposes may not be considered Indians for federal purposes; the converse is also true.

Indian Adoption Project

The Indian Adoption Project (IAP) was part of an assimilationist program in the mid-twentieth century that placed thousands of Indian children in non-Indian homes. The program challenged the dominant policy of placing children with adoptive parents of the same race and implemented what IAP director Arnold Lyslo considered the more enlightened concept of transracial adoption. The IAP was fueled by studies showing that many Indian children living on reservations experienced great poverty and a lack of social services. Funded by the Bureau of Indian Affairs and administered by the Child Welfare League of America, a private organization, the project lasted from 1958 to 1967. Many adoption agencies administered the IAP, especially those who specialized in placing children of color. The pro-

gram put 395 Native children from western states in predominantly non-Native homes in states in the East and Midwest.

Indian activists criticized the IAP's policy, calling it another federal attack on Native communities and culture. IAP opponents organized a successful effort to pass the Indian Child Welfare Act in 1978 that made transracial adoptions difficult. In 2001 the Child Welfare League of America formally apologized for its role in the IAP. While a study of approximately 25 percent of families who adopted through the IAP suggested that children and families adjusted well, the project perpetuated the assimilationist ideals exemplified by the boarding schools that contributed to the break in transmission of Native cultural traditions.

Indian Agents

Indian agents were appointed by the United States to represent the interests of the government to the Indian peoples under their jurisdiction. The agents were also responsible for looking after the security and interests of the Natives under their charge, for assisting Indians with their efforts to acculturate to the majority American society, for dispensing rations and funding to the tribes, and for providing the government with information about the status of the tribes.

The Colonial Origins of the Term

Although individuals such as missionaries and traders had sought to bridge the gap between Native and European cultures since contact, usage of the term "agent" in regard to an individual emissary to a specific people or group of peoples seems to have originated in the English colonies during the eighteenth century. It was disputes arising out of trading activities that necessitated the creation of the agent system. While trade carried the potential for great wealth and status for both the English and the Indians, it also generated many instances of fraud, hostility, theft, and violence on the part of both white traders and their Indian contacts. In addition to the potential of trade disputes to erupt into full-scale war-

fare, the dishonest practices of some traders also deprived colonial governments of much-needed revenue. In the early eighteenth century, many English colonies made an effort to prevent such occurrences by decreeing that only those holding an official license granted by the colony could trade with the local Indian groups. The individuals appointed to oversee these licensing systems came to be known as either Indian commissioners or agents.

By the middle of the century, it was clear that the way Indian relations were being conducted differently by each individual colony was inadequate. In 1755 the British government instituted the Indian policies that provided the basic framework for U.S. Indian policy after the American Revolution. In April of that year, the crown appointed Sir William Johnson, an Irish-born trader and landholder, as superintendent of Indian affairs for the Northern Department. Johnson, who had moved to New York's Mohawk Valley, worked many years to cultivate a relationship with the neighboring Six Nations of the Iroquois Confederacy and was particularly close to the Mohawk branch of the group. His appointment as superintendent came in large part as a reward for his service in securing an alliance between the Iroquois and the British during the early phases of the Seven Years' War (1754–1763). He held the position until his death in 1774 and by that point had gained so much influence among the Six Nations that most of them remained loyal to the British during the American Revolutionary War (1775–1783).

One year after Johnson's appointment, the British government appointed Edmond Atkin as superintendent of Indian affairs for the Southern Department. In 1755 Atkin wrote an influential report on the condition of colonial Indian relations ("Indians of the Southern Colonial Frontier") that suggested how the British government might pull the southern tribes away from their relations with Spain and France. He urged the government to subsidize the deer-skin trade and centralize colonial trade regulations to establish good diplomatic relations. Most of the Indian tribes in the East, however, either allied with France or remained neutral. Atkin resigned in 1761 and was replaced by John Stuart. Stuart, a South Carolina merchant of Scottish origin, was largely responsible for securing Cherokee loyalty to the British during the American Revolution.

The British tasked the superintendents with regulating trade, negotiating disputes, distributing gifts to maintain loyalty, and enlisting the aid of Native warriors during times of war. While this worked better than the previous decentral-

ized system of relations, the superintendents often found themselves in disputes over jurisdiction with both colonial governments and British military commanders. Despite these difficulties, the basic structure, vocabulary, and even some of the plans developed under the British superintendent system were subsequently adopted by the United States.

Revolutionary Era

The use of Indian agents in the early development of the United States began almost exactly one year before the colonies declared their independence. Acutely aware of the need for a coherent Indian policy if they were to achieve success in their war with Great Britain, the Committee on Indian Affairs of the Continental Congress issued its first report in July of 1775. The report divided responsibility for maintaining friendly relations with Indians among three departments: the Southern Department, which was responsible for all Native groups from the Cherokees southward; the Northern Department, which oversaw the Six Nations of the Iroquois and the groups to their north; and the Middle Department, which looked after all the Native peoples located between the other two departments. Several commissioners presided over each department. The commissioners in turn appointed as many Indian agents as they saw fit.

In reality, the job of these agents had little to do with any kind of comprehensive Indian policy on the part of the Continental Congress. Instead, their primary task was to monitor the activities of British agents and prevent them from convincing Indians to fight against the Americans. More often than not, they failed to do this, and the overwhelming majority of Native peoples who fought in the Revolutionary War did so as allies of the British. A comprehensive system in which Indian agents played a large role in day-to-day relations with Native people did not develop until after the ratification of the U.S. Constitution.

Early Republic

George Washington included the implementation of a comprehensive Indian policy as part of his agenda during his first term as president. In a 1792 message to Congress, Washington cited the employment of a professional group of Indian agents as a vital piece of any successful Indian policy. He charged these agents with two tasks he considered critical to maintaining a lasting peace among Indians and Americans in the western reaches of the young nation. The first was to prosecute crimes committed by whites against

Indians. Washington believed that the majority of violence committed by Indians occurred as reprisals against theft, fraud, abuse, and murders perpetrated against them. The second pillar of his Indian policy was the creation of firm economic ties between the United States and Indians. Indian agents were to play a very large role in this by setting up and maintaining trading houses where Indians could trade with whites. At these trading houses, the agents would maintain vigilance against unscrupulous trade activities designed to defraud the Indians. Despite vigorous opposition from those whose finances Washington's program might adversely affect, Congress eventually put nearly all of the elements of the plan into effect (if only on a temporary basis) in the Trade and Intercourse Act of 1793. When the program came up for renewal in 1802, Thomas Jefferson pushed for an end to its temporary status and Congress permanently renewed it. Indian agents were now a permanent fixture in U.S. Indian policy, and while Washington's system was abandoned during the era of Indian removal in the 1830s, Indian agents remained a fixture in U.S.-Indian relations. By the time of removal, agents were also heavily involved in instructing Indians in the government's efforts to "civilize" them. For example, Benjamin Hawkins, an agent for the Creeks, established a model farm to teach his Native charges how to practice Anglo-American style agriculture.

By 1818 there were fifteen agents and ten subagents in the United States. That year, Congress established a formal process for agent selection: they were to be appointed by the president and confirmed by the Senate. When the factory system was eliminated in 1822, the trade and intercourse act passed that year assigned agents the responsibilities of issuing licenses to traders, eliminating the trade in whiskey, and making reports on their activities to the War Department.

Removal Era to the Turn of the Century

Even before the adoption of the Indian Removal Act of 1830, Indian agents found their authority diminished by several conflicting programs, societal attitudes, and overlapping official jurisdictions. In 1819 Congress created a program that encouraged the creation of schools to "civilize" Native Americans that resided near the edges of white settlements. While the program itself did not adversely affect Indian agents, its implementation served to fragment their authority. President James Monroe decided to leave the administration of the schools to various charitable organizations rather than the federal government. This placed the school system outside the jurisdiction of the agents who had been tasked

with oversight of all government activities in regard to Indians. This both confused Indians as to who was really in charge and weakened the agents in their eyes. In addition to conflicts with the charitable and religious organizations that ran the schools, the agents also found their authority increasingly challenged by state governments, military personnel, and the ever-increasing stream of settlers in the West. Also, though they had nominally reported to the secretary of war since the Washington administration, Indian agents had never been legally prescribed to any specific office of the government's growing bureaucracy. This placed them at a distinct disadvantage when challenged by members of Congress, military officers, or state officials.

Finally, with the advent of Indian removal, Congress officially created the position of the commissioner of Indian affairs in 1832 and placed it under the jurisdiction of the secretary of war. At that time, the commissioner oversaw eighteen agents and twenty-seven subagents. Two years later, Congress went even further. As part of a complete reorganization of Indian affairs, new legislation detailed the specific duties of Indian agents, regulated their number and jurisdictions, and streamlined the lines of authority among them. The need for Indian agents to effectively administer the government's removal program was the motivation for much of this reorganization. Convincing Native people to relocate from the East to reservations west of the Mississippi River became one of the primary tasks of Indian agents during the removal period.

In addition to their new mandate as managers of Indian removal, the agents also experienced other significant changes during the nineteenth century. In 1849 Congress removed Indian affairs from the War Department and placed it under the jurisdiction of the newly established Department of the Interior. This move reflected another major change in the direction of Indian policy in the United States. As Americans poured into the lands west of the Mississippi River in the second half of the century, the focus of Indian policy correspondingly shifted to that portion of the country. In 1851 Congress reorganized the territorial distribution of agents by moving many of their offices to the West, as most of the government's attention was now focused on subduing and moving to reservations the Plains tribes and those in the Southwest and the Pacific Northwest.

The Sand Creek massacre, the United States–Dakota War of 1862, and reports of corruption in the Office of Indian Affairs (OIA) brought public scrutiny to Indian affairs. After the Civil War (1861–1865), a group of Christian philan-

thropicists and activists, often referred to as the "Friends of the Indian," called for reform of Indian policy and the OIA. As a result, postwar Indian relations fell increasingly into the hands of Christian missionaries and groups, and Indian agents found themselves tasked with converting Native Americans to Christianity. Eventually, these missionary groups gained almost complete authority over Indian affairs with the advent of President Ulysses S. Grant's Peace Policy.

When he first became president, Grant had planned to place army officers in the agency positions. In the spring of 1869, however, a Quaker delegation convinced Grant to allow their members to serve as agents at some of the reservations in Nebraska, Kansas, and in the Indian Territory. Soon after, Grant turned over the administration of all Indian agencies to a variety of Christian religious denominations. His decision had been swayed by the fact that troops under Colonel E. M. Baker had massacred a number of Piegan Indians in January of 1870, which brought the army's role in Indian policy into public question, and by arguments from the Board of Indian Commissioners—a group dominated by religious reformers—that having some agencies run by Christian missionaries and others by professional warriors was philosophically inconsistent. Fearing that removing the military agents would bring back those who earned the position simply because of their political connections, Grant gave the churches almost complete control over the selection, dismissal, and evaluation of Indian agents.

In the end, denominational control of the agencies failed to produce the results Grant and the government desired. Many Indian agents, regardless of their backgrounds, showed little concern for anything but their own advancement and managed the affairs of their agencies very poorly. The quasi-partnership between the federal government and the religious community devolved into battles over authority and bureaucratic turf. Additionally, the various religious denominations came to view their agency appointments as a right to convert the Indians to their particular brand of Christianity to the exclusion of other denominations. Finally, the outbreak of wars on the Plains in the 1870s brought Indian affairs under the increasing jurisdiction of the U.S. military, and Indian agents now found themselves under the command of military commanders rather than religious organizations. By the end of the wars in the 1890s, with appointments from the military and the churches both discredited, the position of Indian agent had once again become one of the spoils of victory distributed as payment to political supporters of the current administration.

The End of the Indian Agent System

After the U.S. cavalry massacred a large group of Sioux men, women, and children at Wounded Knee in 1890, many reformers began to clamor for the inclusion of Indian agents in the civil service system to prevent the abuses of self-interested politicians, conflicts among overzealous religious leaders, and the use of unnecessary violence against Native communities. Finally, during the presidency of Theodore Roosevelt, a champion of the civil service approach, Indian agents were replaced with civil servants known as superintendents.

Indian Appropriations Act (1871)

With the Indian Appropriations Act of 1871 Congress ended its practice of using diplomatic treaties to deal with Indian tribes and dissolved federal recognition of the tribes as sovereign political bodies with whom the United States would directly negotiate. The act specifically stated, “Provided, That hereafter no Indian nation or tribe within the territory of the United States shall be acknowledged or recognized as an independent nation, tribe, or power with whom the United States may contract by treaty.”

Under the new legislation, executive order or congressional legislation was used to institute policy with a specific tribe. The measure did not invalidate established treaties, but it did suggest that the U.S. government held the power to manage Indian affairs without tribal consent. The provision also implied that the commissioner of Indian affairs would in the future wield absolute economic authority over the tribes through supply disbursement and approval of all contractual agreements. For lawmakers, the measure sought to avoid past mistakes in negotiations that often resulted from the assumption that a tribal chief spoke for an entire Indian nation. The provision also provided the House of Representatives, whose authority existed only in the appropriation of funding for the tribes, greater responsibility over Indian affairs to counter the Senate's exclusive treaty-making power. Many Native Americans, however, saw the legislation as another step toward the dismantling of their culture and the planned assimilation of their people into the majority society.

Indian Art Law

In the early twentieth century, officials in the Office of Indian Affairs began to appreciate the aesthetic and economic value

of Native American arts and crafts and saw Indian artistic work as a way to help Native people become more self-sufficient. By the 1920s, proponents of the idea of marketing Native art realized that the government needed to take action to protect Native artists and the Native art market from unscrupulous individuals and groups passing off items produced by non-Indians as Indian artwork. The U.S. government tried several measures to stem the fraudulent trade in the twentieth century, but it was not until 1990 that Congress would enact comprehensive legislation to try to guarantee and protect the authenticity of Indian-made arts and crafts.

Public interest in protecting Native rights crystallized in 1928, when many Americans became concerned with the general plight of Native Americans. That year, the *Meriam Report*, which itemized the poor conditions and lack of economic opportunity on reservations, sparked an outcry for reform. One remedy reformers suggested for improving conditions was to revitalize Native craft industries. Lewis Meriam, the chair of the Meriam Commission, tasked University of Oklahoma history chair Everett Dale with assessing the market for Indian-made goods. According to Dale, it looked promising, if the government could guarantee the genuineness of the product.

It was not the first time that official labeling was considered for Indian products. In 1910, Charles Davis, an Office of Indian Affairs farming supervisor, produced an official linen tag for Navajo-made blankets identifying the makers as reservation Navajos and the material as Navajo wool. In 1928, Secretary of the Interior Roy West commissioned James Frazer, designer of the Indian-head nickel, to produce a trademark of Indian-product authenticity. Frazer produced an Indian war bonnet design, but it never made its way onto Indian products; the U.S. Patent and Trademark Office (PTO) rejected the petition for it on the ground that the Department of the Interior was not a qualified applicant under trademark rules.

Depression-era relief packages included provisions to bolster the Indian-art industry by cultivating consumer demand through improved product quality and authenticity, with authenticity reflected in how a product was made, rather than who made it. After public hearings about product standards and measures, the Commission on Indian Arts and Crafts was formed in 1934 and identified three market dangers. Two concerned losses in traditional Native artistic values, and a third acknowledged the ominous advance of mechanized domestic curio factories capitalizing on the lucrative tourist trade. Although these factories employed

some Indian labor, they also hired Anglo and Hispanic workers. Again, a distinguishing mark guaranteeing genuineness and quality was recommended.

Market protectionism expanded during John Collier's tenure as commissioner of Indian Affairs, 1933 to 1945. One of his accomplishments was the establishment of the Indian Arts and Crafts Board (IACB) in August 1935. Beyond setting stipulations for board membership, duties, and a funding request, the act creating the board—the Indian Arts and Crafts Act of 1935—provided criminal penalties for Indian-product misrepresentation, counterfeiting, and trademark abuses. In the fifty years that followed, however, not a single case was prosecuted under the act.

Consumer demand for Indian arts and crafts hit an all-time high during the 1970s and 1980s as a result of successful promotion, Native art shows, movies, and a growing public interest in the history of American Indians. Where demand for Indian art increased, however, fraudulent competition followed. By 1985, a flood of fake products was pouring into the United States. Though counterfeit Indian jewelry was the primary source of concern, other imitated goods included Plains beadwork, Navajo rugs, Pueblo pottery, Southwest Indian baskets, and Hopi kachina dolls. These imitations not only led to Native revenue losses, but also threatened to erode consumer confidence.

Congress passed the Indian Arts and Crafts Act (IACA) of 1990, creating a market-entry barrier and compelling Indian artists to qualify themselves by providing tribal identity cards. In part, the law was designed to eliminate consumer fraud and inhibit foreign imitators by constructing brand identification through “Indianness.” The IACA of 1990 sought, like the 1935 act, to protect Indian-made products by making it a felony to “offer or display for sale or sell any good in a manner that falsely suggests it is Indian produced, an Indian product, or the product of a particular Indian or Indian Tribe or Indian-arts-and-crafts organization resident within the United States” (*Code of Federal Registration*, title 25, sec. 309.1). Individual violators faced fines of up to \$250,000 and five years in prison. Wholesale and retail offenders could suffer fines up to \$1,000,000. If convicted a second time, the penalties increased. In 2000, an amendment provided victims of fraud with the right to bring civil court suits against violators of the act.

California attorney William J. Hapiuk Jr. (2001) notes that the first casualty of the IACA was not the type of egregious offshore, Indian art counterfeiter that the law aimed to punish, but the Museum of the Five Civilized Tribes (in

Muskogee, Oklahoma), which temporarily closed its doors for fear of becoming a test case of the law. The museum staff was certain of their arts' Indian origins, but feared that many artists might not meet the IACA's definition of "Indian." The museum reopened after federal reassurance that the law targeted commercial offers for sale, not displays or possessions.

After passage of the IACA, critics complained that its enforcement was primarily left to private and semi-private gatekeepers—that is, museums, fairs, trade shows, retail shops, and art galleries. These ad hoc police became the arbiters of what art was legal, and, as guardians of what was legitimate Indian art, basically subjected some Indian artisans to "identity crises," as the artisans were forced to seek genealogical and legal proof of their rights to proclaim themselves Indians.

Proponents of the law noted that the act was never intended to intimidate museums or launch witch hunts based on Indian identity. The regulation came on the heels of a 1985 Department of Commerce report estimating annual sales of Indian jewelry and crafts to be between \$400 million and \$800 million. Yet the same report stated that 20 percent of those sales involved fake products passed off as Indian-made items. In addition, many such counterfeit products originated in foreign countries—primarily Mexico, Taiwan, and the Philippines—and were selling for half as much as genuine items. Although cheap, offshore products in general plagued many American manufacturers, imitating American Indian goods seemed to touch a nerve signaling that something beyond profits was at risk. Offshore fakes were assaulting a national symbol.

Supporters of the act argued that the IACA's architects had been justified in adopting strict definitions of who qualifies as an Indian to halt product forgery. In doing so, the act had to identify the party or parties affected by such fraud, and if the legislation defined "Indian" too broadly or too vaguely, it would open the door to counterfeiters. The delineation—established as members of federally and state-recognized tribes—encompassed most of the artists the act intended to protect, but the implications of IACA's definition of "Indian" threatened to spill over into how the government identified American Indians for other purposes. Some warned that just as federal legislation gradually gave birth to the idea of Indian blood quantum, the manner in which the IACA defined "Indian" might affect how tribes and the rest of the federal bureaucracy applied the term.

Federally or state-recognized tribes have the prerogative to say who is, or who is not, a member, an essential aspect of

tribal sovereignty rights determined by the ruling in *Santa Clara Pueblo v. Martinez* (1978). Internal tribal feuding sometimes leads to contentious manipulations of tribal enrollment rules. To include people displaced by tribal rules of membership, the act allows tribes to certify artisans, thus recognizing tribal descent without awarding full tribal enrollment benefits. To qualify, artists must receive written documentation from tribal governing bodies indicating that they are certified artisans. The "Indian-artisans" clause has not, however, served its purpose well. Whether intimidated, uninformed, or resentful over the certification process, many artists have not approached their tribes to secure the status. For those who have applied, few petitions have survived tribal politics, misunderstandings of the certification process, or tribal administrative inertia.

The IACA provides guidelines for enforcement, but the ways and means by which violators can be prosecuted are a weakness of the legislation. IACA oversight fell to the IACB, an agency woefully understaffed and underfunded since its inception in 1935. Under the 1990 act, violations must be reported to the IACB, which, lacking its own investigative resources, then turns the cases over to the Federal Bureau of Investigation (FBI). If the FBI deems a claim credible, the case is then prosecuted by the Justice Department. By 2000, only two criminal indictments had been levied. The IACA also allows for civil suits by an enrolled Indian, an Indian tribe, or an Indian arts and crafts organization, but they must be brought before the U.S. attorney general upon the request of the secretary of the interior. At this writing, the Indian Arts and Crafts Amendments Act of 2007 had been introduced into the Senate with the goal of allowing federal agencies, in addition to the FBI, to undertake IACA-related investigations and enforcement. Some observers contend, however, that government investigators are already overburdened by other national priorities and that the Indian Arts and Crafts Board needs its own policing force and a larger staff to implement the IACA.

In the Indian Arts and Crafts Enforcement Act of 2000, Congress had adopted amendments to the IACA to clarify the definition of Indian products and who qualified as an Indian. Of equal importance, the amendment permits individual Indians, Indian tribes, and Indian-operated craft organizations to bring directly civil suits against violators. It also increases civil penalties by offering treble damages as well as court-awarded punitive damages and attorney fees.

The Ho-Chunk Nation (incorporated in Wisconsin) filed more than a dozen civil cases against retailers and non-

Indian craft producers through their art organization, Native American Arts. Courts, wrestling with how to apply the IACA, have sought precedents in other laws, such as the Lanham Trademark Act of 1946. In one case, Native American Arts sued the Waldron Corporation for manufacturing and selling jewelry identified as being Indian but that was actually designed by a non-Indian. Product labels identified products as "Navajo," "Crow," and "Zuni," and accompanying product tags attached the merchandise to tribal lore without authenticity disclaimers. Two important precedents emerged from *Native American Arts, Inc. v. The Waldron Corporation* (7th Cir. 2005). First, the court held that the 1990 IACA was constitutional and second, it declared that the act's regulations made the word "Indian" a trademark under the commercial circumstances set out in the law.

Some legal analysts argue that the most promising instrument for discouraging imitators is the Indian Arts and Crafts Board's ability to trademark Indian products. The 1935 act enabled it to register a "genuineness and quality" trademark with the PTO, without charges to individual Indians or tribes transfer use rights. This action is outside the Lanham Trademark Act, which restricts trademark use to an individual or a manufacturer. The board can, however, based on the Lanham act, issue a certification mark, which is a "special creature" not used by the owner but a guarantee that certain standards are met. The certification mark can indicate origin, describe material and mode of production, and identify laborers as members of a union or organization. Public comments solicited during the 2000 amendment process garnered a recommendation (which was added to *Code of Federal Regulations*, title 25, sec. 309.8) that artists authenticate their own work with labels, hangtags, or provenance cards bearing their name, tribe, and enrollment number as a form of self-certification within reach of the law.

Subjecting the IACA to trademark tests has had risks for Native artists. In 1997, the Trademark Trial and Appeal Board of the PTO reviewed a petition to register the trademark Indian Nation Leather Co., a distributor of equestrian equipment. On first review, examining attorneys disallowed the petition on two breaches: under the Lanham Trademark Act for "falsely suggesting" a connection with Native Americans and under IACA regulation for "falsely suggesting" the goods were Indian produced. A review court reversed the decision, finding that it was not established in the review that "Indian Nation" is uniquely descriptive of Native Americans. The court noted that "Indian Nation"

appears in the names of a range of other enterprises, including aviation companies and power and gas company names, and an Oklahoma turnpike. Although some civil and appeals courts have ruled that "Indian" is a trademark (in certain circumstances), the PTO has not necessarily agreed on its exclusiveness.

The most significant deterrent the IACA seems to have rests in legal stature alone. Respectable art dealers, galleries, and museums and undocumented Indian artists might weigh the possible punitive consequences and then choose to accept the act's definitions and comply with the law. On the other hand, the unscrupulous dealers that the law is meant to deter may weigh the risks of prosecution and then ignore the law. If the goal of lawmakers was to decrease offshore knock-offs, the government could apply existing laws, such as federal customs regulations requiring that imported products be labeled with their country of origin in conspicuous places and that the labeling be legible, indelible, and permanent ("Country of Origin Marking," *Code of Federal Regulations*, title 19, sec. 134.43c-d). The Federal Trade Commission (FTC) also protects consumers from fraud, deception, and unfair business practices, and consumers themselves can report violations directly to the FTC for investigation rather than take the circuitous route through the Indian Arts and Crafts Board. Prior to the IACB and the 1935 act, the government was already prosecuting companies for trafficking jewelry falsely labeled "Indian," "Navajo," and "Product of American Indians." The FTC had also issued cease and desist orders against border-town sweatshops selling tourists machine-made jewelry fraudulently passed off as Indian. Customs agents and lawmakers of the 1930s were not challenged, however, with the same national concerns as agents operating in this century. For customs inspectors, Indian art forgeries are of far less pressing concern than instruments of terrorism, drugs, or tainted foods.

Indian Arts and Crafts Act (1990)

During the early twentieth century, some vendors sold arts and craftworks including jewelry, pottery, baskets, carved stones, woven rags, kachina dolls, and clothing to consumers under the false pretext that these items were produced by Indian tribal members or certified Indian artisans. In an effort to promote American Indians' economic development and expand their marketing opportunities, the Indian Arts and Crafts Board adopted an act in 1935 that established criminal penalties for individuals who sold these misrepresented goods. However, the law failed to deter individuals from selling imitation Indian arts and crafts. In response to the growing sales of misrepresented Indian items, the board passed the Indian Arts and Crafts Act of 1990, which made it illegal for individuals, organizations, or businesses to sell and market imitation Indian arts and crafts within the United States.

Under the new law, vendors and businesses within the United States receive civil and criminal penalties if they display, offer, or sell an art or craftwork in a manner that falsely suggests an Indian, Indian arts and crafts organization, or Indian artisan created the item. The act covers all Indian traditional and contemporary arts and craftworks produced after 1935. For first time violators, an individual can face a fine of up to \$250,000 or five years in prison. If a business violates the act, the company can receive a fine of up to \$1,000,000. The act has proven successful, as the amount of imitation Indian arts and craftworks decreased during the late twentieth century.

Indian Business Development Fund

The Indian Business Development Fund, also known as the Indian Business Development Program, was created in 1971 by the Bureau of Indian Affairs (BIA) to address the lack of entrepreneurship in Native communities and tasked with encouraging new businesses, expanding current businesses, and creating jobs. The fund, with an initial appropriation of just over \$3 million dollars, offered grants to individuals, tribes, and associations that might have had difficulty obtaining loans due to lack of capital, and provided up to 40 percent of the costs of business development. In its first year of operation, the fund helped create 241 businesses and aided in the expansion of another 143.

The program was dropped after its second year, following questions about whether the bureau had the authority to operate it. The fund was reestablished in 1974 under the Indian Finance Act, and between 1972 and 1977, Native business ownership grew by 300 percent. The failure rate of these enterprises was high, however, and the ones that did survive were often in urban areas or near transportation centers. As a result, many in Congress criticized the program, while Native leaders suggested that officials did not provide sufficient technical support.

Despite these complaints, the program continues to be an important source of economic development for Native American enterprises. Congress appropriated over \$10 million for the fund between 1986 and 2004. As of 2008, grants of up to \$100,000 were available to individuals and up to \$250,000 for tribes.

Indian Child Welfare Act (1978)

With the Indian Child Welfare Act of 1978 Congress attempted to address the serious problems that arose from state agency mistakes, cultural insensitivity, and overzealousness in the adoptions and foster care placements of Indian children. Studies had convinced Congress that states were too aggressive in removing Indian children from their homes and cultures and turning them over to non-Indian adoptive and foster parents. Congress recognized that tribes have a particular interest in their children because "there is no resource that is more vital to the continued existence and integrity of Indian tribes" and that the federal government had a responsibility to protect and preserve these relationships.

Consequently, Congress granted tribal courts exclusive jurisdiction over adoption and placement decisions for Indian children living on reservations. It also granted tribes concurrent jurisdiction with state courts for Indian children not living on reservations. Even when a state court exercises its concurrent jurisdiction, however, tribes and Indian parents have several safeguards available to them. In essence, Congress recognized that the best decision makers to determine the futures of Indian children are tribes and tribal courts.

In addition, Congress established heightened requirements of proof before Indian children can be placed in foster care or before parental rights can be terminated. It also said that states must give full faith and credit to tribal court child custody proceedings, placement standards for Indian children must meet the prevailing social and cultural mores of the Indian community, and indigent Indian parents have the right to court-appointed attorneys.

Indian Citizenship Act (1924)

On June 2, 1924, President Calvin Coolidge signed into law the Indian Citizenship Act. Sponsored by Representative Homer P. Snyder of New York, the act granted full citizenship to all noncitizen Native Americans born in the United States. Prior to its enactment, two-thirds of all Indians had already gained citizenship through other means, such as military service, marriage, land allotments, or special dispensation through an act of Congress. Military service, particularly during World War I (1914–1918), had provided a major route to citizenship. Not faced with being placed into segregated units like African Americans, Native Americans had demonstrated an ability to integrate into the general military society. As such, policy makers were eager to grant citizenship to Indians both as a reward for their service and as a means to assimilate them into the American mainstream.

What made this legislation different from previous measures was that it conferred citizenship without mandating any preconditions for attaining it. In theory, this enfranchisement extended to Native Americans all constitutional rights under the Fourteenth Amendment. However, it did not guarantee equality, as it failed to eliminate long-standing prejudices and economic disparity. These shortcomings were more acutely evident in terms of voting rights guaranteed by the Fifteenth Amendment. At the time the act was passed, the Constitution left it to individual states to decide who could vote, and through various loopholes Indians routinely were denied the right. They were treated still as federal wards rather than competent citizens with a vested interest in the electoral process.

Although it granted U.S. citizenship and all that entailed, the act strictly stated that by no means did its passage infringe upon the rights of Indians in tribal or property matters. The language of the act clearly expressed the desire to preserve the status of Indians under federal law, which many Native Americans interpreted to mean they held a unique place under the law as dual citizens of both the United States and their respective Indian nation. Policy makers assumed

that Indians would fully integrate into American society and eventually lose this duality—an assumption that thus far has proven to be flawed.

The question of Indian citizenship raised considerable debate and drew mixed reactions over its impact. Some U.S. reformers believed that neither American nor Indian society would benefit from the act. However, supporters of the measure saw it as an affirmation of their commitment to Indians and their rights, both as members of their respective tribal nation and of the United States. The same was true of Indian attitudes. Some felt it was important to become active American citizens, while others openly resisted the conferral of citizenship as another assault on their culture through assimilation and a wholesale violation of their tribal sovereignty. Nonetheless, whether they wished it or not, all Indians were automatically made citizens of the United States under the new law.

Indian Civil Rights Act (1968)

The U.S. Constitution, and particularly the Bill of Rights, contains a number of provisions designed to prevent the federal and state governments from interfering with individual rights. Beginning with *Talton v. Mayes* in 1986, the Supreme Court has consistently ruled that the Constitution does not apply to tribal governments, but in 1924 Congress declared that all Indians born in the United States are U.S. citizens. By the early 1960s, concerns had arisen about whether tribal governments were impeding the rights guaranteed to U.S. citizens by the Constitution. It is unclear whether these concerns were founded, but the result of the hearings was the passage of the Indian Civil Rights Act of 1968 (ICRA).

The ICRA requires that tribal governments respect, among other things, freedom of speech and of the press, the free exercise of religion, and the rights to be free from unreasonable searches and seizures, to not be subjected to double jeopardy, to due process, and to equal protection. The full list

of rights is enumerated in 25 U.S.C. 1302. The individual rights guaranteed by the ICRA are consistent with, but not identical to, those in the Constitution. Even when the same right is found in both documents, it does not have to be interpreted identically.

Several provisions in the Constitution were deliberately omitted from the ICRA, including the guarantee of a republican form of government (allowing each tribe to structure a government suited to its tradition), the establishment clause (several tribes, most notably the Hopis and many Pueblos, operate as theocracies), and the right to a jury trial in civil cases (which applies only to federal cases; it does not bind states).

The ICRA imposed several extra restrictions on tribes. As originally enacted, the act limited tribes from sentencing defendants to more than six months imprisonment and/or more than a \$500 fine. Congress increased those limitations in 1986 to a maximum of one year imprisonment and/or a \$5000 fine. The ICRA also requires tribes to provide a jury trial for all offenses punishable by imprisonment; the Constitution requires a jury trial only when the possible sentence exceeds six months. The most significant difference between the ICRA and the Constitution concerns the appointment of counsel for indigent defendants in criminal cases. The ICRA provides a right to counsel only if paid for by the defendant; it does not require tribes to provide an attorney at tribal expense. This difference stemmed from concerns that the cost of an indigent defender system would bankrupt tribes, many of whom had very limited tax bases or governmental revenue. Indigent defendants are entitled to an attorney in state and federal court only if charged with a felony (an offense punishable by more than one year in prison) or if convicted of a misdemeanor and sentenced to jail. Since the ICRA restricts tribes from imposing jail terms of more than a year, defendants in tribal court are entitled to an attorney only if sentenced to jail. Consequently, Congress decided not to mandate indigent defense counsel, given the more limited role of attorneys in tribal court and the potential impact on the tribal treasury.

In *Santa Clara Pueblo v. Martinez* (1978), the Supreme Court ruled that a person alleging a violation of the ICRA must file suit in tribal court. Federal courts can hear ICRA cases only if a person files a petition for a writ of *habeas corpus*, which contains significant prerequisites, most particularly the requirements that the tribe be holding the person in custody and that the person must first have exhausted tribal remedies before filing in federal court.

Indian Civilian Conservation Corps

Originally known as the Indian Emergency Conservation Work program, the Civilian Conservation Corps-Indian Division (CCC-ID) developed from the Emergency Conservation Work Act of 1933, the first piece of New Deal legislation to benefit Native Americans. Administered by the Office of Indian Affairs, the CCC-ID focused on increasing the value of, and income from, resources the Indians already possessed. Commissioner of Indian Affairs John Collier believed that Indians could become self-sufficient only by farming and ranching their own tribal lands. Although the tribes held over fifty million acres of land, they only gained 20 percent of their income from agriculture. In addition, most of the land was severely eroded. Collier hoped the CCC-ID would enable the Indians to make better use of their land.

The CCC-ID concentrated its efforts in forestry, development of grasslands, and abatement of soil erosion. Yet the final report of the program noted that workers had been involved in 126 different types of undertakings, encompassing such diverse activities as performing archaeological work in Arizona, restoring a historic council house in Oklahoma, and operating a fish hatchery in Wisconsin.

The six district offices that administered the CCC-ID were located west of the Mississippi River in areas with the greatest concentration of Indian population. Although the regular CCC employed only unmarried men and housed participants at boarding camps, the CCC-ID permitted married men who could live in boarding or family camps. Some camps let workers reside in their own homes. Typical enrollees earned \$30 for a twenty-day month.

The CCC-ID also provided education to workers. For the most part, the instruction was practical and related to work. Classes in safety, first aid, and mechanics were common. By 1940 enrollees could pursue a curriculum geared to secondary and even higher education.

With the onset of World War II (1914-1918), the CCC-ID experienced significant budget cuts. The program enjoyed renewed success, however, when enrollees were allowed to receive benefits from the National Defense Vocational Training Act. Hundreds of Indians found off-reservation jobs in the defense industries.

In 1942 the government abolished the CCC-ID. During its existence, the agency employed over eighty-five thousand Indians and expended \$72 million. Seventy-one percent of that money went to salaries and wages, with Indians receiving nearly 61 percent of those funds.

Indian Claims Commission Act (ICCA; 1946)

The 1946 Indian Claims Commission Act established a government commission to hear the claims of "any Indian tribe, band, or other identifiable group of American Indians." The commission acted on several hundred claims until its demise in September 1978.

In 1855 Congress created a Court of Claims with jurisdiction over lawsuits filed against the United States. Some tribes filed such lawsuits, but in 1863 Congress explicitly prohibited claims "growing out of or dependent on any treaty stipulation entered into with foreign nations or with the Indian tribes." Indians were excluded altogether from the Court of Claims until 1881, when Congress passed a special jurisdictional act allowing the Choctaw tribe to file a claim. From that point, a tribe could sue in the Court of Claims only if Congress specifically authorized the claim. Up to

1924, tribes pursued thirty-nine claims through Congress and the Court of Claims, but the process was difficult.

Perhaps the first call for a special court to address Indian claims came in 1910 from Francis E. Leupp, former commissioner of Indian affairs, but Congress took no action. However, Indian contributions to the U.S. effort in World War I and the recognition of U.S. citizenship for Indians in 1924 improved their success in obtaining jurisdictional acts to sue in the Court of Claims: Congress authorized thirty-seven claims in the three years following the 1924 Indian Citizenship Act. Interest in addressing Indian claims increased after issuance of the 1928 *Meriam Report*, a critique of Indian administration that called for a commission to review Indian grievances. The American Indian Defense Association, a reform group headed by John Collier, expressed support for an Indian claims court as early as 1929. During his tenure as commissioner of Indian affairs (1933–1945), Collier consistently promoted the establishment of an Indian claims commission.

The first bill proposing a court of Indian claims was introduced in Congress in 1930, but it was defeated, as well as the other bills introducing a claims commission during the 1930s. Some members believed such legislation would enrich lawyers at the expense of the U.S. Treasury. Members also disagreed about the specifics of how a claims commission would work.

Congress continued to consider Indian claims bills in the 1940s, with a gap during World War II. Natives' participation in the war effort once again helped to build support for addressing their claims against the United States. In the summer of 1946, Congress finally reached agreement on the scope of an Indian claims commission and passed legislation. President Harry S. Truman signed the Indian Claims Commission Act (ICCA) on August 13, 1946.

The ICCA created a three-person commission (later expanded to five) to hear the claims of “any Indian tribe, band, or other identifiable group of American Indians.” It defined five broad categories of claims, which included “claims in law or equity arising under the Constitution, laws, treaties of the United States, and Executive orders of the President”; “unconscionable consideration” paid for lands under a treaty, contract, or agreement with the United States; and taking of lands without compensation. The commission provided only monetary awards and had no mechanism for or authority to return land.

Tribes had five years to file claims accruing before passage of the act. Any claims not filed by the 1951 deadline were

considered to have expired. (However, the filing date for claims was subsequently and repeatedly extended until the commission was disbanded in 1978.) The act gave the Court of Claims jurisdiction over Indian claims that accrued after its passage. The court would also hear appeals of the commission's decisions. Congress's directive was to resolve all legal and moral claims against the United States, once and for all.

Most of the claims filed dealt with land and were addressed in three stages: title, valuation, and offsets. First, the commission considered whether the tribe or group had title to the land at issue. Indian title was “recognized” if it was acknowledged in a statute, treaty, or executive order. “Aboriginal” title was more difficult to prove: the tribe or group had to demonstrate exclusive occupation and ownership for a long period of time. If the commission found that the tribe had a recognized or aboriginal title, the case could proceed to the second stage in which the commission determined whether the United States had taken the land without compensation or had paid too little for it. The commission determined the fair market value of the land at the time of the taking or cession, and it calculated the consideration paid, which might include money, goods, and services. Finally, the commission reviewed the government's proposed offsets—money it expended gratuitously for the benefit of a tribe—which would be deducted from the final award.

Tribes also filed claims for an accounting of funds and property the government held in trust on their behalf. For the accounting dockets, the General Accounting Office prepared lengthy reports tracking funds appropriated, invested, and expended for tribes under the terms of treaties or other instruments.

Both the United States and attorneys for the tribes offered testimony from numerous experts to make their cases—among them, anthropologists, historians, appraisers, and accountants. The experts' reports and testimony created a rich record of information about Indian settlement and land use, treaty negotiations and implementation, and the nature of lands taken or ceded. Documents from the Indian Claims Commission proceedings are held in Record Group 279 at the National Archives and Records Administration in Washington, D.C. Expert witness reports and testimony have been compiled on microfilm, and many of the anthropological reports were published by Garland Publishing Company in the 1970s.

Scholars have disagreed about whether the ICCA was the final achievement of the Indian New Deal or the first phase of the termination policy. Critics have faulted the commis-

sion for effectively extinguishing Indian title in cases of takings or cessions involving fraud, duress, or mistake. Over the life of the commission, Indians and their advocates complained about delays in their cases, which the commission tried to address through administrative reforms.

As noted, Congress extended the life of the commission several times, the last until September 30, 1978. Cases still pending at that time were transferred to the Court of Claims. In all, 370 petitions were filed, and they were divided into many more dockets (variously reported as 601 or 610). As of September 1, 1978, when the commission issued its final report, it had dismissed 204 dockets and in 342 dockets had issued awards that totaled just over \$818 million.

Indian Commerce Clause

The Indian Commerce Clause is part of the U.S. Constitution. Article 1, Section 8, clause 3 of the Constitution gives Congress the power “to regulate Commerce . . . with the Indian Tribes.” The clause has been crucial to three aspects of United States Indian policy: the status of Indian tribes, the authority of the states in Indian affairs, and the authority of the federal government over Indian tribes and affairs.

The clause represented a continuation of eighteenth-century British Indian policy. Throughout that period, the British government attempted to centralize control of Indian affairs and eliminate the role of the colonial governments. Those attempts culminated in the Proclamation of 1763, which consolidated the authority of the British government.

The Articles of Confederation, ratified in 1781, gave the Continental Congress “the sole and exclusive rights and

power of . . . regulating trade and managing all affairs with the Indians, not members of any of the States, provided that the legislative right of any State within its own limits not be infringed or violated.” The nationalization of Indian affairs authority under the Articles gave rise to considerable state expectation that they possessed an important role with regards to the issue.

The Indian Commerce Clause, included in the Constitution at the urging of James Madison, eliminated the reference to the states and gave the exclusive power to manage trade relations to Congress. Chief Justice John Marshall, in the famous case of *Cherokee Nation v. Georgia* (1831), agreed that the clause placed full authority over Indian relations in Congress, to the exclusion of the states. In the subsequent case of *Worcester v. Georgia* (1832), Marshall expressly concluded that “[t]he whole intercourse between the United States and [the Indian tribes] is, by our constitution and laws, vested in the government of the United States.” However, in *Cherokee Nation*, Marshall also held that because the clause separately addressed foreign nations and Indian tribes, Indian tribes were considered “domestic dependent nations” with no power to invoke the jurisdiction of the U.S. Supreme Court.

During the nineteenth and early twentieth centuries, the Supreme Court continued to view the Indian Commerce Clause as granting exclusive Indian affairs authority to the national government. The Court limited Congress’s power under the clause, however, ruling in *United States v. Kagama* (1886) that the clause did not provide constitutional authority for enactment of the federal Indian Major Crimes Act. The Court in *Kagama*, however, upheld the act as a valid exercise of the federal trust responsibility toward Indian tribes, thus authorizing the first congressional intrusion into the internal affairs of Indian tribes.

By the latter part of the twentieth century, the Court’s view of the Indian Commerce Clause had changed significantly. In *Cotton Petroleum Corporation v. New Mexico* (1989), the Court stated that “the central function of the Indian Commerce Clause is to provide Congress with plenary power to legislate in the field of Indian affairs.” Under this interpretation of the clause, Congress is not restricted to regulating affairs *with* the Indian tribes, but rather has constitutional authority to regulate the affairs *of* the Indian tribes.

Moreover, the Indian Commerce Clause is no longer the absolute barrier to state law that it was when Marshall conceived it. The Court has often authorized state law to be applied to non-Indians in Indian Country unless Congress

has taken steps to preempt the states. For example, in *Cotton Petroleum Corporation* the Court upheld state taxes on mining companies engaged in the extraction of tribal mineral resources within reservation borders. The Court has even found that in “exceptional circumstances” states may extend their laws to Indians within Indian Country, although it has confined those circumstances to state conservation laws for the preservation of species.

Indian Community Action Programs

During a meeting with members of the National Congress of American Indians in 1964, President Lyndon B. Johnson declared that American Indians would be at the forefront of his War on Poverty. Even though Johnson had no special plan for Indian tribes under his Economic Opportunity Act of 1964, historians argue that American Indians benefited more from Johnson’s poverty-fighting Community Action Programs (CAPs) than any other group in the United States.

Because CAPs bypassed local and state governments in fostering “maximum feasible participation” of the poor, Indian tribes, which had a direct relationship with the federal government through the Bureau of Indian Affairs (BIA), were the ideal recipients. Tribal governments were allowed to organize their own CAPs; funds did not go to the BIA. Programs covered everything from education and housing to industrial parks and sanitation systems. By 1967 CAPs were operating on 170 reservations. By 1970, \$70 million in federal funds had gone to Indian CAPs.

Indian communities experienced a sociopolitical makeover with the advent of CAPs. Tribal governments expanded to manage new projects, and several Indian college graduates returned to reservations for CAP-funded jobs. As

a result, new leaders emerged who were not tied to the BIA or to established tribal governments. These leaders were, however, often at odds with the tribal government over political representation and money allocation. Also, although CAPs allowed for the building of Indian centers in places such as Los Angeles and Minneapolis, urban-based Indians argued that CAPs unfairly gave priority to reservations. This struggle for representation frequently divided urban and reservation-based Indians, and a pan-tribal identity emerged among urban Indians that fostered much of the late 1960s Red Power activism. Further criticism was aimed at the failure of CAPs to promote permanent tribal financial stability through economic resource development. Commissioner of Indians Affairs Philleo Nash agreed. However, by the mid-1960s tribes had lost too much resource-rich land, and businesses were not enthusiastic about expanding onto remote reservations to organize an untrained Indian workforce.

Despite such criticisms, many tribes witnessed positive changes in their communities. For example, the Navajo tribe, which received more funding than any other tribe because of its size, built the Navajo Community College and the Rough Rock Demonstration School, two important experiments in Indian-controlled education. In a larger sense, CAPs strengthened Indians’ position in the political relationship between tribes and the federal government. For the first time, tribes were allowed to develop their own projects away from the paternalistic control of the BIA. In effect, then, Indians gained confidence that strengthened the era’s developing tribal self-determination movement and, in turn, helped to produce the Indian Education Act of 1972 and Indian Self-Determination and Education Assistance Act of 1975. In the grand scheme of Indian efforts to defend and exercise sovereignty, CAPs proved to be an ally to the cause.

Indian Country

“Indian Country” is the term used to denote a specific territory wherein American Indian peoples reside and engage in domestic self-government. Historically, the presence of non-Indian peoples was either nonexistent or severely limited in Indian Country. The term was used in an official or quasi-official fashion by British authorities in the eighteenth century and by United States authorities since the country’s founding.

Plans to legally separate the Anglo-American settler population from the Indian population and to reserve certain North American territories for Indian peoples had their origin during the French and Indian War (1754–1763). After the war, King George III issued the Proclamation of 1763, which prohibited British colonists from settling west of the line that ran north to south down the spine of the Appalachian Mountains. Land west of that line was declared the “Indian Reserve.”

After the American Revolutionary War (1775–1783), the U.S. government continued to attempt to draw a firm boundary line between settlers and Indians. Various trade and intercourse acts enacted between 1790 and 1834 sought to regulate all manner of interaction between Indians and settlers. These laws, along with the Indian Removal Act (1830), formally created a permanent territory in the trans-Mississippi region for the resettlement of eastern American Indians. Pressure by settler populations for new lands continued to reduce the size of Indian Country in the nineteenth century. In the 1850s and 1860s, federal commissioners began to favor the creation of separate reservations for individual Indian nations in lieu of a singular Indian Country. Despite this shift to the reservation system, however, these Indian lands continued to be referred to as Indian Country.

Since 1948 Indian Country has been defined by federal statute (18 U.S. Code § 1151). Relying on existing U.S. Supreme Court cases, Congress established three categories

of lands that would constitute Indian Country: all lands within Indian reservations, even if owned in fee by non-Indians; dependent Indian communities; and allotments still held in trust or restricted status located outside reservations. Although the Indian Country statute is located in the federal criminal code, the Supreme Court has stated that it applies to civil jurisdiction matters as well. In interpreting the statute, the Supreme Court has often invoked language it first used in 1914 in *United States v. Pelican*, in which it stated that Indian Country is land “validly set apart for the use of the Indian as such, under the superintendence of the federal government.” Under this approach, the Court has interpreted the term “reservation” broadly, to include, for example, lands held in trust for Indian tribes.

Indian Country status is important to determine jurisdiction over persons and lands. In general, federal jurisdiction is primary within Indian Country and state jurisdiction is limited or even nonexistent. Tribal governmental authority extends outside Indian Country only in certain limited circumstances.

Indian Country Today

Indian Country Today is a media enterprise that provides comprehensive coverage of Native American news, both from Washington, D.C., and from around the United States. Considered the most important media critic of U. S. Indian policy today, *Indian Country Today* publishes “more original journalistic content on American Indian issues than any other news source.”

The weekly newspaper, founded in 1981 by Tim Giago in Rapid City, South Dakota, has garnered numerous awards for its strong national editorial voice on Native American issues, especially those concerning religious freedom. In

1997 Giago won a Golden Quill award from the International Society of Weekly Newspaper Editors.

In 1988 the Oneida Nation of New York, through its Four Directions Media, purchased *Indian Country Today* and moved its headquarters to New York. The paper currently offers four rotating feature sections: Healthy Living; Education; Trade and Commerce; and Entertainment, Lifeways, Pow Wow Updates, and Tourism. In addition to the newspaper, *Indian Country Today* maintains an active Web site, indiancountrytoday.com, and offers subscribers access to podcasts, e-mail news alerts, RSS news feeds, and four quarterly magazines: *Pow Wow*, *Destinations*, *Education*, and *Business*. *Indian Country Today* also maintains an extensive archive of national American Indian news and perspective.

Indian Education Act (1972)

The Indian Education Act of 1972 (IEA), along with the Indian Self-Determination and Education Assistance Act of 1975, marked a legislative shift in education policy from the termination era (during which the federal government sought to bring an end to the special status of Indian nations) to the self-determination era (when the approach became to let Indian people decide their own destiny). This change was brought on by the Indian rights movement of the 1960s. The acts represented a major shift from top-down legislation imposed from Washington, D.C., to legislation that had significant Indian input. The IEA was designed to provide funding to help meet the special needs of American Indian students after studies showed those students were underachieving in public or Bureau of Indian Affairs (BIA) schools.

Historically, United States Indian policy was set by non-Indians, but as Indians learned more about the national political process, they began establishing activist organizations, such as the National Congress of American Indians (1944), to make their voices heard. This process accelerated in the 1960s. A national Indian education conference held in 1969 in Minneapolis, Minnesota, was followed by the formation of the National Indian Education Association in 1970.
